P R E F A C E.

THE "Annual Cyclopædia" for 1879 has grown into a larger volume than usual from the multitudinous events of a year unusually prolific in legislative action and political changes, and teeming with vitality in the various fields of scientific progress and mechanical development, religious activity, industrial advancement, and commercial transition, which come within the scope of a work which aims to be a complete record of the current history of the United States and of the world, and a register of every fact or occurrence which forms an influential factor in modern civilization.

The articles on the States are lengthened beyond their usual compass by exceptionally important legislation transacted and pending upon the regulation of railroad, insurance, and other corporations; upon temperance, convict-labor, tramps, Chinese immigration, and the different elements of the labor question; upon the regulation of the ballot and the question of the Federal control of elections; upon the question of paying or not paying State and municipal debts, and other subjects of moment. The Legislatures of the individual States are the arenas in which most of the socio-political questions, which in other countries make the great national issues, are fought out; and as the "Annual Cyclopædia" is the only full and comprehensive chronicle of this most momentous portion of the country's history, it must not allow any important acts of legislation, nor any decision of the courts concerning them, or subjects of political agitation, to pass unrecorded. Full and interesting data are given this year upon the industrial and agricultural condition of many of the States, as well as the usual reports of public affairs, statistical information, and record of party action. In CALIFORNIA a synopsis of the new Constitution is found. In MAINE and in PUBLIC DOCUMENTS the documents relating to the election difficulty are given at length. In TENNESSEE, ALABAMA, and VIRGINIA, the debt questions are unfolded; in MINNESOTA and FLORIDA, the question of railroad land-grants; and in other States, whatever subjects are uppermost in the public mind. In separate articles the EXODUS OF THE COLORED PEOPLE and the YELLOW FEVER are thoroughly discussed. In CONGRESS the debates on the anti-Chinese and election investigation bills, and the conflicts over the army and judicial appropriation bills in their successive phases, are very fully reported, with the entire texts of the President's vetoes. The NATIONAL BOARD OF HEALTH is explained in a timely article.

The high value and authority of the exhaustive monographs on the MARINE HOSPITAL SERVICE, the SIGNAL SERVICE, the RESUMPTION OF SPECIE PAYMENTS, and REFUNDING THE PUBLIC DEBT will be appreciated by every reader. Every

word in these articles carries the weight of the authority of men who are best qualified and best entitled to speak upon these important institutions and achievements of the national Government—who themselves were *magna pars* in their development. The historical account of the marine hospitals is from the pen of Surgeon-General Dr. John B. Hamilton, the head of the service. The clear and full exposition of the workings of the Meteorological Division of the Signal Service was prepared under the supervision of General Albert J. Myer, Chief Signal Officer. The succinct but complete expositions of the great fiscal achievements of refunding and resumption have for their author J. K. Upton, the present Assistant Secretary of the Treasury.

The "Cyclopædia" is as full as ever of religious information. In **EVANGELICAL ALLIANCE** the acts of that association are recounted; in **BRAHMO SOMAJ** the reform movement among the Brahmans is explained; and a review of each Church is given under the name of the denomination.

The political history and statistical survey of the different nations of the earth are as complete as in former years. The Ferry laws in France, the tariff reform in Germany, and the leading questions and legislative results in other countries are amply discussed. The Nihilistic troubles are recounted and explained in **RUSSIA** and **NIHILISM**. The origin and events of the war in Zooloo-land are described in **CAPE COLONY**, and the rise and growth of the Zooloo nation in **ZOOLOOS**; the history of the South American war is narrated in **BOLIVIA** and **PERU**; of the Afghan war, in **AFGHANISTAN** and **INDIA**; of the Russian expedition into Turkistan, in **RUSSIA**; of the Burmese horrors, in **BURMAH**. In **EGYPT** the developments of the debt question and the deposition of the Khedive are related. The visitation of the plague in Russia is given in **PLAGUE**, and a description of the Isthmus Canal scheme and of the various plans and routes in **INTEROCEANIC CANAL**. The newly erected autonomous states in Turkey are described in **BULGARIA** and **EASTERN ROUMELIA**, and sketches of their rulers under their names. This volume is behind none of its predecessors in the department of biography.

The articles on **COMMERCE** and the commercial statistics presented under the several countries afford a survey of the trade of all nations, and a mass of information upon commerce and industry which can hardly be found elsewhere.

Besides the customary comprehensive scientific articles, there are special ones on the more prominent subjects of recent research and discovery. The article on **GEOGRAPHICAL EXPLORATION** is more detailed than usual; the portion relating to Arctic discovery is a valuable contribution from the pen of Captain Howgate.

With the unusually profuse illustrations of this volume it is hoped that nowhere will be felt the want of a map, a diagram, or a drawing which would make the text clearer. There are steel portraits of President Grévy of the French Republic, Speaker Randall, and Secretary Sherman. A glance through the index will show that the present volume is not merely a larger, but that it is a fuller book than usual. As indicated above, uncommon pains have been taken to render the "Annual Cyclopædia," as far as possible, rounder and more cyclopædic in character.

THE
ANNUAL CYCLOPÆDIA.

A

ABD-EL-KADER (properly SIDI EL-HADJI ABD EL-KADER ULED MAHIDDIN), a distinguished Arab chief, and one of the most prominent representatives of Mohammedanism in the nineteenth century; born near Mascara in Algeria about 1807, died in Damascus in November, 1879. By a pilgrimage to Mecca, which he made together with his father, who was a marabout (Arab seer), as well as by his studies at the University of Fez, he gained a reputation for piety and the title el-Hadji, the pilgrim. The conquest of Algeria by the French, however, made of the future priest a warrior. Upon the recommendation of his father the people elected him Ameer of Mascara, and he soon, by his perseverance, indomitable courage, and patriotism, gained the love and confidence of the Kabyles to a high degree. In 1832 and 1833 he was engaged in a war with France, and, although repeatedly defeated, finally compelled the French to conclude the treaty of February 26, 1834, by which his sovereignty was acknowledged, and he was permitted to buy arms in France. He next subjugated the native tribes, extending his authority over the entire provinces of Titeri and Oran. In the following year he again waged war against the French, defeating General Trézéol on the Makta, June 28, 1835, and General d'Arlandes on the Tafua, April 25, 1836; and he continued his guerrilla struggle with such success that the French, who were then contemplating the capture of Constantine, in order to gain time for this undertaking, made another treaty with him on May 30, 1837, in which they recognized his authority under the nominal sovereignty of France, and by which he was intrusted with the administration of the provinces of Oran, Titeri, and Algeria, with the exception of the capitals and the Metidja of Algiers. In 1839 he renewed the war against France; but this time the French were more successful, so that in 1842 he was compelled to seek refuge in Morocco. Abd-er-Raham, the Sultan of Morocco, received him; but, be-

fore the Sultan had made up his mind what to do, he had involved Morocco in a war with France, which was short and decisive. In the battle of Isly, August 14, 1844, the Moors were completely defeated, and, fearing Abd-el-Kader's influence in Morocco, the Sultan concluded peace with France, and Abd-el-Kader was again a fugitive. Stirring up revolt in Morocco itself, he defeated the troops of the Sultan in several battles. The power against him was too strong, however, and on December 21, 1847, he was forced to enter French territory, and on the following day surrendered to General Lamoricière. The General promised to send him to Egypt or to Syria, and the Duke d'Aumale confirmed this promise. This pledge was broken by the Government of Louis Philippe, and he was retained in captivity for many years. President Louis Napoleon, however, released him in 1852, after he had sworn on the Koran not to oppose the French rule in Africa. He then took up his abode in Brussa, and afterward in Damascus, where he exerted himself strongly in favor of the Christians at the time of the Syrian massacres of 1860, for which he received the grand cross of the Legion of Honor. Louis Napoleon allowed him a pension of 100,000 francs, which was reduced in 1879. He visited the Paris Exposition and England in 1867, and in 1870 offered his services to France against Germany. In 1871 Abd-el-Kader submitted to the Government of Thiers some suggestions relative to reforms in the administration of Algeria. Since that time but little has been heard of him. He was known to live a retired life in Damascus, devoting his time to religious duties, the education of his children, and literary pursuits. Though one of the boldest, bravest, and most intrepid defenders of decaying Mohammedanism against the victorious advance of Christian nations, Abd-el-Kader was by no means an obstinate opponent of modern civilization, but showed an eagerness to learn from his victors. Ever since 1852 he was on the best terms with

France; he became an advocate of the principle of religious toleration, and joined the order of Freemasonry. He did not renounce polygamy, but in his retirement at Damascus had three wives. Most of his numerous children died before their father, and one of his daughters became a Christian. A religio-philosophical work, which he wrote in Arabic in his retirement, was well received, and translated by Dugat into French under the title "Rappel à l'Intelligent, Avis à l'Indifférent" (Paris, 1858).

Special works on Abd-el-Kader have been published by Laménaire, "Vie, Aventures, Combats et Prise d'Abd-el-Kader" (Paris, 1848), and Bellemare, "Abd-el-Kader Sa Vie Politique et Militaire" (Paris, 1863).

ABYSSINIA,* a country of Eastern Africa, the boundaries of which continue to be unsettled. The area of Abyssinia proper, which was formerly said to comprise the three important states of Tigré, Amhara, and Shoa, is estimated by Behm and Wagner ("Bevölkerung der Erde," vol. v.) at about 158,000 square miles; the population is believed to be from 3,000,000 to 5,000,000. The larger portion of this country is governed by King John (formerly known as Prince Kassai), while Shoa is under the government of King Menelek. The son of the late King Theodore, Prince Alma-yoo, who after the death of his father was sent to England to receive there a careful education, died at Leeds on November 24, 1879.

As the King of Abyssinia lays claim to large territories which have of late been annexed to Egypt, especially the port of Massowa, the two countries have been for years on unfriendly terms. In 1879 the Government of Egypt sent Gordon Pasha on a special mission to King John to settle the pending difficulties peaceably. The King refused to accept the propositions made by Gordon Pasha, and threatened to invade Egypt. (See EGYPT.)

An Egyptian functionary, Zobir Pasha, who was ruler of Darfoor before the annexation of this country to Egypt, gave in September to an American writer the following account of the situation of affairs in Abyssinia:

King John has now reduced to obedience his two vassal kings, Menelek and Wold-Mikail. The King knows well that by order of the Sultan at Constantinople the Egyptian army is reduced to 18,000 men. The King knows also that Gordon Pasha has left Cairo with papers from England and France forbidding Abyssinia to make war with Egypt. But will not England and France also prevent Egypt from going to war with Abyssinia? Munzinger Pasha stole for Egypt the country of the Bogos. King John then took back by force a part of this territory. Ismail Pasha then sent three expeditions against Abyssinia. The first, commanded by Munzinger Pasha and consisting of 2,000 men, was annihilated by King John, and Munzinger himself killed. The second, consisting of 1,800 men, shared a like fate, and its commander, Colonel Arendrup, was killed, together with Count Zichy and Arakel Bey, the son-in-law of Nubar Pasha.

* See "Annual Cyclopædia" of 1877, art. ABYSSINIA. On the former history of King John, see "Annual Cyclopædia" of 1878 and 1875.

The third expedition, consisting of over 20,000 men, magnificently equipped and provided with a large European and American staff, was also defeated and driven from the land. Soon after the defeat of this third Egyptian army, Menelek, King of the Shoa country, broke out into revolt in the south, and was aided by King Wold-Mikail in the north. King John hastened to put down these formidable revolts, and in the mean time the Egyptians stole back again the Bogos country. But now Menelek and Wold-Mikail are friends with King John, and have taken wives from his family; and, mark well my words, King John will get back the Bogos country (a fertile district on the north and northwest frontiers of Abyssinia) by fair means or by foul, or he will perish in the attempt. Who will prevent him? Egypt can not, and King John does not believe that England and France will go to war with him to prevent his taking back from Egypt what rightly belongs to him.

King Menelek of Shoa, the southern part of Abyssinia, in August informed the British Anti-Slavery Society that he had abolished the slave-trade throughout his dominions. In December the relations between Menelek and the King of Abyssinia were reported to be critical, because Menelek has failed to pay his annual tribute.

ADULTERATION. The Governments of Germany, Belgium, and other European countries have in recent years taken active steps to suppress adulteration and the use of deleterious substances, more particularly in foods or in articles where a direct noxious effect upon the public health results. In Great Britain the health authorities are empowered to suppress the sale of articles of food containing injurious ingredients. In the different American States special acts have been passed relative to debased or adulterated food articles. In the State of New York dealers in artificial butter are compelled to label it as such, and strict measures have been taken to put a stop to the adulteration or reduction of milk. No general laws have been enacted, however, to suppress the debasement or falsification of commercial commodities, or even of food products, a kind of fraud to which the larger portion of the mercantile community are themselves unwilling parties. This subject has been called to the attention of the public frequently of late by chemists, microscopists, and physicians; but the deadly effects of some of the materials from which articles of daily use are manufactured, and the extent to which the adulteration of foods, beverages, and medicines is carried on, according to the testimony of expert analysts, is hardly conceived of by the general public. Dr. Kedzie, President of the State Board of Health of Michigan, has officially warned the people of that State of two very dangerous sources of disease and death in the reckless employment of poisonous materials in manufactures—arsenic to color wall-papers and to dye clothing materials, and lead in the sheet-tin of which cheap cooking vessels are made. In the report of the Canadian Commissioners of Inland Revenue for 1877 it is stated that out of 180 specimens of groceries 93 were found by analysis to be adulterated.

In the report of the Massachusetts Board of Health for 1874 the most common adulterations were enumerated. George T. Angell, who read a paper on the subject of adulterations and poisonous materials before the Social Science Association at Saratoga, was informed by an eminent physician of Boston that patients frequently die because the prescriptions are made up of adulterated drugs and fail of their effect; and a large wholesale dealer and a retail druggist of the same city stated to him that the adulteration of medicines is so universal that no profits could be made on the sale of pure articles.

Nearly all groceries are adulterated very commonly in the United States. Teas are not only frequently adulterated before they arrive in America, but are colored and faced by the admixture of poisonous substances in the United States, large factories existing for this purpose in New York and Philadelphia: one of the processes involves the use of prussic acid; the commonest coloring materials and adulterants employed are arseniate of copper, verdigris, mineral-green, Prussian blue, talc, clay, and soapstone. In England the sale and even the landing of adulterated teas are now stringently prevented. The exclusion of adulterated China teas from the English market naturally causes their importation into the United States to increase. The Japan teas as they are prepared for the retail trade are said to be quite as frequently adulterated and artificially colored as the others. A great number of substances are used to adulterate the coffee which is purchased in a ground state: pea-flour colored with Venetian red is often used; but the commonest adulterant is chicory, which is itself almost invariably debased by the admixture of various articles, some of them of a highly injurious character. A machine has been invented and is used for molding spurious coffee-berries out of an artificial paste. The article called essence of coffee is composed of various coloring materials. The adulteration of sirups and sugars with glucose is a practice which has recently spread alarmingly. The extensive use of glucose, or the grape-sugar of commerce, is held to be the main origin of Bright's disease of the kidneys, and the cause of the present prevalence of that fatal malady. The importations of glucose increased tenfold between 1875 and 1877, and at the same time extensive factories were established for its manufacture in the Western States. The article sold as grape-sugar is manufactured by boiling corn-starch with sulphuric acid (oil of vitriol), and mixing the product with lime. A portion of the sulphuric acid, and sometimes copperas, sulphate of lime, and other noxious principles, remain in the glucose. In the analysis of seventeen samples of table sirup by Dr. Kedzie, fifteen were found to be made of glucose, one of them containing 141 grains of oil of vitriol and 724 grains of lime to the gallon, and one from a lot which had sickened a whole family con-

tained 72 grains of vitriol, 28 of sulphate of iron (copperas), and 363 of lime to the gallon. The cheap sugars sold in Michigan are stated on the same authority to be adulterated and colored with poisonous substances. Analyses of the sugar sold in New York reveal the presence not only of glucose with its inherent poisons, but of muriate of tin, a formidable poison which is employed in the bleaching process. Mr. Fuller, a retired importer of sugar, called the attention of the United States Board of Trade, in their meeting held at New York in November, 1878, to the dangerous adulterations practiced with sugar, honey, and molasses. Glucose is largely used also to adulterate maple-sugar, candies, jellies, honey, and other sweet foods. Ground stone is undoubtedly used to adulterate sugar and other groceries. It is said that mills are in operation in various parts of the United States in which white stone is ground into dust of varying fineness, which is classified into the soda grade, the sugar grade, and the flour grade. A practice which is now exceedingly common, and is being rigorously suppressed in Great Britain, is the use of alum in bread. The various baking-powders sold now are said to be largely composed of alum, the price of which is less than 3 cents per pound, while cream of tartar costs 30 cents or more. The effects of alum used in this way are colic, constipation, heart-burn, and dyspepsia. The New York chemist, Dr. Henry Mott, Jr., on analyzing sixteen different powders, found alum a very considerable ingredient in every one; some of them contained also terra alba, insoluble phosphate of lime, and other foreign substances. The cream of tartar sold in the shops is seldom found to contain more than 30 per cent. of genuine cream of tartar. It is principally adulterated with terra alba, which produces destructive effects on the stomach and kidneys. Of the milk sold in the larger American cities, 90 to 95 per cent. is said to be reduced with water. This water is supposed to frequently contain the germs of malarial infection, or to be frequently impregnated with lead-poison, and therefore to be a very common cause of infant mortality. The lactometer and creamometer are said to be entirely inefficient to detect adulteration. Cream is made with gums and white glue; and the consistency, taste, and color of watered milk are restored with flour, starch, gum, sugar, carbonate of soda, and the brains of animals. Oleomargarine, which is now extensively manufactured from animal fats as a substitute for butter, is dreaded as a vehicle for infecting the human system with trichinae and other internal parasites. The fat is not subjected to a higher temperature than 120° F. John Michels, a New York chemist, states that the refuse fat of one pork-packing establishment is to his knowledge sent to the artificial butter factories; and Professor Church found in oleomargarine horse-fat, fat from bones, and waste fat, such as is ordinarily used in making can-

dles. The precautions against the sale of the meat of diseased animals are declared to be anything but sufficient. The adulterations of wines and liquors have often been exposed to the public: coarse rums, potato spirits, and not infrequently wood alcohol, are used as the foundation of liquors and wines; sulphuric acid is employed in the manufacture of port, sherry, and madeira wines, and of pale malt. At least half of the vinegar sold in the cities is said to contain active poisons: preparations of lead, copper, and sulphuric acid are used in its manufacture. Confectionery is colored with poisonous materials, to which more than once the attention of the public has been directed: cochineal, red lead, and bichromate of lead are used to produce the red and pink colors; chromate of lead, gamboge, turmeric, and Naples yellow to color yellow; litmus, indigo, Prussian blue, carbonate of copper, and other colors for the blues; acetate of copper, arseniate of copper, emerald-green, Scheele's green, and Brunswick green for the green shades; while weight is imparted by terra alba, chalk, and such substances. Soap is often colored with irritating skin-poisons. Olive oil is one of the most universally adulterated articles, and is most frequently made of oil extracted from hemp, rape, cotton, or mustard seed, or from the peanut. Bright green pickles, colored as they are with acetate of copper, have been the cause of frequent cases of poisoning. Mustard is almost never pure. The different pungent table sauces are often flavored with noxious chemicals. Cayenne pepper is adulterated with cinnabar, vermilion, and sulphuret of copper, and colored with red lead and Venetian red. Cocoa is weighted with sulphate or carbonate of lime, and colored with red lead, vermilion, and ochre.

The most insidious and deadly results of the reckless use of poisons in manufactures probably arise from the extensive use of arsenic for colors and dyes, and the use of lead in food-vessels. The amount of arsenic imported into the United States every year would furnish deadly doses enough to kill six times as many human beings as make up the present population of the earth. It is sold in the market at $1\frac{1}{2}$ to 2 cents a pound, and is handled like coal or stone. This terrible mineral furnishes the color for innumerable articles of every-day use—lamp-shades, fancy wrapping papers, tickets, artificial flowers, dried grasses, eye-shades—so that in nearly every house and every room the fine particles of this poison are floating in the air, finding their way into the human system, and producing their sickening and debilitating effects. Various materials of clothing—dress-goods, veils, sewing-silks, stockings, gentlemen's underwear, gloves, linings of hats and of boots and shoes—are colored with arsenic. Professor Nichols of the Massachusetts Institute of Technology found 8 grains of arsenic in every square foot of a ladies' dress pattern; 10 grains have been detected in a single artifi-

cial flower. A veil thrown over the crib of an infant recently caused its death; gentlemen have been severely poisoned by the arsenic contained in their underclothing. Arsenic has been found in toilet powders and in candles, and is used to color all sorts of fabrics. But the most extensive and most injurious application of the destructive agent is to color wall-papers. A great variety of colors—green, blue, red, yellow, and all their shades—are produced and employed on all grades and styles of paper-hangings. A book exhibiting 75 specimens of arsenic-containing wall-papers, to which the impressive title of "Shadows from the Walls of Death" was given, was published and distributed by the Board of Health of Michigan to warn the people against the use of such papers. A great number of deaths and innumerable cases of poisoning are supposed to have resulted from such poisonous wall-hangings. The arsenical papers, it is stated, are for sale in every town and village in the State. The citizens are advised to buy no paper without having it first tested for arsenic, and, in case their walls are already covered with poisonous hangings which can not easily be removed, to coat them with varnish as affording a certain measure of protection.

Lead-poisoning is supposed to have become in the most recent period a still more prevalent, though subtler and more insidious, cause of suffering and death than arsenical poisoning. Lead is a cumulative poison, and the least particles gathering consecutively in the system retain their baneful powers until quantities have been taken sufficient to produce disease, paralysis, and death. The dangers from drinking water which has been conducted through lead pipes has been often impressed upon the people by medical authors. Pipes of galvanized iron are said to be quite as bad as lead pipes. A still more dangerous source of lead-poisoning has lately been introduced to the attention of the public. The tin vessels which are used in every household to hold milk and other fluids, and often for cooking purposes, are said to be made, not of pure tin, but more frequently of an alloy of tin and lead. The lead is easily decomposed by acids, and salts of lead become mixed with the food or drink. A Michigan physician found that a number of cases which had been taken for chorea were in reality *paralysis agitans* caused by this kind of lead-poisoning. Many cases of the death of children from meningitis, fits, and paralytic affections were traced to the same cause, the children having imbibed the poison in milk which had been kept in cans of this alloy, the acid of the milk having dissolved the lead. Fruit acids will act much quicker upon the alloy. An examination of a large number of tin vessels by the Michigan Board of Health showed that nearly every sample contained lead alloy, and many of them a large proportion of lead. Dr. Emil Querner of Philadelphia, in testing a large number of tin vessels,

found lead in every specimen. The use of sheet-iron vessels instead of tin plate is on this account advised. The marbled iron-ware, which was popular a few years ago, is not so much used since a professor of Harvard University pronounced it to be alive with poison.

ADVENTISTS. SEVENTH-DAY ADVENTISTS.—The following is a summary of the statistics of the Seventh-Day Adventists for the year ending November 7, 1879:

CONFERENCES.	Ministers.	Churches.	Members.
Maine.....	3	18	326
Vermont.....	8	13	392
New England.....	3	24	508
New York.....	11	33	655
Pennsylvania.....	8	12	800
Ohio.....	8	23	674
Michigan.....	22	94	3,175
Indiana.....	4	21	422
Wisconsin.....	12	52	1,107
Illinois.....	9	34	676
Minnesota.....	17	53	963
Iowa.....	13	55	1,202
Nebraska.....	3	23	295
Dakota.....	1	10	200
Missouri.....	2	14	393
Kansas.....	5	34	700
California.....	7	31	740
Kentucky.....	1	3	76
Tennessee.....	1	5	54

Texas.....	1	4	250
General Southern Mission.....	..	3	65
Nevada Mission.....	..	2	45
European Mission.....	2	16	223
Danish Mission in Europe.....	2	6	141
Ontario Mission.....	1	3	70
Province of Quebec Mission.....	1	3	73
Colorado Mission.....	..	2	55
Virginia Mission.....	1	..	55
Wyoming.....	70
Total.....	144	599	14,141

The number of ministers was 27; of churches, 50; of members, 1,064, greater than in 1878. The number of licentiates was 151, or 3 less than in 1878. The amount of moneys pledged to the Systematic Benevolence Fund was \$51,714, or \$4,076 more than in 1878.

The General Conference of the Seventh-Day Adventists met in its eighteenth annual session at Battle Creek, Michigan, November 7th. Twenty conferences and two missions were represented by thirty-nine delegates. The Conference Treasurer reported that his receipts and expenditures for the year had been respectively \$8,848. A committee, who had been appointed by the previous General Conference to look after a number of Russian "Sabbath-keepers" who had settled in Dakota, reported that they had been found to be holding fast to their principles, and were anxious to become identified with the denomination. The denomination attaches importance to a gift of prophecy which it believes to be possessed by Mrs. E. G. White, and several sessions of the Conference were devoted to the consideration of the subject. The report which was adopted upon it declared that the past experience of the denomination had fully proved "that our prosperity as a people is always in proportion to the degree of confidence we cherish in the

work of the spirit of prophecy in our midst; that the most bitter opposition it had to meet was aimed against this work, showing that its enemies realized the importance of the same; and that great light had shone upon it through this channel. It also recommended several measures for the publication and more extensive circulation of the writings of Mrs. White, particularly the volumes of the "Spirit of Prophecy" and the "Testimonies of the Church," and declared it to be the duty of the ministers to teach the "Scriptural view of the gift of prophecy" and of the relation it sustains to the work of God. Resolutions were adopted expressing the opinion, as the sense of the Conference, "that none but those who are Scripturally ordained are properly qualified to administer baptism and other ordinances," and that it is "inconsistent for our Conferences to grant credentials to individuals to occupy official positions among our people who have never been ordained or set apart by our people." A committee was appointed to consider the subject of the proper qualification of ministers, and report to the next meeting of the Conference. A Mission Board of nine members was constituted, and charged with the special oversight of all the foreign missions of the denomination, which is to report annually to the General Conference. The Conference resolved that it was the duty of all members of the denomination to become members of the American Health and Temperance Association, and to induce others to do the same; that health and temperance clubs ought to be formed in every church; that persons should be encouraged to fit themselves to engage in health and temperance work; that ministers especially should prepare themselves to present these subjects and make it a part of their work; and "that it should not be considered that any minister has fully discharged his duty in any new field where a company of Sabbath-keepers has been raised up, until he has fully advocated, in public and in private, the subjects of health and temperance and spiritual gifts, and organized systematic benevolence; and a failure in this shall be considered worthy of censure."

The twentieth annual meeting of the Seventh Day Adventist Publishing Association was held at Battle Creek, Michigan, November 11th. The Treasurer reported that the Association possessed property to the value of \$215,237, and that its assets over the amount of indebtedness were \$103,712, showing an increase of net assets during the year of \$4,599. The receipts for the year had been \$284,799. The Association published a general religious newspaper, the "Advent Review and Sabbath Herald," papers in the Danish, Swedish, and German languages, a health journal, a monthly and a weekly paper for youth, lesson-sheets for Sabbath-schools, and books and tracts. The periodicals had in all 23,133 subscribers; the total amount of issues of books and tracts during the year had been 14,274,560 pages.

The fifth annual meeting of the *Seventh-Day Advent Educational Society* was held at Battle Creek, Michigan, November 9th. The Treasurer reported that the property of the Society amounted to \$52,758 in value, and that its net assets after all indebtedness was paid would be \$46,423. The receipts for the year had been \$9,416. The institution at Battle Creek had been attended by 426 students. Three new departments, a normal department, or teacher's institute, commercial, and primary departments had been added. The debt of the institution was continually decreasing, and would be reduced to about \$6,000, or one half of what it was in 1875, during the present year.

AFGHANISTAN, a Mohammedan country in Central Asia; area, about 278,000 square miles; population, about 4,000,000. The recent war between this country and England, and the views which both England and Russia are supposed to entertain with regard to the annexation of parts of its territory, have attracted the attention of the entire civilized world to Afghanistan, which has hitherto belonged to the least known parts of Asia. The Government of British India has for years made incessant efforts to obtain accurate information about Afghanistan, not only through its military expeditions and diplomatic missions, but through numerous travelers and explorers whom it has supported. These efforts to explore the unknown country have required many sacrifices. Stoddard, who was the first to cross the mountains from Herat to Bokhara, and Arthur Connolly, who pursued a new way from Cabool, by way of Merv, to Khiva, Khokand, and Bokhara, perished in 1841 in Bokhara. Edward Connolly, the first discoverer of Seistan, was shot from an unknown fort in Kohistan. Dr. Lord, the companion of Wood in the valley of the Oxus, was assassinated about the same time. Dr. Forbes was murdered in 1841 in Seistan. Lieutenant Patinson, who was the first to explore the middle and lower valley of the Helmund, was killed by the mutinous Jan-bas in Candahar. Colonel Sanders, who had drawn an excellent map of the region between Candahar and the Hasareh Mountains, was slain a few years later at Maharajpoo. Eldred Pottinger, who twice crossed the mountains between Cabool and Herat, escaped the massacre of Cabool and the danger of an imprisonment by the Afghans, but died soon after of yellow fever in Hong Kong. Alexander Burnes, one of the most distinguished geographical explorers, was one of the first victims of the rising in Cabool. The most important of the English explorations in Afghanistan are laid down in the collective work, "Central Asia, compiled for Political and Military Reference." A synopsis of all the recent explorations is given by F. von Stein, in Petermann's "Mittheilungen," 1878, I., and 1879, I. and II.

The boundaries of Afghanistan have never been fixed. The frontier which separates the

Afghan territory of Herat from the Persian province of Seistan in the southwest, and from Beloochistan in the south, was regulated in 1872 by an English commission of arbitration. In 1873 Russia and England agreed upon the northern frontier of Afghanistan, which was to embrace Badakshan with the dependent district Wakhan, the districts of Koondooz, Khooloom, and Balkh, and the interior districts of Akhshee, Siripal, Maymene, Shiberan, and Anjai. The eastern frontier, which separates it from British India, is likewise fixed, but the Afghan tribes which live east of it can not be relied upon, and frequently make it insecure. The frontier between Afghanistan and Kafiristan has never been settled, and the English maps generally leave it unmarked.

The administrative division of the country was made by Dost Mohammed, who tried to unite the multitudinous independent tribes in an organic whole, and organized the three provinces of Caboolistan in the northeast, Herat in the west, and Candahar in the southeast. The former contains the capital of the country, with the residence of the Ameer, who is accustomed to appoint his nearest relatives governors of the two other provinces. The provinces north of the Hindoo Koosh and its western continuations are treated as conquered lands, and constitute the four administrative districts of Badakshan, Khooloom, Balkh, and Anjai. The governors of all these provinces are appointed by the Ameer, and the Governor of Balkh is regarded as governor-general, the three other governors being dependent upon him.

Afghanistan has not many cities. The capital, Cabool, is situated about 6,000 feet high, and is strongly fortified by nature, being only accessible from one side. The residence of the Ameer, Shere Ali, was in the fort Bala-Hissar. On October 4, 1874, an earthquake destroyed about a thousand houses, and greatly added to the wretched aspect of the city. The number of inhabitants is estimated at 60,000. The city of Candahar is only a shadow of what it was in former times. About twenty miles from the city are the ruins of the city of Alexandria, which was built by Alexander the Great. The present population of Candahar probably does not exceed 15,000, though according to some it is from 60,000 to 80,000. In May, 1874, a part of the city wall fell down, destroyed four hundred houses, and killed many persons. Herat is the chief station on the great road that leads from India to Persia, and as such has long been an apple of discord between the Persians and Afghans. The English regard Herat as so important that they interfered when it was threatened in 1837 by the Persian Shah Mohammed. In 1856 they even began a war against Persia in order to prevent it from occupying Herat. Ghuznee, northeast of Candahar, was the residence of the first Mohammedan dynasty which ruled in India. It was captured by the English in 1839, and again in 1842, and Shere Ali defeated his brother here

in 1868, and secured to himself the rule over Afghanistan.

Their language as well as their physical constitution prove the Afghans to belong to the Aryan race. They are a well-formed, handsome, intelligent people, free from Oriental ignorance and indolence. Almost every village has a mollah, who is at the same time school-teacher and reader in the mosque. The boys quite generally learn to read, to write, and to say the common prayers, and it is believed that about one fourth of the entire population is in possession of an elementary education. The instruction is given in the Afghan language, but the boys also learn Persian, which is the literary language in Cabool, Candahar, and Peshawer, as well as the colloquial language of the higher classes, and is spoken in the western districts almost exclusively. The schools in the towns are very good, and their courses of instruction embrace Persian and Arabic. The high school of Peshawer, which embraced the whole course of Mohammedan science, was celebrated throughout Central Asia. Nearly all the Afghans are Sunnite Mohammedans; the educated classes are tolerant, and, inclining toward Sufism, sometimes exhibit considerable indifference in regard to the Koran.

A full account of the British-Indian campaign against Afghanistan to the end of 1878 was given in the "Annual Cyclopædia" for that year, and mention was made of the ending of the active campaign with the capture of Candahar on the 9th of January. At the end of 1878 the British-Indian forces had marched by three columns into the Afghan country, and had seized the principal passes leading to the important stations of Candahar, Cabool, and Jelalabad. Shere Ali, having become convinced that reliance could not be placed on his troops, had fled after the capture of Fort Ali Masjid and the Peiwan, leaving Yakoob Khan in charge of his capital; and the capture of Jelalabad, December 20th, placed the country substantially at the mercy of the invading force. It was for some time doubtful where Shere Ali had gone, and contradictory reports were in circulation on the subject. It appeared from information which afterward reached the Viceroy of India that, when his military condition had become critical, he held a durbar, at which the chiefs agreed that effective resistance was not practicable, and the Ameer decided to seek the protection of the Russians. Yakoob Khan was released from confinement and placed in control, an oath having been administered to him that he would do as the Ameer might direct; and the Ameer left Cabool on the 13th of December. The Afghan envoys who had been sent to the Russian General Kaufmann at Tashkend held a farewell interview with him about the 1st of January, when the General informed them that the Czar absolutely refused to intervene in the affairs of Afghanis-

tan. Two or three days later General Kaufmann received a letter from General Rasgoff, the Russian agent at Cabool, stating that he had left Cabool with the Ameer for the Russian frontier. General Kaufmann had telegraphed to Prince Gortchakoff for instructions, and had advised that the Ameer be received if he crossed the Russian frontier. Shere Ali left affairs at Cabool in a disordered state. His authority, according to the accounts received from there, had almost disappeared, and Yakoob Khan had difficulty in securing himself in his new position, and there appeared danger for some time that he would be overthrown before he could adopt any definite attitude with respect to the invasion.

The British advance against Candahar was begun on the 31st of December, 1878, when a large part of General Stewart's division marched through the Ghamaja Pass, and General Biddulph's division crossed the Khojek pass. The two bodies met at Tuk-i-Put, at the junction of the two passes, and on the 6th or 7th of January their advanced cavalry encountered the Afghan cavalry, 600 strong, and easily defeated them, with a loss of 34 killed and prisoners, and 4 wounded on the British side. The enemy fled toward Candahar. On the 8th the advancing force was met by two deputations from Candahar. One deputation, representing the townsfolk, reported that the governor of the town had fled with an escort of troops to Herat, taking with him most of the civil officers and a sum of money, and that the rest of the army had fled on receiving the news of the defeat at Tuk-i-Put; and they stated that the people were prepared to open their gates on the arrival of the columns. The other deputation was from the deputy-governor, tendering a formal surrender of the city. On the next day the British entered the city, the first brigade of General Stewart's division and the first of General Biddulph's moving together. The march proved a difficult one, for the dikes by the roadside had been broken and the road was flooded; but the people were quiet, and the troops were well received. The large Hindoo colony dwelling in the town welcomed them, it was said, with delight. Candahar is described by a special correspondent who was with General Stewart's column as "less a great city than a collection of numerous walled villages lying in an oblong plain, intersected every fifty yards by watercourses, and surrounded by a common wall. It is encircled by abrupt stony hills. It possesses no good streets practicable for wheeled vehicles, and in empty spaces within the walls are many rugged trees, and some large sapling plantations, which assist in destroying its appearance as a great city. The mud walls encircling it are of great height and thickness, and are in a state of fair repair. The bastions and towers described as existing in 1840 have now entirely disappeared." The condition of the citadel indicated that military

preparations of a rough nature had been made to stand a siege, when the news of the skirmish at Tuk-i-Put caused an entire change of plans.

General Roberts, after annexing the Kuram Valley, advanced into the Khost Valley, in an endeavor to make a new route into Afghanistan. At Bukk, the governor of the province sent in an officer to announce his surrender. At Yakubi, which General Roberts reached January 6th, the deputy-governor of Khost came to pay his respects to the British commander, and transferred to him the forts and records. Notwithstanding these favorable signs, his force was in a critical position. Large numbers of Mangals were hovering around the camps in a threatening manner, and the men were obliged to sleep on their arms. On the 7th, in anticipation of an attack in the night, General Roberts went out against the Mangals, and defeated them after a brisk action. A reconnaissance was made of the southern and western extremities of the valley, and a promise was gained from the people that they would not give the British any trouble. The Mangals, however, continued to maintain a threatening attitude, and a return to the Kuram Valley was decided upon. Before leaving Khost, General Roberts called the chiefs of the valley to a durbar at Matoond

January 22d. Announcing to them his intended withdrawal, he pointed out to them that the British arms had been successful everywhere, that resistance to its progress was hopeless, that neither Shere Ali nor Yakooob Khan could reign at Cabool unless he accepted the British terms, and that it was idle to entertain any hope of Russian assistance. On the next day he marched to Subbery, twelve miles distant, leaving Sultan Jan as the British representative at Matoond. On the following day news arrived that the Mangals were threatening the fort. A force was dispatched back to Matoond, who found the hills swarming with Afghans. General Roberts rescued his representative, stripped the fort, burned the stores, and marched back to his camp, allowing it to be announced that he had abandoned Khost for the present, convinced that similar disturbances would be incessant. Wali Mahomed, a half brother of Shere Ali, tendered his submission, and was received by General Roberts at a durbar held for the purpose.

While these movements were going on, a band of Mazud Waziris, a tribe who did not acknowledge the rule of the Ameer, made an incursion into British territory, and plundered and burned the frontier town of Tank. Reinforcements were sent to the neighborhood to prevent a repetition of the outrage, who made

attacks upon the marauders and finally cut them off.

The general demeanor of the inhabitants of Candahar after the occupation of the city was quiet; nevertheless, two attempts were made to assassinate British officers. One was against Major St. John, general political superintendent, who was fired at but not wounded; the other against Lieutenant Willis, of the Royal Artillery, who died a few days afterward from the effects of his wound. Gholab Hussein Khan was appointed civil administrator of Candahar, under the supervision of Major St. John. General Stewart prosecuted a reconnaissance to Khelat-i-Ghilzai, a town eighty-eight miles northeast of Candahar, on the road to Ghuznee and Cabool, and occupied it without resistance January 20th. General Biddulph was dispatched to Girishk, at the ford of the Helmund, on the road to Herat, and reached his destination, also without opposition, on the 29th. General Stewart returned to Candahar, where he made preparations to send his surplus troops back to India, while he retained with him as many men as would be needed. Approaches toward Yakoob Khan with reference to negotiation were repelled by him, he answering in writing that he had orders from Shere Ali to hold Cabool and would do it. He was, however, troubled at home with quarrels with his tribal chieftains. He having occupied a fort of the Ghilzais at Tezeen, hostilities were begun against him by that tribe.

Shere Ali, after his flight from Cabool, made his way toward the Russian frontier. He became ill, and sent to General Kaufmann for a military surgeon. On his arrival at the Russian frontier, his followers were disarmed, he alone being allowed to retain his arms. The Russian authorities endeavored to persuade him not to go to St. Petersburg, but he insisted upon it. He was said to have been astonished at his treatment by the Russians, he having expected to be received as an ally. His illness, which arose from a gangrene of the thigh, increased, and he was obliged to remain at Mazar-i-Shereef, near Balkh, and postpone his journey to Tashkend. He, however, dispatched an embassy to Tashkend, consisting of his nephew, his Grand Vizier, his Minister of Justice, and his Minister of the Interior, which traveled in state and was attended by a numerous suite. General Kaufmann had received instructions from St. Petersburg, in anticipation of the arrival of the embassy, to decline all negotiations. He had previously stated to an American correspondent, in explanation of the attitude of the Russian Government, that there would be no Russian interference between Afghanistan and England unless a European war should break out in which Russia and England should not be on the same side. "Besides," he added, "it is the Emperor alone who can decide the future." All question on this subject was put to rest by the death of Shere Ali,

which took place February 21st. The event was officially announced to the Viceroy of India in a note written to him February 26th by Yakoob Khan, who also, speaking of a previous letter he had sent to the Viceroy, added, "As my father was an old friend of the British Government, I send this information out of friendship." Shere Ali was attended by a Russian doctor, Javorsky, who states that after his death the town was in a state of anarchy for five days. A conflict broke out between the partisans of Yakoob Khan, his brother Ibrahim Khan, and his nephew Ahmed Khan. The partisans of Yakoob Khan were victorious, and appointed a new governor, who released Javorsky from the prison into which the contestants had thrown him, and escorted him to the frontier to secure his personal safety. The ambassadors sent by Shere Ali to General Kaufmann took leave of him March 9th. The Russian General, acting under instructions from the Czar, gave them no message to the new Ameer. The coldness of the Russians toward Shere Ali indicated that they had adopted a different policy in reference to the British in Afghanistan from that which it had been supposed they would pursue. In explanation of the change, it was believed that an understanding had been reached between the British and Russian Governments, involving a toleration by the former of certain features of the Russian policy toward Turkey, in consideration of a similar toleration by the Russians of the British operations in Afghanistan. The diplomatic correspondence on the Central Asian question published in February showed that the withdrawal of the Russian embassy from Cabool had been arranged for in December, 1878.

General Biddulph's rear-guard was attacked on the march from Girishk on the Helmund, February 26th, by from 1,500 to 2,000 Alizai Duranis, who were driven off with an estimated loss of 150 killed. This event rendered necessary a continued occupation of Girishk.

Yakoob Khan was proclaimed Ameer immediately after the death of Shere Ali, and seems to have had no difficulty in retaining the recognition he had already gained at Cabool. Efforts to negotiate with him were continued by the British, with at first but little prospect of success. In the latter days of March Major Cavagnari informed the Viceroy that there were no hopes of coming to peaceful terms with Yakoob Khan, and an immediate advance on Cabool was ordered. The British forces suffered from the guerrilla attacks of the native tribes, in consequence of which expeditions were sent out on the 1st of April to Futtelabad and Lughman, with orders to reduce the tribes holding those places to obedience. A squadron of hussars of the former expedition, in crossing the Cabool River at night, missed the ford, and Lieutenant Harford and fifty men were drowned. The other expedition attacked the Khujjanis who were threatening the column, and defeated them.

Early in April the British reconnaissance was pushed forward to Gundamak, where the forces were placed in a strong position. A messenger was dispatched to Cabool to seek an interview with Yakoob Khan, and was followed on his return to Gundamak by the Ameer himself, who arrived at the camp on the 8th of May. He was met by Major Cavagnari with an escort, and was received with a parade of troops of all arms, who lined the road to the camp for a distance of two miles and a half, to the point where General Browne and his staff were awaiting him, and with a salute of twenty-one guns. He was much pleased with his reception, and sent a dispatch to the Viceroy expressing the hope that peace would speedily be made and a permanent friendship established between England and Afghanistan. The agreement of the negotiating parties upon the basis of peace was announced in the British Parliament on the 19th of May. The treaty was signed on the 26th, and was ratified at Simla on the 30th of the same month. Its chief provisions were as follows: A British resident was to reside at Cabool, who should have the power to send British agents to the Afghan frontier on special occasions. The foreign affairs of the Ameer were to be conducted under British advice, and Great Britain would undertake to support him against foreign aggression. The British authorities were to have complete control over the Khyber and Michnee Passes, as well as of the relations and independence of the frontier tribes in the district in which the passes are situated. The Afghan territory in British occupation was to be restored to the Ameer, with the exception of the Kuram, Pisheen, and Sibi Valleys, which were assigned to the British for administration, on condition that the Ameer should receive the surplus of revenue after the administrative expenses were paid. The Ameer was to receive an annual subsidy of £60,000, contingent upon his strict execution of the treaty. Yakoob Khan sent a dispatch to the Viceroy expressing his satisfaction at the conclusion of the treaty, and his hope that the friendship now established between England and Afghanistan would be eternal. He said also that he was exceedingly pleased and thankful for the reception accorded to him by the British officers, and purposed, toward the close of the next cold season, to have "a joyful meeting with his Excellency, for the purpose of making firmer the basis of personal friendship, and drawing closer the bonds of affection and amity in a most suitable and appropriate manner." The Viceroy answered the letter in the same spirit. The British troops were ordered back from Jelalabad and the other advanced positions they had occupied, leaving only small detachments to hold the posts temporarily. The Ameer issued a proclamation announcing perpetual peace and friendship between Afghanistan and the British Government, publicly declared a general amnesty, and sent an expedi-

tion in accordance with his agreement, with British officers, to effect the pacification of Badakshan. These proceedings were followed by measures for organizing the financial administration of the country, and introducing good government into the provinces. On the 12th of July the Viceroy of India issued a congratulatory address on the skillful conduct and conclusion of the Afghan war, in which he recognized the gallantry, steadiness, and strict discipline of the troops, and the tact and discretion of the political officers, and acknowledged the loyalty of the native princes. Medals were promised to the British troops who had been engaged in the campaign.

A British mission to Cabool was dispatched from India early in July. It consisted of Major Cavagnari as envoy and minister, Mr. Jenkins as secretary and first assistant, Lieutenant Hamilton, V. C., as commandant of the escort and assistant, and Dr. Kelly in medical charge, with an escort of twenty-six cavalry and fifty infantry of the corps of the guides. On arriving west of the Shutargardan pass, the embassy was met by an escort of the Ameer's troops to conduct it to the capital. It arrived at Cabool on the 29th of July, and was received with military honors by a considerable body of soldiery of all arms drawn up along the route, and a salute of seventeen guns. A large assembly of people witnessed the entry with orderly and respectful behavior. On the evening of the same day, the British envoy presented his credentials to the Ameer, who gave a friendly answer to his address. The evacuation of the country was begun by the British troops, with the expectation of completing it by the 1st of September. It was considered an evidence of the desire of the Ameer to act up to his treaty engagements that he showed Major Cavagnari three letters which he had received from the Russian General Kaufmann, and consulted him as to the answers he should return to them. Following the advice of the British envoy, he replied courteously to them, and suggested at the same time that all future communications should be sent through the Indian Government.

On the 3d of September the British residency at Bala-Hissar was attacked by mutinous Afghan troops and destroyed, and all of the British officers were murdered. The attack originated in a parade of some of the Ameer's regiments for their pay. They were given one month's pay when they demanded pay for two months. They became violent, stoned their officers, and rushed upon the residency, which was in the neighborhood. Having seized arms from the arsenals and public stores, they kept up a vigorous attack upon the inclosure of the residency, which was gallantly met by the officers and soldiers within. The fight was continued for several hours, during which the disaffected regiments were joined by others and by bodies of the populace. The mob were kept in check by the vigorous resistance of the Brit-

ish till they set fire to the buildings, when the defenders came out, sword in hand, and were all slain. More than two hundred of the mutineers were killed by the British during the conflict. In a letter which he sent with news of the disaster to the British at Ali Khel, the Ameer professed to have been completely surprised at the outbreak, and powerless to control it. Several messengers were dispatched to him from the residency during the attack with requests for help, but they all seem to have been intercepted in going or coming. On one of the letters which reached him he wrote, "If God will, I am just making arrangements," but the answer did not reach the residency. The Ameer sent one of his officers, Daoud Shah, to persuade the mutineers and the mob to desist from the attack; but he was set upon by them and dangerously wounded. He then sent his son, with a similar result. He represented that he was himself besieged, with only five attendants, at the time his letter was sent to Ali Khel, and implored the aid of the British. Thirty-one persons of the residency escaped the massacre, including twenty-two who were out cutting grass, and others who were absent. It has not clearly appeared whether the revolt was a spontaneous outbreak or a premeditated effort to get rid of the British. The enemies of Russia declared that it was the result of Russian intrigue. Some pointed to Ayoob Khan, the Ameer's brother, as its probable instigator. The Ameer was suspected of treachery by many, and believed to be in complicity with it while he pretended to deprecate it; but the Indian authorities appeared, so far as open acts went, still to have confidence in his good faith; and some averred that the event proved the soundness of the position which Sher Ali had maintained, that the temper of the Afghan people was such that he could not safely allow a British embassy to reside with him. The residence of the embassy had not been without warnings of danger several days previous to the outbreak. A street riot took place on the 13th of August between some Afghan soldiers and some members of the envoy's escort, in which the populace took the side of the soldiery, and the residence men were beaten; and on the 16th of August the Ameer advised Major Cavagnari to discontinue the custom of riding about Cabool and its vicinity, as an attempt might be made upon his life. Major Cavagnari is reported to have replied that, if he were killed, there were many more men in India who would be ready to act as his successor.

An outbreak took place at Herat two days after the mutiny at Cabool, when three regiments, which had been ordered to march away to quell disturbances in Turkistan, rose against the Fakir Ahmed Khan, the civil and military governor, killed him, and plundered his house. Another revolt was reported in the district of Kohistan.

On the 11th of September the Ameer wrote

to the Viceroy of India: "I am dreadfully distressed and aggrieved at recent events, but there is no fighting against God's will. I hope to inflict such punishment on the evil-doers as will be known world-wide and prove my sincerity. I have twice written on this subject, and the third time by my confidential servant, Sher Mahomed Khan. I had written to say that for these eight days I have preserved myself and family by the good offices of those who were friendly to me, partly by bribes, partly by hoaxing the rebels. Some of the cavalry I have dismissed, and night and day I am considering how to put matters straight. Please God, the mutineers will soon meet with the punishment they deserve, and my affairs will be arranged to the satisfaction of the British Government. Certain persons of high position in these provinces have become rebellious, but I am watching carefully and closely every quarter. I have done all I could to insure Nawab Gholam Hussein's safety. I trust to God for an opportunity of showing my sincere friendship for the British Government and of securing my good name before the world." The Ameer was informed that a strong British force would march speedily on Cabool to his relief, and that he should use all his resources to cooperate and facilitate its march through his country.

Preparations were begun immediately on receiving the news of the massacre of the embassy to dispatch an adequate military force to Cabool to restore order and chastise the rebels. The force was organized in three columns, the first of which, under General Roberts, should consist of three batteries of artillery, one squadron of British cavalry, two and a half regiments of native cavalry, three regiments of British infantry, four regiments of native infantry, and one company of sappers, in all about 6,500 men, and should take the country from Shutar-gardan to Cabool. A second force, of about 4,000 men, under the command of General J. Gordon, should hold the country from Shutar-gardan to Thull. The Khyber force—consisting of five batteries of artillery, a body of British cavalry, four regiments of native cavalry, two regiments of British infantry, five regiments of native infantry, and two columns of sappers, in all, about 6,600 men, in addition to the Peshawer garrison and the troops already holding the Khyber Pass, up to Lundi Khotal, the whole placed under the command of Major-General Bright—would protect the road from Peshawer to Gundamuk, garrison the intermediate stations, and provide a movable column to hold Jagdalak and communicate with Cabool. The reserve at Peshawer and Rawul Pindiee numbered about 5,000 men. The intention was afterward announced of increasing the Khyber and Kuram forces to the strength of 12,000 men each. The orders which had been issued for the evacuation of positions in Afghanistan were revoked so far as regarded points at which military forces still remained.

A reconnaissance was made from Ali Khel into the Lagar Valley, in which no signs of hostility were observed. The tribes appeared to be friendly, and even to afford assistance to the British. The Governor of Candahar was instructed by the Ameer to be guided by the instructions of the British authorities. The Shutargardan Pass was occupied September 11th, and a strong column was dispatched by General Stewart in the direction of Ghuznee for the purpose of watching, and to maintain order in that part of the country. An attack was made on the camp of the 72d regiment on the night of the 19th, but the assailants had disappeared before the company sent out to clear the ground reached the spot. A treacherous attack was made by Mangals and independent Ghilzais on a convoy of mules on the 22d, and an attack on a tower upon the Tirkai Kotal at the same time. On the 24th General Baker occupied Kushi, a Ghilzai village west of the Shutargardan, on the high-road to Cabool, without resistance. The Afreedees and other tribes in the Khyber Pass guaranteed the safety of their portions of the road to Cabool, and the Shinwarries volunteered to convey supplies to the front. General Hughes's brigade advanced from Candahar to Khelat-i-Ghilzai on the 23d.

On the 27th General Baker received a letter from the Afghan commander-in-chief, asking whether he would receive him and the Ameer's heir apparent in his camp at Kushi. The General replied in the affirmative. An hour later a message came from the Ameer Yakoob Khan, asking General Baker to receive him. The General responded, saying he would meet the Ameer one mile from the camp. The Ameer, his son and father-in-law, and General Daoud Shah, with a suite of forty-one persons, came to Kushi on the same day, and were received by the British. The visit of the Ameer was regarded with some suspicion, and the fact was pointed out as evidence of his insincerity that he had written to the British after the massacre at Cabool that General Daoud Shah, who accompanied him, had been killed in his efforts to quiet the mob. Nevertheless, it was evident that he had put himself into the hands of the British, and had given in his own person the strongest evidence of his good faith which it was possible for him to offer. He afterward accompanied the British march; but both he and his advisers urged General Roberts to delay his advance, fearing that the Afghan troops, whom he did not trust, would sack the Bala-Hissar on his approach. The General replied that delay was impossible.

In order that the purpose of the British march might be made clear, General Roberts was instructed to issue a manifesto to the Afghan people, to the effect that the British army advanced on Cabool to avenge the treachery to the British envoy in that city, that the peaceable inhabitants would not be molested; but, if opposition was offered, those persons with arms in their hands would be treated as

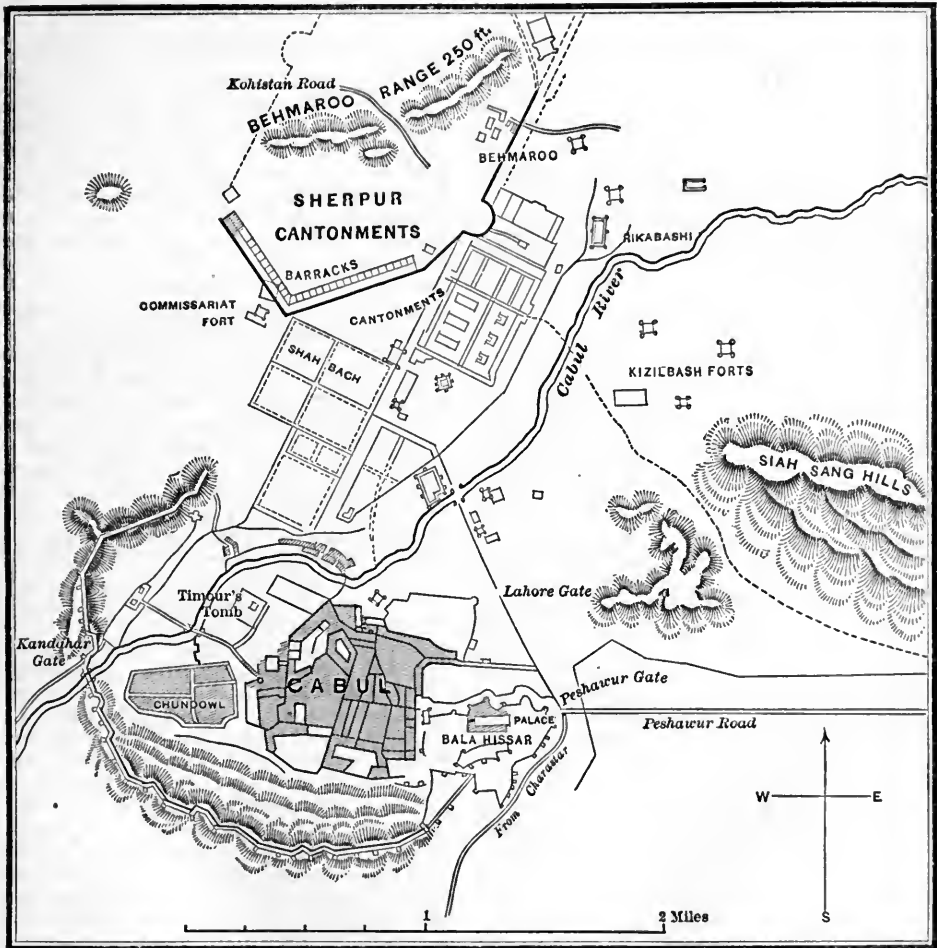

enemies. Further, non-combatants, women, and children, were advised to withdraw to a place of safety. The Ghilzais and Mangals were threatening the Shutargardan, and an attack was made on them on the 2d of October, in which forty of them were killed, while two of the British were wounded. On the 6th of October General Roberts was at Charasiab, ten or twelve miles south of Cabool, and separated from it by a single range of hills, the road through which is described as a gorge. Reconnoitering parties were sent out at daybreak on all roads leading to Cabool. They found the enemy advancing in great force from the direction of the city, and soon had to retire. The high range of hills between Charasiab and Cabool was crowded with troops and people from the city, while parties of Ghilzais appeared on the hills running along both flanks of the camp; and reports were received that the road to Zahidabad, along which a convoy of stores and ammunition was expected, was threatened. Warning and assistance were sent to the convoy. General Baker was intrusted with the duty of carrying the heights in front of the camp, and, having with a detachment driven the enemy off the main hills and captured twelve guns, with a loss to his own force of four killed and nine wounded, he with his main force made a turning movement to the left, and in a hot contest carried height after height in gallant style, with a loss of seventy men killed and wounded, while the enemy fled in confusion, having suffered a large loss, including two standards. The enemy's force was said to consist of eleven regiments, with artillery and "immense numbers of hill-men." It was remarked that the Ameer's party, who were still in the camp, watched the result eagerly, and professed great satisfaction with it. The head men of the suburbs of Cabool asked if they might pay their respects to the British commander.

On the 8th General Roberts was before Cabool. Generals Baker and Macpherson were detailed in strength to attack the enemy who had assembled from the hills above Bala-Hissar. The enemy confronting General Baker fled, abandoning twelve guns, were pursued, and scattered. General Massy was sent to cut off the retreat of the Afghans on the road between Bannian and Rochestan, and captured seventy-eight guns in an abandoned cantonment at Shalpoor. At night the citadel and palace of Bala-Hissar had been abandoned by the enemy. On the evening of the next day the British cavalry, returning from the pursuit of flying Afghan bands, rode through Cabool, and found some of the shops open and everything quiet. General Roberts made a public entry into Cabool at noon of October 12th, accompanied by the Ameer and his suite. British troops of all arms lined the road, and the artillery fired a salute when the British standard was hoisted at the entrance to the city. The Bala-Hissar was subsequently occupied by two regiments.

On entering the city, General Roberts made a speech to the effect that it would be necessary to inflict severe punishment. Buildings of the Bala-Hissar and of the city interfering with proper military occupation would be destroyed. A heavy fine would be levied on the citizens. A military governor would be placed over the city and country within a radius of ten miles. All the inhabitants under his jurisdiction would be required to surrender their arms within a week, on pain of death if they failed to do so.

Rewards would be paid for the denunciation and conviction of any person concerned in the massacre of the British embassy. General Hill was appointed military governor of Cabool.

A visit was made soon after the British column had entered Cabool to the place where the massacre of the members of the residency took place. The premises had been plundered of everything valuable, and the embassy building destroyed by fire. The bodies of Major Cavagnari and Surgeon Kelly were found

buried under a heap of charred, half-consumed logs of wood, beneath the ruins in front of the embassy. The visiting diary of Major Cavagnari was found in the Ameer's palace. About this time Yakoob Khan announced his intention to abdicate. General Roberts advised him to consider the matter, but he said that he had intended to take that step earlier, but was dissuaded, and would now adhere to his resolution. It accordingly became necessary for General Roberts to make provisional

arrangements for maintaining order and carrying on the internal administration of the country. An investigation was instituted into the cause and circumstances of the outbreak of September 3d. Important papers were discovered tending to implicate one of the Khans, and a court-martial was formed for the trial of persons against whom evidence was found. The father-in-law of the Ameer, the ex-Governor of Cabool, and the Minister of Finance were put under close arrest. Five men were

hanged late in October for complicity in the massacre, among whom were the Kotwal of Cabool, the head of the city mollahs, and two generals, one of royal blood; and on the 16th of November forty-nine Afghans had been hanged for complicity in the massacre. A military demonstration was made from Kuram up the Chakmani Valley, which resulted in the dispersion of the hostile bands. In the last days of October, by order of the Viceroy of India, General Roberts issued a proclamation stating that, in consequence of the abdication of the Ameer and the outrage at the British residency, the British Government had been compelled to occupy Cabool and other parts of Afghanistan.

AFRICA. The area, according to Behm and Wagner ("Bevölkerung der Erde," vol. v., Gotha, 1878), is 10,941,000 square miles, and the population 205,219,500. For the area and population of the divisions and subdivisions, see "Annual Cyclopædia" for 1878.

It is believed that about one half of the population of Africa are Mohammedans. After being for many centuries the principal religion of the northern and northeastern coast, Mohammedanism has made more recently great progress in the interior of Africa, and has advanced westward as far as Liberia. The entire Christian population of Africa does not exceed 7,000,000. About one half of these belong to the Abyssinian and Coptic Churches, and are directly descended from the Christian Church of the first centuries. Since the beginning of the maritime discoveries in the fifteenth century, the Portuguese and Spaniards have established their sovereignty over large tracts of land, and the population has gradually become connected with the Roman Catholic Church. In the Portuguese possessions on the continent of Africa, in Congo, Angola, and Mozambique, the carelessness of the Portuguese Government has allowed the missions to fall to ruin, and the connection of the native population with the Catholic Church to become merely nominal, being reduced to the retention of some usages and ceremonies. Large numbers of the natives continue, however, to regard themselves as Catholics, and still figure in the statistical accounts of the Church; and, in view of the greater interest which the Portuguese Government begins to show in its colonies, it is believed that ere long the entire population of the Portuguese colonies, no less than that of the Spanish, will be in real communion with the Catholic Church. The conquest of Algeria in modern times has opened to the same Church a new and large missionary field in Northern Africa, in which already a considerable population of European descent, with a small number of native converts, promise for the future an important addition to its territory. Egypt and Tunis have received large additions to their Catholic population by the immigration of Catholics from Italy and other countries of Southwestern Europe. The Roman Catholics under British rule live chiefly

in the island of Mauritius, which formerly belonged to France, and still is predominantly Catholic.

The Protestant missions in Africa are classified as West African, South African, and East African missions. In West Africa, missions are carried on in Gambia, Pongas, Sierra Leone, Mendi, Liberia, the Gold Coast country, Yoruba, Old Calabar, the Cameroons, the Gaboon, Corisco, and the Sherbro country, by seven American, nine English, and three Continental societies. They include, according to the reports for 1878 and 1879, so far as they are completed, 386 missionaries and assistants, and 25,636 members of the Church. The South African missions are planted among the Damaras, in Namaqualand, the Cape Colony, the Transvaal, Caffraria, Natal, and Zoolooland, and are under the control of one American, six British, and nine Continental (including the Moravian, Waldensian, French, German, Finnish, and Scandinavian Lutheran) societies, and the societies of the colonial churches. They embrace, so far as reports are at hand, 637 missionaries and assistants, and 60,000 communicants. The principal East African missions are carried on by the societies of the Church of England and the United Methodist Free Churches. Several societies have established missions in Abyssinia, chiefly among the Jews, and in Algeria; and five societies have begun missions since 1875 in the interior, on the great lakes and the Congo River, employing altogether between thirty and forty laborers, but have not yet made any reports of converts. Denominationally, the working forces and churches of the Western and Southern African missions are related as follows: Baptist, 22 missionaries and assistants, 209 members; Congregational, 26 ministers, 670 members; Episcopal and Anglican, 149 ministers, 6,878 members (including some white colonists in South Africa); American Lutheran, 1 minister, 40 members; Methodist, 190 ministers, 36,751 members; Moravian, 65 ministers, 10,386 adherents; Presbyterian, 33 ministers, 3,732 members; United Brethren, 2 ministers, 70 members; Lady Huntingdon's Connection, 60 preachers, exhorters, and teachers; Continental societies (French, Swiss, German, Finnish, and Scandinavian Lutheran and Reformed), 318 ministers, 31,518 members. The Anglican missions in Sierra Leone have been turned over to the native Episcopal church of the colony, which receives a grant of £500 a year from the Church Missionary Society. This church has 14 clergymen, 4,874 communicants, and 14,000 native Christian adherents, with 4,037 scholars. The Reformed Dutch Church of South Africa includes 50 ministers, 113 congregations, and 220,000 souls. In Madagascar, the London (Congregational) Missionary Society has 414 European and native preachers, with 3,804 other native assistants, 67,729 members, and 233,188 adherents; the Anglican missions have 13 ministers and

800 members; the Norwegian Lutherans have 19 missionaries and 288 members; and the Friends have 100 congregations. Primary schools are taught at all the stations, and are freely attended by pupils of all ages. Higher schools are also connected with the older stations, and most of the missions have normal and training schools for teachers, and theological schools for the education of native preachers. The statistics of those schools of which regular reports are given show that the attendance of scholars generally exceeds the number of members in the churches. Fourah Bay College, of the Church Missionary Society, on the West Coast of Africa, is affiliated with the University of Durham, whence some of its students have received degrees, and provides a full course of collegiate instruction, with comparative philology, theology, and the Hebrew and Arabic languages. The institution of the Free Church of Scotland, at Lovedale, Caffraria, has elementary, literary, and theological classes, of three years each, and is attended by natives and English, most of the native races of South Africa and the stations of all the denominational missions being represented among its pupils. It has furnished trained teachers for the Free Church and other missions, has developed a branch institution at Blythewood in the Transkei, and has contributed to the establishment of the new mission at Livingstonia, on Lake Nyassa. The mission schools of Madagascar have been extensively developed and systematically organized, and have promoted the establishment of a national system of education. Grammars and dictionaries of the languages of the numerous tribes have been prepared by the missionaries, school and religious books have been published in them, and a varied literature has been produced in the Caffre dialects. This literary work gives employment to some respectable printing-houses.

The following table gives an estimate of the population connected, in 1879, with the Protestant, Roman Catholic, and Eastern Churches:

COUNTRIES.	Protestant.	Roman Catholic.	Eastern Churches.
British possessions (inclusive of missions in neighboring native states).....	700,000	182,000
French possessions.....	10,900	870,000
Portuguese possessions.....	1,204,000
Spanish possessions.....	820,000
Egypt.....	2,000	28,000	200,000
Abyssinia (including mission among the Gallas).....	10,000	3,000,000
Liberia.....	80,000
Morocco.....	18,000
Tunis and Tripoli.....	800,000	20,000
Madagascar.....	50,000
Orange Free State.....
Total.....	1,092,000	2,152,000	3,200,000

The principal event in Africa during 1879 was the deposition of Ismail, Khedive of Egypt, in favor of his oldest son, Prince Tefvik. This was brought about by the pressure of the

Western Powers on Turkey, in consequence of the extravagant measures adopted by the Khedive. Several changes of ministry followed, until finally Riaz Pasha, who had been exiled by Ismail and recalled by Tefvik, was appointed President of the Council. The relations of Egypt and Abyssinia were in an unsettled condition. In the latter part of the year Colonel Gordon was sent to Abyssinia to arrange a definite treaty of peace. (See ABYSSINIA, and EGYPT.)

The British had another native war on their hands in South Africa in 1879, and one which eclipsed all of the preceding wars in importance. This year it was the nation of the Zooloo Caffres, under their king Cetywayo, with whom the British came into conflict. The causes that led to it were said by the colonists to be the general insecurity of their frontiers, and the utter disregard which Cetywayo exhibited toward the demands of the governments of Natal and the Cape. On the other hand, the natives who were from time to time captured, as well as Cetywayo himself, stated that at no time had the Zooloo king been anxious for war, and that he had done everything in his power to satisfy his white neighbors. In England, the war was regarded as unnecessary. The British, at first, met with defeat, but on July 4th they gained a complete victory over the Zooloos, which was followed on August 28th by the capture of Cetywayo. The Zooloo land was then subdivided into thirteen districts, and a chief appointed for each, while a British resident at the krall of each chief is to watch over British interests. The question of a South African confederation was again prominently brought forward by Sir M. Hicks-Beach, but received little encouragement from the colonies. (See CAPE COLONY, and ZOOLOOS.)

In Algeria, a complete change of government took place. The supreme civil and military powers, which had been united up to this time in one person, were separated, and a new governor-general and commander-in-chief were appointed. In June an insurrection of Kabyles broke out simultaneously in Tunis, Algeria, and Morocco. A boundary commission which was to settle the disputed boundary between the British colony of Sierra Leone and the Republic of Liberia adjourned *sine die* on April 24th, without settling any one point in the dispute. Agreement between the English and Liberian members was found to be impossible, and the former flatly refused to refer the matter to Commander Shufeldt of the United States Navy, who had been selected as arbitrator.

The Portuguese Government in March sent a man-of-war to Whydaly to blockade the coast of Dahomey, on account of the capture and imprisonment of a Portuguese merchant. The King of Dahomey, on the other hand, ordered all roads leading from the interior to the coast to be blockaded, so that the entire commerce of the country was prostrated.

The French Government in 1879 seized the island of Matagong. The French claimed it from the fact that, being situated between the mouths of the Rio Congo and the Mellacoree, and near a coast undoubtedly French, it ought logically to be French also. In a map, however, of Senegambia, drawn up in 1864 by order of General Faidherbe, then Governor of Senegal, it is depicted as English, as well as the Los Archipelago, more to the north; but this might arise from its being then the private property of a British subject, and the Paris merchant who represents the present proprietors has produced a declaration of 1855 by Sir George Grey, Colonial Secretary, refusing to aid Mr. Isaacs on the ground that Matagong was not British territory.

AGRICULTURE. (See UNITED STATES and the STATES respectively.)

ALABAMA. The regular session of the Alabama Legislature commenced on November 12, 1878, and terminated on February 8, 1879. In the Senate W. G. Little was chosen President; and in the House David Clopton was chosen Speaker.

One of the earliest measures of the session was a joint convention of the two Houses to count the votes for State officers. As there was only one ticket, the results were announced as follows: Total vote for Rufus W. Cobb for Governor, 89,571; total vote for W. W. Screws for Secretary of State, 87,673; total vote for Willis Brewer for Auditor, 87,315; total vote for I. H. Vincent for Treasurer, 88,231; total vote for H. C. Tompkins for Attorney-General, 88,204. The vote for members of Congress, which was canvassed too late for insertion in the "Annual Cyclopædia" of 1878, was as follows:

District.			
I.	T. H. Herndon, Democrat.....	6,577	
	W. Bailey, Opposition.....	2,941	
II.	H. A. Herbert, Democrat.....	8,364	
	J. P. Armstrong, Opposition.....	6,505	
III.	W. J. Sanford, Democrat.....	6,199	
	F. Strange, Opposition.....	676	
IV.	C. M. Shelley, Democrat.....	8,514	
	Jer. Haralson, Republican.....	6,545	
V.	T. Williams, Democrat.....	6,537	
	Theo. Nuron, Opposition.....	2,734	
VI.	B. B. Lewis, Democrat.....	7,642	
	W. E. Smith, Opposition.....	3,201	
VII.	W. H. Forney, Democrat.....	2,653	
	W. W. Garth, Democrat.....	8,279	
VIII.	W. M. Lowe, Opposition.....	10,324	

Of the members of Congress seven were Democrats and one opposition.

The Legislature was divided as follows:

PARTY.	Senate.	House.
Democrats.....	81	91
Independent Democrats.....	2	4
Republicans.....	..	3
Nationals.....	..	2
Total.....	83	100

On December 10th the Legislature took a recess until January 15, 1879.

An act was passed requiring the execution of criminals to be in an inclosure which is hidden from public view.

A joint resolution was adopted which declares that the act of Congress imposing a tax of ten per centum on the issues of State banks creates in the national banks an unjust and odious monopoly, and is an unwarrantable abridgment of the power and authority of the State, by appropriate acts of incorporation, to provide its citizens with a lawful currency, suitable to their needs; and the Senators and Representatives of Alabama in Congress were requested to use their untiring efforts to have the same repealed.

A memorial requesting Congress to establish a system for a national quarantine against yellow fever and other infectious diseases was also adopted.

A bill to limit or prohibit the sale of seed-cotton was extensively discussed in relation to its constitutionality. Seed-cotton is the name given to the article as it is in the field. If it is stolen and sold, the owner can not distinguish his property from that of others. The extent of the stealing is such as to be considered a great evil. One member in his remarks said:

There are many roads which lead from the rich farming lands into the city of Montgomery, but to illustrate it I will only refer to one, say the Lime Creek road. During the busy picking season, a gentleman of my acquaintance concluded that he would make some observations; so he posted himself upon the road between midnight and daylight, and not less than thirty vehicles of all descriptions, from a four-horse wagon down to the diminutive cart with the diminutive steer or calf, passed him, and, from the movements of the parties having the cotton-seed and the purchasers of the cotton, there is but little doubt that two thirds of all the cotton on these vehicles, besides that of the innumerable foot-passengers loaded with sacks of all sorts and sizes, were stolen; for all these parties with the cotton so graduate their movements that they reach the city at or before sunrise; and, as soon as the first rays of the golden sunshine touch the dome of this Capitol, the doors of the innumerable shops which before sunrise were closed, and the premises as silent as death, fly open as if by magic. The cotton-sack is hurried upon the scales, hurriedly and many times, perhaps, falsely weighed, then hurriedly spirited away to the back rooms, where at leisure it is carried and sold to the pickeries. Pass over any of the roads leading to the city between the hours of midnight and day, and about the suburbs, and you will find them filled, as I said before, with vehicles of every description, meet hordes of tramps with sacks and baskets, all watching for the first rays of the sun to dispose of their ill-gotten gains. I say ill-gotten, for, if not so, why this unseemly time to bring their wares to market? Why this haste? For this army of wagons, of carts, of tramps with sacks, is soon, like the snow, dissolved by the rising sun; and the 9 or 10 o'clock passer-by has no idea of what had occurred only a few hours before.

In support of the constitutionality of the bill, it was urged that it was based upon the proposition that no man can either use or dispose of his property to the injury of his neighbor; and it is for the Legislature to say how far one citizen may go in the use of his property to prevent injury to his neighbor's. The bill was upon the same principle as the measure which prohibits the sale or giving away of spirituous liquors, or that which provides for the

Jules Grévy

PRESIDENT OF THE FRENCH REPUBLIC

New York: A. S. W. & Co.

keeping up of fences. All this class of legislation was strictly within the legislative prerogative to enact police regulations for the protection of the public peace and society. It would be quite anomalous to say that an evil may exist to the detriment of the best interests of society, and yet the Legislature had no right to suppress it, or to enact measures for its prevention. The bill does not prohibit the sale of cotton. A bill which proposed absolutely to prohibit the sale of cotton would be unconstitutional, but a bill which simply restricts and limits its sale is no more violative of the Constitution than the bill which restricts the sale of spirituous liquors. It was urged in reply that the sole end of government was to protect the life, liberty, and property of the citizen. Any law that prohibited the sale of property must be in derogation of the right secured to the citizen under the Constitution. It was far more than a police regulation to prohibit the citizen from selling his property in any quantity and manner he pleases. It might possibly be a police regulation to prescribe that the citizen must sell his property at a certain place or within certain specified hours, or that he must pay a license to sell; but to say that he shall not sell at all is in plain derogation of the Constitution. The bill might as well provide that the citizen shall not sell his corn in the ear, his oats in the sheaf, or he must make his timber in certain shapes. The sale of liquor parallel is far-fetched. Spirituous liquors are not necessary for the existence and support of the human family. Cotton is a production upon which the people depend in a measure for their means of support, and to say that they shall not dispose of their means of existence as they see fit, is not only a violation of the Constitution, but it is an assault upon *magna charta* itself—that great fountain from which the whole fabric of free constitutional government is drawn. The bill, however, passed both Houses and became a law.

Subsequently the trial of an indictment against two persons for buying seed-cotton took place before the Circuit Court of Lowndes County. The argument for the defense was that the law violated that clause of the Constitution of the State which provides that "no *ex post facto* law, or any law impairing the obligation of contracts or making any irrevocable grants of special privileges or immunities, shall be passed by the General Assembly," and the further clause which provides that "the sole object and only legitimate end of government is to protect the citizen in the enjoyment of life, liberty, and property; and when the government assumes other functions, it is usurpation and oppressive." The Judge sustained the unconstitutionality of the law, and the case will likely go up to the Supreme Court. The benefit produced by the law is considered very great on the part of the cotton-planters; while the members of the bar with equal unanimity regard it as unconstitutional.

A bill was passed to protect planters and farmers against farmers from Texas who come into the State to obtain colored laborers. A large colored emigration from the State to Texas has caused great inconvenience. The bill as passed applies to the counties of Dallas, Perry, Washington, Barbour, Marengo, Pike, Montgomery, Covington, Monroe, Lowndes, Greene, Elmore, Macon, Talladega, Bibb, Bullock, Lee, Tuscaloosa, and Shelby, and requires a license of \$100. It also provides that a person failing to pay such license shall be fined three times the amount of such license, and may also be imprisoned in the county jail, or required to do hard labor for the county for not more than one year.

The reduction of taxation was much discussed, and a resolution passed in the House asking the Governor to furnish all statistics and other information in his possession which would or would not justify the Legislature in reducing the rate of taxation. The Governor in reply stated that the taxable property of the State had diminished in value from \$160,000,000 to about \$125,000,000, and for the year 1879 the reported assessments indicated a still further diminution amounting to ten millions or more. The amount of interest to be paid on the debt increases as additional bonds are exchanged. This increase will continue until all the bonds covered by the settlement of the debt shall have been exchanged. In 1881 this will be augmented by an increase in the rate of interest from two to three per cent. on one class of bonds, and from two to four upon another, which will amount to an annual increase of one third of the present interest, or about \$90,000. The balance in the State Treasury at the close of the session would not exceed \$60,000. This would include \$40,000 in State obligations and \$5,000 in Patton certificates, all of which will be destroyed as provided by law, and thus leave only about \$15,000 in cash, which would include all the revenue collected and paid into the Treasury up to that time. If the rate of last year's assessment be maintained for 1879 and 1880, the balance on the 1st of October, 1880, will not exceed \$136,000; and as but a small amount of the taxes for the year will go into the Treasury by the 1st of January, 1881, the demands upon the Treasury occasioned by the expense of the session of the General Assembly of 1880, about \$40,000, and the January interest in 1881, about \$160,000, will exceed the cash in the Treasury \$64,000, for the payment of which a loan will have to be negotiated, until a sufficient amount shall be collected from the taxes of that year to pay the same. After a disagreement between the two Houses, the tax rate for 1879 was left unchanged, and for 1880 it was reduced to 65 cents on the \$100.

The Committee on Privileges and Elections reported an amendment to the State Code, which directed the form, size, and quality of the paper used as a ballot at elections, and also

the inscription on the same. They said that they had had occasion to examine several ballot-boxes, and it would astonish the House if it knew the want of uniformity in the ballots handed in by the electors. They were written on every conceivable kind of paper and in almost every conceivable shape, from a square piece of paper to one more nearly resembling a shoe-string than otherwise, the handling of which, though lightly or carefully done, would endanger it with rents likely to destroy its completeness, if not its expression of the elector's vote.

In consequence of memorials sent to the Legislature, the Committee on Foreign Relations of the House were ordered to investigate the misuse and abuse of power by certain United States officials in the State against citizens of the State, as alleged; which resulted in the adoption of the following joint memorial to Congress:

To the Honorable the Senate and House of Representatives of the United States in Congress assembled:

The joint memorial of the Senate and House of Representatives, composing the General Assembly of Alabama, complaining, respectfully calls the attention of your honorable bodies to the injuries inflicted on the citizens of Alabama by the misuse and abuse, by certain United States officials in this State, of the power intrusted to them. It is apparent to all who see them, that the juries of the United States Courts are not generally a fair representation of the country, but that they are manipulated for a purpose, and for the conviction of petty offenses which are not prosecuted in the true interest of the United States, but to produce fees for those interested in them. It has also been brought to the attention of your memorialists by the representations and petitions of a large number of worthy and reputable citizens, as well as by the statements of many members of this body and of the Senate, that in the Northern and Middle judicial districts of Alabama the internal revenue officers, marshal's deputies and agents, along with traveling United States Commissioner W. H. Hunter, have practiced the grossest abuses under pretense of enforcing the internal revenue laws of the United States. That under this pretense they have raided over the country with large bodies of armed men and, regardless of law and decency, have abused and insulted the people without cause. That they have unlawfully and without pretext broken open storehouses and private trunks, and have either taken the contents or have allowed others to do so. That they have foraged on the country without pay, or upon a tender of the merest pittance for subsistence they have taken. That they have wantonly broken down fences and turned stock in on the growing crops of the people. That they have in mere mischief shot down the cattle and hogs of private citizens. That they have conducted themselves in a riotous and disorderly manner, and in mere wantonness have fired into the yards and around the dwellings of defenseless females for the brutal gratification of terrifying them. That they have arrested persons and carried them long distances, when they were at once discharged, without cause; and it has been a common occurrence to arrest and handcuff and carry citizens before United States commissioners at long distances from the homes of such persons, for preliminary investigations, where they have no friends to bail them if bound over, and no means to defray their expenses back in cases of discharge, when there were commissioners of character and standing near to the places of arrest. That they have repeatedly refused to take persons so arrested in the near neighborhood of General Joseph W. Burke, a commissioner of the United States residing in Calhoun County, lately of the United States Army, and holding re-

sponsible positions under the courts of the United States, but have taken them to Huntsville for preliminary hearing, in a distant part of the State, and that they have in many other cases traveled circuitous routes to avoid nearer commissioners. And that they have arrested, and without preliminary trial confined one John Jackson in jail for fifty days, during the severe rigor of the late cold weather. Collector Booth, Deputy-Collector Smith, W. H. Hunter, Commissioner, Deputy-Marshals Randolph and G. W. Golson, and others, are charged with these abuses.

The information so laid before your memorialists shows that these officials have not pursued their investigations with any great view to serve the true interests of the United States, nor as agents of a great justice-loving power which was seeking to enforce its laws by necessary but orderly force; but they have acted as if they were the ruthless myrmidons of a power at enmity with its people, and whose laws were enacted, not to shelter and protect, as well as punish, but only to harass and destroy.

As the terms of the courts of the Northern judicial district of Alabama approach, these statements show that the roads and the courtyards are thronged with poverty-stricken witnesses in vast numbers, called term after term, and present a picture which is sad to look upon. The historian Gibbon elegantly but feelingly portrays the vengeance visited by Theodosius upon Antioch, and tells us that "the tribunal of Hellebrius and Cæsarius, encompassed with armed soldiers, was erected in the midst of the forum. The noblest and most wealthy of the citizens of Antioch appeared before them in chains; the examination was assisted by the use of torture, and their sentence was announced or suspended according to the judgment of these extraordinary magistrates. The houses of the citizens were exposed to sale, and their wives and children were suddenly reduced from affluence and luxury to the most absolute distress." The abuses of the United States officials in Alabama, thus brought to the knowledge of your memorialists, show that vengeance of officials has lost nothing in the destructive abuses of power since the days of Theodosius, and that the history of the miseries of Antioch repeats itself in modern times. Your memorialists pray your honorable bodies to relieve our people from a repetition of these disgraceful scenes, and to let them feel more of the protection which will follow from a gentler though it may be a stern administration of the laws of the United States, and so teach them to love, not drive them to hate, its administration.

An act was passed to donate \$75 to any resident of the State who, while in the military service of the State or of the Confederate States, lost an arm or a leg.

On the bill to repeal the section of the Code which requires ballots to be numbered at elections, it was urged in its favor as follows:

This is intended to preserve the purity of the ballot-box, whose purity and sanctity are synonymous. Unless the law shuts out every approach to destroy the sanctity of the ballot-box, how shall the weak vote against the strong, the poor against the rich, or the low against the high? The Supreme Courts of eight Northern States have declared by decisions that the violation of the sanctity of the ballot-box in any way is unconstitutional; and the State of Indiana has not only declared this principle by its highest court, but has also cited the numbering of a ballot as a violation of this sanctity, and declared a statute of the State void because it required the ballots to be numbered. It may be asked, Has this decision been acted upon? I can answer, It has. The State of Ohio, one of the greatest Northern States, makes it a violation of law for any one to number, mark, or so designate a vote that it may be known, thereby stamping the numbering of a vote as an infringement and violation of the secrecy of the ballot-box, which is its only safe-

guard in times of peace, and its only defense in times of trouble. But I am asked, How will you contest the election if the ballot is not numbered? Nothing can be easier. When the votes are counted over and turn out ten more than the number on the poll-list, discard ten votes first taken from the box, and the balance take as good. This rule is adopted by several of the States.

The following resolution relative to changing the manner of choosing Presidential Electors was adopted in the Senate:

Whereas, Interference by officers of the United States in popular elections is justly regarded by the people of this State as an evil of great magnitude; and

Whereas, The manifest purpose of such interference, in part at least, is to influence and control the action of the State in selecting Electors for President and Vice-President of the United States; therefore

Resolved, That the Committee on Foreign Relations be instructed to inquire into the expediency of providing by law for the selection of President and Vice-President by the General Assembly until the acts of Congress authorizing interference by Federal authority are rescinded.

The division of the State into judicial districts was accomplished by making the Congressional districts constitute the circuits, except as to the following counties: Randolph, instead of being in the seventh, is put into the fifth; Clay, instead of being in the fifth, is put into the seventh; Marion and Winston, instead of being in the sixth, are put into the eighth.

The act to organize and regulate the system of public instruction sets apart for the support of the schools and appropriates the following sums, which thus compose the school revenue: The annual interest at 6 per cent. upon all sums of money which have heretofore been received or which may hereafter be received by the State as the proceeds of sales of lands granted or intrusted by the United States to the State, or to the several townships thereof, for school purposes; the annual interest at 4 per cent. on that part of the surplus revenue of the United States deposited with the State under the act of Congress approved June 23, 1836; all the annual rents, incomes, profits, or interests arising from the proceeds of sales of all such lands as may hereafter be given by the United States, or by the State, or by individuals, for the support of the public schools; all such sums as may accrue to the State as escheats, which are to be applied to the support of the public schools during the scholastic year next succeeding their receipt in the State Treasury; also all rents, incomes, and profits received into the State Treasury during the scholastic year, from all lands remaining unsold, which have heretofore been donated by the Congress of the United States for the support of the public schools; all licenses which are by law required to be paid into the school fund of any county, the same to be expended for the benefit of the public schools in such county, and all such license-tax shall be promptly paid by the probate judge, or such person collecting such tax, to the County Superintendent of Education; also the

further sum of \$130,000 from any money in the Treasury not otherwise appropriated. The poll-tax of each county shall be retained in the county for the schools thereof. Such poll-tax is fixed at \$1.50 on each male inhabitant over twenty-one and less than forty-five years of age. In 1877-'78 it amounted to \$109,762.

The public school officers are a State Superintendent of Education, a county and one township superintendent.

The following three sections of this act relate to the schools and the children:

Sec. 48. *Be it further enacted*, That every township and fraction of a township which is divided by a State or county line, or any other insuperable barrier, such as rivers, creeks, or mountains, and every incorporated city or town having three thousand inhabitants, shall constitute separate school districts, and each shall be under the township superintendent of public schools, as to all matters connected with public schools. Each township or other school district, in its corporate capacity as created by law, may hold real and personal property; and the business of such corporations, in relation to public schools and school lands, shall be managed by the township or district superintendents.

Sec. 49. *Be it further enacted*, That every child between the ages of seven and twenty-one years shall be entitled to admission into, and instructed in any public school of its own race or color in the township in which he or she resides, or to any public school of its own race or color, in the State of Alabama, as herein provided.

Sec. 50. *Be it further enacted*, That the scholastic year shall begin on the first day of October of each year, and end on the thirtieth day of September of the following year. Twenty days shall constitute a school month. A school day shall comprise not less than six hours.

According to the report of the Superintendent of Education, the number of school districts in the State in the year 1877-'78 was 1,700; number of schools taught, white 2,696, colored 1,404; number of teachers employed, white 2,722, colored 1,423; grades of schools taught, primary 1,590, intermediate 1,370, grammar 973, high 167; school population, white 214,279, colored 155,168; number enrolled in schools, white 86,485, colored 54,745; average attendance in schools, white 61,584, colored 40,092.

There is a normal school at Florence, upon the most approved plan, for the education of white teachers, male and female. Another, at Marion, is for the education of colored teachers; and a university, connected therewith, for the education of colored students in the higher departments of learning. Another is located at Huntsville in the northern part of the State for the professional education of colored teachers, controlled by a board of three commissioners. Pupils are admitted free of charge, but must bind themselves to teach two years in the public schools of the State. This institution is in successful operation.

In the University of Alabama for the year 1878 there were 38 degrees conferred. The number of students was 178. At the Agricultural and Mechanical College for the same year there were 238 students. The number of stu-

dents enrolled at the beginning of 1879 was 217, which exceeds the number at the same date the year previous by 46. The advanced classes are larger this year than ever before. Of the 238 students last year, there were in the first class 8, in the second 16, in the third 53, in the fourth 66, in the fifth 95. Of the 217 students in the present year there are in the first class 13, in the second 30, in the third 47, in the fourth 60, in the fifth 65. In college classes proper there were last year, out of 238 students, 143; this year, out of 217 students, there are 150. During the past year improvements were made upon the college building, which give ample accommodations for 300 students. The income of the college is derived mainly from the endowment fund, which consists of \$253,500, invested, by act of the General Assembly of the State, in Alabama bonds. These bonds are deposited with the Treasurer of the State. The annual income from this endowment is \$20,280.

Two acts were passed by the Legislature which related to the financial affairs of the city of Mobile. The first act repealed the charter of the city, and made provision for the application of the assets of the old corporation in discharge of its debts. Three commissioners were to be appointed by the Governor, with the advice and consent of the Senate, to collect and disburse these assets. Their manner of discharging the duty is to be directed and controlled by the Chancery Court for Mobile. The commissioners are authorized to compromise, compound, and adjust all debts, claims, and demands, including past-due taxes, of every kind which at the date of the passage of the act existed in favor of the city, on such terms and in such manner as, having in view the speedy collection of such outstanding claims and the largest possible reduction of the debt heretofore due from or now asserted against the city, may seem to them best; and for the purpose of so realizing the assets and paying the debt, the commissioners and receivers, with the leave of the Court of Chancery, are authorized and empowered to sell, on the best terms they can obtain, all the real and personal property which may come to their hands as commissioners under the act, and not by existing laws exempt from sale, and so much and such parts or portions of the claims and demands with the collection of which they are charged, as they may be authorized by the order of the Court of Chancery to sell. The commissioners are charged with the duty of opening communication with the holders of the funded debt of the city in relation to the same, with a view to the adjustment thereof, and its settlement; and for that purpose are to conduct negotiations with the creditors to the end that proper legislation may be enacted to secure at the same time and consistently with each other the protection of the life, property, security, and peace of the citizens of the territory of late governed by the municipal organ-

ization of the city of Mobile, and the payment to the utmost extent practicable of the just debt of the city. They are to make report to the Governor of the State, to be laid before the General Assembly at its next term, of the result of their negotiations, together with the draft of such act for their consideration, as in the judgment of said commissioners may be required to carry into effect any scheme of adjustment they may recommend, and secure the objects of the act; and upon the passage of such act they shall apply to the Court of Chancery for such proper orders and decrees as may be necessary to secure the application of the assets under its jurisdiction and control to the uses and purposes which may be agreed upon, and be declared by the act to carry such agreement into operation and effect.

The second act contemplated and provided for the creation of a simple and economical as well as efficient form of local government, to exist provisionally until the next session of the General Assembly, January, 1881. This government, being only for a limited period, is to be intrusted simply with police powers—that is, with power to preserve the public peace, protect the public health, to provide against fires, take care of the streets, and perform such other municipal duties as are necessary for the well-being of the city. This provisional government, however, is to have nothing to do with the settlement of the debt. Eight commissioners are to be elected by the people, one from each ward, to manage the port. There are to be a president of the board, a clerk, and a tax-collector, and such police officers as may be necessary. To defray the expenses of police management, the board is authorized and empowered to lay and collect for each year of its existence, upon all real and personal property and all subjects of State taxation within said port of Mobile, a tax not exceeding six tenths of one per centum of the value of such property or subject of taxation assessed for State taxation during the year preceding that for which said police board may assess and lay the tax above provided for; provided, that where the personal property of any person does not exceed \$150, and his real estate does not exceed \$200, such property shall be exempt from taxation. The two acts thus passed were first brought forward and approved by the city authorities. The Board of Aldermen considered the bill to repeal the charter first, and recommended it for legislative action by a vote of thirteen to seven. After some debate they adopted the second bill creating a new corporation by a *viva voce* vote, which represented the same majority obtained in favor of the first. The Common Council was unanimous in favor of both bills. These measures were the result of two years of agitation. The objects were to secure an effective adjustment of the debt, to get rid of an expensive system of city government, and to place the property of the citizens beyond the

reach of the mandamus writ of the Federal courts.

Among other sources of authority to sustain the action of the Legislature in thus repealing the charter of a public corporation that was in debt, was a reference to the following cases:

But this whole subject, both as to the power of the State and as to the right of the creditors of public corporations, has lately been so clearly defined and settled by the Supreme Court of the United States in the case of *Barkeley vs. Levee Commissioners et. al.*, III Otto, p. 253, that there is now no room for doubt upon the subject. We will set out the head notes of this decision:

"1. A public corporation, charged with special duties, such as building and repairing levees within a certain district, being superseded in its functions by a law dividing the district, and creating a new corporation for one portion, and placing the other under charge of the local authorities, ceases to exist except so far as its existence is expressly continued for special objects, such as settling up its indebtedness and the like.

"2. If, within such limited existence, no provision is made for the continuance or new election of the officers of such corporation, the functions of the existing officers will cease when their respective terms expire, and the corporation will be *de facto* extinct.

"3. In such case, if there be a judgment against the corporation, mandamus will not lie to enforce the assessment of taxes for its payment, there being no officers to whom the writ can be directed.

"4. The Court can not by mandamus compel the new corporations to perform the duties of the extinct corporation in the levy of taxes for the payment of its debts, especially where their territorial jurisdiction is not the same, and the law has not authorized them to make such levy.

"5. Nor can the Court order the Marshal to levy taxes in such a case; nor in any case, except where a specific law authorizes such a proceeding.

"6. Under these circumstances, the judgment creditor is, in fact, without remedy, and can only apply to the Legislature for relief."

This opinion was delivered in 1876. It speaks in no uncertain terms; it is the deliberate judgment of an undivided Court, and its authority can not be questioned by any power in this land. It decides that a State has the power to abolish a public corporation, even when it owes debts, and that new corporations may be created over the same territory which are not responsible for the debts of the defunct corporation; and further, that the creditor has no remedy in the courts whatever, but can only apply to the Legislature for relief.

Then, under this decision, the legal right of the creditor only extends to the assets of which the corporation dies possessed, but the creditor has no lien or charge upon the private property of the individuals who resided within the limits of the defunct corporation. (*Heine vs. Levee Commissioners*, 19 Wall; *Barkeley vs. Levee Commissioners*, *supra*.) These cases overrule and repudiate the extreme doctrines as to the powers of the Federal courts which Judge Dillon attempted to establish in the cases of *Ste. Genevieve vs. Welsh*, and *Lansing vs. County Treasurer*. (*Dillon C. C. Reports*, 1871, pp. 130, 525.)

The misfortunes of Mobile were ascribed to the decline of its prosperity. For proof of its decline, it is stated that on January 7, 1860, there were in Mobile Bay 74 ships and barks. On that day the cotton receipts for the year had been 490,761 bales, and of this number there had been shipped to New Orleans 17,797 bales. On January 7, 1871, there were in the port only 19 ships and barks, and the receipts

of cotton to that date had been 207,699 bales, of which there had been shipped to New Orleans 37,453 bales. On January 4, 1879, there were in port only 13 ships and barks. The receipts of cotton were 215,521 bales, but of this number there had been shipped to New Orleans for sale and export the enormous sum of 91,005 bales. Nearly half of the receipts have gone to New Orleans. At the time of the passage of the acts the Mayor of the city stated that its bonded indebtedness was \$2,497,856. He was in favor of a refunding of the debt at the rate of 60 cents on the dollar, bearing 5 per cent. interest for ten years, and then 6 per cent. until maturity—running for a period of thirty years. He thought that if this was done the city could pay the interest promptly; he was satisfied that with judicious management the expenses of the city could be reduced to \$160,000 per annum. To meet this there was

Three fourths of 1 per cent. on \$15,000,-	
000 taxable valuables	\$112,500 00
Licenses, wharves, etc.	70,000 00
Total city expenses	\$182,500 00
Surplus over \$160,000.....	\$22,500 00

If the city debt were refunded as suggested, the whole tax of the city would be $1\frac{1}{4}$ per cent. on taxable values. In the opinion of its chief officer, by the lengthy period during which a quarantine was kept in force in 1878, heavy expenses were incurred; but for this the city would have met all its obligations. The statistics of the trade of the city for 1879 have not yet been made up; but, according to the report of the Board of Trade, the business of Mobile for the year ending September 30, 1878, shows a considerable increase. The receipts of cotton were larger than during the previous year, while the value of exports aggregated over \$19,000,000, an increase of more than \$6,000,000, and the imports ran up from \$648,404 to \$1,148,442. The value of the lumber exports increased \$50,000, and the importation of all staple articles of merchandise was largely in excess of the previous year. The receipts of cotton advanced from 27,000 bags in 1877 to 51,400 bags in 1878. A second cotton-mill was put in operation in Mobile during the past year. This mill began work with 1,344 spindles, and produced from 900 to 1,000 pounds of yarn, rope, twine, carpet-warp, etc., per day, using from 10 to 12 bales of cotton per week, and employing about 35 operatives. With its present capacity it can use 600 bales annually.

The three commissioners were appointed by the Governor, and they at once proceeded to take the required oath and file their bonds. On February 15th they presented and filed in the Chancery Court their petition to take charge of the city property and assets as provided by the act of the Legislature. This action prevented the appointment of a receiver by a Federal court. The case of *Memphis* (see

TENNESSEE) was different. A bill was filed in the Federal court and the funds of the city attached under it before the corporation of Memphis was dissolved by act of the Legislature. The corporation of the Port of Mobile was soon organized, and its administration of affairs commenced.

The following resolution relative to the election of Presidential Electors was adopted in the Senate:

Whereas, The interference by officers of the United States in popular elections is justly regarded by the people of this State as an evil of great magnitude; and

Whereas, Such interference, in part at least, is to influence and control the action of this State in the selection of Electors for President and Vice-President of the United States; therefore,

Resolved, That the Committee on Federal Relations be instructed to inquire into the expediency of providing for a law for the selection of Electors for President and Vice-President by the General Assembly until the acts of Congress authorizing interference by Federal authority are repealed.

The sum of \$3,000 was appropriated to carry into effect the health laws of the State.

An act was passed which provided for the settlement of delinquent taxes. Under its provisions, where lands or real estate of any kind have been sold for taxes and purchased by the State, between the 1st of January, 1866, and 1st of January, 1878, the owner may now redeem the same by paying 50 per cent. of the amount of taxes for which it was sold, together with 50 per cent. of all taxes which have since accrued. When no assessment of taxes has been made of lands or real estate after the first sale thereof for taxes, and purchase thereof by the State, the Judge of Probate of the county in which such land or real estate may be situated shall assess the same for each subsequent year when proposed to be redeemed.

Another act was passed to secure a better payment of taxes in future. It requires the collector to docket the cases of all delinquencies in a book, and hand the book to the Probate Judge by the first day of March. The Probate Judge is to hold court in April, and thirty days thereafter, say about the 1st of May, is to issue to the owner, or his agent or representative, of each parcel of real estate entered in said book, a notice setting forth the parcels of property on which he is reported a delinquent, and notifying him to appear on a given day and show cause why a decree of sale should not be made for the amount due to the State and county. If no defense is made within ten days thereafter, the Judge enters up a decree ordering a sale of the land. At the end of the term of the court the collector advertises the lands for sale, giving thirty days' notice. The Probate Judge attends the sale and makes a record of the result. An appeal lies from the decree of the Probate Judge to the Circuit Court upon giving bonds in twice the amount of the decree. The land thus sold may be redeemed by the owner, his agent or representative, mortgagee or other person hav-

ing a beneficial interest in such land, at any time before the expiration of two years from the date of sale, by depositing with the Probate Judge of the county in which such real property was sold, the amount of purchase-money, and a penalty of 10 per cent. thereon, damages on the taxes and the costs, and interest on the taxes and costs, at the rate of 8 per cent. per annum from the date of sale, and the costs of the certificates of purchase, all taxes on such land which have accrued subsequently to the sale, unless such taxes have been paid to the collector, as may be shown by his receipt, and also paying the sum of one dollar to the Judge. The tax-collector is compelled by this law to seize any personal property he can find for the collection of taxes; but, before he enters upon his docket any lands of delinquents, he must swear that he has searched diligently for personal property upon which to make the levy, and has not been able to find any.

The Legislature authorized a new loan for the purpose of taking up a million of interest-bearing notes outstanding. The notes were issued at 8 per cent. interest, and were a burden upon the revenue of the State to the amount of \$80,000. It was believed that bonds might be sold at par bearing 6 per cent. interest, the proceeds of which could be used to retire the notes. An offer for the whole loan was made to the Governor from Boston at 6 per cent., with a premium of one half of one per cent. This was declined, as another offer had been received, principally from citizens of Alabama, with a premium of 2 per cent. This indication of the healthy condition of the State credit induced the Governor to determine to offer the loan at 5 per cent.

The report of the Auditor in the last of October showed that for the past fiscal year the disbursements of the Treasury were the lowest, all things considered, for any year since the war. The receipts for taxes were \$564,722.17; total from licenses and all sources \$122,307.58; making a total of \$687,029.75. The total disbursements were \$685,026.47. The total collections, including school money, amount to \$942,998.61; disbursements, including school money, \$872,867.48. The receipts are less than last year, but this is mainly due, as the Auditor maintains, to the reduction of the rate of taxation from $7\frac{1}{2}$ to 7 mills. The report shows remarkable diminutions in the amount of assessments in nearly all the counties. Of the 62 counties tabulated in the report, 50 show a decrease as compared with last year's assessment. The Auditor puts it down as the general opinion that, so far from there being depreciation in the value of property throughout the State, there has been just the reverse. He, however, helps the situation somewhat by adding, "Supplemental and collectors' assessments may bring up these counties considerably," though he does not believe the assessment will reach the "total of the

present tax year." The State is burdened with real estate, purchased at tax sales, from which it derives no revenue. In one county about 197,000 acres, or nearly one third of the entire county, was bid in by the State for the taxes of 1873.

As the sessions of the Legislature are biennial, the condition of the public institutions is stated for the two years before 1879. In the Deaf, Dumb, and Blind Institute, there were in 1878, mutes 41, blind 13; total, 54. The expense per capita was \$224.24. All deaf-mute or blind children residing in the State, whose parents are unable to pay their expenses while at the institute, are entitled to board, tuition, schoolroom expenses, and medicine, free of charge. No provision is made for the payment of traveling expenses, or for clothing. An act of the General Assembly provides that, "in all cases where the parents of pupils sent to the Institution for the Deaf and Dumb and the Blind are too poor to furnish them with good and sufficient clothing, or where pupils are without parents and unable to furnish themselves with such clothing, the Probate Judge of the county shall certify the same to the principal, who shall procure such necessary clothing and charge the same to said county." The total expenses of the institution for the past year footed up \$12,453.90.

The total value of railroad property in Alabama, upon which tax assessment is made, is \$10,297,033.35. The assessment for 1877 was \$10,627,559.90, showing a difference of \$330,526.55 in favor of last year.

The number of railroads in the State is 24, and their total length is 1,819 miles. When all the roads are completed which have been projected, there will be a total length of main line of 2,850 miles. The total estimated value of all the railroads, according to the assessors' books, is \$10,528,060.

The number of convicts received in the penitentiary from October 1, 1877, to September 30, 1878, was 218, which, added to the number, 655, remaining in the prison October 1, 1877, amounts to 873. The sex of the prisoners is: males, white, 96; females, white, 6; males, colored, 733; females, colored, 38. Of the number, 555 were natives of Alabama; of the previous occupations, 447 were laborers; of the crimes for which they were imprisoned, there were 262 for burglary and 274 for grand larceny. The earnings of the penitentiary, over and above all expenses, for the fiscal year ending September 30, 1878, amounted to \$35,649.92. The number of convicts discharged during the past year was 137, and the number pardoned was 30.

The Governor in his efforts to increase the earnings of the penitentiary advertised for proposals to lease the labor. Many bids were made, but before they had been acted upon, with two or three exceptions, those having convicts hired proposed to rescind their contracts on the 1st of January ensuing, and to enter

into new contracts for five years from that date at \$6 per month for all able-bodied convicts, taking all others at rates to be agreed upon between them and the warden, and receiving all at the jails without cost of transportation. This the Governor agreed to, and rejected all the bids for lease. These new contracts embrace all the convicts in the penitentiary on the 1st of January except the so-called Williams hands, until January 1, 1883, and except about one hundred others under old contracts expiring by March 1, 1881, and all that are sentenced thereto for five years. There are about 650 convicts, of whom about 600 are able-bodied; and this average, maintained for two years, will probably be fully maintained for the five years. Four hundred of these, subject to the new contracts at \$6 per month each, will in 1880 earn \$28,800. About 100 under old contracts not rescinded, at \$5 per month each, will next year earn \$6,000. The Williams hands will nominally earn, as heretofore, \$6,000 a year until 1883. The gross earnings for 1880, to become larger thereafter as the \$5 per month contracts expire, will therefore be \$34,400, exclusive of the \$6,000 for the penitentiary farm. The dead-heads will cost the State nothing—heretofore an expense of several thousand dollars a year. The transportation of convicts will cost the State nothing—heretofore ranging from \$9,000 to \$15,000 a year. The State's disbursements will be limited to the payment of the salaries of the officers and inspectors—say \$7,000. The net cash receipts, therefore, should be about \$27,000 for the calendar year 1880, and greater for each of the succeeding four years. This institution in former years has been a constant drain on the Treasury.

The number of patients in the Insane Hospital on October 1, 1878, was 403, and the daily average 389. The maintenance of these has cost the State a small amount over \$64,000. Upon an analysis of the results of the biennial period ending with September 30, 1878, it will appear that the number of patients discharged cured is 40:50 per cent. upon the admissions, and the deaths 3:87 per cent. of the total number under treatment. The report of the officers of the institution thus answers the question, "What is insanity?"—

The fact should be kept prominently in view that insanity is a disease, and a disease of the brain. Too great prominence, indeed, can not be given to these two important considerations. Perception, thought, judgment, memory, imagination, conscience, and, in fact, all the manifestations, are such mysterious forces or results that the average mind turns away in despair from every endeavor to explore their relations or the laws of their origin and normal action. But the states of a diseased organ—how they are brought about, and the precautions necessary to the avoidance of like pathological results under similar conditions—are problems which, in their analogies to those of other organs and functions, invite and encourage investigation. But the definition will be needful in still another aspect. It tends most effectually to controvert, and will ultimately abolish, the absurd notion that insanity is a disgrace. This erroneous view of

the disease, born doubtless of the belief, once very prevalent, that insanity implied demonic possession, does still a vast deal of harm. It causes too often a concealment of the disorder until the curative stage has passed away. It invests it with attributes not only mysterious and forbidding, but alike prejudicial to its proper humane and scientific treatment. It adds greatly, too, to the afflictive burden of those who suffer from its lighter forms, or who have recovered from its more serious attacks.

The report of the physician (Dr. Bryce), after designating alcohol "as the most active of all the exciting causes of insanity," presents the following statement compiled from facts of the total annual expense of alcoholic stimulants in this country:

There are consumed in this country each year 561,-000,000 gallons of alcoholic liquors, which at manufacturers' prices cost the consumers the round sum of \$1,841,204,000. It kills 164,062 persons each year, whose days are shortened ten years, making a total of 1,640,620 years of time, which at \$50 per year makes \$82,031,000. There are 1,523,662 regular or moderate drinkers, who it is estimated lose one third of their time as a consequence of the gratification of this appetite, entailing a pecuniary loss alone of \$76,-182,100. The total amount of crime costs the Government annually \$32,528,437, three fourths of which, or \$24,396,328, is attributable to intemperance. Add the cost of pauperism caused by this evil, \$21,375,000, and we find the total annual expense of alcoholic stimulants to the people of the United States to be \$2,041,249,428.

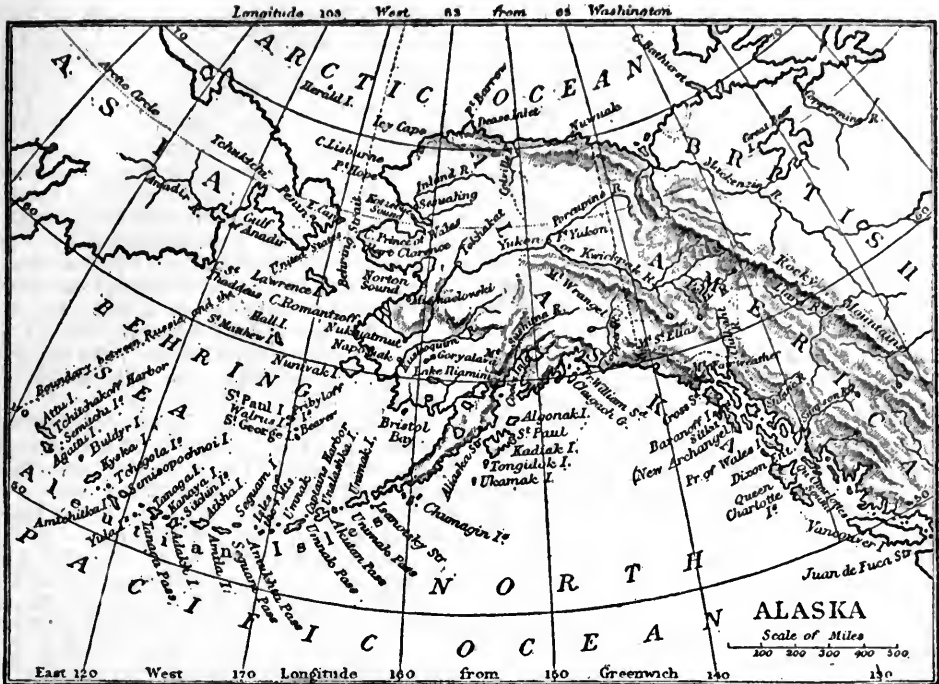

Some cases of indictment for election frauds occurred in Dallas County, and were brought up for trial before the United States Court (Judge Bruce), at Montgomery. The counsel for the defense maintained that the jury law in the statute-book was operative and valid, whereas the Court and District Attorney held the reverse, as follows: The counsel for the defense moved to quash the indictments based upon the provisions of section 820 of the Revised Statutes of the United States, Boutwell edition. This section constitutes the pith of the somewhat celebrated ironclad oath. (See CONGRESS, UNITED STATES.) One at least of the members of the recent grand jury of the United States was a Confederate soldier, and consequently could not take this oath. The counsel for the defendants held that so long as the oath was contained in the Revised Statutes it was operative and of full force and effect. Judge Bruce maintained just the reverse. He held that the ironclad oath was effectually repealed prior to the passage of the act adopting the Revised Statutes of the United States by Congress, and that its appearance in the new edition of these statutes did not reenact it. The law which was passed by Congress, accepting the Boutwell edition of the Revised Statutes of the United States, included all laws of a general and permanent character in force on the 1st day of December, 1873. Judge Bruce held that the test-oath act was repealed before December 1, 1873, and consequently, not being one of the acts in force on that date, its appearance in the Revised Statutes did not reenact it. Hence the

motion to quash indictments found by the late grand jury of the United States, because a Confederate soldier was a member thereof (and of course could not take the ironclad oath), was denied. Upon a similar state of circumstances Judge Woods, of the United States Circuit Court, held precisely the opposite of the opinion of Judge Bruce, and quashed several indictments in Louisiana because upon the grand jury which presented them there were members who could not take the ironclad oath. Their decisions were final, because in these cases, which really involve the liberty of the citizen, there is no appeal from the decision of the Federal Judge.

Many revenue cases brought before the Court developed the fact that Commissioners were in the habit of issuing blank affidavits to agents and deputy marshals, to be filled up with the names of such parties as the agent or deputy marshal might be able to charge, on his own oath, with violation of the law, as he had reason to believe. On such warrants many innocent persons have been arrested, and subjected to great expense, injustice, and oppression, and the Commissioners, agents, and marshals have reaped a large amount of unlawful fees. Judge Woods read an able opinion, setting forth these facts, and denounced such proceedings as contrary to the United States Constitution, which declares that "no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized." He concluded with an order that no Commissioner shall issue any warrant of search, seizure, or arrest, unless a witness shall first appear before said Commissioner and make the proper affidavit.

The statute of Alabama declares that "all railroad companies in the State . . . may, for the transportation of local freight, demand and receive not exceeding fifty per cent. more than the rate charged for the transportation of the same description of freight over the whole line of the road." The Supreme Court of the State held that, as it is the policy of railroad corporations to so connect their lines as to effect a long continuous connected line of transportation, and under such arrangement the saving of labor and increase of business resulting from such connection enable each road to accept its share of the sum realized from this branch of the business, a sum which would fall much below fair remuneration for receiving, loading, transporting, unloading, and delivering the same quantity and description of freight, whose departure and distribution were each within the limit of the one road, hence the words "over the whole line of its road" mean, and only mean, freight which is taken at one terminus and discharged at the other.

ALASKA. This distant region, belonging by purchase to the United States, has not yet been

advanced to the dignity of an organized Territory. The relations of the inhabitants to the Federal Government are only such as were obtained for them by the treaty with Russia in March, 1867. The third article provides that the inhabitants of the ceded Territory, with the exception of the uncivilized native tribes, shall be admitted to the enjoyment of all the rights of citizens of the United States, and shall be maintained and protected in the free enjoyment of their liberty of property and religion. The uncivilized tribes are subject to such laws and regulations as the United States may from time to time adopt in regard to the aboriginal tribes of that country. There is no law for the arrest of persons charged with common-law offenses, such as assault, robbery, and murder, and no magistrate authorized to issue or execute process in such cases. Serious difficulties have already arisen from offenses of this character, not only among the original inhabitants, but among citizens of the United States and other countries, who have engaged in mining, fishing, and other business operations there. On July 25th the people at Sitka assembled and resolved upon the organization among themselves of a civil government. This was completed on August 28th. The preamble of the ordinance adopted sets forth the danger to person and property arising under an absence of all civil law; gives the reasons why no previous efforts could be made to form a government; proclaims the intention to secure protection against violence from the Indians, and that they feel able to maintain a

provisional form until supplanted by a regularly enacted system. A chief magistrate and five selected men, each in separate precincts, were provided and authority given to try civil and criminal cases, to attend to the municipal affairs of Sitka, and to take charge of estates. All citizens entered heartily into the matter, and every one entitled voted, and the government was accepted. The officers elect are: Collector Ball, chief magistrate; selectmen, first precinct, P. Corcoran; second, T. Haltern; third, N. G. Matropolosky; fourth, (omitted); fifth (cannery), Thomas McCauly. There is no test of American citizenship; all white men twenty-one years of age are voters. The officers elect constitute together a provisional council, which regulates and sets in motion the machinery and details of the government, hears appeals from the selectmen's decisions, and tries grave offenses.

In the early part of the year reports were spread respecting apprehended attacks by the Indians; but nothing of the kind has taken place. A letter received at the Navy Department, dated June 23d, from the commander of the United States ship Jamestown, which was ordered there to protect the white settlement from the Indians, represents the state of affairs as very quiet. He says: "I am satisfied that both the local Indians and the Tchilcats have friendly feelings toward the whites, and that there is no danger of any premeditated attack upon the settlement. The whites furnish to the Indians a market for their furs, fish, etc., and supply them with many needed

articles. Many of the Indians, both men and women, 'dress up' on Sunday, and cheap dry-goods are in demand. The two settlements have existed in juxtaposition for many years, and it is exceedingly creditable to both that, with no law to govern them, they have both so governed themselves that outrages and disorder are uncommon. There is, however, a terrible danger to which the whites are exposed, and it is far from an imaginary one. When intoxicated with the vile 'hootchenoo,' like all drunken men, the Indians are liable to commit outrages which the whites are powerless to prevent, and to resent which would draw upon them the vengeance of the entire family to which the culprit belonged. It is my belief that in February last the settlement narrowly escaped a massacre. That it did escape is due greatly to the influence of certain friendly Indians of superior intelligence. I do not think that there is any danger while a vessel of war is here, and I hope to be able to so influence the Indians that after we shall have left they will preserve peace."

The revenue derived from the Territory annually is about \$300,000, and the supply of fish is destined to equal the demand of the whole country. Coal has been found in abundance, with iron ore of excellent quality. Gold and silver are known to exist, but the mountains are heavily timbered, which interrupts prospecting, especially where there is trouble with the natives. No present inducements warrant the Government in keeping constant military guard over so vast a range. But if there be gold regions and encouragement offered, California would furnish 5,000 miners, who would open the mines and take care of the hostile Indians. With the exception of those that are in the southern section, the Indians and Esquimaux of Alaska are peaceable, friendly, and inclined to trade. The climate, though cloudy and rainy, is not so hard as is supposed. The winters are less severe than in Canada. As timber is plenty, housing is not costly. Alaska is as large as many Californias, and the existence of one gold-field would indicate more. With the furs, fisheries, timber, and coals added to its gold and silver mines, it would soon take rank with California in its productions.

ALEKO PASHA, the Governor-General of Eastern Roumelia, was born about 1830. He is a Bulgarian and a Christian, his Christian name being Prince Alexander Vogorides. His father was the Prince Vogorides who played such an important part during the Crimean war, and who was the first Prince of Samos. He was a native of a small village near the Kazan Pass, and went in early youth to Constantinople, where he was educated in a Greek school. It was mainly owing to his influence that the Greeks during the Crimean war did not openly espouse the cause of Russia. Aleko Pasha, who was his third son, occupied in the beginning of his diplomatic career various subordinate positions at Berlin, London, and

Vienna. During his stay in Germany he devoted himself ardently to study, and he speaks with great fluency French, English, Italian, and German. During the war with Russia he was Turkish Ambassador in Vienna, when his knowledge of Western affairs made him of great value to his Government. When, however, in spite of his repeated assurances that Austria would not permit Serbia to take part in the war, the latter country did begin hostilities, he was recalled, particularly as he was a warm friend of Midhat Pasha. Upon the creation of the principality of Eastern Roumelia, he was selected for the position of Prince, as being a Christian and a Bulgarian. He is described as a man of strict integrity, and as possessing a thorough knowledge of the condition of his principality.

ALEXANDER I., first Prince of Bulgaria, was born April 5, 1857. He is the son of Prince Alexander of Hesse, the brother of the Empress of Russia. His mother was the daughter of Count Hauke, who was a Russian general and for a time Minister of War. Upon her marriage with the Prince of Hesse she received the title of Princess of Battenberg. Prince Alexander is the second son of this union, his elder brother being now in the British navy. He served with the Russian army all through the Turkish war, and is well acquainted with Bulgaria and its inhabitants, which could not but recommend him to the Bulgarians. He rode in the ranks of the 8th Uhlans, and was also attached to the staff of Prince Charles of Roumania. At the siege of Plevna he gained unusual experience, was among the first who crossed the Balkans with General Gourko, and accompanied the Grand Duke Nicholas to Constantinople. After the close of the war he was transferred to the Prussian Life Guards, and at the time of his election was doing garrison duty at Potsdam.

ALGERIA, a province of France in Northern Africa. Governor-General in 1879, Albert Grévy. The country is divided into territory under civil administration and territory under military administration. The former is subdivided into departments and the latter into divisions. The area and population, according to the "Statistique Générale de l'Algérie" (1877), are as follows:

DEPARTMENTS AND DIVISIONS.	Square kilometres.	Square miles.	Population.
1. Territory under civil administration:			
Algiers.....	8,268	3,198	454,711
Oran.....	15,356	5,929	416,465
Constantine.....	17,976	6,941	414,714
Total.....	41,600	16,068	1,815,950
2. Territory under military administration:			
Algiers.....	96,899	37,418	587,886
Oran.....	70,747	27,317	236,716
Constantine.....	109,088	42,121	737,124
Total.....	276,734	106,851	1,551,676
Total Algeria.....	818,334	122,914	2,867,626

On March 16th, M. Albert Grévy was appointed Civil Governor of Algeria in place of General Chanzy. General Chanzy, in a farewell address to the inhabitants of Algeria, reviewed his efforts for the gradual assimilation of the colony to the mother-country. Out of 353,000 Europeans, 345,000 are under French common law, as also 1,200,000 natives, military government being confined to 8,000 Europeans settled round advanced posts and 1,267,000 natives inhabiting remote regions. Moderation and justice have been shown toward the natives, and the best relations exist with Tunis and Morocco. The sequestration inflicted on the insurgents of 1871 has been completed, and the law of 1873 on native proprietors is being carried into effect. Educationally, French Algeria figures among the most advanced states, and higher education is being arranged for. Harbor-works, roads, and the reclamation of marshes are in full activity, while 700 kilometres of railways are in working order, 650 under construction, and 1,150 projected. The commerce with Europe amounts to 380,000,000 francs per annum. Within six years 176 fresh villages have been founded, and the European rural population has increased by nearly 50,000. General Chanzy leaves the country with the satisfaction of seeing it in the path of progress, and with thorough confidence in its future. In a second address to the army, he remarked that, after generously shedding his blood in the conquest of a bravely resisting people, it has been and is still the most powerful instrument of colonization and progress.

M. Grévy on taking possession of his post issued a proclamation to the inhabitants, in which he said that the system which might have been suitable in the early and laborious stages of the colonization of Algeria runs the risk, if prolonged, of compromising the development of the country. The government would, therefore, be essentially civil. The new Governor-General then dwelt on his intention vigorously to carry out the extension of the railways and high-roads and all the reforms feasible to make Algeria for the Europeans and the Frenchmen, whom it attracts more and more, an image of the mother-country. As to the natives, they might count on the kindly disposition of the Government, which, along with the consciousness of its power and rights, is imbued with a sense of its duties toward civilization. By widely diffused education, justice, and order, the tribes will acquire a taste for French institutions.

On June 1st the General-in-Chief telegraphed that unforeseen disturbances had broken out in Aures, in the province of Constantine, among the tribe of the Uled Daud. Several natives and six Spahis accompanying a French officer had been killed, and the latter had escaped with difficulty. To be prepared for any contingency, he had sent three battalions and two sections of artillery from Algiers to Constan-

tine. The revolt was declared suppressed by the middle of the month, after a few engagements. The property of the insurgents was sequestered, and they were required to pay a minimum contribution of 800,000 francs. The leader, however, escaped to the oasis of Zoribel-el-Wid, from where he could reach Tunisian territory.

In July a commission was appointed by M. de Freycinet, the French Minister of Public Works, to report on the feasibility of a railway from Algeria to Soodan and Senegal. The population of the Soodan, M. Freycinet remarked, is estimated at 100,000,000. The Niger traverses half of it. The inhabitants are industrious. The moving sands, formerly considered universal, are only a local accident, and the soil is everywhere similar to that of European soils. A railway from Algeria to the Niger would not exceed 2,000 kilometres, and would be much less costly than the projected Panama Canal. A preliminary commission had already recommended the scheme, one ground being that it would repress the internal slave-trade; but it enjoined circumspection on account of the imperfect knowledge of certain parts of the Sahara. It therefore suggested a survey of a line of 300 kilometres between Biskra and Wargla, to be connected with the Algiers and Constantine line, and that explorations should be made beyond Wargla toward the Niger. The Budget Committee of the French Chamber and the Senate Committee on Algerian Railways had also pronounced in favor of France taking an active part in the opening up of Central Africa.

ALLEN, WILLIAM, a Governor, Senator, etc., was born at Edenton, Chowan County, North Carolina, in 1806. By the loss of both parents he became an orphan in infancy. As there were no common schools in North Carolina at that time, nor in Virginia, to which he subsequently removed, he had no public opportunities to obtain instruction. By private aid and his own efforts he obtained the rudiments of an education. While at Lynchburg, Virginia, he supported himself by working as a saddler's apprentice. At sixteen years of age, with his bundle in hand, he started on foot for Chillicothe, Ohio, to find a sister whom he had never seen, and who was the mother of Senator Allen G. Thurman. Here he was sent to the town academy, and continued under the supervision of his sister until he became a law student in the office of Edward King, a son of the distinguished Rufus King of Revolutionary fame. He was admitted to practice before he was twenty-one years of age, and soon attained considerable reputation as a criminal lawyer. Public speaking had always presented great attractions to him, and he cultivated the art of addressing juries and assemblies successfully, with more diligence than the learning of cases and the acquisition of pure legal habits of thought and statement. He had a fine figure and a powerful voice, and

soon attracted public attention. He shortly after became the Democratic candidate for Congress in a strong opposition district, and had an ex-Governor for a competitor. He was elected by one majority, and was the youngest member in the House of the Twenty-third Congress. At the next election Mr. Allen was defeated by a small majority, but obtained fifteen hundred more votes than the rest of the ticket. In 1837, when only thirty-one years of age, he was elected to the United States Senate and took his seat March 4th, where he became a leader. Just before the expiration of his term he went directly before the people of Ohio as a candidate for reelection. The result was that the Democrats had a handsome majority in the Legislature, and Mr. Allen was reelected without opposition. In the Democratic National Convention of 1848, which met in Baltimore, so bitter was the contest between the friends of Cass and Van Buren, the leading candidates, that, to prevent a division, a committee, composed of men from both factions, waited on Senator Allen in Washington and urged him to accept the nomination for the Presidency; but he persistently refused to allow his name to be used, taking the ground that, as he had been an earnest advocate of Cass's nomination, to accept a nomination himself would be a betrayal of his friend. He afterward made a canvass of New York and Pennsylvania in favor of Mr. Cass. Mr. Allen then retired from public life, from which he did not emerge again until 1873, when he ran as the Democratic candidate for Governor of Ohio, and was elected by about 1,000 majority, his associates on the State ticket all suffering defeat. Mr. Allen was again the Democratic nominee for Governor in 1875, but after a vigorous contest was defeated by General Rutherford B. Hayes, who was in the next year the Republican Presidential candidate. Thus closed his political career. He continued in excellent health until the morning of July 10th, when he complained of being unwell, but did not regard his illness of sufficient importance to receive attention until the afternoon. At six o'clock he retired to bed, and was up and down several times during the night. His son-in-law and daughter sat up in an adjoining room. A little before one o'clock she was startled by seeing her father arise from the bed, stagger to a chair, and fall into it. Before they could reach him he was dead. His death was instantaneous.

AMERICA. The prominent change in the administration of affairs in the Dominion of Canada during the year has been the adoption of a system of high protection for home manufactures. It remains to be seen whether this policy, to which the Canadians have committed themselves almost irrevocably, may not prove too burdensome to a people so largely engaged in agricultural and similar pursuits. The general depression of trade had, however, disposed them to welcome any innovation in

their commercial policy, and the large increase in imports from the United States during several years, with a decrease from Great Britain, had awakened discontent in all classes. A constitutional question arose out of the dismissal of Lieutenant-General Letellier of Quebec, which became complicated by later events until it involved the Dominion Government, the Governor, and the British Government in a controversy. (See DOMINION OF CANADA.) The extension of railway communications has been one of the prominent Canadian questions of late years, and especially the construction of the Pacific Railroad. During the year a section from Lake Superior to the Province of Manitoba, about 185 miles in length, has been put under contract, and the line has been extended west of the Red River to a point south of Lake Manitoba. The work is also connected at St. Vincent with the system of the Northwestern States.

In the United States, the 1st of January, 1879, was fixed for the resumption of specie payments by the Federal Government at its place of deposits in New York City. This seems to have taken place without producing the slightest unfavorable impression. The enormous exportation and diminished importation of the previous year still continued, and soon enlivened the stagnant trade that had prevailed during the larger part of 1878. The consequence has been a state of remarkable and increasing prosperity during 1879.

The political affairs of the country have been quiet. The only agitation was that produced in Congress by the efforts of the majority to remove from the statutes every appearance of authority for military interference at the elections, while the President vetoed all such bills, although they contained the appropriations necessary for the expenses of the Government. In this conflict between the legislative and the executive departments no conclusion was reached.

The results of the State elections were generally in favor of the Republicans, although the total vote was somewhat reduced. The elections attracted much interest, as they were held in some of the large States, which occupy an important position in a close Presidential election, such as is anticipated in 1880.

Some disturbances occurred with roving bands of Indians on the frontier, by which a few lives were lost on each side. The hostile condition was promptly suppressed, and peace has uniformly prevailed throughout the country.

In Mexico and the Central American States no event of political importance transpired during the year. In the first-named country, demonstrations hostile to the Diaz Administration were for a time apprehended; but, with continued tranquillity, confidence was restored, in the belief that no change would take place in the existing order of things before the elections for a new President in 1880.

Venezuela was the scene of internecine dissensions, though of comparatively little moment, the disturbance having occurred in States far distant from the capital and preserved a purely local character. Guzman Blanco, having resumed his position as Dictator, proposed some notable measures of reform; among others, a new territorial division, reducing the number of States to seven, in order to "limit the central and extend the Federal power of the republic."

The year was marked by more or less agitation in some of the States of Colombia; but the triumph of the Independent party lulled the revolutionary spirit, and was hailed as an earnest of the early return to permanent peace, it being confidently believed that a large proportion of the influential men of all parties would rally round the government of the President-elect, and second his efforts toward the regeneration of the country.

The progress of time can scarcely be said to have improved the condition of affairs in Ecuador. Political arrests and growing discontent of the people with the Government were the almost exclusive burden of such reports as found an echo outside the limits of that distracted country.

A disputed question of boundaries between Chili and Bolivia led to the declaration by the former against the latter of a war, in which Peru, the friend and ally of Bolivia, was afterward involved, and which has proved one of the most disastrous in the annals of South America since the period of independence.

Peace in the remaining countries of the Southern Continent has continued undisturbed, and the efforts of the governments, as well as those of the people, were directed to the development of the various elements of national prosperity.

AMES, EDWARD R., preacher and bishop, was born at Ames township, Ohio, on May 20, 1806, and died at Baltimore, Maryland, on April 25th. His early education was plain and practical. A natural taste for reading was fostered by a local library to which he had access, and when twenty years of age he entered the Ohio University at Athens. There he remained many years, and supported himself mainly by teaching. In 1828 the Ohio Conference of the M. E. Church was in session at Chillicothe, and he attended its meetings. Bishop Roberts, the presiding officer, was so impressed with the young man's ability that he invited him to accompany him to the Illinois Conference, at Madison, Illinois. When there he made the acquaintance of several prominent Methodist clergymen, and opened a school at Lebanon, Illinois, which was the germ of McKendree College. In August, 1830, he entered the itinerant ministry, and was licensed to preach by the Rev. Peter Cartwright. He was sent to the Shoal Creek circuit, which covered an almost unlimited territory, and when the Indiana Conference was organized

in 1832, he, then a young man, went with the new Conference, and was ordained a deacon by Bishop Soule. In 1834 he was ordained an elder by Bishop Roberts, and was employed in several fields of labor, including two years spent in St. Louis, Missouri, until 1840. In that year he was appointed a delegate to the General Conference, held in Baltimore, and that body elected him Corresponding Secretary of the Missionary Society for the South and West. In this office he had the supervision of the Methodist German and Indian missions, and traveled upward of twenty-five thousand miles. He was the first chaplain ever elected by an Indian council, having served the Choctaw General Council in that capacity in 1842. From 1844 to 1852 he traveled as presiding elder on the New Albany, Indianapolis, and Jeffersonville districts of the Indiana Conference. In 1844 the State University of Indiana conferred on him the degree of A. M., and in 1848 he was elected President of the Asbury University, Indiana, but declined the honor. At the General Conference of 1852 he was elected Bishop together with Bishops Scott and Simpson; and he was the first Methodist Bishop who ever visited the Pacific coast. When the question of the separation of the Methodists came up in 1844, he opposed the division, and afterward did all he could to foster a fraternal spirit. When the ecclesiastical property of the M. E. Church South was confiscated for the time being, he was commissioned by President Lincoln and Secretary Stanton to take charge of it. This was a most delicate duty, and in its performance he visited New Orleans and other Southern cities, organizing societies and appointing white and colored preachers. During the twenty-seven years in which Bishop Ames was in the episcopacy his whole public life was marked by a strict adherence to the rules and discipline of Methodism; and even when the most difficult points came up for settlement he displayed a far-seeing judgment and quickness of comprehension which enabled him to grapple successfully with them. He had a happy facility for selecting the right men, and their conduct in the fields to which they were appointed showed the correctness of his judgment. Although grave and dignified in manner, there was a magnetism about him which attracted, and his preaching was always thoroughly enjoyed. He could scarcely be styled an orator, and yet his quiet reasoning, apt aphorisms, pertinent illustrations, and earnestness, impressed more than mere declamation. After a protracted illness from diabetes and pulmonary troubles he gradually sank until released by death. He was married twice, and left a son and two daughters.

ANGLICAN CHURCHES. In 1879 the Church of England contained in England and Wales two ecclesiastical provinces, Canterbury and York. The province of Canterbury comprises the Archbishop of Canterbury and the Bishops of London, Winchester, Oxford, St.

David's, Llandaff, Norwich, Bangor, Worcester, Gloucester and Bristol, Ely, Rochester, Lichfield, Hereford, Peterborough, Lincoln, Salisbury, Bath and Wells, Exeter, Truro (established in 1877), Chichester, St. Albans (established in 1877), and St. Asaph. The province of York comprises the Archbishop of York and the Bishops of Durham, Ripon, Chester, Carlisle, Manchester, and Sodor and Man. The Church of Ireland has the two provinces of Armagh and Dublin, each containing one archbishop and five bishops. The Episcopal Church of Scotland has seven bishops, the Bishop of Moray, Ross, and Caithness being the "Primus." In the British colonies and in missionary territories the Church of England had in 1879 also the following dioceses: 1. In Europe—Gibraltar; 2. In India—Calcutta, Lahore, Rangoon, Madras, Bombay, Labuan, and Colombo, the Bishop of Calcutta bearing the title of Metropolitan in India and Ceylon; 3. In the West Indies—Kingston (Jamaica), Barbadoes, Guiana, Antigua, Nassau, and Trinidad; 4. In China—Victoria and North China; 5. In Africa—Capetown, Graham's Town, Maritzburg, Sierra Leone, St. Helena, St. John's (late Independent Caffraria), Zoolooland, Bloemfontein (Orange Free State), Pretoria, Mauritius, Madagascar, Central Africa, and Niger (mission), the Bishop of Capetown having the title of Metropolitan; 6. In Australasia—Sydney, Melbourne, Ballarat, Adelaide, Newcastle, Bathurst, North Queensland (established in 1878), Grafton and Armidale, Perth, Brisbane, Goulburn, Tasmania, Christ Church (New Zealand), Auckland, Nelson, Wellington, Waiaapu, and Dunedin (Otago), the Bishop of Sydney having the title of Metropolitan of Australia, and the Bishop of Christ Church the title of Primus of New Zealand; 7. In North America—Toronto, Newfoundland, Rupert's Land, Saskatchewan, Athabasca, Moosonee, Montreal, Fredericton, Nova Scotia (the first colonial see, founded in 1787), Huron, Columbia, Quebec, Ontario, Algoma, and Niagara; 8. Others—Falkland Islands, Honolulu, Melanesia, and Jerusalem.

The population connected with the Anglican Churches of the British Isles is estimated as follows by E. G. Ravenstein:

England and Wales	17,781,000
Scotland.....	73,000
Ireland.....	668,000
Total British Isles.....	18,522,000

In each of the Australian colonies the Anglican Church is the leading religious denomination. In 1877 the population connected with it in the several colonies was officially reported or estimated as follows:

New South Wales.....	232,000
Victoria.....	258,000
South Australia.....	51,000
Western Australia.....	15,000
Queensland.....	44,000
Tasmania.....	53,000
New Zealand.....	107,000
Total.....	760,000

In British North America, the Anglican Church had according to the census of 1871 a population of 494,049 in the provinces of Ontario, Quebec, Nova Scotia, and New Brunswick, 7,220 in Prince Edward Island, and 55,184 in Newfoundland. Including the districts of British Columbia, Manitoba, and North-west Territories, the aggregate population connected with the Church of England amounted in 1871 to about 580,000.

The *Convocation of Canterbury* met February 18th. A petition was presented in the Upper House praying the House to take into consideration the repeated applications of the Patriarch, Bishops, and clergy of the descendants and representatives of the Church of Persia and the farther East, whose Catholicos had been recognized at the Council of Nice as ranking next after the three great Patriarchs of the Church. The Archbishop of Canterbury gave some information as to the result of inquiries which had been made into the condition of these people, who constitute the community commonly called the Nestorians. The petition was referred to a committee, who were instructed to consider it and report upon it at the next group of sessions of the Convocation. A committee was appointed to inquire into the sale of next presentations and advowsons. A discussion took place on the character and status of the Reformed Episcopal Church, in the course of which the Archbishop stated that he had received a communication from a person representing himself to be one of the ministers of that body, asking whether he might officiate in any of the churches of his lordship's or any other diocese. To this the Archbishop had replied that as a clergyman of the Reformed Episcopal Church the inquirer was not entitled to officiate in any church of the dioceses of the province: and if he did, the law had provided for the taking of legal proceedings against him for the penalties prescribed in the Act of Parliament. It appeared, from statements made during the discussion, that the Colonial Church Act requires the consent of the bishop to the performance of any service by a person other than a clergyman ordained by a bishop of the Church of England; and that, when an unqualified person is allowed to officiate in the parish church, the incumbent is liable to severe penalties. In the Lower House, a petition was presented from the English Church Union, asking that steps be taken to protect the churches from the desecrations to which they are liable by the celebration therein of the (so-called) marriages of divorced persons whose real husbands or wives are still living. A gravamen was presented which embodied the representations of fellows and other members of the University of Cambridge against the continued use of the so-called damatory clauses of the Athanasian Creed, and asking for their removal from the Liturgy. It was taken to the Upper House. A report was presented from the Committee on the Sale of Advowsons

and Augmentation of Small Livings, containing a scheme for the sale of small advowsons, the patronage of which is vested in public bodies. After discussion, it was referred back. A resolution was adopted expressing the desire of the House that liberty should be given to the deans and chapters of the cathedrals of the new foundation to revise from time to time their statutes, with the consent of competent authority.

The Convocation met again for the dispatch of business on June 24th. Several days were spent in consideration of the revision of rubrics in respect to ornaments, the Athanasian Creed, and the burial service. A synodical declaration was decided upon to be appended to the Athanasian Creed, "for the removal of doubts and to prevent disquietude," which states that the creed "doth not make any addition to the faith as contained in Holy Scripture." A recommendation was adopted to the effect that in the burial service it shall be allowable, under certain circumstances, to read portions of Scripture and prayers from the Prayer-Book not at present included in the service. The following new rubric was agreed upon, to be placed immediately after the "ornaments rubric": "In saying public prayers and administering the sacraments and other rites of the Church, every priest shall wear a surplice with the stole or scarf and the hood of his degree; or, if he thinks fit, the gown, with hood or scarf; and no other vestments shall at any other time be used by him contrary to the monition of the Bishop of the diocese; provided always, that the rubric shall not be understood to repeal the 24th, 25th, and 58th canons of 1604." The schedule of proposed alterations of the rubrics in the Prayer-Book having been completed, a report of the business of revision in which the Convocation had been engaged for several years was ordered to be presented to her Majesty, with an address, in which it was submitted that in approving the accompanying alterations and recommendations, the Houses did not wish to be understood as inviting the sanction of the two Houses of Parliament to what was proposed until the draft bill presented with the report should have become a law.

The *Convocation of York*, at its session in July, declined to take any action on the ornaments rubric, every effort in that direction being defeated by the disagreement of the two houses. A similar result was reached in the propositions which were made to modify the use of the Athanasian Creed. A resolution was offered to the effect that no action of Convocation ought to diminish the frequency of the use of this creed. The Bishop of Durham offered an amendment proposing to change the rubric so as to make the use of the creed optional. Both motions were lost by disagreement. A motion favoring variations in the burial service, similar to those approved in the Convocation of Canterbury, was lost in both

houses. A resolution was passed unanimously, to the effect "that in the opinion of the Convocation it is inexpedient that any legislative sanction be sought for proposed amendments of the rubrics until the 'Bill to provide Facilities,' etc., agreed to by the Convocation of Canterbury July 4, 1879, which was previously in substance agreed to by the Lower House of Convocation of York 19th February, 1879, or some similar measure, had become law."

The Archbishop of Canterbury waited on the Home Secretary August 15th, and placed in his hands the report which had been agreed upon by both houses of the Convocation of Canterbury in answer to her Majesty's letter of business, on the subject of the rubrics of the Book of Common Prayer. The report embodies a bill "to provide facilities for the amendment from time to time of the rites and ceremonies of the Church of England." In principle the bill recognizes that regulations respecting rites and ceremonies require to be revised from time to time, and that, as times, manners, and modes of thought change, old rules and customs must be changed to correspond. It recognizes, too, that in such changes the Church ought to take the initiative, and that the mouthpiece of the Church should be the archbishops and bishops of both provinces and the clergy by representation in the two Convocations. It recognizes, further, the necessity of the assent of the laity through Parliament to any alterations or additions to the Prayer-Book so initiated. The bill consists of eleven clauses, of which three are either explanatory or directive. The remaining eight provide that the archbishops, bishops, and clergy in both Houses of Convocation may prepare from time to time and lay before her Majesty in Council a scheme for making desirable alterations in the Prayer-Book. Any scheme so prepared is to be laid before both Houses of Parliament within twenty-one days of their meeting. Within forty days either House may address the Queen asking her Majesty to withhold her royal consent. If neither House present such address, her Majesty may make an order ratifying the scheme and specifying when it shall take effect.

A memorial from graduates of the universities and persons learned in history and archæology was prepared and addressed to the Home Secretary, asking him to advise her Majesty to take no further judicial action on the ritual reports of the Privy Council until certain historical misstatements, misquotations from, and interpolations in, important documents shall have been examined by learned men appointed by her Majesty for the purpose. Some of the misstatements are specified, such as the assertion that 1549 was the second year of Edward VI.; that the consecration prayer was omitted in 1552; that mixing wine and water apart from the service was unknown to East and West; that there are such documents in existence as the advertisements of

1564; the interpolation of the word "only" in the copies quoted in the reports; the assertion that surplice and alb were not worn "concurrently" according to any known use; the assertion that Bishop Cosin held a visitation in 1687, fifteen years after his death, etc. Decisions based on such statements, they will urge, only bring the law into contempt.

The General Conference of Anglican Bishops which met at Lambeth in July, 1878, appointed a committee "to consider the relations between the Old Catholics and others who have separated themselves from the Roman Communion. To this committee the Archbishop of Canterbury referred a petition which he had received from the dissident French ecclesiastic M. Loyson, praying for official recognition of the Old Catholics by the Anglican Episcopate. Bishop Eden, Primus of Scotland, as chairman of this committee, in the latter part of 1878, addressed a letter to M. Loyson, saying that, in conjunction with the Bishop of Edinburgh, he would so far recognize his mission as to give it a provisional oversight. Under ordinary circumstances, he said, the English Episcopate must have declined the request; but the times were not ordinary, and the conduct of the Church of Rome in issuing the recent Vatican decrees seemed to the bishops to justify a departure from their customary usage, and to authorize them to recognize a principle of yet higher obligation than that of church order. It would be impossible, however, for the bishops to pledge themselves to the administration of episcopal functions in the mission until they had become acquainted with the proposed ritual and order of the Church; and they could then do so only in the event of the ritual "in its language and ceremonies containing nothing inconsistent with the Word of God, with the principles enunciated in our formularies, with the prerogatives of the One Divine head of the Church, or with the One Mediator between God and man, the Man Christ Jesus." (See OLD CATHOLICS.)

The case of the appeals of Lord Penzance, Dean of Arches, and of Mr. James Martin, the promoter of the suit of Martin *vs.* Mackonochie, against a judgment of the Lord Chief Justice making absolute a rule obtained on behalf of the Rev. Alexander H. Mackonochie, restraining all further proceedings in the suit, came before the High Court of Appeal in March. The proceedings against Mr. Mackonochie in the Court of Arches had lasted for four years, when in June, 1878, he was sentenced by Lord Penzance to three years' suspension from his benefice. A rule was obtained in the Queen's Bench for a prohibition, based on the ground that the monition which had been inflicted upon the appellant previous to his suspension was a sentence covering all the penalty awarded, and ended the case; that any further penalty must result from a new trial, and the sentence of suspension to which

the Court appealed against had proceeded could not be imposed without such new trial. In August, 1878, the prohibition was made absolute. The Solicitor-General, who appeared for Lord Penzance, in advocating the appeal, argued that the common-law courts had no authority over the ecclesiastical courts, supporting his position by citations from old writers on the subject when the authority of the spiritual courts was admittedly independent. The case was decided, June 28th, in favor of the appellants, three of the judges giving opinions in favor of reversing, two of sustaining the decision of the Court of Queen's Bench. Lord Chief Justice Coleridge, in giving his judgment, reviewed all the circumstances of the case, and expounded the ecclesiastical laws and usages by which such cases as that before the Court were governed. He held that, both on the ground of reason and on the authorities he had looked into, such a monition as the one in question was perfectly allowable in a Court Christian, and that disobedience to such a monition might subject the offender to some form of punishment. It seemed to him that in this case suspension was warranted by the law and the practices of the ecclesiastical courts. The steps taken in this case were, to his mind, right; but, if he thought they were wrong, his conclusions as to the law and usage would be the same. He could not see the hardship of an officer of the Church being obliged to obey the law of his society, after the law had been declared to him by the highest authority in the country. He thought that Lord Penzance had not done more than he was called upon to do, and no more than what the practice of his Court justified, and he thought that that practice was not contrary to the Church Discipline Act. On the 15th of November Lord Penzance, in the Court of Arches, ordered the enforcement of the writ of prohibition which he had issued against Mr. Mackonochie in June, 1878, the operation of which had been suspended during the pendency of the appeals on the case. The writ involved a suspension of the ecclesiastical functions of Mr. Mackonochie for three years, beginning with the 23d of November. While granting it, Lord Penzance said that he would be willing to hear any application for a relaxation of sentence founded on a promise to obey the law. The Council of the Church Union determined on a policy of resistance to the judgment.

A prosecution was instituted against the Bishop of Oxford in January, requiring him to show cause why he should not institute proceedings of inquiry into charges which had been made under the Church Discipline Act against the Rev. Thomas T. Carter, rector of the parish of Clemer, for adopting ritualistic practices in worship. The Bishop appeared in person, February 27th, in the Court of Queen's Bench, and pleaded that the Church Discipline Act could not intend that he should be deprived of his right of discretion to grant or refuse a

commission; and that, if this right were taken away, grave injury would result to the Church from power being given to foolish, frivolous, or vindictive persons to set the law in motion. The Court decided, March 8th, that a mandamus should be issued directing the Bishop to issue a commission of inquiry. The Lord Chief Justice, in giving the judgment of the Court, said that two questions were raised by the proceedings: first, whether the language of the Church Discipline Act imposed a duty on the Bishop which he was bound to fulfill, or merely gave him a discretionary power which he might exercise or not at his option; and, secondly, whether the Church Discipline Act had been superseded by the Public Worship Regulation Act of 1874. In regard to the meaning of the Church Discipline Act, it was a settled canon of construction that, where an act authorized the doing of a thing for the sake of justice and for the public good, the words "it shall be lawful" were to be read in a compulsory sense. The statute in question was passed with the view of enforcing the rights of parishioners to have the service of the parish church performed according to law, and the power given to the Bishop to issue a commission to inquire into the matter was certainly one to be exercised for the sake of justice and the public good. The statute had reference to the administration of justice in ecclesiastical offenses; and the maintenance of the doctrines and ritual of the established religion, for the uniformity of which so many acts have been passed, could not be other than a matter of national interest and concern. Moreover, it was the undoubted right of every inhabitant of every parish in the kingdom, who desired to frequent the parish church, to have the services performed according to the ritual established by law, without having his religious sense shocked and outraged by the introduction of innovations not sanctioned by law nor consistent with usage, and which appeared to him inconsistent with the simplicity of worship of the Church of England. Reading the whole of the act together, and looking at the state of the law previous to its being passed, their lordships were of the opinion that the act imposed a duty upon the Bishop which he might be compelled to exercise. Their lordships were further of opinion that the Church Discipline Act was still in force, and had not been superseded by the later act. The Bishop appealed against this decision to the Supreme Court of Appeal, which decided, May 30th, in his favor, reversing the decision of the Court of Queen's Bench. The decision was given by Lord Justice Bramwell, who held that *prima facie* the words "it shall be lawful," in the third section of the Church Discipline Act, constituted a discretion. In the present case, he thought, the discretion had been erroneously exercised.

The eightieth anniversary meeting of the *Church Missionary Society* was held in Lon-

don, May 5th. The total available income of the Society for the year had been £187,235, and the total expenditure had been £204,186. The total deficit for the last two years, which had to be taken from the Society's working capital, was £24,757. The sum of £35,000 had been deposited with the Society in trust for the development of an evangelistic native agency in connection with the native churches in India, and £10,601 had been given for other special objects, making the whole amount intrusted to the Society during the year £232,836. Fifteen qualified laborers had been accepted for the work of the Society, and fourteen others had been accepted as suitable to be trained in the missionary college.

The Board of the *Society for the Propagation of the Gospel* in November, 1878, adopted a resolution altering the rule respecting the examination of candidates, so that candidates selected by a colonial bishop or his commissioner need not be required to pass the Board of Examiners. The resolution was regarded as being in the interest of ritualism, since the immediate occasion of its being offered had been the rejection of a candidate by the Board of Examiners on the ground, as was alleged, of his being a member of the Society of the Holy Cross; and dissatisfaction was excited among officers and members of the Society by its passage. The Bishops of Gloucester and Bristol and of Peterborough declared that they would resign their offices as Vice-Presidents of the Society if it were not rescinded; and animated discussions were had over it at the meetings of the Board. At a meeting of the Society held February 2, 1879, the resolution in question was rescinded, and a committee was appointed to consider the by-laws bearing upon the subject and all matters affecting their working.

The annual meeting of the *Society for the Propagation of the Gospel in Foreign Parts* was held in London, April 29th. The Archbishop of Canterbury presided. The receipts of the Society had been £145,223, or about £3,000 less than the receipts of the previous year. There had been employed during the year, in various fields of labor, 567 missionaries, as follows: In Asia, 135; in Africa, 121; in Australia and the Pacific, 61; in America and the West Indies, 248; in Europe, 2. The force of the Society also included about 1,200 catechists and lay teachers, mostly natives in heathen countries, and about 250 students in colleges abroad.

The Rev. Dr. Baring, Bishop of Durham, having resigned his office in consequence of illness, an address was sent him by 531 of the clergy of the diocese, in which it was stated that during his eighteen years' administration of the diocese 119 new churches and 188 parochial schools had been erected, 130 churches and chapels of ease restored, 102 new parishes formed and endowed, and 186 added to the number of the parochial clergy. The Rev.

Joseph Barker Lightfoot, Canon of St. Paul's and Margaret, Professor of Divinity at Cambridge, was nominated to be the new Bishop of the diocese, was duly elected by the Dean and Chapter, and was consecrated Bishop at Westminster Abbey, April 25th. The new Bishop was born in Liverpool, is a little more than fifty years of age, was graduated from the University of Cambridge in 1851, and is one of the most distinguished Biblical scholars in the English Church.

Bishop Samuel Gobat of Jerusalem died May 11th. The Bishop of this diocese is appointed under a joint arrangement of the British and Prussian Governments, by the terms of which he is designated by either alternately. The appointment of the successor of Bishop Gobat falling to the British Government, the Rev. Dr. Joseph Barclay, rector of Stapleton, Herts, was made Bishop. The new Bishop had already spent ten years in Jerusalem as examining chaplain to Bishop Gobat, whereby he had acquired a close acquaintance with the East. He is versed in the Hebrew, Arabic, and German languages, and has translated and prepared commentaries on parts of the Talmud.

The Right Rev. Dr. Reginald Courtney, Bishop of Kingston, Jamaica, having resigned his office, to take effect in April, 1879, the Right Rev. George William Tozer was appointed Bishop of Kingston in August. Bishop Tozer was for several years Anglican Missionary Bishop of Zanzibar, but retired from that position in 1873 on account of his health.

The fourteenth annual report of the Council of the *Church Association* was made in March, 1879. Thirty-three branches had been formed during the year, and the whole number of branches was now 358. Branches of the Association had been established at Edinburgh, Glasgow, and Montrose, in Scotland. In accordance with the object of the Association, which is the maintenance of Protestant principles in the Church of England, organized operations were being made throughout the country to bring the subject of ritualism before candidates for Parliament at the coming election.

The annual meeting of the *English Church Union* was held at Hereford, August 21st. The annual report and the address of the President of the meeting, Major Thomas Palmer of Hereford, represented that the Union and the principles it represented were gaining ground. Thirty years ago, it was claimed, crosses, surplised choirs, candles, etc., were ruled out; now they had all these. The people in attendance at their churches and the number of communicants had increased, and the observance of the services appertaining to Lent had been more numerous. Resolutions were passed, stating that the Union regarded with surprise and alarm the decision of the Archbishop of Canterbury, and some of the bishops, to displace the Athanasian Creed from its present position in the Prayer-Book, and that it should be left as it is; that the Union disapproved of the

action of the Lower House of Convocation in the matter of the ornaments rubric, and they were astonished that the House should accept an addition which contradicts the rubric itself; and that the Union will do all it can to prevent any alteration in the Prayer-Book, as dangerous to the interests of the Church. The holding of a mass meeting in London in November was advised.

The *Confraternity of the Blessed Sacrament* is an association for propagating the doctrine of the real presence in the Lord's Supper, for promoting the administration of that ordinance with a full ritual, the offering of prayers for the dead, the increase of daily celebrations, the receiving of the sacraments for the sick and dying, and auricular confession. According to the report for 1878, 61 priests had been enrolled as members during the year, 53 had withdrawn, and the whole number of priests associate was 933; 759 lay associates had been admitted, 47 had withdrawn, and the whole number of lay associates was about 10,563; making the total of members in England 11,499. Twenty-one new wards had been formed in England, one in India, one in Canada, and one in South Africa, while six wards had been discontinued; and there were now 147 English and eight colonial wards. The "Intercession" paper was regularly issued, 10,500 copies being required each month. The income of the Society had been £1,161, and its expenditures £892.

A new society, called the *Church and Stage Guild*, has been established in connection with the Church of England, with the object of promoting religious and social sympathy between the members of the Church and the stage.

The annual meeting of the *Society for the Liberation of Religion from State Patronage and Control* was held in London, April 30th. The expenditures of the Society for the year had been £13,249, after defraying which a balance of £579 was left in the treasury. About eight hundred meetings had been held in England, Scotland, and Wales, and 3,148,000 publications had been circulated. The report dwelt upon the advance which had been made in the cause which the Society was intended to promote, as shown in the movement for the disestablishment of the Scottish Church, in which the Society cooperated; the agitation on the subject of burials, in the case of which it was claimed that the principles insisted upon by Mr. Osborne Morgan had been acquiesced in in the bill of Mr. Balfour; and other events. The scheme for the endowment of an Irish Roman Catholic University would meet with strenuous opposition. Resolutions were passed expressing confidence in the success of the movement for disestablishment in Scotland, commending the question of disestablishment to the support of electoral constituencies, and urging preparation to oppose the project to establish a Roman Catholic University in Ireland. Resolutions were passed at the public

meeting referring with satisfaction to the tendency of ecclesiastical litigation "to convince the members of the Church that legal coercion is not a fit instrument for the attainment of spiritual ends, and that the advantages of an establishment can not be enjoyed without sacrificing the peace and freedom of the Church," and expressing the hope, in the prospect of the coming general election, "that the friends of religious equality will not fail to press upon the electoral bodies the expediency of putting an end to state interference with religion, and also that in England, no less than in Scotland, there will be a firm determination to secure the early abolition of the Scottish establishment."

The *Church Congress* met at Swansea, October 7th. The Bishop of St. David's, the diocese in which the meeting was held, presided. In his opening address he counseled the avoidance of the danger of making the Congress the battle-ground of different classes of thought in the Church. The subjects discussed on the first day's session were: The missionary work of the Church among the Jews and in India; "The Causes of and Remedy for Dissent"; "Home Reunion"; "Higher and Intermediate Education in Wales"; "How can the Church best gain and retain its Influence over the Young?" and "Church Work among the Seafaring Population." The Bishop of Winchester, President of the Home Reunion Society, opened the discussion on the causes for dissent and its remedy. He traced the history of nonconformity, and sketched the principles on which it should be met. The chief of the remedies which he proposed were: that the Church should not be looked upon as a sect, but as a world-wide society, meant to include in it all who accept Christ as their King; that party spirit and partisan language should be avoided; that mixing of religion with politics should be shunned; that lay work should be increased and lay counsel sought; that a lower order of clergy be enlisted as a permanent diaconate; that what are called irregular devotional services should be encouraged, or at least fully tolerated, and that more missionary and evangelizing labor should be secured, both at home and abroad. The programme of discussions was continued during the succeeding days with papers and addresses on the subjects of "The Maintenance of Voluntary Schools, and the best Means of promoting Religious Education in them and in Board Schools"; "Diocesan Synods and Conferences"; "Church Temperance work"; "Parish Organization," with reference to rich and poor town parishes, and compact and scattered country parishes; "The Church in Wales"; "Ecclesiastical Courts and Final Court of Appeal"; "Religious Benefits from recent Scientific Research." On the subject of religious education in the schools, the opening paper, by Canon Melville, advocated a religious basis in instruction, and mentioned an increase in the number of schools which

had adopted the Lord's Prayer, the Ten Commandments, and the Apostles' Creed as bases of such instruction. In relation to Ecclesiastical Courts, Dr. Phillimore proposed a reform in the organization of the Courts, under which the Church should be given a voice in the appointment of its bishops and archbishops; these officers should sit as judges canonically with the assistance of their clergy, with their chancellors as assessors, and with representatives of the laity to concur; the appeal to be to the synod of the province presided over by the Metropolitan, and, if further appeal be required, to the synod of the whole Anglican Communion. Such a reform, he thought, need not be incompatible with establishment. The discussion of the subject of the Church in Wales bore reference to the difficulties of bilingual parishes and the special education and training of the clergy. The Dean of Bangor showed that, out of a million people speaking the Welsh language, eight hundred thousand are attached more or less closely to the Congregational, Baptist, Wesleyan, Presbyterian, and other chapels. He maintained that the Church had lost its hold on the Welsh people through the indifference it had shown to them; and that, if it would recover them, it must have more earnest and devoted men capable of speaking to them in their own tongue.

Questions concerning the means of securing more friendly relations with nonconformists were considered at the meetings of several of the diocesan synods in October. At the Diocesan Conference of Manchester, a resolution was adopted expressing a desire to promote a friendly recognition of dissenters who would meet Churchmen on the ground of a common Christianity, and an earnest wish to cultivate friendly relations with them and to cooperate with them on any possible platforms of Christian work; further, that "in the opinion of this Conference it is desirable that the Convocation of this province (York) should consider the question of the comprehension of nonconformists with a view to devising the best means of terminating our dissensions and establishing essential unity, and working harmony between all sections of earnest Christian people in the land." The Synod of Peterborough resolved "that in full recognition of the sin and scandal of divisions among Christians, and in humble consciousness that they have been fomented and encouraged by many shortcomings on the part of the English Church, this Conference would hail with the utmost satisfaction any proposals toward home reunion without compromising scriptural truth and apostolic order; and that, while unable to perceive that the time has arrived for formal communications between the authorities of the Church and delegates from nonconformists, it is of opinion that special attention should be directed to a possible concordat with Wesleyan Methodists."

The *Representative Body of the Irish Episcopal Church* had at the beginning of 1879 a

capital sum of upward of £7,000,000, the interest of which forms the yearly endowment of the Church. The *General Synod* of the Irish Episcopal Church met at Dublin on April 22d. The most important discussions referred to the condition and relations of the Divinity School of Trinity College. The friends of the College moved for a declaration of the Synod that it is not advisable that it should cease to teach theology to the members of the Church of Ireland, or that its control should pass out of the hands of the provost and fellows. The Bishop of Meath moved a resolution expressing the desire of the Synod that the bill introduced by Lord Belmore for the future management of the Divinity School might speedily become a law, so that the due maintenance and government of the school in accordance with the recommendations of the late University Commission might be secured. The mover stated that the disposition of this question was the last special difficulty arising out of disestablishment. Lord Belmore explained his bill, which, he contended, did not contemplate any practical separation of the school from the University. The archbishops and bishops were requested by the Synod to confer with the Board of Trinity College, with a view to promote an arrangement with the authorities of the University and the Synod. The Senate of the University having at its meeting on the 1st of May refused to approve the bill, and having adopted a motion to the effect that means could be found by which the connection of the Divinity School and the College can be maintained, and the welfare of the school, under the conditions as altered by recent legislation, can be better provided for than under its provisions, the Synod, on the 2d, referred the whole subject with the bill back to the archbishops and bishops, requesting them to summon the Synod again if an agreement of terms should be reached. It was always to be understood that the connection between the Divinity School and the College should be as close as possible. Petitions were presented against a screen which had been erected in the cathedral. A proposition to remove the screen was rejected, but leave was given to introduce a bill declaring that in future it should not be lawful to erect any screen or partition separating the officiating clergy from the congregation. This was lost through a failure to secure the approval of the clergy, the vote in the two houses standing—clergy, yeas 73, nays 78; laity, yeas 130, nays 29. A scheme was approved for establishing such a permanent training school for teachers in connection with the Church as may be entitled to receive support from the state. A special meeting of the Synod was held in June to consider the questions relating to the Divinity School of Trinity College, when resolutions were adopted asserting the right of the bishops to nominate the professors and lecturers in the school.

ANIMAL-PLANTS AND PLANT-ANIMALS. The singular behavior of the sundew (*Drosera*) and other plants of its class in preying upon insects, and the fact that the victims of these carnivorous plants, which possess various and complex arrangements for attracting and securing their prey, are decomposed by a fluid which corresponds in its nature and action to the gastric juice of animals, and are taken into the system of the plants, awakened the wonder of the scientific world a few years ago, when the discovery was made and published by Charles Darwin. The fact that the nitrogenous matter thus consumed actually formed a part of the nutriment of this group of plants still remained to be proved until the recent experiments of F. Darwin established it beyond question: he took a large number of sundew plants and supplied half of them with nitrogenous food in the form of roast beef; of the fed plants, 69 per cent. more survived than of the unfed; their stems weighed 41 per cent. more; they excelled the starved plants in the number of their seeds by 141 per cent., and in the aggregate weight of their seeds by 279 per cent. Equally confirmatory results were reached in Germany by Kellermann, Reiss, and Von Raumer, who fed the plants with aphides.

Another approach to the animal kingdom in the physiology of plants has been noticed by Weyl, and more lately investigated by Sidney Vines in a micro-chemical examination of the aleurone grains in the seeds of the blue lupine (*Lupinus varius*). These are grains of a soluble or partly soluble proteinaceous substance which are found in the endosperm or the cotyledon of the seeds of numerous plants, and contain the stores of proteid food. The analysis of Vines revealed the presence of two proteids belonging to the globuline group, which have never before been found except in animals: these were myosine, which occurs in dead muscular tissue, and vitelline, which is found in the yolk of eggs. An extract of the seeds also contained a proteid which possesses all the properties of peptone, and resembles very closely the hemi-albuminose of Kühne, or *a* peptone of Meissner. The peptones, formed by the action of the gastric or pancreatic fluids on proteids in the digestive organs of animals, are classed by Meissner as the *a*, *b*, and *c* peptones, representing three different stages of decomposition in the digestive process. The presence of these products, which were supposed to be confined to the physiological economy of animals, has been detected not only in the higher flowering plants, but is established by recent researches of Professor Nägeli in one of the lowest of the protophytes—the yeast-plant. Nägeli finds by his analysis of the cells of this fungus that, besides the albuminoids, of which the cells are mainly composed, they contain about two per cent. of peptones, and that these exist in all three of the modifications distinguished by Meissner.

A process completely analogous to the excretion of animals is discovered to take place in this plant. That plants give off carbonic acid as a product of waste tissue, just as animals do, has long been observed. Nitrogenous products of the oxidation were by analogy known to exist, but have never been observed. Nägeli discovered in his analysis of the yeast-fungus, besides the glycerine and succinic acid which were known as extractives of yeast, several of the well-known nitrogenous products of the waste of animal tissue—guanine, xanthine, surkine, and leucine, the last of which is believed to be in animals the urea in one of the stages of its formation.

A no less startling discovery has been made in the animal kingdom by which one of the broadest and plainest marks of distinction between the animal and plant kingdoms has been obliterated. Certain animals are found to exercise a most important physiological process which has been supposed to be the most exclusive and distinctive attribute of vegetable life. The green color of a number of the lower animals, belonging to widely separated groups, is well known to be due to the presence of chlorophyl. This substance is found to exist in certain infusoria, in a species of fresh-water sponge, in the *Hydra viridis*, in a sea-anemone, the *Anthea cereus*, in a tube-worm, the *Chaptopteris Vglenciensis*, in the *Bonellia viridis*, in an isopod, the *Idotea viridis*, and in three species of planarians. The green grains contained in these animals were found by the chemical and spectroscopic investigations of Cohn, Ray, Lankester, and others, to be chemically identical with plant-chlorophyl. That they performed the chemico-physiological function of chlorophyl in plants, that they had the power and actually served to decompose carbonic acid, was not established; and that such a process attended and supported the life of these animals seemed quite as incredible as did the fact that the nitrogenous substances dissolved by the gastric fluid of the carnivorous plants actually served as nutriment. An English scientist, Geddes, has now discovered that this process does take place in the planarians at least. Placing a number of specimens in water, and exposing them to the rays of a bright sun, he found that they emitted bubbles of gas which contained from 45 to 55 per cent. of oxygen. In their habitat on the seashore they are always found covered by a few centimetres of water only, and directly exposed to the sun: in an aquarium they seek the fullest exposure to the light, and live much longer when in the light than when kept in the shade. By dissolving out the chlorophyl with alcohol, and subjecting an aqueous extract of the bleached and coagulated substance of their bodies to the delicate and infallible iodine test, he discovered the indisputable presence of starch. The blue coloration, fading out on exposure to heat and reappearing when the solution cooled again, establishes

beyond question the existence of this purely vegetable constituent in these animals.

These remarkable discoveries, following closely one upon another, of plants which devour, digest, and are nourished by animal food, of veritable peptones formed by many plants, of plants performing a process of excrementation, and the converse discovery of starch-forming, oxygen-exhaling animals, overturn the broadest, never-questioned generalizations, and obliterate the clearest marks of distinction which have been fixed regarding the demarkation of the animal and vegetable kingdoms. This latest revelation of the infinite complexity and manifold interlinkages of organic nature is accentuated by its discoverer in the following language: "As the *Drosera*, *Dionæa*, etc., which have attracted so much attention of late years, have received the striking name of 'carnivorous plants,' these planarians may not unfairly be called 'vegetating animals,' for the one case is the precise reciprocal of the other. Not only does the *Dionæa* imitate the carnivorous animal, and the *Convoluta* the ordinary green plant, but each tends to lose its own normal character. The tiny root and the half-blanchéd leaves of *Pinguicula* are paralleled by the absence of a distinct alimentary canal and the abstemious habits of the planarian."

ARGENTINE REPUBLIC (REPÚBLICA ARGENTINA). For detailed statements of the territorial divisions and population, reference may be made to the "Annual Cyclopædia" for 1877 and 1878.

The President of the Republic is Dr. Don Nicolás Avellaneda; the Vice-President, Dr. Don Mariano Acosta; and the Ministers composing the Cabinet, as follows: Interior, Dr. Don Benjamin Zorrilla; Finance, Dr. Don Victorino de La Plaza; Justice, Public Worship, and Public Instruction, Dr. Don Miguel Goyena; War and the Navy, Dr. Don Carlos Pellegrini. The Argentine Chargé d'Affaires in the United States is Sr. Don Julio Carrié. The Consul-General (at New York) is Sr. Don Carlos Carranza; and the Vice-Consul, Mr. F. H. Snyder.

The Governors of the several provinces were:

Buenos Ayres.....	Dr. C. Tejedor (May, 1878).
Minister of the Interior.....	J. Alcorita.
Minister of Finance.....	F. L. Barbin.
Catamarca.....	M. Molina.
Córdoba.....	Dr. A. del Viso.
Corrientes.....	
Entre-Ríos.....	Dr. R. Febre.
Jujuy.....	M. Torino.
La Rioja.....	V. A. Almonacid.

The following tables of the revenue and expenditure of the republic for the year 1878 are taken from the report presented to Congress by the Minister of Finance in 1879:

REVENUE.

Import duties	\$12,038,041 13
Export duties	2,299,575 64
Warehouse fees, etc.	305,502 24
Stamped paper, patents, etc.	451,166 17
Post-office and telegraphs	391,028 72
Lighthouses, etc.	35,563 09
Government railways	445,071 01
Interest on national funds loaned to provinces.	23,753 23
Interest and sinking fund, uninvested titles, loan of 1871	611,751 92
Interest on shares of Central Argentine Rail- way	74,604 00
Sundries	1,774,775 71
Total	\$13,451,897 86

EXPENDITURE.

Ministry of the Interior	\$1,815,759 55
Ministry of Foreign Affairs	156,455 85
Ministry of Finance	8,471,897 22
Ministry of Justice, Public Instruction, etc.	987,247 19
Ministry of War and the Navy	3,717,194 59
Expenses extraordinary	26,064 00
Total	\$15,174,618 40

In the report already referred to, the national debt of the republic was set down at \$85,589,963.33 on March 31, 1879.

The subjoined tables exhibit the values, sources, and destinations, respectively, of the imports and exports for the year 1878 :

IMPORTS.

From.	Values.
Belgium	\$2,714,574
Bolivia	53,925
Brazil	2,103,654
Chili	506,147
France	8,095,251
Germany	2,132,778
Great Britain	11,518,011
Holland	869,589
India	12,379
Italy	2,527,508
Paraguay	571,725
Portugal	58,576
Spain	2,447,404
United States	2,773,589
Uruguay	2,000,676
West Indies	94,265
Other countries	349,163
In transitu	3,418,228
Total	\$42,347,460

EXPORTS.

Destinations.	Values.
Belgium	\$9,264,167
Bolivia	221,044
Brazil	1,777,045
Chili	2,072,297
France	9,390,240
Germany	994,186
Great Britain	3,499,260
Holland	101,831
Italy	804,431
Paraguay	875,707
Peru	13,030
Portugal	21,765
Spain	823,700
United States	2,547,187
Uruguay	975,219
West Indies	708,402
Other countries	15,870
In transitu	2,707,948
Total	\$36,313,267

The shipping movements at the ports of the republic in 1878 were as follows :

	Sailing ves- sels.	Tons.	Steamers.	Tons.
Entered	1,263	280,228	1,190	616,409
Cleared	821	256,469	390	410,120

The foregoing are the only returns of interest published officially since 1878.

The Patagonian question still remains unsettled. In a lengthy memorial, presented to the national Congress in 1879 by the Minister of Foreign Affairs, are found a reassertion of the limits of the portion of Patagonia "belonging to the Argentine Republic," namely, "the Rio Negro on the north, the Atlantic on the east, the Straits of Magellan on the south, and the Andes on the west," and the following mention of a treaty between the two republics: "With a view to decide the pending question of limits between the Argentine Republic and Chili, a treaty was made at Buenos Ayres on January 18, 1878, by the plenipotentiaries of either nation, for the purpose of submitting to arbitrators thereafter to be chosen the question, 'Were the now-disputed territories in the possession of the Viceroyalty of Buenos Ayres or of the Captaincy-General of Chili in 1810?' The treaty, however, was not ratified by Chili, and it was agreed that the arbitration should be conducted in accordance with the treaty of 1856, both governments, to prevent the occurrence of an armed conflict in the mean time, binding themselves to refrain from sending war-vessels on missions of an aggressive character—the Argentines to the Straits of Magellan, or the Chilians to the Atlantic coast of Patagonia." (See "CHILI.")

ARKANSAS. The biennial session of the Legislature of Arkansas began on January 14th, and terminated on March 3d, after the passage of about eighty acts. In the Senate M. M. Duffie was elected President on the forty-third ballot; in the House J. T. Bearden was elected Speaker.

The election of Governor took place on September 7, 1878, and the canvass of the votes by the Legislature showed the following result: William R. Miller, 88,730 votes; Milt Rice, 5; J. N. Cypert, 1; M. L. Bell, 1; B. S. Fox, 1; J. O. McGuire, 5; W. P. Grace, 2; E. N. Conway, 1; Thomas Fletcher, 3; Jeff. Rice, 1; — Fletcher, 1; S. O. Cloud, 2; Martin Levy, 2; scattering, 15.

A Senator to represent the State in Congress was chosen by the Legislature on the sixth ballot, on February 1st. The vote was as follows: J. D. Walker, 68; United States Senator Robert W. Johnson, 47; scattering, 5. Pending the ballot Representative Davidson of Sharpe County rose and stated that before voting he demanded a promised explanation from Representative Holfield of Clay County. Mr. Holfield had a writing prepared, which he read, to the effect that he had been offered \$500 to vote for Johnson. Representative Barnett of Bradley County said he felt authorized in saying the statement was false. Senator Mitchell of Hempstead demanded the name of the offerer of the bribe. Representative Fishback moved to dissolve the convention and investigate. President of the Senate Duffie decided that the motion could not be enter-

tained. Representative Furbush (colored) proposed that members should scatter ballots so as to temporarily prevent election. The roll-call proceeded to the result above stated. Davidson's statement had apparently no effect on the actual ballot, save that Representative Washburne asked and was excused from voting in consequence. No reflections were cast upon Johnson personally.

Under such a charge Colonel Johnson could do no less than demand an investigation; the House could do no less than to order it. It was ordered. Two of the committee were Johnson men, two Walker men, and one a Baxter man. Another was afterward added who had taken no part in the senatorial contest. After some weeks spent in investigation, five of the committee made a majority report, in which they say:

Your committee have failed to find in the testimony before them any evidence whatever reflecting, either directly or indirectly, upon the Hon. R. W. Johnson, or upon his conduct in the senatorial contest; but his record in this, as in all other and previous contests, stands above reproach and above suspicion. Nor do your committee find anything in the testimony which implicates, either directly or indirectly, the Hon. J. D. Walker in any attempt to bribe any member of the General Assembly, while his life-long integrity forbids all idea of such a suggestion. In regard to the members of the House, there is no testimony whatever which shows that any member received a bribe for his vote in the senatorial election, and no satisfactory evidence that any offer of a bribe was made to any member. Nor do your committee find any testimony that any money was on deposit or was used by or for any senatorial candidate in influencing votes for Senator.

One of the committee made a minority report, in which he says:

While a proper discharge of the duty devolved upon them rendered it necessary to admit testimony which could not be justified by the ordinary rules of evidence as applied in courts of justice, yet we fail to see, in the scope we have given the investigation, any infringement of the ordinary rules of propriety. Your minority fully agreed and concur in the majority report in regard to the Hon. R. W. Johnson and the Hon. J. D. Walker, and would add that the same is true of the other senatorial candidates. Your minority are further of the opinion that there is no evidence before this committee indicating that any member of this House received any bribe or valuable consideration to influence his vote in the recent senatorial election, but that the peculiar conflicting and contradictory character of the testimony taken renders it impossible for your committee to say with positive certainty whether or not any such offer was made, and therefore desire to submit the testimony taken for your consideration.

A resolution in accordance with the report of the committee was laid on the table by the House, and another adopted on the last day of the session, and shortly after the report of the committee was made, declaring that an attempt had been made to bribe two of its members, without implicating any of the candidates.

The necessity for an insane asylum in this State has become so pressing that the Governor in strong terms urged upon the Legislature the passage of an act to provide for such an institution. A bill was passed and vetoed by

the Governor. He stated his objections to be that it was located in a wilderness, remote from indispensable conveniences, that the bill made no efficient provision for the erection of an asylum, and that its adoption as a law would probably operate to defeat for the present generation any efficient provision for the object.

A bill was passed to abolish the office of adjutant-general, but this was vetoed by the Governor as an unconstitutional measure.

A proposition to hold the State and Congressional elections on the same day was voted down. This defeat was caused by the existence of Congressional laws authorizing the appointment of supervisors of elections for members of Congress.

A resolution was adopted to appoint a committee of five to prepare an address to the fruit-growers of the State, calling for a convention to meet at Little Rock as early a day as practicable, for the purpose of organizing a State Horticultural and Fruit-Growers' Association, and requesting such committee to prepare a constitution for the consideration of the Convention.

Exclusive original jurisdiction was given to justices of the peace to try and finally to determine all cases of misdemeanors; the circuit courts, however, have concurrent jurisdiction in cases of false imprisonment and malfeasance and misfeasance in office.

An act for the prevention of cruelty to animals provides that "if any person shall overdrive, overload, torture, torment, deprive of necessary sustenance, or cruelly beat or needlessly mutilate or kill, or cause or procure to be overdriven, overloaded, tortured, tormented, or deprived of necessary sustenance, or to be cruelly beaten or needlessly mutilated or killed as aforesaid, any living creature, every such offender shall, for every such offense, be guilty of a misdemeanor." The details of the act comprise almost every form of cruelty; and it further provides that "in this act, and in every law of this State passed or which may be passed relating to or affecting animals, the singular shall include the plural; the words 'animal' or 'dumb animal' shall be held to include every living creature; the words 'torture,' 'torment,' or 'cruelty' shall be held to include every act, omission, or neglect whereby unjustifiable physical pain, suffering, or death is caused or permitted; and the words 'owner' and 'person' shall be held to include corporations as well as individuals. But nothing in this act shall be construed as prohibiting the shooting of birds or other game for the purposes of human food."

A bill passed the Senate—yeas 13, nays 6—prohibiting the sale of intoxicating liquor to habitual drunkards.

An act regulating the sale of mortgaged property provides that, at all sales of personal or real property under mortgages and deeds of trust, such property shall not sell for less than

two thirds of the appraised value thereof; the act shall not apply to sales of property for the purchase-money thereof; and if the property shall not sell at the first offering for two thirds of the amount of the appraisal, then, in case of personal property, another offering may be made sixty days thereafter, and in case of real property another offering may be made twelve months thereafter, at which offerings the sale shall be to the highest bidder, without reference to the appraisal; and the real property thus sold may be redeemed by the mortgagee at any time within one year from the sale thereof, by payment of the amount for which said property is sold, together with ten per cent. interest thereon and cost of sale.

By another act all lands returned as delinquent to the offices of the county clerks shall there remain for a period of one year, during which time they may be redeemed by the owner or person in whose name the same may be listed. But if the lands are not then redeemed they shall remain in said clerk's office one year longer, during which time the same shall be subject to redemption by any person whatsoever who will pay the tax, penalty, and costs; and upon the payment of the same the clerk shall execute and deliver a proper deed of conveyance. If at the end of this period they are not redeemed, they shall be forfeited to the State.

The following preamble and resolution, intended to respond to the investigation undertaken by the so-called "Teller Committee" (see CONGRESS, U. S.), was passed in the House by yeas 71, nays 15:

Whereas, The purity and absolute freedom of the ballot-box are of the utmost importance in a government by the ballot; and

Whereas, A committee of the United States Senate is now engaged upon an investigation of facts in connection with infractions of the rights of suffrage in the States of the Union, with a professed view to ascertaining a remedy; and

Whereas, The larger the number of facts, the more valuable will be the generalization or conclusion drawn from them; and

Whereas, During the period of reconstruction, there were from 30,000 to 40,000 of the legal Democratic voters of this State who were periodically deprived of a free exercise of their suffrage, either by fraud or intimidation, or both; and

Whereas, Notwithstanding many instances of outrageous fraud upon the ballot were brought in 1874 to the attention of a Republican committee of the national House of Representatives, and by sworn testimony, yet the distinguished presiding officer of the House has recently said upon the floor of the Senate, that he doubted if it be in the power of the most searching investigation to show that in any Southern State, during the period of Republican control, any legal voter was ever debarred from the freest exercise of his suffrage—a statement which would indicate either the very gross inefficiency of such committee, or as very gross ignorance of their findings on the part of those who believe such an assertion; and

Whereas, It is desirable that the committee now engaged in a like investigation make their inquiry searching and complete, lest its labors be obnoxious to the charge of a like inefficiency, or its members to the charge of a like ignorance, and its investigation therefore prove fruitless of beneficial results; and

Whereas, It is charged by some of the Republican press of the North that the right of suffrage is not fully enjoyed by the colored voters of Arkansas; and

Whereas, It is alleged by members of this body that, in one county of this State, in 1870, a very large number of the legal voters of the county, who were Democrats, were deprived of the free exercise of their suffrage, while at the same time a large number of ballots were fraudulently voted under fictitious names taken from the directory of one of our Northern cities; that in many of the counties of this State, where the white population were largely in the majority, just before the election of 1872 the boards of revision met in secret and scratched from the registration lists names by the hundreds of legal voters who had been legally registered, and for no other known reason except that it had been ascertained "they would not vote the right way."

That, indeed, many of the victims were young men who had just attained to manhood, and not infrequently honorably discharged soldiers of the Federal army, who were so unfortunate as to be Democrats, by these boards, the members of which were generally themselves candidates for lucrative offices at the same election; that on election day armed militia and deputy-marshals surrounded the polling-places, using means calculated and designed to intimidate these illegally "scratched" voters from voting at the polls erected under the enforcement act; that in several instances they actually arrested men for no other offense than that of offering to vote at such polls; that on the day of election printed circulars, purporting to be by order of the Governor, but *having no signatures*, were distributed among the election officers (all of whom were Republicans), directing them to permit no man to vote whose name was either absent or scratched from the registration list, no matter how illegally.

That as an instance and an illustration of their methods, early in the morning of election day in 1872, in the town of Fort Smith, the few negro voters of the precinct were stationed in a line from the door of the polling-place across the street, where they stood until the closing of the polls, preventing all except such as they chose to permit to vote, while in a room just above the polling-place were armed and drilled men, under command of officers, established for the purpose of overcoming any resistance to these so great outrages, and that in the mean time deputy-marshals swarmed about the polls in numbers almost as great as that of the Republican voters. That the better to carry out these outrages, the judges of elections refused to allow the Democratic supervisors, appointed by the United States District Court, to sit with them, ejecting one after another as fast as the Judge appointed them, until he consented to appoint the one whom they themselves designated. That at the same election one of the voting-places of Crawford County was removed by stealth from the usual place to a canebrake, on the farm of the United States Marshal, known to the Republican voters, but unknown to Democrats. That the marshal transferred one of his clerks to this place, and made him a clerk of election. That the same clerk swore before the Poland Committee that he saw the ballot-box stuffed with fraudulent votes. That the Democrats, in the exercise of a commendable patience and forbearance, appealed to the United States District Court for the enforcement of the laws made for their protection, but the guilty Marshal failed to summon the grand jury selected after the usual manner; summoning in their stead a number of his partisans and fellow-conspirators, from whom to make up a grand jury, in the necessary default of the regular panel. That a few Democrats and honest Republicans, who were interested in the punishment of these crimes against the ballot, having an intimation of the marshal's intended default, themselves notified the regular panel to appear, but upon their assembling the regular panel were dismissed, which gave the Marshal his opportunity of making up a new panel of the very men who were more or less implicated, thus preventing the punishment of any guilty party.

That an address setting forth these facts was drawn up and signed by twenty-one members of the bar of the Western District of Arkansas, and forwarded to the President and Senate of the United States, through the Hon. B. F. Rice, who reported that he handed it in to a committee of the Senate, where it has since slept without a protest, and without even a notice by that honorable body. And

Whereas, Many other devices were resorted to during that unhappy period, by which to "debar" legal voters from a free exercise of their suffrage, and which should be known to the country, and especially to the Senate Committee now engaged with the subject, that they may be the better prepared to draw intelligent conclusions as to the remedy for so great an evil:

Therefore, be it resolved by the House of Representatives of the State of Arkansas, That a committee of nine of its members, selected from different sections of the State, be appointed by the Chair to inquire into and report such facts in connection with the violation of the rights of suffrage in this State as can be established by competent testimony, and in time to be forwarded to our Senators and Representatives in Congress before the adjournment of its present session.

A joint resolution instructing the Representatives of the State and people in Congress to vote for all measures looking to the unlimited coinage and full legal-tender capacity of standard silver dollars, and also for substituting United States Treasury notes for national-bank notes, passed by decisive majorities. In the Senate the vote was—yeas 28, nays 2. The following resolution contains the list of measures in detail:

Resolved, by the General Assembly of the State of Arkansas, That our Senators and Representatives in Congress be, and they are hereby, requested to vote for and support the following measures:

First. The unconditional repeal of the resumption act.

Second. The repeal of the act exempting United States bonds from taxation by the States.

Third. The repeal of all laws exempting greenbacks from taxation.

Fourth. The abolition and prohibition for ever of all bank issues.

Fifth. The free and unlimited coinage of gold and silver.

Sixth. The issue by the Government of full legal-tender paper money, receivable for all dues and demands, public and private, in amount sufficient to meet the wants of trade, said amount to be not less than thirty dollars per capita of the whole population of the United States, and provides by law that this paper money shall remain permanently in circulation, and equal before the law with the nation's gold and silver coin.

The following memorial to Congress, relative to the intellectual status of the colored people, also was passed by the Legislature:

To the Honorable Senate and House of Representatives of the United States:

Your memorialists, the General Assembly of the State of Arkansas, would respectfully ask for the passage of the bill now before the lower House of your honorable body, and in the hands of the Committee on Labor and Education, authorizing the appointment of a committee of three colored men to inquire into the intellectual status of the colored people of the Southern States; the expenses of the same, as provided for in the bill, to be paid out of the unclaimed bounty funds of the colored soldiers. Believing that such an action will be productive of great good, not only to an essential element of our society, but to the community in general, and urged so to do by those immediately concerned.

The subject of the finances of the State was the most important before the Legislature. It appears that the amount of warrants drawn on the State Treasury during the fiscal years 1877 and 1878 was \$1,296,859.16, of which sum \$422,977.57 were expended in payment of the current expenses of the government. To the latter sum should be added \$26,792.24, amount of certificates of indebtedness against the State. Total sum expended during the two years, exclusive of interest paid on bonds, \$449,769.81; an average of \$224,884.90 per annum. The funds in the Treasury at the beginning of the year consisted chiefly of State scrip which had been issued in previous years to pay current expenses, and which was made receivable for all dues except interest. It had been returned to the Treasury in payment of taxes, and at that time there was outstanding \$477,729.47. The plan adopted by the Legislature was to stop all further issues of scrip, and to borrow the amount necessary for the expenses of the ensuing two years. By this method the State government would be carried on and the outstanding scrip retired. A State Board of Finance, consisting of the Governor, Auditor, and Treasurer, was created for two years, which was authorized to borrow money for current expenses; and the Governor and Secretary of State are authorized to execute in the name of the State, and the said Board of Finance is authorized to countersign and deliver promissory notes of the State, or rather instruments in writing, as evidence of the indebtedness so incurred. The faith and credit of the State are pledged to the payment of such obligations. For the further security of their payment, the Board was authorized to pledge the bonds of the State authorized to be issued under an act of December 28, 1874; and upon default of payment of the principal sum or interest on said obligations, as the same may become due, a sufficient amount or number of said bonds so hypothecated, to pay off the interest or principal sum then due, may be sold at public sale, at the city of New York or the city of Little Rock, after having given at least thirty days' notice of such sale. The unusual feature of this arrangement is, that to raise a half million for current expenses there are pledged as security for its payment bonds amounting to a million dollars. If the State fails to pay on the day the money borrowed is due, the lender, upon thirty days' notice, can sell the bonds at auction. The credit of these bonds, which have obtained the name of "Loughborough bonds," is based upon the following section of the original act authorizing their issue:

SEC. 10. In order to secure the prompt payment of the interest on said bonds, and to provide a sinking fund for the redemption of the principal thereof, it is further enacted as a part of the contract on which said bonds shall be issued, and as an inviolate condition thereof, that until said bonds, principal and interest, shall have been fully paid off and discharged, there shall be levied an annual tax sufficient to produce the sum of one hun-

dred and fifty thousand dollars for interest, and thirty-eight thousand dollars for sinking fund, which sums are hereby set apart for the purpose aforesaid; and the first money received in the Treasury annually during the period aforesaid, from any source whatever, is hereby expressly appropriated to said purpose, until the sum of one hundred and eighty-eight thousand dollars aforesaid shall have been applied annually in payment of said interest, and in creating said sinking fund; and the right of any holder of said bonds to the benefits herein provided, shall be considered as vested and inextinguishable from the time of issuing thereof until the said bonds shall have been fully paid off. All moneys belonging to said sinking fund shall be annually applied by the Treasurer, under the direction of the Governor, in the purchase of any of said bonds which may be outstanding, in the same manner as is provided in section nine of this act, for the purchase of bonds by the trustee or trustees; and any Judge of the Circuit courts of this State or Chancellor, in term time or vacation, is hereby enjoined and required, upon the application of any holder of any of said bonds, to compel by mandamus or other proper process the authorities of the State to levy, assess, and collect the taxes provided for in this section, and to prevent a misapplication of the moneys set apart for the interest and sinking fund, by injunction or other proper process to compel the proper officers of the State to apply said moneys to the payment of the interest and the purchase of the bonds as herein provided for. And it is provided that all the powers herein conferred upon the Judges of the Circuit Courts of the State and the Chancellors thereof are hereby vested in any Judge of the Circuit or District Courts of the United States, and may be so exercised in the event that any bondholder aforesaid desiring the process of the courts shall be at the time a non-resident of this State, and owning and holding a bond not less than one thousand dollars.

The report of the minority of the Judiciary Committee of the Senate on this measure presents the objections which were considered as sufficient to defeat it, but without avail. The first was, that the issue of bonds to be hypothecated was regarded as a great stretch of power, and only justified as a "military necessity." The original act authorizing the Loughborough bonds was passed after the downfall of the carpet-bag government, which had plundered the Treasury of every dollar and bequeathed to the people a large floating debt; and its only object was to get money to carry on affairs until the restored government could be established. As that had been accomplished, no more bonds should be issued. Further, the act surrendered to the holders of the bonds issued under its provisions the sovereignty of the State of Arkansas. Section 10 authorizes the State and United States courts, or the judges thereof in vacation, to issue writs of mandamus against the officers of the State, to compel a levy of taxes to pay the principal and interest of said bonds—all of which virtually places the State and her citizens at the mercy and in the power of the bondholders. Again, the act authorized the Board of Finance to hypothecate the bonds of the State at one half their par value, with authority given to the holders thereof to sell them for what they may bring, upon default of the State. Also, the act authorized the Governor of the State to mortgage the bonds of the State to secure the payment of said bonds; and if the necessity

should arise for the sale of the bonds hypothecated, and they should not bring the amount required to pay for the sum borrowed, a trustee is authorized to sell the domain of the sovereign State. Finally, the borrowing of money to defray the current expenses of this State, when it appears that we have \$90,000,000 of taxable property in the State, is an evidence to the world of mismanagement, and a want of confidence in the State by her people, and is sufficient, within itself, to cast a grave reflection upon the honor and dignity of the State.

The acknowledged and undisputed indebtedness of the State amounted at the beginning of the year to \$2,969,050, principal and interest, which was then due and unpaid; and the whole debt was short of five million dollars. All propositions for its arrangement have failed. The Senate at this session passed a resolution from the House providing for a constitutional amendment repudiating certain bonded debts of the State, with a Senate proviso that nothing therein contained shall be construed as a prohibition against paying such part of the State bonds as courts of the State may decide to be just and legal. The resolution was recalled by the House from the committee by a vote of 43 yeas to 41 nays, in the following words:

Whereas, The bonds of this State known as "railroad aid bonds" and "levee bonds" have been decided to be illegal and void by the Supreme Court of the State, and the facts as well as the law upon which these decisions rest are easily accessible; and

Whereas, The numbers of the bonds known as "Holford bonds" can be ascertained from the books of the Treasurer of State within twenty minutes; and

Whereas, The character of these bonds has been the subject of discussion and investigation for several years and by several legislative bodies, while they involve twelve millions of the people's money and their settlement involves the future prosperity of the State; and

Whereas, The Judiciary Committee to whom they have been referred have had them under consideration for nine days; therefore

Resolved, That the Judiciary Committee be, and they are hereby, directed to report House joint resolution No. 1 (which provides for submitting to the people a constitutional amendment forbidding any Legislature to pay these bonds) back to the House for such action as it may see proper.

This amendment was promptly passed by the House and sent to the Senate.

A resolution was presented in the Senate asking Congress for the early opening of the Indian Territory to white settlement. It was read the third time, and on the question of its adoption considerable discussion ensued, but when put to vote it received 9 yeas to 16 nays. The discussion of the question of the establishment of a territorial government by Congress over the Indian Territory has existed for some time in Arkansas, and is extending to other adjacent States. More than twenty years ago Senator Johnson of Arkansas introduced in the United States Senate a bill for the organization of a territorial form of government over the country; and from time to time since then

bills of a similar character and for a like purpose have been brought to the attention of Congress. At the session of 1878-'79 a bill was introduced in the House of Representatives to establish the Territory of Oklahoma. Its aim was to set up the ordinary territorial government over the Indian country, the same in kind and form as is usually established by Congress when new Territories are created,

except where the peculiar condition of affairs there required other provisions to be inserted in the bill. The justice and legality of the measure were discussed, but no final action was taken by the House.

The names of the tribes in the Indian Territory, the area of each reservation in square miles and acres, and the population of each tribe are as follows:

RESERVATION.	Tribes.	Popula- tion.	AREA.	
			Square miles.	Acres.
Arapahoe and Cheyenne.	Apache, Southern Arapahoe, and Northern and Southern Cheyenne.	4,766	6,715	4,297,771
Cherokee	Cherokee	18,672	7,561	5,081,351

The number of white employees in the service of the above-enumerated tribes is over three thousand, and these are the men who are actually the tillers of the soil in this country. There are about nine thousand other white persons legal residents in this country held by these civilized tribes. Besides this number, there are about three thousand white men without any lawful authority. The area of land devoted to cultivation increases every year, and every agricultural product that is raised in the neighboring States is produced in sufficient abundance to supply the wants of all in the Territory. Live stock of all kinds is reared in excess of domestic demands. There are over two hundred common schools and ten high schools in the Territory. Over six thousand children attend the schools. Nearly all the tribes have abandoned the barbaric religion professed for generations among them. There are more church-houses, a greater number of Sunday-schools, and more children attend them, than in any other Territory of the United States, without regard to population. The traffic in ardent spirits is absolutely forbidden within the limits of this Territory.

After the close of the session of Congress, information was received at Washington of an extensive movement in the Western States with the design of occupying, by unauthorized per-

sons, of certain lands in the Indian Territory, which had been ceded to the Government for the purpose of settlement by other Indian tribes. The President immediately issued the following proclamation:

Whereas, It has become known to me that certain evil-disposed persons have, within the territory and jurisdiction of the United States, begun and set on foot preparations for the organized and forcible possession of, and settlement upon, lands of what is known as Indian Territory, west of the State of Arkansas, which Territory is designated, recognized, and described by treaties and laws of the United States and by the executive authorities, as the Indian country, and as such is only subject to occupation by Indian tribes, the officers of the Indian Department, military posts, and such persons as may be privileged to reside and trade therein under the intercourse laws of the United States; and

Whereas, These laws provide for the removal of all persons residing and trading therein, without express permission of the Indian Department and agents, and also of all persons whom such agents may deem improper persons to reside in the Indian country: Now, therefore, for the purpose of properly protecting the interests of the Indian tribes as well as of the United States in said Territory, and of duly enforcing the laws governing the same;

I, Rutherford B. Hayes, President of the United States, do admonish and warn all such persons so intending or preparing to remove upon said lands or into said Territory without permission of the proper agents of the Indian Department, against any attempt so to remove or settle upon any of the lands in said Territory. I do further warn and notify any and all such persons

who may so offend that they will be speedily and immediately removed therefrom by the agent according to the laws made and provided, and if necessary the aid and assistance of the military forces of the United States will be invoked to carry into proper execution the laws of the United States herein referred to.

In testimony whereof, I have hereunto set my hand and caused the seal of state to be affixed.

R. B. HAYES.

By the President:

WILLIAM M. EVARTS, Secretary of State.
WASHINGTON, April 26, 1870.

The landed interest of the State of Arkansas is large, and promises, if properly managed, to afford the means of liquidation of a large portion of the indebtedness to the United States, of effective assistance to the cause of education, and of still further, and greatly needed, assistance to the finances.

Immigration societies exist in various parts of the State, and there is also a State society; but they appear to languish for want of adequate support. Nevertheless, the natural attractions of soil and climate steadily induce a certain amount of immigration. The State has now the basis and foundation of a magnificent system of railroads. Two great trunk lines run continuously through it, from north to south and from east to west, and all that is necessary to complete this system and make it efficient in the diffusion of general prosperity, is to multiply feeders to these lines so as to send out their vivifying streams into every quarter and section of the State. Several such subsidiary lines have already been projected, and only await the aid and assistance of the State to become realities. The most prominent of these are the Joplin and Little Rock, connecting the rich and healthy regions of the northwest with the Little Rock and Fort Smith road; the Helena and Iron Mountain road, traversing and opening up that rich section of the Northeast known as the Crowley Ridge country; the Washita Valley road, bringing the great cotton-producing section of the southeast into connection with the Iron Mountain road at Arkadelphia; the Little Rock, Mississippi River, and Texas road, traversing and opening up the still richer cotton-growing regions of the lower Arkansas Valley, and directly connecting the lower Mississippi Valley with the main trunk-lines, with a prospective short-cut from Kansas City and the grain-growing regions of the Northwest, through the State, to New Orleans. All these subsidiary lines can be speedily built with the aid of the State government, without entailing a dollar of expenditure or of debt upon the people. All that they ask of the State is the donation of the public lands lying along their respective routes, and perhaps a little assistance here and there in the way of temporary exemptions or decrease of taxation. The most of these lands are now not only useless and unproductive, but in their present condition are actually hindrances and obstructions to advancement. They present the revolting aspect of deserted farms and silent and forbidding forests, and repel rather

than invite immigration. Before the adjournment of the Legislature a bill was passed to aid the railroad from Washington to connect with the Iron Mountain road at Hope. This is the first step in a system that promises sooner or later to redeem all Southwest Arkansas. This road will be extended and branched into all the other counties of that section, and bring their waste lands to the notice of immigrants, and their rich products to market.

Besides the Homestead Act passed by the last Congress authorizing persons desiring to settle on public lands within railroad limits to claim their homesteads out of odd sections in all States except Missouri and Arkansas, there was passed on the last day of the subsequent extra session a bill granting additional rights to homestead settlers on railroad lands in the two above-named States. It authorizes them to claim their homesteads out of odd sections just as they could do in other States. The general law, which is perfected by the new law, gives to every person the right to enter 160 acres instead of 80 acres, as heretofore, on these lands. The new bill provides that odd sections within the limits of any grant of public lands to any railroad company in the States of Missouri and Arkansas, or to these States in aid of any railroad where even sections have been granted, shall be open to settlers under the homestead laws to the extent of 160 acres. It further provides that any person who has, under existing laws, taken a homestead on any section within the limits of any railroad grant in these two States, who has been restricted to 80 acres, may enter an additional 80 acres adjoining the land embraced within his original entry. If the additional land is subject to entry, he may if he wishes surrender his entry to the United States for cancellation, and thereafter can enter lands under the homestead laws the same as if the surrendered entry had not been made. He can do so without payment of fees and commissions. It provides also that the residence of such person upon and the cultivation of land embraced in his original entry shall be considered his residence upon and the cultivation for the same length of time of land embraced in his additional or new entry, and shall be deducted from the five years' residence and cultivation required by law; provided that in no case shall a patent issue upon an additional or new homestead entry under this act, until the person has actually, and in conformity with the homestead laws, occupied, resided upon, and cultivated land embraced therein at least one year.

The public schools of the State are suffering in consequence of the payment of teachers in the depreciated State scrip, which is receivable for all dues and payable for all expenses. A poll-tax appropriated to the support of schools, through imperfect collection, yields about \$40,000 instead of \$100,000. The Arkansas Industrial University has 300 pupils, which might be increased to 600 under a small addi-

tional outlay by the State. There is a normal branch of this institution located at Pine Bluffs. St. John's College unsuccessfully asked of the Legislature an appropriation of \$5,000 per annum, to be expended in the establishment of a department of chemistry, metallurgy, geology, and mining; which department was to accomplish a thorough geological survey of each county, furnish a complete collection of specimens of the mineral productions of the State, and publish the results of its labors. The college engaged further to provide, in consideration of the State aid thus to be received, a free normal school.

It is made the constitutional duty of the General Assembly to provide by law for the support of institutions for the education of the deaf and dumb and of the blind, and also for the treatment of the insane. A beginning has been made for the education of the deaf and dumb and of the blind; but the institutions established for that purpose are imperfect. Owing to the embarrassed financial condition of the State, the appropriations for their support have been insufficient to provide for the education of all of those unfortunate classes residing in it.

In the Blind Institute forty-six pupils have been instructed during the last two years. Through lack of funds the number of pupils was limited and the length of the sessions reduced. The deaf-mute institution requires an appropriation of \$8,000 for its maintenance, and for the pupil fund the sum of \$180 per pupil. The sum of \$50,000 was appropriated in 1873 for the erection of a lunatic asylum. Of this appropriation \$21,000 in scrip was drawn by the trustees, and the balance of \$29,000 reverted to the Treasury; \$16,000 was expended in purchasing ground for the building, and \$5,000 converted into currency, realizing \$3,866.61. Out of this amount there has been paid for improvements on the ground, for plans and specifications for buildings, and on other accounts, \$1,104.16, leaving in the hands of the trustees \$2,262.45. The number of insane persons in the State, as nearly as can be ascertained, is about 800. Many of these are now "confined in loathsome and pestilent jails, unfit for the meanest criminals, without any regard for sex or condition." The trustees estimate that it will require an appropriation of at least \$150,000 in current money for the erection of "suitable and substantial buildings for the insane."

An enrollment of the militia of the State has been made, and all irregular organizations disbanded. The State possesses, nominally, 1,162 Springfield breech-loading rifle muskets, 79 muzzle-loading muskets, 61 shot-guns, 1 (62-pounder) Parrott gun, complete, and 1 (64-pounder) siege-gun, with sundry ordnance stores. There is due to the State from the United States, on her quota of arms, \$11,977.

The number of convicts in the State Penitentiary on December 1, 1878, was 496. There

had been released during the year 201. During the years 1877 and 1878 the Governor pardoned 50 convicts out of the penitentiary; released from fines and imprisonment in county jails, 55; commuted the sentence of death passed on three persons to imprisonment for life; and under the provisions of the act of January 31, 1867, granted, for exemplary conduct during their confinement in the penitentiary, commutations of sentence to 177 prisoners.

The investigation by a committee of the House of Congress relative to the failure of the appropriation for the Hot Springs,* showed it to have been the consequence of an oversight and not of a premeditated design. The appropriation was therefore confirmed. The Commissioners were reappointed in December, 1878, for one year. The engineer in charge finished the laying out of the streets in the southern portion of the city. Thirty-nine streets and eight main avenues have been surveyed. The Hot Springs reservation is under the superintendence of General B. F. Kelly of West Virginia. The bath-houses pay an annual rental to the United States of \$5 for every bathing-tub in actual use. The money received from this source will be applied toward improving and embellishing the mountain with shady walks, carriage-drives, and summer-houses. Certificates of ownership are granted by the Commissioners, and improvements on an extensive scale are projected.

Considerable excitement was created by the reported discovery of silver ore in Montgomery County, about thirty-five miles from Hot Springs. The locality is at the extension of the Santa Rosa Mountain range into the basin of the Mississippi. The topography and geology of this Arkansas region are similar to that of New Mexico, and may be rich in minerals.

Vigorous and successful measures were taken under the direction of the State Board of Health to keep out of the State yellow fever and other infectious diseases.

A colored convention assembled at Little Rock on April 12th to consider the subject of emigration. There was a fair representation from different sections of the State. Fifteen delegates and as many alternates to the conference at Nashville on May 6th were appointed. Resolutions were adopted affirming that, as colored citizens of Arkansas in many localities were not allowed free enjoyment of their constitutional rights, they were desirous of emigrating to some other State or Territory where the elective franchise can be enjoyed unmolested, and recommending the appointment of two colored commissioners under the National Migration Aid Society to select a suitable State or Territory, and a national donation or loan to aid settlers in the territory selected. The convention resolved itself into an auxiliary State Migration Aid Society, and appointed an executive committee.

The embarrassment in many of the counties and towns arising from a failure to pay the bonded indebtedness still continues. In Clark County a vote of the citizens was taken on the question of a dissolution of the county organization on a compromise of the debt. The result was 464 votes for compromise, and 622 for a dissolution of the county organization.

The official returns of the election of 1878 were received too late for insertion in the "Annual Cyclopædia" of that year. The vote for Governor, W. R. Miller, to whom there was no opposition, was 88,730. The following State officers were chosen: Secretary of State, John Frolich; Auditor, John Crawford; Attorney-General, William F. Henderson; Land Commissioner, D. W. Lear; Supreme Court Judge, John R. Eakin; Superintendent of Public Instruction, J. L. Denton; Chancellor, D. W. Carroll. The vote for members of Congress was as follows:

DISTRICT.	Democrat.	National and Independent.
I.....	8,863
II.....	11,226	8,399
III.....	7,202	6,863
IV.....	4,687	2,637

The State Legislature was divided as follows:

PARTY.	Senate.	House.
Democrats.....	29	61
Republicans.....	1	6
Nationals.....	1	6
Total.....	31	93

ARMY OF THE UNITED STATES. The strength of the Army of the United States at present is 2,127 officers, 24,262 men, and 388 retired officers. The enlisted men of the Signal Corps, Engineer and Ordnance Corps, Ordnance Sergeants, Commissary Sergeants, and Hospital Stewards, the prison guard at Fort Leavenworth, and the recruiting detachments, amount in the aggregate to 3,463 men, and are employed in the performance of important duties connected with the military establishments, but these duties bring but few of them into active service in the field. The statute now authorizes a total force of 25,000 men, not including the Signal Corps, which has by law 456 men. The combative force of the army proper consists of 11 generals, 1,559 officers, 20,556 men, and 233 Indian scouts.

The only disturbance of the peace during the year took place on the frontier with the Utes in Colorado and the Apaches in New Mexico. The Indian name "Utee," from which Utah takes its name, was applied to all the nomads west of the Rocky Mountains, as far as Nevada, and south into New Mexico and Arizona. Gradually they have been surrounded by white settlements and broken up into many distinct bands, the four principal of which are located

as follows: The Uintahs, in northeastern Utah, estimated at 430 souls; the "Los Pinos," in the Uncompahgre Valley, Colorado, estimated at 2,000 souls; the "Southern Utes," in southwestern Colorado, with 934 souls; and the "White River Utes," in northwestern Colorado, estimated at 800 souls. These Indians are of the fiercest class, and occupy the roughest parts of our country for farming, grazing, or for military operations. Their management is complicated by the fact that their country is known to possess mineral deposits, which attract a bold and adventurous class of white men. They are very warlike, and have no difficulty in procuring, in exchange for their deer-skins, horses, and sheep, any amount of the best rifles and ammunition. In former years they used to come east of the Rocky Mountains to hunt buffalo, but of late years they have confined their hunting to the bear, elk, and deer of the mountain region. As long as the game lasts they will not work or attempt farming, except in the smallest and most insignificant manner, and that only by compulsion.

A state of irritation, which resulted in a conflict, was produced by the demand of the agent, Mr. Meeker, that the Indians should engage in farming, to which they were unpromisingly hostile, and, in his endeavor to plow land for farming, Major Thornburgh with a small force announced to the agent his intention of coming to afford him any assistance he might need. The agent in reply stated that the Indians were very much excited, and regarded the approach of troops as a declaration of war; and he suggested to Major Thornburgh to stop at some convenient camping-place, and with five soldiers come into the agency, where a talk and a better understanding could be had. Major Thornburgh accepted the suggestion, and stated that he should move with his entire command within striking distance, and suggested that the agent and some of the chiefs meet him on the road. The former expressed gratification with the plan, and, in a letter dated September 29th, one p. m., said he expected to leave the agency on the next morning, adding: "If you have trouble getting through the cañon to-day, let me know. We have been on guard three nights, and shall be to-night, not because we know there is danger, but because there may be." The Indians lay in wait and made an attack. The result was a loss on the side of the military command of 11 citizens, 2 officers, and 12 soldiers killed and 41 wounded. The Indians admitted a loss of 39. Major Thornburgh was killed in this action, and the agent, Mr. Meeker, at his residence. About the same time some of the Apaches, who belong to the Mescalero Agency, near Fort Stanton, New Mexico, more than 600 miles south of White River, began a raid upon the ranches and settlements in southern New Mexico. Major Morrow, of the Ninth Cavalry, with about 450 men at his command, started

in pursuit, but no very serious affair was anticipated. These Apaches have no connection whatever with the Utes. They have always been restless and mischievous, and only resort to agencies to rest, recuperate, and make ready for the next war. As soon as winter comes they are expected to return to their agency and become orderly.

A proposition, often made and recently renewed, to transfer the charge of the Indians from the Department of the Interior to the War Department, has led to such conflicting discussions on the subject of Indian management as to obtain the name of the "Indian problem" for it. The difficulties connected with it have been steadily growing from year to year as the Western country, formerly occupied as hunting-grounds exclusively, is required for agricultural settlement and mining industry. In the same measure as white men and Indians more and more jostled each other, their contact has been apt to result in collision. The Indians are scattered over an immense extent of country, in tribes and bands of different size, with constantly growing and multiplying settlements of whites between them. The game upon which formerly most of them could depend for subsistence is rapidly disappearing. They occupy a number of reservations, some large and some comparatively small; some consisting in great part of fertile lands, some barren; many of which were secured to them for occupancy by treaties in times gone by with them as distinct nations. Many treaty reservations have turned out to be of far greater value in agricultural and mineral resources than they were originally thought to be, and are now equally coveted by the white population surrounding them.

The system of superintendents and agents has continued from an early period; but these officers were few in number and made their reports to the War Office, although neither the Secretary nor any officer of the Department had anything to do with their appointment, nor was the Department charged with the duty of supervising or controlling them. In 1854 an act of Congress was passed by which there was given to the Secretary of War a sort of general superintendency of the agents and sub-agents appointed by the President; and, while by that act the President was authorized to select military men to discharge the duties of Indian agents, a large majority of the agents selected were taken from civil life, and much machinery was employed in the conduct of Indian affairs. Year after year large amounts of money have been expended with a view to civilizing these people, and yet failure has attended the efforts in this direction. The inauguration of the "peace policy" in 1868 by President Grant, in which their management was placed entirely in the hands of civilians, was expected to produce more favorable results. The ends steadily pursued by the Interior Department have been—1. To set the Indians to

work as agriculturists or herders, thus to break up their habits of savage life and to make them self-supporting; 2. To educate their youth of both sexes so as to introduce to the growing generation civilized ideas, wants, and aspirations; 3. To allot parcels of land to Indians in severalty, and to give them individual title to their farms in fee, inalienable for a certain period, thus to foster the pride of individual ownership of property, instead of their former dependence upon the tribe, with its territory held in common; 4. When settlement in severalty with individual title is accomplished, to dispose with their consent of those lands on their reservations which are not settled and used by them, the proceeds to form a fund for their benefit, which will gradually relieve the Government of the expenses at present provided for by annual appropriations; 5. When this is accomplished, to treat the Indians like other inhabitants of the United States under the laws of the land. "This policy," says the Secretary of the Interior, "if adopted and supported by Congress and carried out with wisdom and firmness, will, in my opinion, gradually bring about a solution of the Indian problem; without injustice to the Indians and also without obstructing the development of the country."

It appears, from the report of the Commissioner of Indian Affairs, that the Indians on reservations have now under cultivation 157,056 acres, about 24,000 of which were broken by them in 1879, and that the products raised by the reservation Indians during the same twelve months amounted to 328,637 bushels of wheat, 643,286 bushels of corn, 189,654 bushels of oats and barley, 390,698 bushels of potatoes and other vegetables, and 48,353 tons of hay. This exhibit of the products of Indian labor does not include the five civilized tribes of the Indian Territory, who cultivated 237,000 acres and raised 565,400 bushels of wheat, 2,015,000 bushels of corn, 200,500 bushels of oats and barley, 336,700 bushels of vegetables, and 176,500 tons of hay. At the same time the raising of stock has been encouraged as much as possible. There are owned by reservation Indians 199,700 horses, 2,870 mules, 68,894 head of cattle, 32,537 swine, and 863,525 sheep, the latter principally by the Navajos. The five civilized tribes in the Indian Territory are reported to have 45,500 horses, 5,500 mules, 272,000 head of cattle, 190,000 swine, and 32,400 sheep. Provision has been made for an additional distribution of 11,300 head of stock cattle among the uncivilized tribes, it being found that the Indians are beginning to take excellent care of their domestic animals, and to be proud of the increase of their stock. Many have commenced raising swine and poultry, and it is thought expedient to encourage such beginnings in every possible way. The cultivation of garden vegetables among them is also rapidly spreading. Preparations have been made to increase the area of

cultivated soil very largely in 1880. Considerable quantities of agricultural tools and implements have been distributed, and the demand is constantly growing. So far as regards the solution of the Indian question, the Secretary of the Interior is of the opinion that it "depends upon the civilization of the Indians and their ability to take care of themselves."

The expenditures of the War Department for the fiscal year ending June 30, 1879, were \$42,653,723. The appropriations available for the service of the fiscal year ending June 30, 1878, were \$45,076,702; those for 1879 were \$53,016,040; and those for the fiscal year ending June 30, 1880, were \$46,269,821. The estimates for the service of the fiscal year ending June 30, 1881, amount to \$40,380,428. The estimates for the civil establishment, which is the War Department proper, amount to \$1,159,460. The force of the War Department and its bureaus was reorganized by an act of June 20, 1874, and placed on a basis, as to numbers, grades, and compensation, which seemed to be satisfactory in the transaction of public business, until that basis was materially changed by legislative reduction in 1876, and was thereafter considered by Congress as subject to further decrease. The military establishment is estimated for on the basis of 25,450 enlisted men, the Signal Corps being by law allowed 450 men not to be included in the 25,000. Under this head the estimates for the fiscal year ending June 30, 1880, were \$29,335,727.33; the appropriations to meet the same were \$26,978,847.33; and the present estimates are for \$29,319,794.78. The principal differences between the estimates and the appropriations are on account of the item for pay, etc., of the army, which is made up of estimates based on arithmetical calculations, and on items for the Ordnance Department which relate to timely provisions for the public defense in any emergency that may arise. The estimates for the public works are \$7,557,034.42, which amount is \$396,043.34 less than the estimates for 1879, \$113,946.88 less than those for 1880, and \$3,237,460.19 less than the appropriations for 1880, which were \$10,794,464.61. The amounts appropriated for "fortifications and other works of defense" during the last five years have been insufficient to preserve all such Government property from waste. This fact accounts for the annual increase in the amounts suggested for these works by the Chief of Engineers. Under this title the estimates for 1880, which were \$3,188,400, were reduced to \$1,000,000, and the present estimates, rendered in detail, for \$4,028,500, have been reduced in the aggregate to \$1,000,000, which amount could be wisely and properly applied to the preservation and care of these works. The estimates for rivers and harbors, rendered by items for \$14,326,650, were reduced in the aggregate to \$5,015,000, which was the total of the amount appropriated for the fiscal year 1877, and which

seems to have been sufficient for the promotion of the general commerce of the country during that time. The miscellaneous estimates are \$2,344,139.73, of which amount about one fourth appertains annually to the departmental collection and diffusion of valuable official data, such as the observation and report of storms through the Signal Service, the compilation and publication of official records of the war of the rebellion, and the like, and the remaining portion (which is over \$1,500,000) is made up of items wholly relative to certain moral obligations of the Government, such as the support of the National Home for Disabled Volunteer Soldiers, the furnishing of artificial limbs and other appliances to disabled soldiers, and the care of national cemeteries. The aggregate of the estimates for the next fiscal year is \$2,273,294.69 less than the amount of actual expenditures of 1879, \$5,889,393.01 less than the appropriations available for the service of the fiscal year 1880, and is \$7,289.40 less than the estimates for 1880, which were for a less sum of money than any annual estimates rendered to Congress from the Department for a period of at least eleven years.

The preparation of the Union and Confederate War Records is progressing under the management of Colonel R. N. Scott, of the army. The Secretary of War says: "There is a general disposition on the part of the ex-Confederate officers to contribute material to the official History of the War." The Southern Historical Society has placed its collection at the service of the Department, and valuable documents have been furnished by Generals Johnston, Pemberton, Wheeler, Jones, Rugles, and others.

The total number of deaths from all causes reported among the white troops was 266, or 12 per 1,000 of mean strength. Of these, 162, or 7 per 1,000 of strength, died of disease, and 104, or 5 per 1,000 of strength, of wounds, accidents, and injuries. The proportion of deaths from all causes to cases treated was 1 to 142. The total number of white soldiers reported to have been discharged the service on "surgeon's certificate of disability" was 677, or 31 per 1,000 of mean strength. The total number of deaths of colored soldiers reported from all causes was 28, or 14 per 1,000 of mean strength. Of these, 15, or 8 per 1,000 of strength, died of disease, and 13, or 6 per 1,000 of strength, of wounds, accidents, and injuries. The proportion of deaths from all causes to cases treated was 1 to 140. The total number of colored soldiers reported to have been discharged on "surgeon's certificate of disability" was 42, or 22 per 1,000 of mean strength.

The survey of the territory west of the 100th meridian has been continued in the States of Colorado, Texas, Nevada, California, and Oregon, and in the Territories of Arizona, New Mexico, Utah, and Washington, and in connection with this work a special survey of Great Salt Lake has been completed. No funds were

available for the prosecution of the field-work on this survey after June 30, 1879, and all parties were withdrawn from the field on or before that date. There are eight engineer officers now employed in the Western military divisions and departments in making surveys, and in collecting and mapping the geographical and topographical information obtained in scouts and campaigns against the hostile Indians. Maps prepared in this way are of great value to the War Department and to the army.

The Ordnance Department still continues the test of breech-loading ordnance, especially of the 8-inch rifle converted from a 10-inch smooth-bore gun, and thus far 202 rounds (190 with full battering charges) have been successfully completed. The endurance so far has proved satisfactory, and no evidences of want of endurance in its special construction have been so far afforded; and there are good grounds for the opinion that it will stand its thorough proof, and establish the fact that after this system the original smooth-bore cast-iron guns can be converted into breech-loaders, or original breech-loading cannon of the heaviest construction can be produced. The decided advantages to be derived from the use of breech-loading rifles, especially in casemated works, have been heretofore noticed in these pages. Since then the unfortunate disaster on board of the Thunderer (the bursting of a 38-ton muzzle-loading gun by the accidental insertion of two charges, impossible to occur in breech-loaders), and the unexcelled results (in power, accuracy, and successful manipulation) recently attained at Meppen, by Herr Krupp, in the trials of his breech-loading guns of 70 and 80 tons, have led to the conviction that it is highly probable that the general introduction of breech-loading instead of muzzle-loading cannon in the armaments of Europe, for all heavy ordnance especially, is a mere matter of time. During the last fiscal year there were manufactured at the National Armory 20,005 Springfield rifles, and, under the law authorizing it, 1,000 of the experimental Hotchkiss magazine rifles. The former have been produced at a much less cost than heretofore, owing to the increased number manufactured and the improvement of the plant employed; and, as there is now available a larger appropriation than usual for the present year, it is confidently expected that the cost will be yet further reduced in the future. There were in store on July 1, 1879, only 22,073 rifles and 5,406 carbines at the armory and arsenals. The Hotchkiss arms are now in the hands of the Regular Army for trial in actual service, and upon the reports to be made bimonthly will depend any recommendations for the supply to be hereafter manufactured.

The military board, consisting of Generals J. M. Schofield, A. H. Terry, and George W. Getty, before whom the President ordered a rehearing of the case of General Fitz John Por-

ter, made a report exonerating him entirely. They state the evidence as presenting itself under several distinct heads: 1. Imperfect and in some respects erroneous statements of facts, due to the partial and incorrect knowledge in the possession of the witnesses at the time of the court-martial, and the extremely inaccurate maps and erroneous locations of troops thereon, by which erroneous statements were made to convey still more erroneous impressions; 2. The opinions and inferences of prominent officers, based upon this imperfect knowledge; 3. Far more complete and accurate statements of facts now made by a large number of eye-witnesses from both the contending forces; 4. Accurate maps of the field of operations and the exact positions of the troops thereon at different periods of time, by which statements otherwise contradictory or irreconcilable are shown to be harmonious, and opposing opinions are shown to be based upon different views of the same military situation; and, 5. The conflicting testimony relative to the plan of operations, the interpretation of orders, the motives of action, and relative degrees of responsibility for the unfortunate results. Concerning the charge of which General Porter was found guilty, of not having moved his command on the night of August 27, 1862, in obedience to an order from General Pope, the Board report that it was a manifest physical impossibility to march over that road that night. They say nothing could have been gained by the attempt, and that it would have been wiser if General Porter had delayed his attempt still longer than he did. They think he exercised the very ordinary discretion of a corps commander, and that it was his plain duty to so express it. The report recites at much length and in detail the important events connected with the military operations of the 29th of August, 1862, and among other important facts it is made clear that Porter's display of troops in the early part of the afternoon of the 29th gave rise to the belief on the Confederate side of an attack about to be made, and that under this belief Longstreet sent his reserves from the extreme left to the extreme right of his army and in front of Porter, thus relieving the Union army under the other commanders from this Confederate force. Porter's duty during the afternoon of that date, the report states, was too plain and simple to admit of discussion, and the Board is unable to find anything in it subject to criticism, much less deserving censure and condemnation. He had made frequent reports to his superiors, stating what he had done and what he had been unable to do; what his situation was in respect to the enemy, and what their strength; what his impressions were from the sounds of action toward his right; how he had failed to get any communications from any commander in the main army, or any orders from General Pope or McDowell as to his designs for the night, sending an aide-camp to General Pope for orders and receiv-

ing no reply, not even information that the vital 4.30 order had been sent to him; and generally informing his superior officers that if left to himself without orders he would have to retire at night for food and water, which were not accessible where he was. These reports were sent not only frequently but early enough to insure the receipt of orders from General Pope or correct information from McDowell, if they had any to send him.

ASIA. The area of Asia was estimated in 1878 at 17,308,000 square miles, and the total population at about 831,000,000.* (Behm and Wagner, "Bevölkerung der Erde," vol. v., Gotha, 1878.)

In Afghanistan, the British armies having after a series of easy victories gained the important positions of Jelalabad and Candahar, and having secured the passes commanding the approaches to Cabool, the representatives of the Indian Government concluded with the Ameer Yakoob Khan, who succeeded the deceased Shere Ali, the treaty of Gundamuk. In this convention the jurisdiction of the English over the border territories was recognized, perpetual friendship was declared between England and Afghanistan, and the residence of a representative of the British Government at Cabool was stipulated for. The resident appointed in accordance with the treaty was received at Cabool with ceremonial honor; but a few weeks afterward a mutiny broke out among the Afghan soldiers, the residency was destroyed, and its principal members were murdered. Another military expedition was dispatched against Cabool, and occupied that capital October 10th, after which the British officers proceeded to restore order and punish the perpetrators of the outrages against the late residents. In consequence of this occupation, Yakoob Khan declared his abdication as Ameer of Afghanistan, and General Roberts issued a proclamation announcing that for the present the administration of the country would remain with the British authorities. (See *AFGHANISTAN*.)

Throughout the year the British Government was on the verge of another war with the young King of Burmah. This King, who succeeded his father in October, 1878, proved to be one of the worst tyrants the Asiatic countries have known during the present century, and seemed to be under the influence of a war party which inflamed him against the British. A claim laid by the King to the East Karenee country, which was disputed by England, greatly strained the relations between the two countries, and in October the British Resident at Mandalay left the country. In November the King of Burmah sent a special envoy to the Viceroy of India. (See *BURMAH*.)

While the progress of the British arms in

* For a detailed account of the area and population of the divisions and subdivisions of Asia see "Annual Cyclopædia" for 1878, article Asia.

Afghanistan was watched with great interest and considerable jealousy in Russia, a new Russian expedition against the Tekke Turcomans created some uneasiness in England. The expedition advanced in the direction of Merv, a place which many English statesmen would prevent Russia from occupying even at a risk of war. The Russian Government denied that the direct object of the expedition was the occupation of Merv; it was, however, generally understood that the expedition might ultimately lead to this result. For the present, the utter failure of the Russian army prevented a serious complication between England and Russia; but, as the attempt will be renewed next year, the danger of a collision is by no means averted. This further advance of the Russian armies, and the consolidation under Russian rule of the territories which have of late been annexed or may be hereafter annexed, will be greatly promoted by the building of a Central Asian railroad, which is contemplated for the near future, and by other works of material improvement which are pushed forward by the Russians. (See *RUSSIA*.)

The rule of the Chinese Government in Kashgaria has been fully reestablished, and Russia has been prevailed upon to consent to a restoration of Kulja, which was occupied by the Russians eight years ago in consequence of the disorders prevailing among the Mohammedans there. The influence of the Chinese Government in many of the small neighboring countries, like Burmah and Nepaul, seems to be on the increase, but the Government was again harassed in 1879 by several rebellions. (See *CHINA*.)

The entire incorporation of the Loochoo Islands with the Japanese Empire has strained the relations between Japan and China, as the Government of the latter country has never abandoned its claim to the islands. In discussing the controversy, the native papers of Japan glory in the progress they have made in civilization. (See *JAPAN*.)

Toward the close of the year the relations between England and Turkey assumed an unfriendly character, because the Government of Turkey, in the opinion of the English Government, had failed to carry out in Asia Minor those reforms which were stipulated for in the Berlin Treaty. In the beginning of November the British Mediterranean fleet was ordered to enter Turkish waters, and Sir A. Layard, in reply to inquiries from the Turkish Government, stated that his Government could not tolerate any further delay in the execution of the reforms promised in Asia Minor. The Turkish Government yielded to these representations, and promised to carry out the reforms. (See *TURKEY*.)

The religious complexion of Asia appears to be approaching a considerable change. Mohammedanism, which has been in modern times the most progressive of the Asiatic re-

ligions in point of territorial extension, is more and more stripped of all political power. (See MOHAMMEDANISM.) The missionary efforts of the Christian Churches, which since the beginning of the present century had not succeeded in adding any large numbers to the Christian population, have begun to be attended with marvelous success, especially in India and China. (See CHINA and INDIA.) In India, moreover, large numbers of the educated classes of natives are connecting themselves with the Brahma-Somaj, one of the most remarkable reformatory movements of the age, to the rise and progress of which we devote this year a special article. (See BRAHMA-SOMAJ.) The following table exhibits an estimate of the total population connected with the Protestant, Roman Catholic, and Eastern Churches and missions :

COUNTRIES.	Protestant.	Roman Catholic.	Eastern.
Russia.....	14,000	51,000	5,941,000
Turkey.....	10,000	260,000	3,000,000
Persia.....	8,000	10,000	50,000
China.....	50,000	483,000	5,000
Japan.....	4,000	20,000	5,000
Anam.....	450,000
Burmah.....	5,000
Siam.....	2,000	25,000
British possessions (including neighboring missions).....	2,600,000	1,264,000	800,000
French possessions.....	800,000
Spanish possessions.....	4,000,000
Portuguese possessions.....	850,000
Dutch possessions.....	170,000	80,000
Total.....	2,558,000	7,823,000	9,801,000

ASTRONOMICAL PHENOMENA AND PROGRESS. *Sun-spots.*—The dearth of sun-spots in 1878 and 1879 has been very remarkable. The minimum looked for about 1876 or 1877, and then thought to be at hand, was not reached till 1879, making the last period no less than twelve years. Dr. Schmidt, director of the observatory at Athens, Greece, reports that in 1878 the sun was entirely free from spots on 298 days of observation. At Greenwich, England, during the year ending May 1, 1879, sun-spots were visible but 27 days. It has been remarked, moreover, that throughout this period of quiescence the solar prominences were few and inconsiderable.

Minor Planets.—The search for minor planets during the past year was unusually successful, nineteen having been discovered in about nine months. Of these, eight were detected by Dr. Peters of Hamilton College, New York, and nine by Herr Palisa of Pola. The former has now discovered forty members of the group; the latter, twenty-one. The following names have been recently selected for those discovered, but not named in 1877 and 1878: No. 174, Phædra; 175, Andromache; 179, Clytemnestra; 180, Garamna; 182, Elsbeth; and 183, Istria. The names, together with the principal facts in regard to the discovery, of those detected in 1879 are given in the following table:

NO.	Name.	Date of Disc.	Discoverer.	Place of Disc.	Mag.
192.	Nausikaa...	Feb. 17....	Palisa...	Pola.....	11
193.	Ambrosia...	Feb. 28....	Coggia...	Marsellies..	12
194.	Prokne....	March 21....	Peters....	Clinton....	11
195.	Eurykleia..	April 25....	Palisa....	Pola.....	12
196.	Philomela..	May 14....	Peters....	Clinton....	10
197.	Arcto.....	May 21....	Palisa....	Pola.....	12
198.	Ampella....	June 18....	Borelly... Marsellies..	11

Comets.—Brorsen's comet of short period, first discovered in 1846, was detected on its seventh return by M. Tempel of Florence on the 14th of January. It passed its perihelion on the 30th of March. On the 24th of April the same observer found the second comet of 1867 on its third return—its period being nearly six years. Its orbit is the least eccentric known in the cometary system, the perihelion being exterior to the orbit of Mars, the aphelion interior to that of Jupiter. In other words, it is confined to the region of the asteroids. In 1882 it will approach very near to Jupiter, when its orbit may be so changed as to render it invisible on its future returns to perihelion. The third comet of 1879 was discovered on the 16th of June by Dr. Lewis Swift of Rochester, New York. When discovered it was about three minutes in diameter, had a bright central nucleus, and appeared nearly equal to a star of the ninth magnitude. The elements of its orbit have no resemblance to those of any former comet; its motion is retrograde; and its perihelion was passed on the 27th of April. The fourth comet of the year was discovered by Herr Palisa of Pola, August 21st. It had a circular disk nearly three minutes in diameter; its motion was direct; and it passed its perihelion October 4th. On the 24th of August Dr. Hartwig of Strasburg discovered a faint comet—the fifth of 1879—in R. A. 12^h 19^m, and decl. N. 61° 2'. Its elements have no marked resemblance to those of any known comet.

Spots on Jupiter.—Observations on Jupiter during the latter part of 1878 and the whole of 1879 have indicated changes of an extraordinary character in the planet's atmosphere. Some of the observers who have given close attention to the phenomena are Dr. Swift of Rochester, New York, Professor Pritchett of Glasgow, Missouri, Dr. Lohse of Potsdam, Mr. Dennett of Southampton, England, and Mr. Gledhill of Halifax. A very large spot, somewhat variable in color, but generally described as red or rose-colored, has been visible seventeen months. This spot when first seen was nearly circular. Gradually, however, it has assumed a more and more elliptical form, its

major axis remaining constantly parallel to Jupiter's equator. It seems also, like the solar spots, to have a proper motion upon the surface. Mr. Dennett remarks that "between July 27th and November 15th the longitude of its preceding extremity seems to have increased some twenty-four degrees, which means a proper motion eastward of more than 230 miles per day." In August, 1879, the length of the spot, according to the measures of Professor Pritchett, was nearly 25,000 miles, and its greatest breadth about 6,400. Other markings, indicative of unusual atmospheric activity, have been noticed during the year, but this "red spot," by its magnitude, color, permanence, and proper motion, has attracted the special attention of observers.

The Density of Saturn.—In the "Astronomische Nachrichten," No. 2269, Professor Asaph Hall of Washington compares the observed value of Saturn's polar compression with Laplace's formula for the ellipticity of a rotating homogeneous spheroid. The theoretical value of the ratio of the semi-axes is found to be 1.1859. The observed value is 1.1087 according to Bessel, or 1.1223 according to Kaiser. Consequently, as in the cases of the earth and Jupiter, the polar compression is less than it would be if the mass were homogeneous. The density increases, therefore, from the surface to the center of the planet. Moreover, the rate of variation is more rapid in Saturn than in Jupiter, and, as the mean density of the former is considerably less than the density of water, we may conclude that the surface of Saturn is in the condition of vapor.

Meteoric Showers.—The meteors of January 2d were observed at Bristol, England, by Mr. W. F. Denning. The sky was overcast on the night of the 1st, but toward morning the clouds partly cleared away, and in a watch of twenty minutes, commencing at 6^h 14^m on the morning of the 2d, two thirds of the sky being covered by clouds, fourteen meteors were seen, all belonging to the shower whose radiant is in Quadrans. The shower at this time was evidently very active. Mr. Denning remarks that in a cloudless sky more than one meteor per minute would have been seen by a single observer. The radiant point was at R. A. 230°, decl. N. 51°.

The Meteors of August 8th–12th.—The number of August meteors observed in 1879 was rather less than usual. The weather, however, was unfavorable, not only in our own country but also in England. In the "Science Observer" for September Mr. Edwin F. Sawyer of Cambridge, Massachusetts, gives the results of his watching on the nights of the 10th, 11th, and 12th; a succession of cloudy nights having prevented any previous observations. On the 10th, commencing at 9 o'clock and watching four hours, Mr. Sawyer counted 107 meteors, of which 78 were Perseids. The greatest frequency occurred soon after 11^h 30^m. "Their persistency to grouping was very noticeable,

and frequently intervals of five minutes and even longer occurred without a single meteor being recorded, and then several being seen almost simultaneously." The radiant was at R. A. 44° 30' and decl. N. 57°. The number of Perseids observed in 2½ hours, beginning at 9 o'clock on the night of the 11th, was 27. On the evening of the 12th the shower had nearly ceased.

The Meteors of November 13th–14th.—A few meteors from this interesting stream were seen at several stations. In a watch of two hours, commencing at 3^h 30^m on the morning of the 13th, Mr. D. E. Hunter of Washington, Indiana, assisted by several students, counted 190 meteors, the greatest number reported from any one station.

Relative Numbers of Meteors in Different Months.—In order to determine the relative proportion of meteors of all kinds registered by different observers, Mr. W. F. Denning recently summarized the results given in twelve catalogues, which comprise 59,086 meteors, and the following numbers were derived:

January.....	2,419 meteors.	July.....	7,369 meteors.
February.....	1,609 "	August.....	23,374 "
March.....	1,449 "	September....	2,897 "
April.....	4,324 "	October.....	4,827 "
May.....	1,183 "	November....	5,457 "
June.....	1,325 "	December....	2,908 "

Thus August alone contains nearly two fifths of the whole number recorded.

Origin of the November Meteors.—In a lecture recently delivered before the Royal Institution of Great Britain, Mr. G. Johnstone Stoney, after tracing the history of the November meteors, pointing out their connection with the comet of 1866, and indicating the manner in which they were permanently attached to the solar system, presents the following views in regard to their origin:

The question now arises, how the deserts of space which extend from star to star come to be tenanted here and there by a patch of gas or an occasional meteorite? Light has been thrown on this inquiry by discoveries made with the spectroscope in modern times, and by observations during eclipses. These have revealed to us the fact that violent outbursts occur upon the sun, and doubtless on other stars, so swift that the uprush must sometimes carry matter clear away into outer space. Imagine such a mass, consisting in part of fixed gas and in part of condensable vapors, ejected from some star. As it travels forward the vapors cool into meteorites, while the fixed gas spreads abroad like a great net, to entangle other meteors. In some cases both might travel together; in others the gaseous portion would be retarded before it passed beyond the neighborhood of the star, and the denser meteors would get ahead. But even so, in the lapse of ages other meteors would be caught, so that in any event a cluster would at length be formed. Now, the reasonable suspicion that this is the real origin of meteors has received striking confirmation from the discovery of the late Professor Graham, that meteoric iron contains so much hydrogen occluded within it as indicates that the iron had cooled from a high temperature in a dense atmosphere of hydrogen—precisely the conditions under which the vapor of iron would cool down while escaping from a large class of stars, including our sun.

We have now traced an outline of the marvelous history of these Arabs of the sky. We have met with

outbursts upon stars sometimes of sufficient violence to shoot off part of their substance. We have found the gaseous portion sweeping through space like a net, and the vapors that accompanied it condensed into spatters that have consolidated into meteorites. We have seen this system traveling through boundless space, with nothing near it except an occasional solitary meteor, and we have seen it in the long lapse of ages slowly augmenting its cluster of these little strangers. As it wandered on, it passed within the far-spreading reach of the sun's attraction, and perhaps has since been millions of years in descending toward him. Its natural course would have been to have glided round him in a curve, and to have then withdrawn to the same vast abyss from which it had come; but, in attempting this, it became entangled with one of the planets, which dragged it out of its course and then flung it aside. Immediately it entered upon the new course assigned to it, which it has been pursuing ever since. After passing the planet the different members of the group found themselves in paths very close to one another, but not absolutely the same. These orbits differed from one another very slightly in all respects, and among others in the time which a body takes to travel round them. Those meteors which got round soonest found themselves, after the first revolution, at the head of the group; those which moved slowest fell into the rear, and the comet was the last of all. Each succeeding revolution lengthened out the column, and the comet soon separated from the rest. Fifty-two revolutions have now taken place, and the little cloud has crept out into an extended stream, stretching a long way round the orbit, while the comet has fallen the greater part of a revolution behind. We can look forward, too, and see that in seventeen centuries more the train will have doubled its length, and that ultimately it will form a complete ring round the whole orbit. When this takes place, a shower of these meteors will fall every year upon the earth, but the swarm will be then so scattered that the display will be far less imposing than it now is.

*The Meteor of November 27, 1877.**—The number of the "Monthly Notices" of the Royal Astronomical Society for February, 1879, has a brief account of a fire-ball seen in England by Captain Tupman and others on the evening of November 27, 1877, at 10^h 26^m Greenwich mean time. A discussion by Captain Tupman of all the observations leads to the remarkable conclusion that the meteor was revolving about the sun in an orbit less eccentric than that of Mercury, and at a mean distance intermediate between those of Mars and the earth. The elements of its orbit are given as follows:

Mean distance.....	1.1691
Period.....	462 days.
Eccentricity.....	0.1568
Longitude of perihelion.....	70° 8'
Longitude of ascending node.....	245° 50'
Inclination.....	15° 0'
Motion direct.....

The radiant point of this meteor was at R. A. 285° and decl. N. 64°. Other meteors near this epoch have had very nearly the same radiant—a fact regarded by Captain Tupman as indicating the probable existence of "a meteoric ring of nearly circular form occupying the position in space defined by the elements given above."

The Meteorite of May 10, 1879.—In the

* The accounts of this meteor were received too late for our last volume.

"American Journal of Science" for July, 1879, Professor S. F. Peckham of Minneapolis, Minnesota, gives the principal facts in regard to a meteoric fall at Esterville, Emmet County, Iowa, at 5 o'clock p. m., May 10, 1879. Professor Shepard of Amherst College secured several fragments of this meteorite, and in the September number of the "Journal" he furnishes an interesting description of its structure and composition. The fall was preceded by a terrific explosion, which in a few seconds was followed by others, each succeeding report becoming gradually less violent. The meteoric body was seen to strike the earth at the edge of a ravine, where it penetrated to the depth of fourteen feet. Within a distance of two miles several other fragments were found, one of which, weighing about 170 pounds, was secured for the cabinet of the Minnesota State University. The largest mass weighed 431 pounds, and the third in magnitude, 32. Several small fragments were found after considerable search, making in all about 640 pounds. Professor Shepard characterizes the Esterville aërolite as remarkably unique in its composition. "Judging," he says, "from the specimens in hand, it can not properly be referred to any group of meteoric stones with which we are acquainted."

Meteor of November 24, 1879.—A meteor considerably larger than Jupiter was seen at 8^h 40^m on the evening of November 24th, at Bloomington, Indiana, by President Moss of the State University. It became visible nearly in R. A. 67° and decl. N. 13°, and it exploded into four fragments about R. A. 87° and decl. S. 7°. Its motion was slow, but the observer made no estimate of the time of flight. Dr. Moss, who was looking eastward when the meteor appeared, and had a complete view of its track, states that it continued to increase in brightness up to the moment of its explosion. It probably belonged to the group known as Taurids I.

Gold Medal of the Royal Astronomical Society.—The Council of the Royal Astronomical Society of London, at their annual meeting in February, 1879, awarded the Society's gold medal to Professor Asaph Hall of the United States Naval Observatory, Washington, D. C., for his discovery and observations of the satellites of Mars, and for his determination of their orbits. Lord Lindsay, the President of the Society, explained at length the grounds upon which the Council had made their award, gave an interesting sketch of the life and labors of Professor Hall, and closed by delivering the gold medal to the Foreign Secretary, whom he addressed as follows: "And now, Mr. Hind, may I request you, as the Foreign Secretary of the Society, to place this medal in the hands of the Minister of the United States, to be transmitted to Professor Asaph Hall, as the highest mark of esteem in the gift of the Royal Astronomical Society? Assure him at the same time of the deep interest that we in England have

ever felt in watching the progress of our beloved science in the hands of our cousins in the Far West."

AUDIPHONE, THE. It has long been known that waves of sound when made to resound on the teeth of deaf persons are appreciable by the auditory nerve, and that, when conveyed by a hard vibratory substance held in close contact to the teeth, the resonance in the mouth affects the nerve independently of the anatomical mechanism by which the waves collected in the aural canal are transmitted. The sonorous vibrations of the teeth and bones of the face are conveyed to the perceptive organism through the Eustachian tube. The sounds thus produced are usually, however, so wanting in clearness and purity that no one until recently has thought it possible to convey by such means any agreeable sounds, much less intelligible speech. At length an American inventor, himself wanting the power of hearing, has perfected an apparatus on this principle, by which the mouth is made to perform the office of the ear, and with which the deaf are made sufficiently sensible to, and able to distinguish and appreciate, all kinds of sounds. The sufferers from this affliction, which deprives them in so great a degree of lively and sympathetic social intercourse, have not found that the ear-trumpet, when they are able to use that clumsy instrument, relieves them much from their social isolation. These trumpets, while they can not convey to the defective ear the language of general conversation or the utterances of public speakers, or enable the wearer to enjoy the impressions of music, have also a tendency to aggravate the infirmity by throwing upon the impaired organ a greater volume of sound than it is able to bear. The inventor of the new instrument called the audiphone, Richard S. Rhodes, of Chicago, is himself deaf, and had his attention first attracted to the subject by the ticking of a watch. By holding the watch between his teeth he perceived that he was able to hear distinctly the clicking of the machinery, while if he held it against his ear no sound was audible. Mr. Rhodes consumed many years in experimenting upon all kinds of materials. He found wood, after trying a hundred different kinds in all possible shapes, too resonant for his purpose. The metals, zinc, silver, steel, brass, etc., gave too hollow a sound. After innumerable failures, he at last tested vulcanized rubber, which yielded most promising results. With another long series of experiments he elaborated the form which bears the sounds to the regained sense most perfectly and distinctly. The instrument, which the inventor proceeded to manufacture after obtaining a patent, has been used with surprising results, and promises to bestow the sense of hearing and the power of speech on many who otherwise could only communicate with their fellow beings by signs and gestures. The audiphone is similar in shape to a large fan.

It consists of a sheet of vulcanized rubber firmly attached to a handle of the same material. The sheet is about $\frac{1}{2}$ of an inch in thickness. The first size used was 9 by $9\frac{1}{2}$ inches; but different sizes are now made. When in use, this sheet is bent at the outer end by drawing a cord which passes through holes in the upper rim and down the inner side of the sheet into a slot in the handle. The lower or straight end of the sheet is held against the teeth of the upper jaw. The curve required is a very slight one, usually making an angle of 10° or 12° between the cord and the level surface. The more deaf the person, the tenser must the rubber be drawn. The vibrations imparted by any sound to the tense plate of rubber are communicated to the upper teeth and to the bones of the head, when the rubber is held in contact with the teeth, even if they are artificial teeth well fitted to the jaw; and the impression of the sound is faithfully recorded by the nerve of the ear. The instrument enables a deaf person to hear and enjoy music in a concert-room, as well as to listen to conversation carried on near him in ordinary tones.

AUSTRALASIA AND POLYNESIA. The population of the Australasian colonies of England increases with greater rapidity than that of any other country in the world. While the population of the United States increased during the forty years from 1830 to 1870 from 12,870,000 to 38,560,000, or about 200 per cent., that of Australia and New Zealand has during the same time risen from 300,000 to 2,000,000, or nearly 566 per cent. How rapidly the population has increased from 1871 to 1878 is shown by the following table:

COLONIES.	Population according to census of 1871 (or 1870).	Estimated population in 1878.
New South Wales.....	501,580	675,000
Victoria.....	729,568	887,000
South Australia.....	188,995	287,000
Queensland.....	120,066	208,000
Western Australia.....	24,755	28,000
Tasmania.....	99,328	107,000
New Zealand.....	294,028	414,000
Natives.....	Included in total.	100,000
Total.....	1,958,650	2,651,000

The total increase in seven years was about 692,000, or 35 per cent. The other English possessions in Australasia and Polynesia are:

Feejee Islands—white population.....	1,569
“ “ natives.....	118,000
Chatham Islands.....	172
Lord Howe's Island.....	40
Fanning Island.....	150
Malden Island.....	79
Total.....	120,010

Adding this total to the population of Australia, Tasmania, and New Zealand, the total population of the British possessions would amount to 2,771,010. The total area, including some small islands which are not inhabited, amounts to 3,084,671 square miles.

According to the last official censuses of the

several Australasian colonies, taken in 1870 and 1871, the aggregate number of Protestants was 1,382,584, or 74·4 per cent. of the total population; of Roman Catholics, 443,926, or 22·9 per cent.; of Jews, 8,248; of other religions, 12,141; of pagans, 30,903; not declared, 43,931. Among those registered in the last group there were 24,000 who "objected to state their religion from conscientious scruples." The remainder of 20,000 is made up of persons whose declarations could not be verified, and is partly explained by discrepancies which occur in every census. The pagans were chiefly represented by Chinese settlers in the gold districts. Among these Chinese there were no more than about thirty women, and the number of converts to Christianity was only a few dozens. The Jews nowhere exceed one and a half per cent. of the total population. The proportion of Roman Catholics to Protestants did not materially differ in the several colonies in 1871, as will be seen from the following table of percentages:

COLONIES.	Protestant.	Catholic.
New South Wales.....	67·5	29·3
Victoria.....	70·9	23·4
South Australia.....	77·7	15·4
Queensland.....	68·0	23·4
Western Australia.....	66·6	26·5
Tasmania.....	74·7	22·8
New Zealand.....	70·4	13·9
Total.....	74·4	22·9

Assuming that the proportion of Protestants and Roman Catholics was in 1878 about the same as in 1871, the aggregate number of Protestants in 1878 was about 1,972,000, that of Roman Catholics, 607,000. Of the 120,000 inhabitants of the other English possessions, about 100,000 may be set down as Protestants, and 10,000 as Roman Catholic, increasing the aggregate Protestant population of the British possessions to 2,072,000, and the Roman Catholic to 617,000. The following table presents an estimate of the total (the Protestant and the Roman Catholic) population of Australia and Polynesia in 1879:

TERRITORIES.	POPULATION IN 1879.		
	Total.	Protestant.	Roman Catholic.
British possessions.....	2,781,000	2,072,000	617,000
French ".....	97,000	18,000	89,000
Spanish ".....	36,000	7,000
Hawaiian Islands.....	57,000	34,000	23,000
All other Islands.....	1,805,000	172,000	16,000
Total.....	4,776,000	2,296,000	702,000

The Colonial Treasurer of New South Wales, James Watson, made his financial statement in the Legislative Assembly on February 12th. According to his report, the present Government had adopted, with only a few alterations, the estimates prepared by the previous administration. The revenue of 1878 amounted to £5,000,000, which was £76,000 more than was anticipated. The revenue of the present year

would probably be £5,100,000, and the expenditure £4,970,000, leaving a surplus of £130,000. The accumulated surpluses of previous years now amounted to £2,500,000, of which it was proposed to appropriate one half for permanent public works and other important services, leaving the other half for future appropriations. The estimates would contain only services of a reproductive character, such as railways and the water-supply for the metropolis. The railway scheme embraced a line from the present terminus at Redfern, through Sydney, to the waters of Port Jackson, a system of suburban lines, and the projected extension of lines into the interior to a distance of 400 miles. Mr. Watson said that in 1877 the railways paid 4½ per cent. on their capital. The financial prospects of the colony were, he added, so bright that it was unnecessary to change the fiscal system. They had had a splendid season, and an abundant harvest in every district of the colony. A change in the governorship took place during the year. Sir George Robinson, whose time had expired, was succeeded by Lord Augustus Loftus, formerly British Ambassador to St. Petersburg. Lord Loftus arrived at Sydney on August 4th. The budget, after having been passed by the Assembly, was disapproved by the Legislative Council in the latter part of August. It was finally decided to effect a partial remission of the customs duties, and cover the deficit by an increase in the stamp duties to the extent of £70,000. The principal measure of the session, the Government Law Bill, was lost in the Upper House, not by its rejection, but by its withdrawal. The second clause of the bill proposed to reduce from twenty shillings to ten shillings an acre the improvements which free selectors agreed to make on the land they had been allowed to take up. The Council, while willing to make the reduction for the future, objected to an alteration of the bargains already made with the state. The Government declined to go on with the bill unless it was made retrospective. As the Council was inexorable, and refused, in the absence of evidence or petitions, to release free selectors from the contracts they had made, the measure was dropped. The majority in the Assembly then pronounced itself strongly in favor of an elective Council in place of the present system, by which the Council is appointed for life. Nothing was done to secure that object, however, and Parliament was prorogued in the beginning of August.

The International Exhibition at Sydney was opened on September 17th by Lord Loftus, the Governor of New South Wales, in the presence of the Governors of Victoria, South Australia, and Tasmania, and the foreign Commissioners. There was a large display of agricultural implements, machinery in motion, pottery and glassware, and of fine art. There were 800 British industrial exhibitions, and 513 fine-art entries, including photographs.

Germany had 695 entries, including 108 fine-art; Austria, 170; France, 350 industrial and 168 fine-art; Belgium, 236 industrial and 50 paintings; United States, 150 industrial collections. Among the best filled sections were railway apparatus and material, steel and cutlery from Sheffield, guns and miscellaneous manufactures from Birmingham, and Manchester goods.

The term of Sir George Bowen, the Governor of Victoria, expired in 1878, and the Marquis of Normanby was appointed in his place. Lord Normanby had been previously Lieutenant-Governor of Nova Scotia, and Governor of Queensland and New Zealand, and his appointment was welcomed with great satisfaction by the inhabitants of Victoria. The dispute between the Legislative Council and the Assembly terminated in the proposition, made in the latter part of 1878, to send an embassy from the Assembly to the Home Government, to represent to it the state of affairs in the colony, and to ask its intervention. An embassy of three was accordingly sent off, but in February a dispatch from the Colonial Secretary of Great Britain, Sir M. Hicks-Beach, was published in Melbourne, expressing the opinion that no sufficient reason had been shown for the intervention of the Home Parliament. If, however, representatives of both the Council and the Assembly would come to England, every assistance would be rendered them. An act was passed by the Assembly in February, authorizing an International Exhibition, upon a somewhat extensive scale, at Melbourne. The building is to cost £95,000, and the exhibition will be opened on October 1, 1880, and closed on March 31, 1881.

On February 21st the following notice was issued by Sir Bryan O'Loughlen, acting Chief Secretary:

In consequence of the fabrication by, and the publication in, the "Argus" journal of false news, purporting to be genuine and authoritative, concerning the proceedings and discussions of the Cabinet, being continuously persisted in for several weeks past, the public are hereby cautioned against giving any credence to either those statements or any similar kind of news for the future in that journal. The "Argus" journal has been refused any official information of the kind by the Acting Chief Secretary, who feels justified in taking this course, as that journal has for several months unpatriotically attempted to depreciate the financial credit of Victoria.

This action of the Government created considerable excitement, and was severely denounced as aiming at the subversion of the liberty of the press.

On May 3d Sir M. Hicks-Beach sent another dispatch to the Government of Victoria, in which, after referring to the arrival of the Commission, headed by Mr. Berry, and to his former dispatch, he continues as follows:

The request urged by Mr. Berry in his letter of February 26th, that Parliament should, "by a simple alteration of the 60th section of the Constitutional Act of Victoria, enable the Legislative Assembly to enact in two distinct annual sessions, with a general

election intervening, any measure for the reform of the Constitution," is, in my opinion, even more open to objection than the proposal I understood him to convey in his memorandum of August 6th. But it is not necessary to discuss the merits of this or any other proposal, for, though fully recognizing the confidence in the mother-country evinced by the reference of so important a question for the counsel and aid of the Imperial Government, I still feel that the circumstances do not justify any Imperial legislation for the amendment of that Constitutional Act by which self-government, in the form which Victoria desired, was conceded to her, and by which the power of amending the Constitution was expressly, and as an essential incident of self-government, vested in the Colonial Legislature with the consent of the Crown. The intervention of the Imperial Parliament would not, in my opinion, be justifiable, except in an extreme emergency, and in compliance with the urgent desire of the people of the colony, when all available efforts on their part had been exhausted. But it would, even if thus justified, be attended with much difficulty and risk, and be in itself a matter for grave regret. It would be held to involve an admission that the great colony of Victoria was compelled to ask the Imperial Parliament to resume a power which, desiring to promote her welfare, and believing in her capacity for self-government, the Imperial Parliament had voluntarily surrendered; and that this request was made because the leaders of political parties, from a general want of the moderation and sagacity essential to the success of constitutional government, had failed to agree upon any compromise for enabling the business of the Colonial Parliament to be carried on.

In speaking of the recent differences, he says they turned upon the ultimate control of the finances. In order to avoid this difficulty, he recommends to the Council and the Assembly to follow the practice of the Imperial Parliament.

Parliament was opened on July 8th. The Governor's speech stated that signs of a revival of trade were apparent, and that agriculture and mining prospects were improving. He expressed regret at the necessity for increased taxation, owing to the loss of revenue. He referred briefly to the recent mission of Mr. Berry to England, which he hoped would result beneficially for the future progress of necessary legislation. The speech announced the introduction of bills for amending the land-tax, and measures of constitutional reform, including the amendment of the electoral law, the abolition of plural voting, and the amendment of the Local Government Act. On July 22d Mr. Berry, the Premier, introduced in the Assembly a bill to amend the Constitution. It gave to the Assembly absolute control over expenditure and taxation, provided for the gradual substitution of a nominee Council in place of the present elective Legislative Council, and provided that bills passed by the Assembly, and twice rejected by the Legislative Council, should be referred by the Governor to a *plébiscite*. On July 30th Mr. Berry presented his financial statement to the Assembly. The revenue for 1878 amounted to £4,807,000, and the expenditure to £4,944,000; the estimated revenue for 1879 was £5,088,000, and the expenditure £5,374,000, inclusive of the deficiency of £137,000 from last year's budget. It was proposed to

provide for the deficit of the current year by an increase of the land-tax and customs duties. In January a vote of want of confidence in the Ministry was passed by the Legislative Council of Queensland. In consequence, the Ministry resigned, and a new one was formed, composed as follows: Premier and Treasurer, T. McIlwraith; Colonial Secretary, A. H. Palmer; Minister of Justice, T. M. Thompson; Public Works, J. M. McCrassan; Minister of Lands, T. Perkins; Postmaster-General, C. H. Buzacott. This Ministry met with a vote of

want of confidence from the Assembly in the beginning of August. In August the Legislature passed an act declaring that certain islands in Torres Straits, and lying between the continent of Australia and the island of New Guinea, shall, from a day to be fixed by the Governor by proclamation, become part of the colony of Queensland, and subject to the laws in force therein. This territory is described in the act as follows: "All islands included within a line drawn from Sandy Cape northward to the southeastern limit of the Great Barrier Reefs; thence following the line of the Great Barrier Reefs to their northeastern extremity near the latitude nine and a half degrees south; thence in a northwesterly direction, embracing East Anchor and Bramble Cays; thence from Bramble Cay in a line west by south (south 79 degrees west) true, embracing Warrior Reef, Saibai, and Tuan Islands; thence diverging in a northwesterly direction, so as to embrace the group known as the Talbot Islands; thence to and embracing the Deliverance Islands, and onward in a west-by-south direction (true) to the meridian of 138 degrees of east longitude."

The Parliament of New Zealand was opened on July 11th. Among the measures, the introduction of which was promised by the Governor's speech, were manhood suffrage, Parliamentary representation on the basis of population, triennial Parliaments, and the regulation of Chinese immigration into the colony. The revenue of the colony for the preceding year had exceeded the estimates by £190,000; but there had nevertheless been a great falling off in the amount derived from land and from the income-tax, and Parliament would be asked to sanction an additional loan of £5,000,000. A difficulty arose with the Maoris at Taranaki, which at one time seemed to assume serious dimensions. The Maoris had trespassed on lands of white settlers, which had been confiscated from the natives,

THE POST-OFFICE, MELBOURNE.

and began plowing on these lands. The settlers applied to the Government for aid, but the Government refused to direct the settlers how to act in the emergency. The settlers, thereupon, having first informed the Government of their intention, took the matter into their own hands, and, mustering in considerable numbers, but unarmed, took possession of the plowmen and their teams, and removed them bodily across the Waingogoro River, which forms the boundary of the confiscated lands. No great attempt at resistance was made by the Maoris, and no unnecessary force was used by the settlers; and, after the ejection had been successfully accomplished, Sir George Grey telegraphed his approval of what had been done. The ejected plowmen were duly warned that in case of their return they would be arrested and sent to prison. But this threat and its subsequent execution did not deter them from their purpose. One party after another renewed the trespass, some of them even coming within the inclosures surrounding the armed constabulary depots with their plows; and party after party was arrested. The imprisoned natives were committed for trial for destruction of property, but they pleaded that their action was simply an assertion of an undefined claim in the confiscated lands, and that they adopted this as the only means of obtaining a hearing. Among the majority of Parliament an evident desire made itself manifest to do justice to the natives, and Sir George Grey, the Premier, who had up to this time enjoyed public confidence to a high degree, was bitterly denounced in Parliament, and charged with maladministration of the native affairs in particular, and public affairs in general. Upon the motion of Sir William Fox, the leader of the opposition, the House declared in August, by a majority of fourteen, that it had ceased to repose confidence in the administration of Sir George Grey. Upon the latter's request the House

was dissolved, and a new election ordered within four weeks by the Governor. Upon the assembling of the new House, the Government was defeated by a majority of two, whereupon Sir George Grey resigned, and a new Ministry was formed under Mr. John Hall.

In 1876 New Zealand, previously composed of nine large provinces, was divided into a large number of counties. The census of the colony by counties was taken in March, 1878. The total population of New Zealand, including Chinese, half-castes, and persons on ship-board, but exclusive of Maoris, was 414,412. The North Island had a population of 158,208; Middle Island, 255,757; Stewart Island, 251; and Chatham Island, 196. The provincial districts are still retained for certain purposes, and their population was as follows (exclusive of Chatham Island):

PROVINCES.	Population.
Auckland	82,661
Taranaki	9,463
Wellington	51,069
Hawke's Bay	15,015
Marlborough	7,557
Nelson	25,123
Westland	16,932
Canterbury	91,922
Otago	114,469
Total	414,216

The number of the Chinese was 4,382, of whom only eight were females. The number of the Maoris was 42,819, a decrease since 1874 of 3,197. The males considerably exceeded the females, the former being 23,533, and the latter only 19,286. But the most characteristic feature of these figures was the great disparity

PARLIAMENT BUILDINGS, SYDNEY.

in the proportion of adults and children. Of the total of 42,819 in 1878, no less than 14,533 were males and 11,802 females over fifteen years. In European countries the men usually average one fifth or one sixth of the population, while at present among the Maoris they constitute one third.

The Chinese question, which agitated all of the colonies of the Australian continent, also assumed considerable dimensions in Tahiti, the largest of the Society Islands, and which is under a French protectorate. An order was issued in the beginning of the year that no Chinaman would be permitted to land on the island without a residential permit from the Government. Any Chinese wishing to reside in the country must apply for leave to the authorities, who will make the necessary inquiries as to the character and the ability to work of the applicants; and any Chinaman presenting himself without authority will be sent back by the first ship. If he has not the means to pay his passage, he will be made to work in the Government dockyards until he has earned enough to pay the sum necessary to defray the expenses of his repatriation.

A revolt broke out among the natives on the island of New Caledonia, belonging to France, in the latter part of 1878. It was completely suppressed by February, 1879, and the captured natives were transported to the Isle of Pines and other small islands in the neighborhood.

The later efforts of Protestant missionaries among the aborigines of Australia show that those people have a higher intelligence and a greater capacity for civilization than they had been credited with. The failure of the earlier attempts to instruct them had left an impression that they would hardly receive even a rudimentary civilization. The colonies of natives connected with the Moravian and Episcopal missions have, however, made a respectable intellectual advancement and acquired considerable skill in industrial labor. The Moravians have two stations in Gippsland, to which neat churches are attached, with 125 native Christians living in a civilized manner. The Presbyterian Church of South Australia has a mission at Point Maclay, of which a similar report is made. The Anglican missionaries have schools from which favorable results have been gained, and missions have been established by colonial societies and the German Lutherans. The natives

connected with the Moravian mission received a medal at the Vienna Exhibition for arrow-root. The Anglican, Presbyterian, and Wesleyan Churches have also missions among the Chinese immigrants.

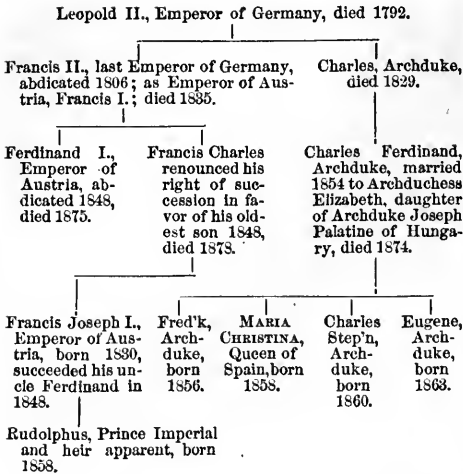

Missions are carried on among the Maoris by the Anglican and Wesleyan Missionary So-

cieties and two German societies. The principal mission is that of the Church Missionary Society, which returns 16 European and 27 native missionaries, with 220 native teachers, and has about 2,000 members with 10,315 adherents. The Wesleyan missions were nearly broken up by the wars several years ago. For 1879 they returned five missionaries, two assistants, and 385 members. The Hermannsburg mission has three stations among the natives. The Society for the Propagation of the Gospel and the North German Missionary Society sustain missions to colonists and natives.

Several Protestant missionary societies have found some of their most fruitful fields of operation in the South Sea islands. This has been notably the case with the American and British Congregational societies, and the British Wesleyan societies, whose labors have been rewarded by the conversion of whole nations. The condition of these missions, including those of the Sandwich Islands which have become a self-supporting Church, is as follows: Congregational churches and missions in the Sandwich Islands, Micronesia, the Marquesas Islands, the Society, Loyalty, Samoa, and Hervey Islands, and New Guinea, 36 missionaries, 680 assistants, mostly natives, and 36,580 members; Wesleyan churches and missions in the Feejee and Friendly Islands, Samoa, Rotumah, New Britain, New Ireland, and the Duke of York Islands, 17 missionaries, 572 native assistants, 31,143 members; Presbyterian missions in the New Hebrides, 16 missionaries, 1,150 members; Anglican missions in Melanesia and the Sandwich Islands, 14 missionaries and assistants, 252 members; French Evangelical missions in the Society Islands, 25 missionaries and assistants, 2,379 members; making a total of 1,360 missionaries and assistants and 71,471 members. The Rev. S. J. Whitmee, of the London Missionary Society, estimating the whole number of converts at 68,101, allots them among the three races of people thus: Malayo-Polynesian, 36,079; Melanesian, 30,522; Micronesian, 1,500. Taking the number of church members to be one fifth the number of nominal Christians, he estimates the whole number of those who have renounced paganism and come under the direct influence of missionary teaching to be 340,505. The missionary churches of the Sandwich Islands and Micronesia are now under the care of the Hawaiian Evangelical Association, a society organized in the Sandwich Islands, which is assisted by the American Board. The Wesleyan South Sea missions are under the care of the Australasian Wesleyan Missionary Society, whose office is at Sydney. The Malayo-Polynesian race have become almost entirely Christianized, the principal exceptions to the fact being found in the Marquesas Islands, where the Hawaiian Society has a mission. The Wesleyan missions in the Friendly Islands are self-supporting and contribute to the support of the society; and the same is the case to a large extent with those in

the Feejee Islands. Several of the London Society's missions are largely self-supporting, the people building their own chapels, buying their own books, and paying the salaries of their native pastors and schoolmasters, only the English missionaries drawing their salaries from home; but this last item is more than covered by the amounts which the missions contribute to the general funds of the Society. Native pastors and teachers are relied upon in most of the islands to continue the work, the white missionaries acting to a large extent as superintendents and counselors, or, as in the Sandwich Islands, simply as equals, and tending every year to exercise less authority and be less necessary. Schools have been established everywhere, and religious books and school-books have been published in the native languages, of which those in use at the missions have been reduced to writing by the missionaries. The Wesleyan missions return 47,431 scholars. The elementary schools are supplemented by higher schools, training schools for teachers, colleges, and theological schools. The colleges of the Sandwich Islands have been for several years in successful operation. The Wesleyans have a college at Navuloa, Feejee, where, according to the British Governor, Sir Arthur Gordon, "a really superior education is given to those who are preparing for ordination, and to a large number of others of the best native families." At the Wesleyan Tubon College, in Nukualofa, Tonga, the pupils are said to have acquitted themselves well before the Governor when examined in "euclid and algebra, in English, and geography." In the Anglican Melanesian missions the plan is adopted of taking youths from their own islands to a school in Norfolk Island for a few months in each year, after which they are returned to their homes with the expectation that they will exert a favorable influence over their countrymen. The missionaries in charge of the school also visit the different islands for a few weeks or months in the healthy season.

AUSTRO-HUNGARIAN MONARCHY, an empire in Central Europe. Since the year 1867 the monarchy forms a dual state, consisting of a German or "Cisleithan" monarchy, Austria, and a Magyar or Transleithan kingdom, Hungary. Each of the two countries has its own Government, while the connecting ties between them consist in the person of the hereditary sovereign, in a common army, navy, and diplomacy, and a common Parliament, the Delegations. Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, the Emperor Ferdinand I., December 2, 1848. Heir apparent to the throne, Archduke Rudolphus, born August 21, 1858. A member of the imperial family, the Archduchess Maria Christina, was married on November 29th to King Alfonso XII. of Spain. (See SPAIN.) The following genealogical table shows the relationship between the new Queen of Spain and the Emperor of Austria:

The Ministry for the Common Affairs of the Empire consisted, toward the close of the year 1879, of Karl Heinrich Baron von Haymerle, Minister of Foreign Affairs and of the Imperial House (appointed October 9, 1879); Baron Leopold Friedrich von Hofmann, Minister of the Finances of the Empire (appointed 1876); and Count Arthur Bylandt-Rheidt, Minister of War (appointed 1876).

The Ministry of Cisleithan Austria, at the close of 1879, was composed of Count Eduard Taaffe, President (appointed August 14, 1879); C. von Stremayr, Public Worship and Instruction (November, 1871); General Horst, Defense of the Country (appointed *pro tem.* November, 1871, definitely in March, 1872); Count Julius von Falkenhayn (August 14, 1879), Agriculture; Baron Karl von Korb-Weidenheim (August 14, 1879), Commerce; Emil Chertek (August 14, 1879), Finance; Florian Ziemialkowski (April, 1873), and Dr. Alois Prazak (August 14, 1879), Minister without portfolio.

Count EDUARD TAAFFE was born February 24, 1833. Having held various administrative offices, he was in March, 1867, appointed Minister of the Interior, and later on in the same year substitute of the Minister-President and Minister of Public Defense; and in 1868 he was appointed temporarily and in 1869 permanently Minister-President. Resigning this post in 1870, he was next called to the office of Governor of the Tyrol, where he showed great administrative talent in reconciling the Italian with the German element. At the beginning of 1879, on the resignation of the Auersperg Cabinet, he was charged with the formation of a new Cabinet, but, having failed in this task on the eve of the expiration of the session of the Reichsrath, and the members of the Auersperg Cabinet being prevailed on to retain their portfolios, the Count joined that body as Minister of the Interior. Under his auspices the Reichsrath was closed and new elections were held. The pro-

gramme of Count Taaffe aimed at the reconciliation of the various nations of Austria, the union of their representatives in the Reichsrath, and the direction of the energies of Parliament to economic and financial questions.

Dr. VON STREMAJR was born October 30, 1823. He was on several occasions Minister of Justice and Worship, until in 1871 he was appointed Minister of Education in the Auersperg Cabinet, which office he held up to the present year.

General Baron HORST, the Minister of Public Defense, has held this position since 1871, and has administered his department with eminent success.

Dr. ZIEMIALKOWSKI, a Pole by birth, had as a youth a very agitated career, and was condemned to death for being compromised in some political affairs. Having been successful as an advocate, he entered Parliament, and was in 1867 elected second Vice-President. In 1873 he was called upon to act as intermediary between the Government and his Polish compatriots.

Count JULIUS FALKENHAYN is the representative in the Parliament of the Clerico-Feudal party, of which he has long been an active partisan. His appointment was regarded as a concession to the rural communes of the Tyrol, Salzburg, Upper Austria, and Styria, where the Clerical party is in the majority.

Baron KORB-WEIDENHEIM, Minister of Commerce, although belonging to the Reichsrath since 1867, was known but very little before his appointment. This was intended to secure to the large landed proprietors of Bohemia a place in the Government.

Dr. A. PRAZAK, born February 21, 1820, was a deputy for Moravia from 1861 to 1863, and again since 1874, and represented in the new Parliament the Czech element. Together with Dr. Ziemialkowski, he was expected to form an instrument of communication between the Government and the new Slav element which had recently entered the Reichsrath.

The area of the Monarchy is 240,348 square miles; population, according to the census of 1869, 35,901,435. The area of Cisleithan Austria (the land represented in the Reichsrath) is 115,908 square miles. The civil population at the end of 1878 was officially estimated at 21,970,649, to which must be added the army, numbering (close of 1876) 177,449 persons; making a total population of 22,148,098. The estimate is based upon the census of December 31, 1869, by adding the average percentage of increase. The civil population was distributed among the different crown lands as follows:

COUNTRIES.	Inhabitants, Dec. 31, 1878.
Austria below the Enns	2,201,423
Austria above the Enns	750,301
Salzburg	154,956
Styria	1,191,732
Carinthia	389,366
Carniola	471,936
Trieste	140,117
Goritz and Gradisca	219,215
Istria	275,798

COUNTRIES.	Inhabitants, Dec. 31, 1878.
Tyrol.....	796,577
Vorarlberg.....	103,920
Bohemia.....	5,486,814

Of the total number of children born, 21,514 were still-born, and of these 17,084 were legitimate and 4,430 illegitimate. Of the live-born children, 717,130 were legitimate and 117,099 illegitimate. Of the total number of children born, 440,830 were males and 414,913 females. Of the total number of deaths, 357,182 were of males and 329,236 of females. In regard to age, 31 males and 45 females were upward of 100 years old at the time of their death. Of the deaths, 69,513 were caused by epidemics (among them, 36 by cholera and 1,274 by small-pox), 607,707 by other diseases, and 9,198 by violence. The latter class includes 2,314 suicides of males and 433 of females.

The number of professors and students (inclusive of non-matriculated bearers) was in the summer semester, 1878, as follows:

UNIVERSITIES.	Professors.	Students.
Czernovitz.....	39	223
Cracow.....	82	583
Gratz.....	112	764
Innspruck.....	82	587
Lemberg.....	54	941
Prague.....	168	1,695
Vienna*.....	294	3,711
Total.....	881	8,504

According to the common budget of the whole empire for 1878, the amount required for the ordinary branches of administration was 111,221,662 florins. The receipts for the same branches were estimated at 4,548,196

florins, and the receipts from customs 9,000,000 florins, leaving 97,673,466 florins to be distributed in Austria and Hungary. Of this amount, 1,953,469 florins were to come from the Treasury of Hungary, and of the balance Austria contributed 70 per cent. and Hungary 30 per cent. The common debt of the empire on January 1, 1878, amounted to 411,999,868 florins. The budget of Austria Proper for 1878 was as follows (in florins—1 fl. = 48 cents):

RECEIPTS.	Ordinary.	Extraordinary.
1. Ministry of Finance.....	343,993,836	1,599,107
2. Ministry of Commerce.....	10,402,340	78,900
3. Council of Ministers.....	583,030
4. Ministry of the Interior.....	1,071,900
5. Ministry of Public Defense.....	30,000
6. Ministry of Worship and Education.....	5,077,852	1,014,659
7. Ministry of Justice.....	575,800
8. Miscellaneous.....	60,800	35,806,779
Total.....	361,795,058	37,999,445
Total receipts.....	399,795,168
Net receipts.....	323,146,471

Among the receipts of the Ministry of Finance, the direct taxes amounted to 90,000,000 florins (ground-tax 36,000,000, income-tax 20,000,000), and the indirect taxes to 231,632,300 florins (duties 18,634,000, excise 61,481,000, salt monopoly 19,292,000, tobacco monopoly 59,690,000, stamps 17,200,000, judicial fees 32,500,000, state lottery 20,117,700).

The expenditures were as follows:

EXPENDITURES.	Ordinary.	Extraordinary.
1. Civil list.....	4,650,000
2. Imperial Cabinet chancery.....	72,514
3. Reichsrath.....	677,480	800,000
4. Imperial Court.....	21,000
5. Council of Ministers.....	872,700	16,550
6. Ministry of the Interior.....	15,800,600	1,405,404
7. Ministry of Public Defense.....	7,849,100	400,000
8. Ministry of Worship and Education.....	14,461,945	2,407,708
9. Ministry of Finance.....	71,800,400	441,192
10. Ministry of Commerce.....	21,578,900	3,248,900
11. Ministry of Agriculture.....	9,881,561	984,840
12. Ministry of Justice.....	19,645,100	1,448,420
13. Board of Control.....	157,000	1,000
14. Pensions.....	18,692,000
15. Dotations.....	609,000	29,958,030
16. Public debt.....	100,170,754	23,281,560
17. Administration of public debt.....	774,600
18. Cisleithan portion of the common expenditure.....	76,753,146
Total.....	359,067,800	63,383,904
Total expenditure.....	423,121,704
Total receipts.....	399,795,168
Deficit.....	23,326,541

The public debt of Austria Proper on July 1, 1878, was as follows (in florins):

TITLE OF DEBT.	Bearing interest.	Bearing no interest.	Total.
1. Consol. debt, old....	580,582	726,697	1,316,279
Consol. debt, new....	2,769,265,625	122,612,273	2,891,877,898
2. Floating debt.....	97,930,029	995,998	99,926,027
3. Rentes for damages.....	12,555,862	12,555,862
4. Rentes to Bavaria..	1,750,000	1,750,000
Total.....	2,976,094,098	124,385,067	3,000,429,165

* Exclusive of the faculty of evangelical theology.

The commerce of Austro-Hungary, comprising imports and exports of merchandise and of bullion, was as follows in each of the years from 1868 to 1876:

YEAR.	AUSTRO-HUNGARIAN CUSTOMS TERRITORY.				CUSTOMS TERRITORY OF DALMATIA.	
	Merchandise.		Bullion.		Imports.	Exports.
	Imports.	Exports.	Imports.	Exports.		
1868...	387,300,000	428,900,000	33,000,000	83,900,000	8,300,000	7,200,000
1869...	420,600,000	438,100,000	39,500,000	26,900,000	8,100,000	7,900,000
1870...	436,000,000	393,400,000	41,000,000	84,100,000	9,200,000	8,600,000
1871...	540,800,000	467,600,000	59,400,000	55,500,000	8,600,000	7,900,000
1872...	613,400,000	384,600,000	36,500,000	66,100,000	9,200,000	6,900,000
1873...	538,100,000	428,600,000	40,800,000	31,100,000	9,700,000	8,100,000
1874...	563,700,000	443,300,000	19,900,000	15,900,000	10,300,000	6,500,000
1875...	552,500,000	504,500,000	15,800,000	13,400,000	13,400,000	10,400,000
1876...	518,000,000	508,600,000	33,600,000	81,300,000	13,800,000	8,200,000

The following statement shows the strength of the commercial marine of Austro-Hungary on the 1st of January, 1878:

	Number of vessels.	Tonnage.	Crews.
Sea-going steamers (15,560 h. p.)...	70	15,883	2,172
Coasting steamers (832 h. p.).....	28	1,576	181
Sailing vessels, including coasters and fishing-smacks.....	7,510	273,339	25,298
Total.....	7,608	290,298	27,651

The army of the Austro-Hungarian Monarchy was in August, 1878, composed as follows:

	PEACE FOOTING.		WAR FOOTING.	
	Officers.	Men.	Officers.	Men.
Standing army.....	14,710	257,207	23,637	761,929
Imperial Royal Landwehr.....	572	2,782	2,916	118,626
Royal Hungarian Landwehr.....	1,045	9,288	3,028	127,284
Staffs.....	186	90
Gendarmes and military police.....	24	1,069	24	1,069
Army studs.....	143	5,095	143	5,095
Total.....	16,635	275,581	29,753	1,018,958

The naval forces at the end of the year 1878 consisted of 14 ironclads and 37 other steamers, the majority of the latter of small dimensions, constructed chiefly for coast defense.

The total length of railways in operation on January 1, 1878, was: In Austria Proper, 11,211 kilometres; in Hungary, 6,773 kilometres; total, 17,984. The length of the telegraph lines and wires, and the number of stations and messages carried were in 1877 as follows:

	Austria.	Hungary.	Total.
Lines.....	34,087 kil.	14,908 kil.	48,996 kil.
Wires.....	87,585 "	49,943 "	137,529 "
Stations.....	2,418	981	3,399
Messages.....	5,353,544	2,667,818	8,025,362

The number of post-offices in 1877 was 4,366 in Austria Proper and 1,960 in Hungary.

The area and population of the occupied districts of Bosnia and Herzegovina, according to the "Neue Freie Presse" of Vienna, were divided as follows: In Bosnia there are 4,499 square miles under agricultural cultivation,

8,659 of forest and woodland, 2,750 of meadow and pasturage, and 530 of sterile soil; altogether, 16,438 square miles. The population includes 325,020 Mussulmans, 390,460 Orthodox Greek Christians, 136,287 Roman Catholics, 2,145 Jews, and 8,290 gypsies; total, 862,202. The occupied portion of the sanjak of Novi-Bazar has 700 square miles under cultivation, 1,592 of forest and woodland, 509 of pastureland, and 721 of mere sterile desert; altogether, 3,522 square miles. The population is set down at 61,150 Mussulmans, 79,948 Oriental Greek Christians, 95 Jews, and 807 gypsies; total, 142,000. The Herzegovina has 806 square miles under cultivation, 849 of forest, 573 of pasturage and meadow, and 2,080 of sterile soil; altogether, 4,308 square miles. The population is composed of 56,000 Mussulmans, 101,348 Orthodox Greeks, 49,217 Roman Catholics, 65 Jews, and 1,340 gypsies; total, 207,970. The entire area of the occupied provinces therefore amounts to 24,277 square miles, and includes a total of 6,005 square miles under cultivation, 11,100 of forest and woodland, 3,841 of meadow and pasture land, and 3,331 of sterile soil, most of which is probably reclaimable, with a total population of 1,212,172. This population is distributed as follows: 442,170 Mussulmans, or 36.48 per cent. of the whole; 571,756 Orthodox Greeks, or 47.17 per cent.; 185,504 Roman Catholics, or 15.31 per cent.; 2,305 Jews, or 0.18 per cent.; and 10,437 gypsies, or 0.86 per cent.

The Reichsrath reassembled after the Christmas recess on January 15th, and, after the transaction of some minor business, began the discussion of the Treaty of Berlin. There were 28 speakers announced against and 12 for the treaty. In the general debate Pächter moved to reject the treaty and to proceed to the order of the day. Dunajewski denied the right of the Reichsrath to come to a decision on the resolutions of a European Congress, and moved that the House receive the treaty. Deputy Fux of Znaim also spoke against the treaty, and moved the order of the day, or, in case the treaty be accepted, a declaration with regard to the constitutional difficulties in the way of the occupation. The debate was then adjourned. It was continued on the 21st, when the report of the committee was made. Pro-

fessor Ed. Stuss, the reporter of the majority of the committee, confined himself to moving that the constitutional sanction be given to the Treaty of Berlin. He was followed by Dr. Herbst, the reporter of the minority, who stated that the House undoubtedly had the privilege to criticise the events which had come over Austria, and had inflicted on the country and the citizens such heavy burdens. He added that the policy of presenting to the country *faits accomplis*, which had been inaugurated so successfully by the Government, was continued uninterruptedly; that every day new *faits accomplis* were created; and that every day new interrogation marks were placed after the provisions of the Constitution. He also referred to the address of the Emperor of last November, and declared that since that time no change had taken place to satisfy the people. He closed his address as follows: "This is a difficult time for parliaments, not only in Austria but in all of Europe. The free speech of the individual is to be restricted, but it would be a still greater crime if the Chamber of Deputies was to renounce its free speech." The debate ended on the 25th, in the acceptance of the Treaty of Berlin by 154 votes against 112, together with the resolution proposed by the Left Centre expressing the conviction that in the direction of foreign affairs the Government would henceforth take into due consideration the views expressed by the House in its address to the Crown on November 5, 1878, regarding the serious financial position and constitutional complications to be apprehended from the occupation of Bosnia. Unlike the first debate on this subject, the debate on this occasion grew more and more animated toward the end, attracting universal popular attention. This was due to the circumstance that the internal strife of the different fractions of the Constitutional party, subdued in the earlier debate by a compromise, came this time, after the failure of the compromise, to the front. Added to this, while in the former debate on the address the Government maintained almost a passive attitude, Dr. Unger, its best speaker, came forward in the latter debate, and in a brilliant constitutional *exposé* set forth the anomalies which must needs arise if the paragraph of the Constitution giving the Reichsrath the right of accepting or rejecting international treaties were taken too literally and applied without due discrimination. This brought to the front the constitutional question, in which most of those now in opposition had made their reputation, and afforded them an opportunity to remind their adversaries that they had become faithful to their colors. In the heat of the debate personal attacks and rejoinders became more and more frequent, till toward the end a warm discussion was developed such as had not been heard for years in the House. The effect of all this was, that the schism and decomposition of the Constitutional party, long patent by the

proceedings of the clubs, but hitherto deferred or prevented by a series of compromises from appearing in the House, now came openly to light there, manifesting such an intense revulsion that any further attempts to solder the broken party seemed hopeless. There had been many causes gradually leading to this result, the principal one being that the party had in the course of time lost, so to speak, its right of existence in a country endowed with a parliamentary Government. In face of the combination of Clericals, Federalists, and Nationalists in the time of the Hohenwart Ministry, and of the Czechist fundamental articles threatening destruction to the work of compromise effected in 1867, and aiming to upset the dualistic organization of Austro-Hungary, the gathering together of all the German liberal elements, however antagonistic otherwise, in the one purpose of upholding the present Constitution, insuring the virtual supremacy of the German element in Austria and the consolidation of parliamentary government, was nothing but an act of self-defense. Great, too, had been the results of this combination within the past seven years. By substituting for the deputation of the provincial Diets direct elections to the Reichsrath, the power of particularism had been broken and the supremacy of the Reichsrath fully established; while by the regular working of parliamentary government the vitality of the new liberal institutions had been more and more demonstrated, and the system had recommended itself to the public, more and more gaining the bulk of the population. The more, however, the object for which the party had been formed was attained, the bond hitherto keeping the party together was loosed. The most timid among the defenders of the Constitution ceased to fear a reaction, and even the most obstinate among its opponents, the Czechs, despaired of their cause. The dissimilar elements, therefore, comprising all political shades, being no longer held together by a common object, necessarily began to resolve themselves into their original shape. In the beginning of February the Emperor recalled Count Taaffe, Governor of the Tyrol, and intrusted him with the formation of a new cabinet. On February 4th all the subjects awaiting discussion in the Lower House of the Reichsrath were removed from the order of the day, pending the definitive appointment of a ministry. In the beginning of February the Upper House of the Reichsrath adopted the report of the committee on the Treaty of Berlin, recommending its adoption, unanimously and without debate. On the 11th an imperial decree was published accepting the resignation of the Minister President Prince Auersperg, and of the Minister without portfolio Dr. Unger, and appointing Dr. Stremayr President of the Council, Count Taaffe Minister of the Interior, and reappointing the former Ministers to their posts. Even those most opposed to such a solution saw no alternative after the

failure of the attempts to form what might be called a Parliamentary Ministry in the strict sense of the word, supported by a clear and compact majority. Two attempts in the latter direction had been made, the first by Baron Pretis-Cagnodo, which aimed at forming a majority by the fusion of the different fractions of the Constitutional party, and the second by Count Taaffe, who took as the basis of his combination the two more Conservative fractions of the Constitutional party, round which should be grouped some of the fractions outside that political body. Both these schemes, however, failed, and the hope of forming in the present Parliament a compact working majority had to be abandoned. Nothing remained but to tide over the time till the general election, which must be the principal task of the reconstituted Ministry.

The new Ministry met on February 18th in the Reichsrath, and Dr. Stremayr made a declaration, in which he alluded to the attempts made to form a new Cabinet. Besides the difficulties of the general political situation, he said, the circumstance that the duration of the present Parliament would end in the course of the current year proved an insuperable obstacle. This decided the position of the present Cabinet. It had no programme of the future, no new policy to announce; its main office was to guard against any interruption in the constitutional working of Parliament and in the administration. As to the principles directing the Ministry in this province, the House had known them for seven years. In regard to the work to be done, there were, above all, the budget and the bills connected with it. With reference to Eastern affairs, which so deeply affect the interests of the monarchy, a precise and positive basis had been laid down for them by the Treaty of Berlin. Taking its stand on this instrument, the Government would esteem it its duty to execute fully the task assigned it by the Powers. The Government would seek to avoid all constitutional complications and further sacrifices, as far as they regarded it compatible with the honor and security of the monarchy. After voting the budget, the session of the Reichsrath was closed on May 17th by the Emperor. In the speech from the throne he said that the sacrifices which had been made by the country had rendered it possible for the Government, in the interest of the maintenance of peace, to employ all its influence in consolidating the work achieved by Europe in the East, and that the attainment of this object was near at hand.

The elections for the new Reichsrath were held during June and July, and resulted in a loss of seats by the Liberal party. Of the deputies elected, 173 belonged to the different Liberal fractions and 175 to the Conservatives. From these figures it will be seen that the two parties nearly balanced each other, and that if they both were compact parties neither could furnish a working majority. There were,

however, no signs of cohesion on either side. Among the 173 of the so-called Constitutional party, there were the representatives of all the clubs into which the party was divided in the previous session—that is, the Left Center, the Left, and the new and old Fortschritt Clubs. On the other side were reckoned the Clericals, the Czechs, the Poles, and the Slovenes, a conglomeration as mixed as, if not more so, than the other party. A new Cabinet was formed on August 14th under the presidency of Count Eduard Taaffe. (See above.)

An important political conference was held on August 31st at Linz, in which all the newly elected German liberal members of the Reichsrath took part. It was called for the purpose of determining the position of the party toward the new Ministry, which comprised Liberals, Czechs, Clericals, and Feudals. It was unanimously resolved at this meeting that the composition of the present Cabinet did not justify its support by the German Liberal Constitutional party. The leaders of the different groups of the opposition to the Liberal party held a meeting about two weeks later, under the presidency of the Count Hohenwart, and resolved to act as a united Right. In the beginning of October an autograph letter of the Emperor was published, acceding to Prince Carlos Auersperg's repeated request to be relieved, on account of ill health, of the post of President of the Upper House of the Reichsrath. On September 30th the Emperor appointed Count Trautmannsdorf in his place.

The Reichsrath met on October 7th, but the formal opening did not take place till the next day. In his speech from the throne, the Emperor referred with pleasure to the fact that the Bohemian delegates, who formerly had declined to enter Parliament, had taken their seats, and stated that an important step had thus been taken to secure that general reconciliation and agreement which have always been his wish. Among the measures which would probably come before Parliament, he mentioned decrees relating to the military system of the country, laws relating to Bosnia and Herzegovina, and the revision of treaties and trading laws. With regard to foreign affairs he said:

It is with great satisfaction that I record the undisturbed continuation of friendly relations with other Powers. The Berlin Treaty has been carried out in all its essential conditions. The entry into the sanjak of Novi-Bazar has been made upon the basis of that treaty, in friendly accord with the Porte. The Government is now in a position, and it will be its principal task, to devote its earnest and full attention to cherishing with unremitting care its economical relations with the East.

Referring to the finances, he said:

The endeavor to recover an equilibrium in the finances by careful arrangement will above all things concern you, and this also applies to the war budget; so far only, however, as may appear compatible with the position and safety of the empire. A considerable diminution of the expenditure has, through the simplification in the administration of the individual

departments of the public service, been arranged, and in respect to this I have ordered the submission of appropriate proposals. The covering of the deficit which the next budget may show should be effected without calling upon the state credit, and without injuring the productive power by increasing the revenue. These proposals will form the subject of your earnest consideration because the contemplated reform in reference to direct taxation undertaken in previous sessions has not been carried out. My Government will submit new proposals, making use of previous preparatory researches, and I hope that the Reichsrath will at last succeed in bringing about the improvements so pressing in our system of taxation in the interests of a more just division of the burdens.

A conference of the Constitutional members of the Upper House was held on October 1st, under the presidency of Herr von Schmerling, and a party club was formally constituted for the first time since the creation of the Upper House. The programme adopted by the conference was as follows: Inviolable adhesion to the fundamental laws of the state, especially those concerning the competency of national representatives; opposition to every attempt at diminishing the rights of the Reichsrath, to the profit of the separate provinces of the Crown. One of the first signatures attached to the programme was that of Cardinal Kutschker.

The Lower House organized by the election as President of Count Coronini, a Constitutionalist, and as Vice-Presidents of Dr. Smolka, a Pole, and Baron Goedel Launay. On the 27th the reply to the address from the Throne was voted by the Lower House, after a short debate. It was on the whole friendly to the Government. On the 28th the Minister of Finance presented the estimates for 1880. The balance closed with a deficit for 1879 of 12,000,000 florins. This deficit it was proposed to cover without having recourse to any new credit; and for this purpose the Government proposed several alterations in the stamps and special taxes, from which the total increase of revenue expected was 5,800,000 florins; to impose a tax on the consumption of home mineral oils and increase the customs duties on petroleum from 3 to 8 florins, thereby providing an addition to the revenue of 4,800,000 florins; to increase the duty on brandy so as to realize an additional revenue of 1,500,000 florins; and, as temporary measures for 1880 only, to lay a tax of 10 per cent. upon passenger traffic on railroads and steamers, and a supplementary tax on all incomes exceeding 1,400 florins, which were estimated to yield 4,000,000 florins. The financial statement concluded by saying that reductions in the expense of administration, a thorough reform in the system of taxation, the introduction of a general income-tax, and the taxation of joint-stock companies, would firmly secure a financial equilibrium in the future.

The Delegations met in Pesth on February 27th. The budget was presented by the Government and referred to the Budget Committees. On March 4th the Budget Committee of

the Austrian Delegation, after a long debate, resolved, on motion of Herr Sturm, to give an ulterior sanction to the expenditure of 41,720,000 florins in excess of the grant of 60,000,000 florins, with the reservation of a final decision being arrived at when the accounts were closed and the results made known. At the same time it was resolved not to approve the additional 5,000,000 florins asked for by the Government for expenses in November and December, 1878. The chief argument urged against granting the credit demanded was that a large sum had already been spent on barracks, roads, and railways, and that in the estimates for 1879 3,000,000 florins were set down for such purposes, which are investments in the provinces which the Delegations had no right to accord. By way of rejoinder, the Minister of War pointed out that all the works undertaken had been determined by purely military considerations, and that the saving they would effect in the cost of transport would in a comparatively short time compensate for the money expended on them. After a similar vote in the Committee of the Hungarian Delegation, the Delegations themselves approved the budget and then adjourned.

In August Count Andrassy resigned his position as Prime Minister of the Common Ministry. Previous to the departure of the Emperor to Ischl in the beginning of August, he had an audience with him. The latter hesitated to comply with Count Andrassy's desire for retirement, and a leave of absence sufficiently long to enable the Minister to recover from the fatigues of office, which had somewhat shaken his health, was at first thought of. The Count, on the other hand, was not disposed to bear the responsibility of the policy of the Government so long as he did not personally direct it. He accordingly renewed his petition on the first opportunity at Ischl, when the Emperor at last granted his request, reserving his formal acceptance of Count Andrassy's resignation to the time when he should have decided on his successor. It was stated officially at the time that the Minister's resignation was entirely spontaneous on his part, and only accorded to his most ardent desire, and that no question of foreign or home policy had brought it about. The change in the Government was completed on October 9th. On that day the "Official Gazette" contained the Imperial letter relieving Count Andrassy of his functions, and also one nominating Baron Haymerle Minister of the Imperial House and of Foreign Affairs, and intrusting him with the Presidency of the Common Ministry. (For a biography of the new Minister, see HAYMERLE.) The letter addressed to Count Andrassy says:

If I, though really with regret and reluctance, grant your request and relieve you of the office of a Minister of my House and of Foreign Affairs, you may take this as a proof of the high value that I set on the preservation of your health. You have for years, during one of the most eventful and memorable periods, and under heavy responsibility, borne the charge with

courage, force, and success, and you may quit with well-earned satisfaction your sphere of action, in which you have rendered the most eminent services to the monarchy and to my House. I do not consider, however, your present retreat as the end of your political activity. On the contrary, your loyalty to me and the self-sacrificing devotion with which you have testified this are a pledge to me that you will most readily follow my call whenever and in whatever sphere I may again require your trusty services. You retain my full confidence not less than my grateful recognition.

The administration of Bosnia and Herzegovina was regulated as follows in the beginning of the year: The head of the Government is the Duke of Württemberg, who is subordinate in questions relating to the civil administration to the Common Ministry only. The latter, in accord with the governments of the two halves of the empire, establishes for the transaction of the current business the Bosnian Commission, composed of three delegates of the Common Ministry and one representative of each of the two Governments of Austria and Hungary. In this Commission the three delegates of the Common Ministry form an executive committee, whose decisions were to be countersigned by Count Andrassy as President of the Common Ministry. As Count Andrassy, however, felt unable to attend to all of this business, it was ordered that these decisions should in future be signed by Baron Hofmann.

After negotiations had continued over nine months, during which they were repeatedly dropped and resumed, a convention was signed on April 21st between Turkey and Austria, concerning Bosnia, Herzegovina, and the sanjak of Novi-Bazar. The convention recognizes the existing condition of affairs in Bosnia. It also recognizes the right of Austria to garrison Novi-Bazar, but it is expressly stipulated that the presence of the Austrian troops shall in no way interfere with the Turkish administration, nor shall any impediment be placed in the way of the Turkish Government if it should desire to send troops to the sanjak. The entry of the Austrian troops into the sanjak of Novi-Bazar was delayed until September. On the 8th, at 6 A. M., a brigade, composed of two regiments of infantry, a battalion of chassens, two mountain batteries, and half a squadron of hussars, crossed the frontier of Bosnia close by Svetlo Borje, not far from Cainitza. Every precaution was taken against any unexpected incident, columns being detached from the bulk of the brigade to cover the flanks of the Austrian force—a function which required these detached columns to make their way over almost impassable mountains. The road followed by the bulk of the army was itself sufficiently toilsome, the ground from Cainitza to the frontier rising to the height of 2,100 feet. After a six hours' march, the troops encamped near Han-Kovac. They were well received. The Turkish detachment which held Karakula Gorzd retired at the approach of the Austrian forces. Besides this brigade, which crossed the frontier on the

south side of the sanjak, another entered it on the north side, by way of Visegrad. Crossing the frontier close to Ratcha, the latter portion of the Austrian troops directed their steps to Priboj, where they met with a friendly reception at the hands of the municipality; a superior Turkish officer, the Kaimakam, and the leading men of the place also turning out to welcome the brigade. The southern part of the sanjak occupied by the Albanians was closed by a cordon of twelve Ottoman battalions, extending along Sienitza, Novi-Varosch, and Bielopolje. Previous to the entry of the Austrian troops, Safvet Pasha, the Turkish Minister for Foreign Affairs, declared to the Austrian Ambassador that he considered the Porte had the greatest interest in showing as distinctly as possible the existence of its complete understanding with the Austro-Hungarian Monarchy. With this view, Husni Pasha was expressly ordered to accompany the Austrian troops upon their entry into Novi-Bazar. Fresh orders were also sent from the Sultan to the Turkish authorities in the district to afford every possible facility to the Austrian troops on their advance. The latter met with no resistance whatever, and within a week of their entry those troops not destined for garrison duty began their backward march. As for the remaining troops, a definite agreement was come to by the Duke of Württemberg and Husni Pasha, as follows: All the important military positions were to be jointly occupied. The line of communication from Priboj to Priepol, as well as that from Cainitza, the most advanced point in Bosnia from the west to Tashlidje, was to be kept open by Austrian detachments posted on the more important points, while the line from Tashlidje to Priepol was to be held jointly by an Austrian detachment occupying the height of Jabunka, which forms the watershed, and a Turkish detachment. The rest of the line was to be held, as hitherto, by the Turks, who would perform likewise the patrolling service.

Spizza was formally taken possession of by the Austrians on May 11th. The Montenegrin commissioner, in an address to the people, called upon them to be loyal to their new sovereign.

On January 20th, a treaty based on the most-favored-nation clause was signed between Austro-Hungary and France. The negotiations had been going on for some time, and, not having been concluded by December 31, 1878, it was feared that the general tariff would have to be applied on both sides, a result which would have almost put an end to commercial intercourse between the two countries. The present general tariff of France is so high that in most cases it would have caused an increase of duty of about 60 per cent. On the other hand, the Austrian tariff, though much lower, permits an addition of 10 per cent. to the duty on all articles coming from countries having no treaty with Austria. This would have told

most adversely on articles from France, especially on silks, lace, and wine. The advantages over the general tariff offered by the tariff treaty just concluded, and the disadvantages of the former, were so much felt by the commercial world on both sides that representations were made which contributed to hasten the conclusion of the treaty.

In the beginning of February, a treaty was concluded between Germany and Austro-Hungary, by which the latter renounced its right to enforce Clause V. of the Treaty of Prague, which provided for the retrocession of North Schleswig to Denmark, conditionally upon a popular vote being given to that effect.

Prince Bismarck paid a visit to Vienna, arriving on September 21st, and leaving again on the 24th. His reception by Count Andrassy and the Emperor was of so friendly and cordial a character that it attracted general attention. Although his visit was reported to be entirely of a private character, he had several interviews with the leading Austrian statesmen, at which conclusions of far-reaching importance were supposed to have been arrived at. It was generally assumed that Prince Bismarck and Count Andrassy had concluded a treaty of alliance, and the Emperor William was said to have signed this treaty on October 15th. An article by Dr. Moritz Busch, the author of a book on Prince Bismarck, and who stands in high favor with him, confirmed the general impression. Reviewing the Prince's attitude on the foreign questions, the author glanced at the military activity displayed by Russia since the war, imputing to that power a secret desire, among other things, to achieve yet the conquest of Constantinople, which she knew it was only possible for her to do by marching thither through Berlin and Vienna. To prevent this, and otherwise preserve the peace of Europe, there was no other course for Prince Bismarck than to seek an alliance with Austria.

The Emperors of Germany and Austria met at Gastein on August 9th, and had a long and

cordial interview. The Vienna papers declared officially that the meeting had no political significance, but the Hungarian journals apprehended that it implied the subordination of the Austro-Hungarian policy in the East to the views of Prince Bismarck.

The silver wedding of the Emperor and Empress of Austria, the anniversary of which fell on April 24th, was celebrated with great rejoicings throughout the empire, the festivities in Vienna continuing during the entire week. Delegations from all the provinces, including one from Serajevo, the capital of Bosnia, came to Vienna to assure the Emperor of their loyalty. The festivities in the provinces were very limited in consequence of an Imperial letter issued shortly after the catastrophe at Szegedin, which invited those who had such intentions to devote the expenses to the relief of the distressed city.

The erection of a Protestant church in Innsbruck, in 1879, attracted considerable attention, as being the first Protestant church in the Tyrol, in which province up to this time the Roman Catholic Church had preserved an exclusive influence. The bishops as well as the Diet sought by the exclusion of Protestants to preserve the unity of faith, and a law to that effect was passed in April, 1866. In October, 1878, an interpellation was introduced in the Diet, signed by thirty-one deputies, together with a protest against the formation of Protestant communities without the consent of the Diet. The Governor, Count Taaffe, referred the members to the Constitution of 1867, by which all recognized religious denominations were granted full liberty in the exercise of their devotions, and by which the law of 1866 had become inoperative. The Catholic General Assembly which met in Innsbruck in May, 1878, resolved to use all honorable means to prevent the settlement of Protestants in the country; and that every Catholic Tyrolese not only should not sell any real estate to a member of another faith, but should try to prevent at any cost such a sale in his community.

B

BAPTISTS. I. REGULAR BAPTISTS IN THE UNITED STATES.—The whole number of associations in 1879 was 1,075. The number of baptisms reported during the year was 102,736; number of Sunday-schools, 11,845, with 108,405 officers and teachers, and 872,862 scholars; amount of benevolent contributions, \$4,439,749. The returns of educational institutions are not complete as regards the number of instructors and students, but appear, so far as they are given, as follows: 9 theological institutions, with 37 instructors and 338 students for the ministry; 31 colleges and universities, with 230 men and 93 women as instructors, and

4,897 students, of whom 4,000 were young men and 897 young women, and 584 were students for the ministry; 47 academies, seminaries, institutes, and female colleges, with 293 instructors, of whom 123 were men and 170 women, with 4,956 students, of whom 1,993 were young men and 2,963 young women, and 416 were studying for the ministry. The total value of the property of these institutions was \$11,142,904.

The following is a summary of the statistics of the regular Baptist churches in the United States as they are given in the "American Baptist Year-Book" for 1879:

The annual meeting of the *American Baptist Publication Society* was held at Saratoga Springs, New York, May 29th. The receipts of the Society in its business and missionary departments for the year had been \$335,413, or \$30,803 more than those of the previous year. Subscriptions had been secured sufficient to provide for the payment of the entire debt of the Society, about \$25,000, of which \$19,420

had been paid in. The publications included 57,500 copies of new works, 101,925 copies of works already on the catalogue, and 106,000 copies of tracts. The number of publications on the catalogue was now 1,158. The meeting resolved that particular attention should be paid to the colored men who should emigrate from the Southern to the Northern States. It also decided to confer with the Southern Baptist Convention with reference to publishing catechisms as nearly as possible identical.

The forty-seventh annual meeting of the *American Baptist Home Mission Society* was held at Saratoga Springs, New York, May 29th. The receipts of the Society for the year had been \$217,093, and the expenditures \$175,209. The debt had been reduced from \$45,433 to \$30,597. The Society had employed, including teachers, 246 missionaries, or 24 more than in the previous year, who had organized 42 schools, and reported 1,172 baptisms and 19,923 children in Sunday-schools. Nine preaching missionaries had been employed among the Indian tribes in the Indian Territory. Schools were taught among the freedmen in the Indian Territory under a contract between the Government and the Society. The chief work of the Society among the freedmen had been in maintaining the eight schools for teachers and preachers, viz.: Wayland Seminary, Washington, D. C.; Richmond Institute, Richmond, Va.; Shaw University, Raleigh, N. C.; Benedict Institute, Columbia, S. C.; Augusta Institute, Augusta, Ga.; Leeland University, New Orleans, La.; Natchez Seminary, Natchez, Miss.; Nashville Institute, Nashville, Tenn.; which together returned 46 teachers and 726 young men and 315 young women—in all 1,041—as pupils. A school had also been established by the colored people themselves at Selma, Ala., to which designated funds were sent through the Society. The school at Augusta, Ga., was to be removed to Atlanta, Ga.

The *Women's Baptist Home Mission Society* had employed 14 missionaries, of whom 11 had labored among the freedmen, one among the Scandinavians of the Northwestern States, and two among the Indians in the Indian Territory.

The sixty-fifth annual meeting of the *American Baptist Missionary Union* was held at Saratoga Springs, New York, May 27th. The receipts of the Union for the year had been \$252,677, of which \$17,247 were in the shape of additions to the invested funds. The sum applicable to the payment of current expenses was \$235,430. Of the receipts, \$46,450 were contributed through three women's societies, \$357 from India, \$4,242 from Burmah, \$1,228 from Assam, and \$836 from China. The Rangoon Baptist College had 111 pupils. A new building for this institution, called "Ruggles Hall," was dedicated on the 13th of February, 1879. The theological seminary at Rangoon was in its twentieth year, but had suffered severely from sickness, the 49 pupils

with whom the term opened having been reduced by its close to 23. The theological seminary at Ramapatam, Telugu mission, had 152 pupils. A board of councilors for a theological institute for the Baptists of Franco was organized in connection with the meeting of the Union, and the subject of the appointment of a professor was referred to the Executive Committee of the Society. The following is a summary of the reports of the missions :

ASIATIC MISSIONS.	Mission-aries.	Native preachers.	Churches.	Members.
Burmah.....	83	423	440	20,811
Assam.....	14	48	13	1,207

Grand total.....	141	984	903	80,475

The *Women's Baptist Foreign Mission Society* reported that its receipts had been \$41,472 during the year, and that it had connected with it 840 circles and 212 mission hands, with 19,500 subscribers to its periodical, the "Helping Hand." It had employed among the Burmans, Telugus, Chinese, Japanese, Shans, and Garas, 33 missionaries and 39 Bible women, under whom 38 schools were conducted.

The twenty-fourth session of the *Southern Baptist Convention* was held at Atlanta, Georgia, beginning May 8th. All the States within the territory of the Convention were represented by about 350 delegates. The Rev. J. P. Boyce, D. D., of Kentucky, was chosen President. The receipts of the Foreign Mission Board for the year had been \$54,551, of which \$27,479, or more than half, were contributed for the chapel in Rome. The African mission, being near the Zooloo country, had been embarrassed by the war to which that region had been subjected. Three men and six women were employed in connection with the mission in China, with twenty-six native laborers. Regular missions were established in Shanghai, Canton, and Tung-Chow, with outlying stations in several villages. In Italy stations were established at Rome, Venice, Naples, Milan, Modena, Bari, Barietta, Carpi, Cagliari, and Torri Pellice, with more than twenty out-stations. The Board had been invited to open missions in Greece and in the island of Cuba. The "first Baptist Church of Brazil, near Santa Barbara, in the province of San Paolo," a body of forty members in comfortable circumstances, had made several applications to the Board to be received as a self-sustaining mission, and desired to conduct a religious work under its sanction in the sur-

rounding country. The receipts of the Home Mission Board had been \$16,200. Thirty-five missionaries had been employed during the year, who reported 400 baptisms. The scheme for holding ministers' institutes for colored preachers, sanctioned by the last meeting of the Convention, had gone into operation under an agreement for coöperation with the American Baptist Home Mission Society. The Rev. S. W. Marston, D. D., had been appointed a superintendent of missions among the colored people, and charged with the organization and conduct of the institutes. The Board had been obliged to withdraw the white missionary appointed to labor among the wild Indian tribes, on account of the prejudices of the Indians against white men, and to appoint in his stead native preachers from the civilized tribes. A missionary had been appointed to labor among the Chinese in California. Provision was made for the preparation of a catechism for children and servants. A committee of five persons was appointed to bear to the Baptists of the Northern States at their approaching anniversaries expressions of the fraternal regard of the Convention, and its assurances that, "while still holding to the wisdom and policy of preserving our separate organizations, we are ready to coöperate cordially with them in promoting the cause of Christ in our own and foreign lands." The resolutions under which this action was taken contained a recommendation for holding a meeting of representative men from all sections to devise and propose plans of coöperation, but this was struck out.

The *Eastern German Baptist Conference* met at Berlin, Ontario, August 27th. Reports from about fifty churches showed that 364 additions had been made by baptism and 30 by letter, with a net gain of 330 members, making the whole present number of members 4,601. The Conference in part supported 20 missionaries during the year. The churches represented in this Conference are situated in the Province of Ontario and in the States of New York, Connecticut, Pennsylvania, Delaware, and Maryland.

The *Western German Baptist Conference* met at Racine, Wisconsin, September 17th. L. H. Donner was elected Moderator. The churches and missions represented by this Conference are situated in a territory which is described as extending from Ohio to Oregon and from Texas to Minnesota. The reports from the churches gave the number of baptisms during the year as 234, and the whole number of members as 3,878. Estimating for the churches whose reports had failed to arrive, the whole number of members was thought to be about 4,000. A new constitution was adopted, in which the name "Conference of German Baptist Churches of the West" was substituted for the old name of "Conference of Ministers, Fellow Laborers, and Delegates of the German Baptist Churches." Steps were taken to in-

corporate the Conference under the laws of Wisconsin. Contributions of more than \$2,100 were reported for missionary work among the German population of the United States. Besides this, the Conference had during the year supported a missionary at Ramapetam, India, and some of the churches had contributed to the missions of the German Baptist Union in Russia.

The *Scandinavian Baptist Churches* in the Northwestern States held their first General Convention at Village Creek, Iowa, in August. The Convention decided that the Scandinavian department should be continued in the theological seminary at Morgan Park, near Chicago, Illinois, and appointed a board to exercise supervision over it. It also determined to form a fund in aid of the publication and diffusion of Scandinavian Baptist literature, and resolved that the officers of the General Convention should, in the interest of Scandinavian missions, communicate directly with the American Baptist Home Mission Society, recommending to it suitable missionaries for new fields and asking aid for such missionaries.

II. FREE-WILL BAPTIST CHURCH.—The following is a summary of the statistics of the Free-Will Baptist Church in 170 quarterly meetings, as they are given in the "Free-Will Baptist Register and Year-Book" for 1880:

YEARLY MEETING.	No. of churches.	Ordained preachers.	Licensed preachers.	No. of communicants.

There are several associations of Baptists in North America which in doctrine and polity are in general agreement with the Free-Will Baptists. Among these are the associations of General Baptists in Indiana, Illinois, Kentucky, and some adjoining States, numbering several thousand members. The General Conference of the Original Free-Will Baptists of North Carolina, which met in November, 1878, has 96 churches and 6,000 members. The Southern Baptist Association has 66 churches, 68 ministers, and 3,108 members; it holds correspondence with the Chattahoochee, South Carolina, Tennessee River, and Butts County Conferences, and is represented by the "Baptist Review," La Grange, N. C. The Mount Moriah Free-Will Baptist Association, Alabama, has 21 churches, 24 ministers, and about 1,000 members. The Union Association of General Baptists, Kentucky, has 24 churches, 15 ordained ministers, 4 licensed ministers, and 1,000 members. The Free-Will Baptist Association in Texas numbers 33 ministers; The Texas Free-Will Baptist Association reports 6 churches and 5 ministers. There are other Free-Will Baptist Churches in Tennessee, Mississippi, Arkansas, and Missouri, numbering some thousands of members, that have no organized connection, but are one in doctrine with the Free-Will Baptist Church. The aggregate of these and similar bodies will not fall short of 25,000 members. The Free Baptists of Nova Scotia have 52 churches and 3,368 members. The Free Baptists of New Brunswick number 148 churches and 9,389 members. The General Baptists of Great Britain are in harmony with the Free-Will Baptist Church, and a correspondence by epistles and delegations has long been sustained between them.

The contributions of the churches to the missionary and educational societies of the denomination for the year ending August 1, 1879, were: to the Foreign Mission Society, \$19,913; to the Home Mission Society, \$7,608; to the Educational Society, \$2,131; total, \$29,653. Of the contributions to foreign missions, \$2,069, and of those to home missions, \$1,039 were received through the Woman's Mission Society. The *Home Mission Society* has a permanent fund of \$4,745 and a centennial fund of \$4,895. Its most important work is among the freedmen, for whom it sustains a school at Harper's Ferry, W. Va. It has also stations at Cairo and neighboring towns in southern Illinois, in Nebraska, and near New Orleans, La. The *Educational Society* has a general fund of \$43,826, and a library fund of \$2,225. The number of students reported in 1879 as preparing for the ministry in all the schools of the denomination was 88, nine more than the largest number ever given in any former report of the Society. The Foreign Missionary Society supports a mission in Lower Bengal and Orissa, India, which includes 8 missionaries, 4 assistants, 478 members, and 453 scholars in the Sunday-schools.

III. SEVENTH-DAY BAPTIST CHURCH.—The Committee on Statistics of the General Conference of this Church reported in September, 1878, that two churches had been added during the year, making the whole present number of churches 90. Of these churches, 59, or one less than two thirds of the whole, had reported 7,446 members. Presuming the remaining 31 churches to have a proportionate number of members, the total membership of the denomination would be about 11,000. The reports of the contributions of the churches, so far as they were sent to the committee, showed an average of \$2.40 per member in the total contributions, and an average of 25 cents per member for denominational work, this head including the tract and missionary enterprises. The Committee on Sabbath-Schools reported that the number of such schools was 88, being larger than ever before, but the number of scholars had decreased three per cent.

The *Seventh-Day Baptist General Conference* met for its sixty-fifth annual session at Brookfield, New York, September 24th. A. B. Prentice was President. A committee which had been appointed by a previous General Conference to present for consideration a denominational exposition of faith made a report embracing eleven articles of belief, viz.: in God; Christ; the Holy Spirit; the Holy Scriptures; Man (affirming his twofold nature, his fall, and the necessity of regeneration); Heirship and Eternal Life; Repentance, Faith, and Baptism; the Lord's Supper; the Sabbath (the seventh day); the Resurrection of the Dead and the Eternal Judgment; and the Resurrection body of the Saints. The report was ordered to be printed and to lie on the table for one year, and the committee was continued. An order of procedure at the sessions of the Conference was adopted, which provides for the previous selection of a list of subjects for discussion, and the appointment for each subject of some person to introduce the discussion in an address or essay, after the reading of which a limited time shall be allowed for general discussion in five-minute speeches. The Conference recommended to young men who contemplate entering the ministry that they endeavor to prepare themselves for that work by a classical education and a full course of theological training; and advised them to study in the schools of the denomination. A policy of engaging the pastors of such churches "as could serve the cause advantageously" to labor in the mission-fields for a month or more at a time, was recommended. The Hon. Horatio Gates Jones, of the State Senate of Pennsylvania, communicated to the Conference the latest results of his efforts to obtain a relaxation of the Sunday laws of that State in favor of those who keep the seventh day as the Sabbath. The bill introduced by him for that purpose had on the 13th of May, 1879, secured a majority of the votes of the members of the Senate present and voting, but had failed to

pass for the want of a majority of the whole Senate as required by the Constitution. "From this statement," he said, "you may well suppose that I am not disheartened, for each year has brought fresh accessions to the ranks of those who believe in the great principle of the rights of conscience."

The anniversary meetings of the Educational, Missionary, and Tract Societies were held in connection with the meeting of the General Conference. The Missionary Society sustained home missions at different points in the United States, and a mission at Shanghai, China, which was at present without a missionary superintendent. At Shanghai the Society owned a city chapel to which dwellings were attached, a cottage in the country, and a lot in the missionary burial-ground. The missionary work was in the hands of two or three native preachers or Bible-readers; the Church had eighteen or twenty members, while about the same number of members had died.

IV. THE BRETHREN, OR TUNKERS.—The Annual Council of the Tunkers, or Brethren, met at Broadney, Virginia, June 3d. The sum of \$800 being needed for the mission in Denmark during the coming year, a contribution of two dollars was requested from each church. The Council of 1877 had decided that the double mode, viz., that in which one person washes and another wipes the feet of the brother or sister participating in the ceremony, was the proper method of administering the ordinance of foot-washing. A petition was presented asking for a grant of liberty to use the single mode, or that in which the same person washes and wipes. The question was deferred till the next year. The question whether a member who has withdrawn from the Masonic order may or may not answer recognitions from members of the order, was answered in the negative. On the question whether a minority ought to be permitted to prevent a church from establishing a Sunday-school—the customary way of deciding matters in the Brotherhood being by unanimous consent—the Council agreed to ask minorities to yield. Newspapers had been established within the denomination which had indulged in free criticism of some of its peculiar usages. The Council determined that the editors of the papers should be called upon to make acknowledgments of their offenses; that certain elders who were named should be required to give satisfaction for publishing schismatic articles; and that a committee should be appointed to see that the editors of church papers admit no articles assailing the doctrines or principles or practices of the Brotherhood. A request that the wearing of hats by the sisters should not be made a bar to membership was denied. An order was adopted that each brother attending the meetings of the Council should pay one dollar, while payment was left optional with the sisters; and that free board should be given only to brethren and sisters and their special friends.

V. BAPTISTS IN CANADA.—The twenty-first annual meeting of the *Canada Baptist Convention East* was held at Montreal, beginning October 1st. D. Bentley presided. The principal business related to the adoption of a union with the Convention West. A plan for the organization of a Baptist Union of the Provinces of Ontario and Quebec, which had been proposed by the Western Convention, was sanctioned, "subject to such modifications as on further deliberation may be deemed necessary without affecting the main principles of union suggested." To facilitate the formation of the proposed union, it was suggested that committees be appointed by the two Conventions to represent them in considering what modifications should be made, by whose joint action both Conventions should consider themselves bound. In accordance with this action, a committee was appointed by the Convention to represent it. The Canadian Baptists, and the Baptists of the maritime provinces coöperating with them, sustain a mission among the Telugus in India, in which thirteen missionaries including wives and a female teacher are employed. The mission embraces three stations, and returned for 1879 467 "baptized believers."

VI. BAPTISTS IN GREAT BRITAIN AND IRELAND.—The following is a summary of the statistics of the Baptist Churches in Great Britain and Ireland, as they are given in the "Baptist Hand-Book" for 1879: Number of churches, 2,587; of chapels, 3,451; of sittings, 1,028,833; of members, 276,348; of Sunday-school teachers, 40,216; of Sunday-school scholars, 399,317; of pastors, 1,879; of Evangelists, 2,652. Sixty-three new chapels and 28 new schoolrooms were erected during the year ending September 30, 1878. The number of members in the different parts of the United Kingdom was, according to the tables in the "Hand-Book": In England, 199,820; in Wales, 66,043; in Scotland, 9,234; in Ireland, 1,251. The Baptists in other countries of Europe returned 452 churches and 367 pastors, and members as follows: Austria, 81; Denmark, 2,114; Finland, 400; France (part of whom were in churches aided by the American Baptist Missionary Union), 784; Germany, 15,287; the Netherlands, 465; Italy, 400; Sweden, 15,000; Norway, 615; Poland, 1,747; Russia, 3,686; Spain, 244; Switzerland, 403; Turkey, 159; total, about 40,000. In Africa (Cape Colony, Port Natal, West Africa, and St. Helena), there were 32 churches, 17 pastors or missionaries, and 1,147 members; in the Australasian Colonies, 127 churches, 87 pastors, and 7,700 members; in Asia, 514 churches, 213 pastors or missionaries, and 34,006 members. The estimate for the whole world is 28,505 churches, 17,683 pastors or missionaries, and 2,473,088 members. These numbers are made up in part, particularly where churches in foreign lands are concerned, from the reports of two or three years previous to the current year. The real present number of Baptists is not

less than 100,000 more than the number given above.

The annual meeting of the *Baptist Union of England and Ireland* was held in London, April 28th. The Rev. George Gould presided. The report of the Secretary showed that 20,000 new sittings had been added to the chapel accommodation during the year, and £145,000 had been spent upon the increase of chapel accommodation and schoolrooms. A resolution was adopted condemning the foreign policy and the expenditure of the Government. The expenditures of the *Society for British and Irish Home Missions* had been £5,571. Three new stations had been opened in England; operations had been extended in some directions and contracted in none. Satisfactory progress had been made in Ireland. The receipts of the *Bible Translation Society* had been £2,244,105. The report gave accounts of the publication and sale of editions of the Bible and New Testament, or of parts of the same, in the Sanskrit, Bengali, Mussulman Bengali, and Hindi languages, the languages of Orissa, Ceylon, and Japan, and one of the languages of Africa. The anniversary of the *Baptist Missionary Society* was held in London, May 1st. The Earl of Northbrook presided. The total receipts of the Society had been £46,092. Favorable reports were made of the condition of the missions in India, where two hundred persons had been baptized; in Ceylon, in China, where the missionaries had been largely occupied in distributing relief to the sufferers by the famine; in Brittany, where the missionaries enjoyed greater freedom; in Africa, where a mission to the Congo had been finally resolved upon; in Norway, where the "Union of the Norwegian Baptists" had undertaken the general management of the mission; in Italy; and in Jamaica. The mission in Trinidad had suffered from the loss of many of its members by death. Four missionaries were on their way to the Congo mission in Africa, and would be reinforced by some native helpers from the Cameroons mission. The missions of the Society in India, Ceylon, China, Brittany, Norway, Italy, Africa, the West Indies, and Jamaica were under the care of 88 European missionaries, with 39 native missionaries and 186 evangelists, and returned members as follows: India, 3,653; Ceylon, 653; China, 108; Brittany, 53; Norway, 645; Italy, 133; Africa, 137; West India islands, 4,215; Jamaica, 21,984; total, 31,581. Number of teachers, 147; of day scholars, 4,269; of Sunday scholars, 4,114. The expenditures of the Zenana mission in India had been £3,019. The mission employed about 23 European lady visitors and 42 native teachers and Bible women, who were laboring in Calcutta, Baraset, Delhi, Benares, Allahabad, Soorie, Barisaul, Monghyr, and Patona. Nearly 700 women were receiving religious instruction in the Zenanas, and 13 girls' schools, containing about 400 children, were taught by the agents.

The autumnal meeting of the Union was held at Glasgow, beginning October 7th. The fourth report of the annuity fund showed that the total value of its securities in the hands of the Treasurer was £73,882, and that more than £37,000 had been received in redemption of promises amounting to £58,000. Sixty-eight ministers, widows, and children were receiving annuities. The British and Irish Mission reported that new stations had been opened in England and Ireland, and that 611 members had been added in the two kingdoms. The labors of the special evangelists had been successful, but more men were wanted. Ten missionaries had been accepted, and eight sent out during the year to the foreign stations, in pursuance of a resolution which had been adopted in the previous year to raise funds to send out twenty additional missionaries. Mr. Watkins, of Bristol, who had made a gift in the previous year for the African mission, had offered to contribute £700, half the sum required, to send out twelve additional missionaries, if the rest were raised. The required amount was obtained. Discussions were held during the meeting on the subjects of the use and disuse of confessions of faith, the attitude of the Union in relation to religious opinion and belief, politics and the pulpit, and the relations of the Union to other denominations. A resolution was passed declaring that the present condition of the country demanded the serious consideration of the Christian community; expressing the judgment of the assembly that the policy of the Government "has been the cause of needless wars, has involved the nation in grave financial difficulties, and has failed to ameliorate by domestic legislation the social and moral evils under which the country suffers"; and advising the members of the Union to active and united efforts to return members of Parliament pledged to oppose that policy.

GENERAL BAPTISTS.—The one hundred and tenth annual meeting of the *General Baptist Association* was held at Halifax, beginning June 19th. The statistical reports showed that the Association included 179 churches, to which three new ones would be added, the whole containing 24,003 members. The income of the Home Mission Society had been £1,705, the largest amount ever reported in one year. The income for foreign missions had been £3,872, £86 more than that of the previous year. Three additions had been made to the European missionary staff during the year, and a new chapel had been opened in connection with the mission at Rome. During the last twenty years the number of mission churches had increased threefold. Chinnell College had ten students, and had suffered a financial deficiency of £598. Resolutions were passed in favor of the bill for closing the public-houses on Sunday; counseling opposition to the war spirit, and expressing a hope for the termination of the Zooloo war; urging

on the House of Commons not to pass any enactment which would enable particular religious views to be inculcated at the expense of the state; and denouncing the Government Valuation Bill as a measure which, by allowing exemptions in the ratable value of clerical incomes proportioned to the salaries of curates, would virtually give additional endowments to the Anglican Church.

The annual meetings of the *Baptist Union and Home Mission of Scotland* were held in Edinburgh in October. The report of the Secretary showed that the number of Baptist members connected with the Union in Scotland was 8,862, or 513 more than the number reported in 1878. One hundred and forty stations were kept up in the home mission department, in connection with which 28 missionaries had been employed and 214 members had been added during the year.

V. GERMAN BAPTIST UNION.—The German Baptist Union embraces churches in Germany, Austria, Denmark, Holland, Switzerland, Poland, Russia, and Africa. The triennial Conference was held at Hamburg in July, at which 125 delegates were present. The statistical reports showed that an increase of 919 members had taken place during the year, the gains being 76 in Germany, 63 in Austria, 42 in Denmark, 25 in Holland, 56 in Switzerland, 40 in Poland, and 687 in Russia, while there appeared a decrease of 30 in Africa and of 44 in Turkey. The business transacted related to the publishing house, which is hereafter to be under the supervision of Dr. P. W. Bickel, representing the American Baptist Publication Society; to the education of ministers, for which it was resolved to establish and endow a theological seminary; and to the promotion of Sunday-schools.

BARRY, General WILLIAM FARQUHAR, a military officer, born in New York, August 8, 1818, died at Fort McHenry, near Baltimore, July 18th. He entered the United States Military Academy at West Point on September 1, 1834, and graduated on July 1, 1838, with the rank of brevet second lieutenant in the Fourth Artillery. On July 7th of the same year he was appointed second lieutenant, and on the 12th of July was transferred to the Second Artillery. He served first at Carlisle Barracks, Pa., and next at Buffalo, N. Y., during the Canada border disturbances of 1838-'39. After doing garrison duty at a number of different stations, he went with the army to Mexico, remaining there from 1846 to 1848. He was in the battle of Tampico, and served in Major-General Patterson's division, and also as aide-de-camp to Major-General Worth. From 1849 to 1851 he was stationed at Fort McHenry, and was made a captain in the Second Artillery on July 1, 1852. He served in the war against the Seminoles in Florida in 1852-'53, and was in garrison at Baton Rouge, La., in 1855. He did frontier duty at Fort Washington, I. T., in 1855, and at Fort Snelling,

Minn., in 1857. In that year, as also in 1858, he was stationed at Fort Leavenworth, Kansas, during the Kansas disturbances, being transferred afterward to Fort Kearney, Neb. During the year 1858 he was a member of the board to revise the system of light artillery practice, which was adopted on March 6, 1860. The year 1861, the breaking out of the civil war, found him at the arsenal in Washington, D. C. He soon went into active service, assisting the same year in the defense of Fort Pickens, Fla., as major of the Fifth Artillery. He passed through the Manassas campaign as chief of artillery in the army of Brigadier-General McDowell, and was at the first battle of Bull Run, July 21, 1861. He was chief of artillery in the Army of the Potomac from July 27, 1861, to August 27, 1862, and organized its artillery. On August 20, 1861, he was appointed brigadier-general of United States volunteers, and was in the defense of Washington, D. C., until March, 1862. He took a leading part in the Virginia peninsular campaign until August, 1863, being in the siege of Yorktown, at the battle of Gaines's Mill, the skirmish of Mechanicsville, the battle of Charles City Cross Roads, the Malvern Hill contest, and at Harrison's Landing. From the end of that campaign until 1864 he was chief of artillery of the defenses of Washington, D. C., having been appointed lieutenant-colonel of the First Artillery on August 1, 1863. He was assigned to the command at Pittsburgh, Pa., and Wheeling, W. Va., against a threatened cavalry raid in May, 1863, and was next appointed chief of artillery on General Sherman's staff, commanding the military division of the Mississippi from March, 1864, to June, 1866. From May to September, 1864, he was with the invading army in Georgia, and took part in the action of Tunnel Hill. On September 1, 1864, he was made brevet major-general of volunteers and colonel by brevet for gallant conduct at Rocky-Faced Ridge. He was also at Resaca, the battle of Kenesaw Mountain, New Hope Church action, the skirmish of Peach-Tree Creek, and the battle and siege of Atlanta. In the Northern Georgia and Alabama campaigns he passed through the battles of Jonesboro, Lovejoy Station, and the skirmishes of Snake's Creek Gap, Ship's Gap, and Rome. From February to April, 1865, he was in the Carolina campaign at the battles of Averysboro and Bentonville. On March 13, 1865, he was made brevet brigadier-general in the United States army for his services in the campaign ending with the surrender of the army under General J. E. Johnston, and on the same day was made brevet major-general for gallant conduct in the field. On December 11, 1865, he was appointed colonel in the Second Artillery, and was in command of the Northern frontier pending the Fenian raids of 1866. On January 15th of that year he was mustered out of the volunteer service. He served on the Northern frontier to September,

1867, and then commanded the Artillery School of Practice at Fortress Monroe to March 5, 1877, when he was appointed to the command at Fort McHenry. During the labor riots of 1877 he rendered valuable service at Camden Station. He was the author, in conjunction with General J. G. Barnard, of a work published in 1863 entitled "Reports of the Engineer and Artillery Operations of the Army of the Potomac from its Organization to the Close of the Peninsular Campaign."

BATTLE, Judge WILLIAM HORN, a highly honored citizen and jurist, born in Edgecombe County, North Carolina, October 17, 1802, died at Chapel Hill, March 17th. At the age of sixteen years he entered the university at Chapel Hill, and in two years graduated with high honors, with a class some of whose members subsequently manifested distinguished ability. On leaving the university he entered the office of Chief Justice Henderson and prepared himself to practice at the bar. At the end of three years he was admitted, and manifested such proficiency that he was at once advanced to both county and Superior Court practice. He opened his office in Louisburg. The early years of his professional life were not full of promise. But, with pride and pleasure, he was wont to attribute his final success to the encouraging influence and superior character of his wife, a daughter of Kemp Plummer, a distinguished lawyer of Warrenton, with whom he was married in 1827. He represented Franklin County in the House of Commons in 1833-'34, and, associated with Thomas P. Devereux, Esq., reported the Supreme Court decisions from December, 1834, to December, 1839, inclusive. In 1835 he was associated with Governor Iredell and Judge Nash in preparing the Revised Statutes of North Carolina, and personally superintended the printing of that work in Boston. He removed to Raleigh in 1839, and the same year was a delegate to the Convention which nominated William Henry Harrison for President of the United States. In politics he was a Whig, but was never a partisan, and his political career ended with his elevation to the judiciary. In August, 1840, a vacancy occurred on the bench of the Superior Court of the State, and he was appointed by Governor Dudley to fill it, and subsequently elected by the Legislature. In 1843 he removed to Chapel Hill, and in 1845 was elected by the Trustees to the professorship of law in the university, which he continued to hold until the institution went down in 1871, after which he closed his law school and removed to Raleigh. In May, 1848, a vacancy occurred on the bench of the Supreme Court, and he was appointed by the Governor to fill it, but not confirmed by the Legislature, because there were already three judges of the Court residing in the same county; but he was again elected to the Superior Court, where another vacancy occurred, by the same Legislature. This position he accept-

ed, and retained until 1852, when he was called to the bench of the Supreme Court, where he continued to preside as an Associate Justice until the inauguration of the reconstructed State government in 1868. In 1872-'73 he was appointed by the Legislature to revise the statutes of the State; but this revision, the work of his unassisted mind, never attained so high a rank as the joint labors of others. He subsequently removed to Chapel Hill after the death of his wife, and resided with his son until the close of his career. He was a man of much natural excellence of character and extensive learning.

BEET, SUGAR, NEW PRODUCT FROM THE. The chemists have nowhere proved the utility of their science in a more marked and gratifying manner than in extracting so many valuable commercial commodities from the residual products of manufactured materials. The waste products of many an industrial operation, which before the developments of modern chemistry were useless and troublesome to get rid of, cumbering the ground or distaining and poisoning the rivers, have been made to yield the materials for one or more secondary industries, turning out products of valuable properties; so that the residual products now utilized greatly exceed in number those which are still found valueless. In the science of organic chemistry the development has been very recent, and is very imperfect compared with the progress which has been made in analyzing the non-organic mineral constituents of the earth's matter. Every step in this new science, whose threshold has scarcely yet been passed, indicates that the chemistry of life is vastly more complex than the chemical combinations of the mineral world; and nearly every new substance discovered by resolving into their simpler materials, or by recombining organic principles with each other or with non-organic elements, is found to possess properties of utility, which are sometimes exceedingly novel and remarkable. An important gain to industrial art is likely to result from a process discovered by Camille Vincent of Paris for utilizing another refuse material. In the manufacture of beet-root sugar, the juice of the beet is expressed, and, after filtering, is boiled and allowed to crystallize. A thick molasses is left, which has been used sometimes for sweetening purposes and sometimes for fattening cattle, but is now almost all subjected to fermentation and distillation, yielding a coarse kind of rum. After the alcohol is distilled out there is left in the retort a liquid called *vinasse*, which was formerly thrown away, until Dubrunfaut discovered its value as a source of potash salts. It is evaporated and the dry residuum calcined, yielding an ash which is called *salin*, and is rich in compounds of potassium. In this way 2,000 tons of carbonate of potash are produced annually in the distilleries of France. By this process the products of the beet were appar-

ently all used up. But M. Vincent shows that very valuable principles were allowed to escape. Besides the alkaline matter, the liquor remaining after the distillation of the spirit also contains considerable quantities of organic matter, partly nitrogenous, which is decomposed by the process of calcination, leaving a porous carbonaceous mass containing also the remaining mineral substances. The volatile products of the decomposition may be saved by subjecting the concentrated *vinasse* to destructive distillation in an iron retort; and, by passing them through condensers, the condensable ones will liquefy, while the permanent gases can be conducted off and utilized as fuel. The portions which admit of condensation consist in bituminous and ammoniacal liquors, which differ in their chemical composition in some important respects from the similar products remaining after the manufacture of illuminating gas from coal. One of the constituents of the ammonia-water thus obtained is the foundation of the new manufacturing process inaugurated by M. Vincent. The liquid is found to contain large quantities of the salts of trimethylamine. Trimethylamine has never before been produced except in very small quantities in the chemical laboratory. It is one of the organic compounds called compound ammonias, the first of which, methylamine, was discovered by M. Wurtz in 1848, and the others, dimethylamine and trimethylamine, by Dr. Hofmann, about thirty years ago. In these the organic radical, methyl, performs the part of hydrogen in the gaseous compound of nitrogen and hydrogen, and they were produced by replacing one, two, or all three of the atoms of hydrogen in ammonia by atoms of methyl. The trimethylamine, the hydrochlorate of trimethylamine, yields products of great utility. Upon decomposing the hydrochlorate by heat, it is resolved into free ammonia, which is a valuable product; free trimethylamine, which can be used over again for the same purpose; and chloride of methyl, a compound which has never before been obtained in any quantities, and which possesses some very remarkable properties. The chloride is a combustible gaseous substance, which can be easily condensed into a liquid form in strong wrought-iron cylinders, and transported and handled with safety. One use of chloride of methyl is in the manufacture of the methylated colors, such as Hofmann's violet and aniline green, in which it does the service of the more expensive iodide. It possesses another quality which gives it a far higher and a singular value. It is as a refrigerating agent that it promises to be of the greatest service. By the rapid evaporation of the liquid a reduction of temperature takes place which exceeds that produced by any other means. The liquid is not at all corrosive nor poisonous, and promises to supplant all the other freezing agents. A machine has been constructed by M. Vincent in which a temperature of 55° C. can be produced and

maintained by the evaporation of this volatile substance. This temperature is considerably below the freezing-point of quicksilver. The discovery of this new product of the sugar-beet presents an additional inducement for its cultivation in the United States, an object which the Agricultural Bureau has for some time sought to promote. The climatic conditions most favorable to the growth of this useful plant were considered in a paper read before the Association for the Advancement of Science at Saratoga in September, by Dr. William McMurtrie. The best meteorological conditions are a warm, dry spring, and a temperate, moist summer, followed by a cool, dry autumn.

BELGIUM, a kingdom of Europe. Leopold II., King of the Belgians, born April 9, 1835, is the son of King Leopold I., former Duke of Saxe-Coburg, and ascended the throne at his death, December 10, 1865. He was married August 22, 1853, to Marie Henriette, daughter of the late Archduke Joseph of Austria (born August 23, 1836), who has borne him three daughters. The heir apparent to the throne is the brother of the King, Philip, Count of Flanders, born March 24, 1837, lieutenant-general in the service of Belgium, who was married, April 26, 1867, to Princess Marie of Hohenzollern-Sigmaringen (born November 17,

1845), and has two sons, Baldwin, born July 3, 1869, and Albert, born April 8, 1875.

The area of this kingdom is 11,373 square miles. The population according to the census of December 31, 1876, was 5,336,185, and in December, 1877, according to a calculation based upon the movement of population, 5,412,731. The following table exhibits the population of each province at the close of 1877:

PROVINCES.	Pop. in Dec., 1877.
Antwerp.....	550,179
Brabant.....	959,803
Flanders, West.....	639,895
East.....	671,943
Hainault.....	966,400
Liège.....	642,264
Limburg.....	207,204
Luxemburg.....	206,733
Namur.....	318,755
Total.....	5,412,731

The population of the principal cities on December 31, 1877, was as follows: Brussels, 164,598, and including eight adjacent communities, 380,238; Antwerp, 155,820; Ghent, 129,201; Liège, 118,140; Bruges, 44,950; Malines, 39,776; Verviers, 38,410; Louvain, 34,440; Tournay, 32,180; Courtrai, 26,328; Saint Nicholas, 25,440; Namur, 25,353; Mons, 24,638; Seraing, 24,564; Alost, 21,107.

The movement of population from 1871 to 1877 is shown in the following table:

YEAR.	Marriages.	Births. Deaths.		Still-born Children.	Surplus of Births.	Total Population on December 31.
		Inclusive of Still-born.				
1871.....	37,588	166,010	152,996	7,250	13,014	5,118,650
1872.....	40,084	174,935	127,673	7,558	47,267	5,175,087
1873.....	40,595	178,491	120,656	7,783	57,835	5,235,521
1874.....	40,323	181,728	117,845	7,750	64,883	5,296,534
1875.....	39,050	183,801	130,229	7,749	53,072	5,403,006
1876.....	38,225	184,645	124,717	7,980	60,128	5,395,185
1877.....	36,962	188,122	122,314	8,045	60,808	5,412,731

Almost the entire population is connected with the Roman Catholic Church. The number of Protestants is estimated at 15,000; that of Jews at 3,000. The larger portion of both lives in the provinces of Antwerp and Limburg. Of the 5,336,185 inhabitants according to the census of 1876, 2,256,860 spoke French, 2,659,890 Flemish, 340,770 French and Flemish, 38,070 German, 22,700 French and German, 1,790 Flemish and German, 5,490 these three languages, 7,650 foreign languages, and 2,070 were deaf and dumb.

According to the census of 1866 the nativity of the inhabitants was as follows:

COUNTRIES.	Population.
Belgium.....	4,729,737
Netherlands.....	26,435
Dutch Limbourg.....	7,419
Dutch Luxembourg.....	5,625
France.....	32,021
Germany.....	20,701
Great Britain.....	3,003
Other Countries.....	2,892
Total.....	4,827,833

The budget for the years 1877 and 1878 esti-

mated receipts and expenditures as follows (in francs):

I. RECEIPTS.	1877.	1878.
1. Direct taxes.....	43,758,000	44,008,000
2. Indirect taxes.....	100,790,000	102,985,000
3. From means of communication (railroads, telegraphs, post, etc.).....	95,981,400	100,652,500
4. Miscellaneous.....	9,927,000	9,772,000
5. Reimbursements.....	1,794,860	2,921,366
Total receipts.....	252,245,760	260,838,860
II. EXPENDITURES.	1877.	1878.
1. Public debt.....	65,071,815	74,785,815
2. Dotations.....	4,454,306	4,595,808
3. Ministry of Justice.....	15,908,889	16,272,349
4. Ministry of Foreign Affairs.....	1,650,505	1,908,585
5. Ministry of the Interior.....	19,893,663	20,871,424
6. Ministry of Public Works.....	61,792,584	81,354,889
7. Ministry of War.....	41,036,500	41,068,000
8. Budget of the gens d'armes.....	2,833,000	2,920,000
9. Reimbursements and outstanding debt.....	15,174,970	15,274,950
Total expenditures.....	248,986,782	259,606,765

The immigration into Belgium has since 1871 always exceeded the emigration from the country, as will be seen from the following table:

	1871.	1872.	1873.	1874.	1875.	1876.	1877.
Immigrants	16,708	15,789	15,792	16,762	15,872	14,446	15,075
Emigrants	13,171	11,040	7,981	8,217	10,157	13,124	11,547
Surplus of immigrants	3,537	4,749	7,811	8,545	5,215	1,322	3,228

The movement of the special commerce of Belgium during the years 1876 and 1877 was as follows, expressed in millions of francs:

COUNTRIES.	IMPORTS.		EXPORTS.	
	1876.	1877.	1876.	1877.
Central Europe:				
France	352·6	354·0	814·1	296·0
Ger'n Customs Union	184·3	197·4	225·0	200·7
Netherlands	185·0	196·8	165·3	165·7
Other countries.....	11·5	17·4	16·8	22·0
Northern Europe:				
England	248·9	212·6	191·7	220·1
Russia	114·7	82·0	19·3	25·2
Other countries (Sweden, etc.).....	32·0	27·8	14·4	18·5
Southern Europe.....	50·6	62·7	72·6	71·3
America.....	243·0	250·1	35·8	49·5
Asia	20·9	17·1	1·5	7·8
Africa	5·0	8·3	1·8	2·5
Total.....	1,448·5	1,426·2	1,063·8	1,074·8

The following table gives in millions of francs the movement of the general and special commerce of Belgium from 1860 to 1877, and compares it with the commerce in 1830:

YEAR.	IMPORTS.		EXPORTS.	
	General.	Special.	General.	Special.
Yearly average, } 1860-1864..... }	1,048·9	598·5	966·1	511·8
1865-1870.....	1,520·3	809·4	1,945·1	638·1
1871-1874.....	2,240·6	1,288·2	1,953·0	790·6
1875.....	2,318·8	1,307·1	2,107·6	1,101·8
1876.....	2,460·4	1,448·5	2,088·4	1,065·8
1877.....	2,356·6	1,426·2	2,004·2	1,074·8
1830.....	90·0	90·0	104·6	96·6

The Chambers reassembled in January, and on the 21st the Government introduced a new law on elementary instruction, designed to take the place of the law of 1842. It required every community to establish a school in a proper locality, tuition to be free for poor children. The school-books to be used are to be examined by the school council, and to be approved by the Government. The clerical supervision is to cease. The teachers shall be appointed by the Communal Council, but must be native or naturalized Belgians, and possess a certificate of their ability to teach. The instruction is to comprise morals, reading, writing, arithmetic, object-teaching, the rudiments of the French, Flemish, or German language (according to the locality), geography, Belgian history, drawing, gymnastic exercises, music, and needlework. Article IV. is as follows: "Religious instruction shall be left to the care of the families and of the ministers of the different denominations. A room in the school is to be placed at the disposal of the latter in order to give religious instruction to the school-children before or after school-hours."

A royal decree was published on February 23d, which ordered that, in the state normal schools for the instruction of elementary school-teachers, the principles of constitutional and administrative law shall be taught, embracing a history of the political institutions of the country, a knowledge of the Constitution and the laws relating to it, and the elementary school law. This instruction is to be given by a professor specially appointed for that purpose, who shall if possible be a doctor of laws. In April the Minister of Public Instruction appointed a committee of seventeen to prepare a plan for the improvement of the secondary schools.

The discussion on the new elementary school law in the Chamber of Deputies led to violent scenes and severe recriminations. M. Woeste, one of the leaders of the Clerical party, attempted to show that lay teachers were not fit for their work. For this purpose he cited fifteen cases of teachers who had since 1859 been convicted of improper conduct with their pupils. The Minister of Public Instruction in reply stated that only three of this number had come from state normal schools, which, however, had been under clerical supervision; while the remaining twelve had graduated with high honors from episcopal seminaries. Of 5,393 lay teachers in the public schools, fifteen had committed offenses against morality in twenty years. In the same time, however, of 452 clerical teachers, not less than eighteen had committed similar offenses, who indeed had not all been punished, because some had disappeared.

In May the Minister of Finance submitted a bill abolishing the hearth tax introduced by the laws of 1821 and 1822, and increasing the rent, door, and window taxes. The object of the bill was to put an end to numerous election abuses which had occurred under the old order of things.

The bill on primary education was passed by the Chamber of Deputies on June 6th by a vote of 67 to 60, all but two members being present. In the Senate the bill was passed on June 18th by a vote of 33 to 31, after a bitter speech by the President, Prince de Ligne, who is a member of the Left, in which he denounced the law as an unfortunate law and a war measure. Immediately upon the passage of the school law in the Senate, the bishops of Belgium issued a common pastoral letter condemning it. They declared that the school system which the Government wished to introduce was "dangerous in itself, that it promoted infidelity and indifference, and that it is an attack on the faith, the piety, and the religious rights of the Belgian people." No par-

ents should therefore send their children to a school subject to the new law, if a Catholic school was in their vicinity. No Catholic should aid in the execution of the new law, should accept a school office, or be a member of the school council.

On June 27th the Minister of Finance presented a financial bill, in which he proposed to tax the cultivation of tobacco, and to increase the import duty on tobacco, as well as the succession and excise duties. The preamble to the bill stated that the proposed augmentations were estimated to yield to the Treasury an additional sum of 7,350,000 francs, whereas the deficit to be covered amounted to 12,000,000 francs. The Government therefore reserved to itself to propose, when expedient, the conversion of the $4\frac{1}{2}$ per cent. rentes. The electoral reform bill was passed in the Lower Chamber in the beginning of July by 69 votes to 60. The discussion on the new financial laws was closed on July 22d, after a speech from M. de Kerwyn urging the necessity of affording protection to the agricultural interests of the country. The Minister for Foreign Affairs replied that there was no occasion to revert to a policy of protection, and the bill was then adopted by 60 to 42 votes. A proposition of the Government to convert the $4\frac{1}{2}$ per cent. rentes to 4 per cents was adopted the same day in the Chamber and the Senate. On July 21st Prince de Ligne, President of the Senate, resigned, and on August 1st the Chambers were closed. In the beginning of September General Liagre was appointed Minister of War in the place of General Renard, who had died shortly before.

The new school laws were considered in a meeting of the Belgian bishops held in Malines in the middle of August, when it was resolved to refuse absolution to the teachers of normal schools; that the religious instruction given in secular schools was schismatic, and all teachers giving such instruction were to be excommunicated. These resolutions were, however, not fully approved by Cardinal Nina, the Papal Secretary of State, in a note to the Papal Nuncio in Brussels, in which Cardinal Nina ordered that the resolutions should not be communicated to the clergy until they had received the sanction of the Holy See.

The bitter feeling existing between the different parties caused the King to address the people at a festival in Tournay, exhorting them to unity and fraternity, particularly in view of the semi-centennial of national independence to be celebrated in 1850.

BIGELOW, Dr. JACOB, an eminent physician, born in Sudbury, Mass., February 27, 1787, died in Boston, January 10th. He was graduated at Harvard College in 1806, and, having prepared himself for the practice of medicine, opened his office in Boston in 1810, and displayed unusual skill. In 1814 he published a work entitled "*Florula Bostoniensis*," describing the plants of Boston and its envi-

rons, enlarged editions of which were published in 1824 and 1840. He enjoyed the friendship of several noted European botanists, with whom he had an extended correspondence relative to botanical studies and discoveries. Between 1817 and 1821 he published in three volumes the "*American Medical Botany*," a work that commanded marked attention not only in this country, but also in Europe. He edited with notes Sir J. E. Smith's work on botany in 1814, was one of the committee of five selected in 1820 to form the "*American Pharmacopœia*," and is to be credited with the principle of the nomenclature of *materia medica* afterward adopted by the British colleges, which principle substituted a single for a double word whenever practicable. Mount Auburn Cemetery, the first garden cemetery established in the United States, was founded by him, and became the model after which all others in the country have been made. During a term of twenty years Dr. Bigelow was a physician of the Massachusetts General Hospital, and was Professor of *Materia Medica* and of *Clinical Medicine* in Harvard University. From 1816 to 1827 he held the Rumford Professorship in the same institution, and delivered lectures on the application of science to the useful arts. These lectures were published in a volume entitled "*Elements of Technology*," which work, enlarged and improved, was republished some years later with the title "*The Useful Arts considered in Connection with the Applications of Science*" (1849). At various times he published medical essays and treatises, in the production of which he was industrious and prolific without impairing the value of his work by its quantity. "*Nature and Disease*," a volume published in 1854, contained several of these essays. Notable among his papers was one entitled "*A Discourse on Self-Limited Disease*," which was delivered as an address before the Massachusetts Medical Society in 1835, and had a marked effect in modifying the practice of physicians. He was during many years the President of that Society, and was also President of the American Academy of Arts and Sciences. Retiring from the active practice of his profession some years ago, Dr. Bigelow gave much attention to the subject of education, and especially to the matter of establishing and developing technological schools. In an address "*On the Limits of Education*," delivered in 1865, before the Massachusetts Institute of Technology, he laid especial emphasis on the necessity of students devoting themselves to special technical branches of knowledge, rather than devoting time and strength to subjects irrelevant to the particular vocations they are to follow.

BLAINE, JAMES GILLESPIE, an American statesman, born in Washington County, Pennsylvania, January 31, 1830, at Indian Hill Farm, the home of his maternal grandfather, Neal Gillespie. His great-grandfather, Colonel

Ephraim Blaine of Carlisle, Pennsylvania, was Commissary-General of the Revolutionary army from 1778 till the close of the struggle in 1783. Washington attributed the preservation of his troops from actual starvation during that terrible winter at Valley Forge mainly to the heroic and self-sacrificing efforts of Colonel Blaine. Mr. Blaine's father, born and reared in Carlisle, after an extended tour in Europe, South America, and the West Indies, returned and settled in Washington County about 1818, becoming one of the largest landed proprietors in western Pennsylvania. He took special pains to give his son a thorough intellectual training, but died before he was fully grown. At the age of eleven he was sent to school in Lancaster, Ohio, where he lived in the family of his relative, the Hon. Thomas Ewing, at that time Secretary of the Treasury. He graduated from Washington College in 1847, at the age of seventeen. Specially excelling in mathematics and Latin, he shared the first honor of his class with John O. Hervey, now Superintendent of Public Instruction at Wheeling, West Virginia. His college guardian was his uncle, the Hon. John H. Ewing, then a Representative in Congress from the Washington district of Pennsylvania. After graduating, Mr. Blaine taught for a while in Pennsylvania and Kentucky, wrote for the press, and studied law, but never practiced. He married Harriet Stanwood, a teacher from Massachusetts.

In 1853 he went to Maine, where he edited the "Portland Advertiser" and the "Kennebec Journal." He was chosen a member of the Maine Legislature in 1858, where he served four years, the last two as Speaker of the House. The late Governor Kent of Maine, speaking of Mr. Blaine's record in that State, says: "Almost from the day of his assuming editorial charge of the 'Kennebec Journal,' at the early age of twenty-three, Mr. Blaine sprang into a position of great influence in the politics and policy of Maine. At twenty-five he was a leading power in the councils of the Republican party, so recognized by Fessenden, Hamlin, and the two Morrills, and others then and still prominent in the State. Before he was twenty-nine he was chosen chairman of the Executive Committee of the Republican organization in Maine—a position he has held ever since, and from which he has practically shaped and directed every political campaign in the State, always leading his party to brilliant victory."

In 1862 Mr. Blaine was elected a Representative to the Thirty-eighth Congress, and served on the Committee on Post-Offices and Post-Roads. Re-elected to the Thirty-ninth Congress, he served on the Committee on Military Affairs, and the special Committee on the Death of President Lincoln, and as chairman of that on the War Debts of the Loyal States. Re-elected to the Fortieth Congress, he served on the Committees on Appropriations and Rules. Though entering very young, Mr.

Blaine always commanded the attention of the House, and before he had been three years a member he ranked with the highest as a debater. At the period of greatest anxiety and depression in the war, he delivered a speech on "The Ability of the American People to suppress the Rebellion," which has been cited for the great attention and commendation it received. While a member of the Post-Office Committee he took an active part in securing the system of postal cars now in general use. Throughout the period of reconstruction he was active and energetic in influencing legislation, and was especially prominent in shaping some of the most important features of the fourteenth amendment, particularly that relating to the basis of representation. The discussions on this great series of questions, in which Mr. Blaine figured largely, are among the most interesting and valuable in the history of the American Congress.

He was re-elected to the Forty-first Congress, and made Speaker of the House of Representatives, which position he also held during the Forty-second and Forty-third Congresses. It has been said that no man since Clay's speakership presided with such an absolute knowledge of the rules of the House, or with so great a mastery in the rapid, intelligent, and faithful discharge of business. His knowledge of parliamentary law was instinctive and complete, and his administration of it so fair that both sides of the House united at the close of each Congress in cordial thanks for his impartiality. Even more marked than his career as Speaker was Mr. Blaine's course in the House when he returned to the floor at the close of his speakership. His speeches during the debates on the proposition to remove the political disabilities of Jefferson Davis added greatly to his reputation as an orator and parliamentarian.

In June, 1876, Mr. Blaine was appointed by the Governor of Maine to fill the vacancy in the Senate caused by the resignation of Lot M. Morrill, appointed Secretary of the Treasury. On the meeting of the Legislature in January, 1877, he was promptly chosen not only for the remainder of the unexpired term, but for the full term ending March 4, 1883. In the Senate he has taken a prominent part in every important debate. Always a strong party man, he is now one of the recognized leaders on the Republican side.

Mr. Blaine is a man of good temper, with a certain intellectual vehemence that might sometimes be mistaken for anger, of strong physique, with wonderful powers of endurance and recuperation, and of great activity and industry. To these qualities, added to great personal magnetism and a remarkably tenacious memory, he owes his success in public life. In the recent political troubles in Maine his statesmanlike qualities proved sufficient for the emergency, saved the State from threatened violence, and carried the Republican party to success.

BOLIVIA (REPÚBLICA DE BOLIVIA). This republic, so rarely the scene of events of interest to the rest of the world, now emerges from obscurity and claims her share of the attention attracted by a war ranking among the most disastrous in its course, and likely to prove one of the most sterile in useful results, that have ever been waged on the Pacific coast of South America. A brief review of Bolivian statistics, and Bolivia's relations with the neighboring states, for some years past, will suffice to throw into conspicuous relief the true origin of the strife.

With an area (assuming the lowest estimate) of rather more than 500,000 square miles, and a population of 2,325,000,* Bolivia is nearly the equal of Peru in both respects, while she is slightly the superior of Chili in the second and four times her superior in the first respect. But in spite of the vastness of her territory, a large proportion of which comprises cultivable lands of unsurpassed fertility, and notwithstanding the richness and variety of her mineral products, she is commercially and industrially the inferior of both. Possessing but a few miles of seaboard, with two small ports accessible only over a narrow strip of desert wedged between her maritime neighbors, her landlocked position condemns her to the fatal necessity of carrying on through Peruvian territory and Peruvian ports the main bulk of her commerce, which thus becomes a tributary of the Peruvian Treasury. In the official returns last published, for 1875, but which are asserted to give figures far below the truth, the imports and exports were set down as of the total value of \$5,750,000 respectively, for the most part through Peruvian ports—Árica, etc. The duties on the imports went to the Peruvian custom-houses, and to Bolivia was paid over the sum of \$500,000, or little more than one third of the total amount collected, assuming the average rate of duties to have been 25 per cent.† But the official returns, as above suggested, have been pronounced incorrect by some writers, one of whom remarks substantially as follows: The subjoined table, from the "Tableau général du commerce de la France," exhibits the value of the Bolivian, Chilian, and Peruvian trade with the French Republic in 1876:

Bolivia.....	{ Imports.....	\$45,956
	{ Exports.....	635
Chili.....	{ Imports.....	5,523,430
	{ Exports.....	6,492,008
Peru.....	{ Imports.....	11,906,376
	{ Exports.....	4,094,903

These figures show a striking disproportion between the Chilian and Peruvian imports and those of Bolivia, although the population and the consumption of foreign commodities are nearly equal in the three republics. The cause of the discrepancy is to be found in the fact that Bolivia's purchases from Valparaiso and

Tacna, which constitute the great bulk of her foreign supplies, do not figure in the list of her imports. Conversely, the full value of her exports is not represented either, as they are transmitted through Peru and Chili, in payment of the merchandise received through these countries. From 1825 to 1840 the value of the silver purchased annually by the Banco Nacional, which was then very generally supposed to monopolize that metal, was from \$2,000,000 to \$2,500,000; but large quantities have always been exported secretly, the value of which there is no means of determining. Certain it is, however, that all the silver sent out of the country is in payment of imports. Ever since 1850 the yield of the silver mines has steadily increased, and it is now estimated at an annual value of not less than \$10,000,000, exclusive of the product of the Caracoles mines. Gold, too, has at all times been exported on an extensive scale, but secretly. Yet, as nowhere in the republic is gold-mining systematically carried on, and as all the gold brought to market is in the shape of *pepitas* or nuggets, laid bare by descending torrents in the rainy season and gathered by the Indians, it is probable there has been no progressive increase of quantity, notwithstanding the increased necessities of the Indian population. Another important article of export is copper from the Corocoro mines, which, in spite of greatly reduced prices, continues to be extracted on account of its superior quality. Tin, though very abundant, is now almost wholly neglected. Merchants who have attentively studied this subject are of opinion that the aggregate value of the gold, copper, and tin at present exported is about \$5,000,000 a year; which, with \$10,000,000 for silver, constitutes an annual value of \$15,000,000 for metal exports alone. The various branches of agricultural industry in Bolivia are for the most part limited by the demand for home consumption. The great Yungas valleys of the east, watered by the snow-covered Cordilleras, extending from the giant peak of Illimani to that of Sorata (a distance of some 300 miles), and with a climate no less favorable than that of tropical Brazil, yield coffee and cacao of excellent quality. Indeed, the cacao is said to be superior to that of Guayaquil; and the *quina* or calisaya-bark of the same region is esteemed for the strength and general superiority of its sulphates. In the absence of necessary data, it would be rash to form an estimate of the quantity exported of these commodities; but it is evidently very much smaller than it might be with improved means of transportation. The sugar-cane is cultivated in the valleys above referred to, and in that of Santa Cruz; but the sugar and molasses manufactured do not exceed the home requirements. Cereals, leguminous plants, and almost every variety of fruits peculiar to the tropical and temperate zones, are abundant and cheap, but, like the products above enumerated, are never sent

* For the territorial division, area, population, etc., see "Annual Cyclopædia" for 1872 and 1873.

out of the country, owing to the lack of easy means of communication with the coast. In the event of persistent droughts, such as those of 1877 and 1878, especially that of the latter year, famine spreads desolation over such localities as, by the difficulties of transport, are cut off from immediate relief. Of all Bolivian products, that most assiduously cultivated by the Indians is the coca-shrub (*Erythroxylon coca*), the leaves of which they use as the Asiatics use betel. The annual sales of this article at La Paz, the seat of government of the republic, vary in amount from \$4,000,000 to \$5,000,000. Cattle, sheep, horses, and mules are abundant, the last being the chief animals of burden on the western slopes of the Andes; while in the elevated regions there are great numbers of llamas, vicuñas, guanacos, and alpacas (varieties of what may be termed the American camel), with the hair of all of which the Indians manufacture hats, fine cloths, etc.

Notwithstanding the absence of positive statistics, as the Bolivian imports are known to consist mainly of manufactured goods, an approximate idea of their *minimum* values may be arrived at thus: Let the population be regarded as made up of—(1), 325,000 Indians in a state of savagery, and not submissive to the laws of the land; (2), 1,000,000 civilized Indians; (3), 500,000 whites, forming the first or upper class; and (4), 500,000 mestizos, constituting the second class. The civilized Indians, the most useful element of Bolivian society, being for the most part land-owners, farmers, cattle-rearers, etc.—in fine, the factors of the nascent industries of the country—may, in order to avoid possible exaggerations, be excluded from the proposed estimate. Nevertheless, these Indians, besides their usual dress, which is exclusively of home manufacture, make liberal expenditures on gala-dress for their carnival and other feasts, in the regular observance of which they yield to none. If, then, the moderate sum of thirty dollars be assumed as the yearly outlay of the 1,000,000 individuals of the first and second classes (500,000 whites and 500,000 mestizos), for dress and such other necessities or luxuries as are not produced in the republic—church ornaments, jewelry, watches and clocks, house ornaments, fancy wares, stationery, books, school supplies, musical instruments, hardware, cutlery, wrought and cast iron, agricultural and mining implements, machinery, etc., etc.—the total value of the foreign merchandise annually imported into Bolivia will be \$30,000,000. And it may be affirmed, without fear of challenge, that this estimate is far below reality. Now, if the imports amount to \$30,000,000, and two millions be assigned as the value of merchandise free of duty, the custom-house duties on the remaining twenty-eight millions should be, according to the Bolivian tariff, from six to seven millions, of which perhaps not one million goes into the Government Treasury! Do the Peruvian cus-

tom-houses and smuggling on the Bolivian coast and frontiers absorb the rest?

The following table shows the national revenue and expenditures as estimated in the budget (voted in 1872) for the fiscal year 1873-'74, since which time no official statement of the finances has been published:

REVENUE.	
Customs (duties on imports):	
Arica.....	\$405,000
Cobija*.....	250,000
	\$655,000
Mint, export duty on silver.....	198,696
Guano sales.....	800,000
Stamped paper.....	27,268
Import duty on cattle (from the Argentine Republic).....	20,580
Colonel Church's loan.....	650,000
Indian contribution.....	66,807
Sundries.....	896,428
	\$2,929,574
EXPENDITURES.	
Ministry of the Interior.....	\$597,458
Ministry of Foreign Affairs.....	158,940
Ministry of Finance (inclusive of home debt).....	2,072,018
Ministry of Justice and Public Worship.....	399,167
Ministry of War.....	1,126,916
Expenditures extraordinary.....	156,010
	\$4,505,504
Total.....	\$4,505,504
Deficit.....	\$1,575,930

This deficit would, of course, be reduced somewhat by the proceeds of the sale of public lands at Mejillones, in the coast region, export duties on silver from the coast mines, and other sources of revenue, the yield of which could not be accurately estimated.

The national debt amounted in June, 1875, to £3,400,000 (\$17,000,000), including an item—Colonel Church's loan of £1,700,000, negotiated in London in 1872—which for some years past has been a subject of angry debate in British financial circles, and the details of which are as follows: The loan is designated as the "Bolivian six per cent. of 1872"; the nominal amount was £1,700,000; the issue price, 68; interest and sinking fund, 8 per cent. per annum; and the number of years to run, twenty-four. The net produce† to the borrower was set down at £1,156,000; the annual charge throughout at £136,000; and the total cost to borrower, including capital repaid at redemption, at £3,235,440. The proceeds of the loan were to be applied to the construction of railways.

The regulation strength of the army in time of peace is 3,000, as follows: 8 generals, 1,012 subaltern officers, and 2,000 men! The annual cost of this force is about \$2,000,000, or two thirds of the revenue. After the commencement of the war, the number was almost immediately raised to about 20,000 men, neither raw levies nor disciplined soldiers, but men accustomed to fighting and the use of arms.

Bolivia, formerly called the Presidency of Charcas, and afterward Upper Peru, formed from 1767 a part of the viceroyalty of Buenos

* Port of entry on the Bolivian coast.

Ayres and was erected into an independent state in 1825, taking the name it still bears, in honor of Simon Bolivar.

The signal victory gained over the Spaniards by Bolivar and Sucre at the battle of Ayacucho in December, 1824, proved the death-blow to Spanish sway in America; and the Spanish-American countries, after they had achieved their independence, retained their former boundaries unchanged.

The Chilians urge the point, disputed by the Bolivians, that during the colonial period the Chilean territory extended northward to latitude 23° south, or at least up to the bay of Mejillones, over a portion of the desert of Atacama; and in support of their claim they evoke the testimony of royal letters patent, the jurisdiction exercised by Chili up to the bay just named, the result of a special survey of the coast under the auspices of the Spanish Government, and lastly a clause of a Bolivian President's message to Congress in which Cobija is mentioned as the only port of Bolivia, and in need of improvement. The fact is, Chili remained until 1842 in peaceful possession of the territory which is the prize and in part the scene of the present strife. In that year attention appears to have been for the first time directed, by the President of Chili, to the Atacama Desert as a possible source of national wealth, and then commenced the discussion which has ended in an appeal to arms. Guano discoveries on the barren strip of coast, and the expropriation by the Government of Chili of the deposits whose location had been ascertained by a commission appointed by that Government, brought into the field the Bolivian Government as a claimant for what was supposed to be a rich prize. However, Chili seems to have exercised jurisdiction over the guano deposits at Mejillones, Angama, Santa Maria, and other points on the desert coast, inasmuch as from the year 1842 to 1857, 113 vessels of various nations loaded guano at those places under licenses obtained from the Chilean port of Valparaiso. No allusion, it would seem, has been made to any grant of similar licenses from the Bolivian port of Cobija. The discussion as to the proprietorship of the desert was carried on from 1842 until 1864, when the hostile visits of a Spanish fleet to the coast had the effect of uniting the Republics of Chili, Bolivia, and Peru to oppose a common enemy. Under the influence of this feeling the first two republics in 1866 made mutual concessions of their respective rights and privileges, in a treaty of limits establishing the boundary-line at 24° south, but fixing a common zone between latitude 23° and 25° south wherein both countries should share equally in customs receipts and export duties on minerals. A transcript of this treaty and of others of more recent date will be found at the end of this article. It is contended on behalf of Chili that Bolivia from the first disregarded the obligations she had contracted; set aside the arrangement for a

partition of revenues; refused permission to the Chilean inspectors to perform their duty; and that the general course she pursued was rather that of a sole than of a joint owner of the territory.

In the mean time it had been discovered that the barren strip of soil was rich, not only in guano, but in metallic and other mineral wealth, and especially in vast deposits of nitrate of soda. The value of this mineral as an agricultural manure is now universally recognized. Almost exclusively through Chilean capital and enterprise, the trade in it soon became important; and Peru, which has rich deposits of her own, was jealous of the menaced competition of the Chilean companies with her nitrate and guano trade. "Accordingly," says an English writer, "the Peruvian Government, which has recently acquired a monopoly of this trade by grievous oppression of the private persons who owned deposits in Peru, and which has been able in consequence to extort enormous prices from foreign customers, is believed to have persuaded Bolivia to follow the same course, in defiance of treaty obligations, toward the Chilians." In less than ten years after signing the treaty of 1866, the conduct of Bolivia had become such as to render it necessary for the Government of Chili, in defense of her citizens and their properties, either to negotiate a new treaty or reassert former boundaries. Chili chose the former course, and the treaty of August, 1874, was signed and duly ratified. This treaty abolished the neutral zone, and gave to Bolivia all export and customs dues previously agreed upon except those arising from the sale of guano, freedom from Chilean inspection, etc. The stipulations on behalf of Chili were in protection of her industry. They provided that, for a space of twenty-five years, Chilean capitalists working mines should not be subjected to any increase of export duty, nor in their persons, capital, or industries, to other imposts of any nature whatsoever than those already existing at the time of the treaty. Since then, millions of Chilean capital have been invested in mining and the manufacture of nitrate on this formerly unproductive coast, causing three important towns to be built, nine tenths of the inhabitants of which are Chilians.

The respective rights of the two republics being thus settled by a new treaty (that of 1874), which, while securing the possession of the territory to the Bolivians, protected the interests of the Chilians as capitalists and workers of the mineral wealth of the country, friendly relations were reestablished; but they did not prove enduring. The Bolivian Government began last year to trench upon these rights, and especially to subject Chilean companies concerned in the nitrate trade to new and heavy burdens (an export duty of 10 cents per quintal, February, 1878), in contravention of express treaty stipulations. It is contended that the influence of the Peruvian Government

was the moving power in this "unwise and unjust enterprise." It was believed that Chili, unprepared for military efforts, and afraid of impairing her sound financial position, would submit to any wrongs rather than go to war. Peru had made her guano and nitrate trades a government monopoly, and the Peruvians calculated that, if the Chilian competition could be suppressed by the arbitrary measures of the Bolivian Government, the price of commodities for which there was a constant demand among European and American agriculturists might be indefinitely raised. When the Santiago Government protested, the crushing export duty was abolished, but the Chilian Company's property was declared confiscated to the state. If this policy had been successful, the Peruvian and Bolivian Governments would have shared between them a monopoly of guano and nitrate beyond the reach of any rivalry. There was reason to hope at one time that the offer of the Chilian Government to refer the matter to an impartial arbitration might have been accepted. But Peruvian influence appears to have been too strong for Bolivia, and this offer was refused. The rejoinder of Chili was swift and decisive. On February 12th, a day celebrated as the anniversary of the Chilian victory over Spanish domination at Chacabuco in 1817, public meetings denounced the act of Bolivia as one of bad faith and spoliation, and demanded redress by arms. Already, however, the Chilian Government had recalled its Minister and sent forward both ships and troops to the scene. The ironclads Admiral Cochrane and Bernardo O'Higgins hurried to join their mate in Antofogasta harbor, and with them went a small force of Chilian regulars, who on February 14th landed and occupied the town without firing a gun. The next day the O'Higgins took possession of the port of Mejillones, while the land forces successively occupied Caracoles, Cobija, Calama, and Tocopilla. In a word, the entire coast-line was blockaded by Chilian vessels and garrisoned by Chilian troops. Thus Chili's energy had won the first move in the campaign, in a complete mastery of the disputed territory. Reinforcements went forward, and the Chilian residents and workmen in the nitrate and mining districts were also organized, equipped, and drilled. Chilian postal and customs regulations and general laws were introduced into Antofagasta, two Chilian newspapers were founded, military engineers planned permanent fortifications, and the Chilians evidently meant to stay. It would seem as if the Government of Santiago had resolved to accept the nullification of the treaty of 1874 which Bolivia attempted, and to hold by force the territory which Chili originally claimed. A loan of a million and a quarter and an issue of inconvertible paper were sanctioned at once by the Chilian Chambers.

No immediate resistance was offered by Bolivia, whose government was evidently awaiting the result of a proposed Peruvian media-

tion. In the mean time President Daza issued two proclamations: one calling the nation to arms to resist the invader, and the other declaring an amnesty for all political offenders, since at the present crisis private quarrels should be forgotten in the effort to regain the territory arbitrarily occupied by Chili. Public enthusiasm was intense. The wealthy citizens of La Paz offered to the Government, as a war contribution, 50 per cent. of their revenues; but Daza, declining such a munificent gift, restricted his acceptance to 10 per cent. of the sum offered, stating that until it was known whether Bolivian troops would be allowed to pass over Peruvian soil, and to make use of Peruvian railways, he could not estimate the cost of the campaign.

The following decree was issued shortly after the proclamations just referred to:

Hilarion Daza, President of the Republic of Bolivia, considering that the Government of Chili has invaded *de facto* the national territory, without observing the rules of international law or the practice of civilized nations, violently expelling the authorities and Bolivian citizens resident in the department of Cobija; that the Government of Bolivia finds itself in duty bound to adopt the energetic measures which the gravity of the situation demands, without departing, however, from the principles recognized by the rights of nations;

I decree:

ARTICLE I. All trade and communication with the Republic of Chili is prohibited during the continuance of the war undertaken by that republic against Bolivia.

ART. II. The Chilians resident in Bolivian territory must disoccupy it within the term of ten days from the date of the notification which shall be made them by the local political authority; they being at liberty to take with them their private papers, their baggage, and articles of personal use.

ART. III. The expulsion ordered in the previous article can only be suspended for the term which should be strictly indispensable on account of sickness or other serious impediment in the judgment of the authorities.

ART. IV. The respective authorities will proceed, as a war measure, to embargo the fixed and movable property belonging to Chilian subjects within the territory of the republic, with the exception of the objects designated in Art. II. The mining property belonging to Chilians, or in which there should be shareholders of that nationality, may continue to be worked under the charge of an administrator appointed by the authorities, or with the intervention of a representative of the Government, as they may think most desirable.

ART. V. The net proceeds of the mining property belonging to Chilians, or of shares belonging to the same, shall be deposited in the national Treasury.

ART. VI. The embargo ordered by this decree will be changed to final confiscation, should the nature of the hostilities engaged in by the Chilian forces require an energetic retaliation on the part of Bolivia.

ART. VII. All transfers of Chilian interests made at a later date than the 8th of November last, on which date the Chilian Government declared the treaty of 1874 annulled, will be ignored; and any contract which should have been agreed upon in this respect will be considered void.

Given in the city of La Paz, the 1st day of March, 1879.

(Signed)

H. DAZA.

The mediatory intervention of Peru led only to the discovery by the Santiago Government

of a secret treaty of alliance existing between Peru and Bolivia, and the dismissal of the Peruvian Envoy, Don José Antonio de Lavalle, a prominent diplomatist, as set forth in the following note to the latter :

MINISTRY OF FOREIGN AFFAIRS, }
SANTIAGO, April 2, 1879. }

SIR: The reply given to the Chilean Envoy in Lima a few days ago, by your Government, that it could not observe neutrality in our present conflict with Bolivia, because there existed a treaty of defensive alliance between them—which is the same that you read to me in the conference held on the 31st ult.—has forced this Government to the conclusion that it is impossible to maintain friendly relations with Peru.

Considering the assurance you gave me in the first conference we held on the 17th ult., in reply to my interrogation whether such treaty existed or not, that you had no knowledge of it, that you believed it had no existence, and that it could not have been approved by the Peruvian Congress of 1873 (when it was said to have been approved), and much less in the succeeding years, when you formed part of the diplomatic commission—considering this assurance, I repeat, my Government sees that yours, as well as yourself, in denying this treaty, have placed yourselves in an exceedingly irregular position.

My Government is surprised to learn that that of Peru projected and signed that treaty at the time that it professed sentiments of cordial friendship toward Chili.

To this secret transaction, in which the strictest reserve was stipulated, the Government of Chili replies with the fullest frankness, declaring that its relations with that of Peru are broken, and that it considers it belligerent, in virtue of the authority to that effect received to-day from the high authorities of the state.

In forwarding you your passports I have to assure you that the proper orders have been issued in order that you and the *personnel* of the permanent Legation of Peru may receive all due consideration and facility in returning to your country.

With sentiments of distinguished consideration, etc.,
ALEJANDRO FIERRO.

On April 6th Chili declared war against Peru.

Owing to the occurrence of untoward events in the course of the month of December, no mention has hitherto been made of the Chief Magistrate or of his Cabinet. Previous to the commencement of hostilities, the President was General Hilarion Daza (installed on May 4, 1876), and the Ministers were: Interior and Foreign affairs, Sr. P. T. de Guerra; War and Finance, Sr. E. D. Medina; Justice, Public Worship, and Public Instruction, Sr. J. Mendez. After the enthusiasm with which the Bolivians had hailed the alliance with Peru as the earnest of prompt vindication of their rights, real or imagined, and the repulse of the invader of their soil, repeated reverses of the allied forces brought a change in the popular sentiment. Reflection and suspicion, according to report, grew in time into the conviction that the people's interests had been jeopardized by an appeal to arms in the interest of a designing few; and the general discontent was ultimately manifested in a revolution. The President, still at the theatre of war, was deposed, and found it necessary to seek safety in flight from the country. General Daza, on setting out at the head of his troops, had left the government in charge of Señor Guerra, the Minister of Foreign Affairs, etc.; but on the death of Guerra, in Sep-

tember, Don Serapio Reyes de Ortiz, secretary to Daza, was sent to form a new Cabinet with the aid of the new Minister of War, General O. D. Tofré. It was rumored, however, that Reyes had placed himself at the head of the revolutionary movement and seized the reins of government.

A narration of the main features and events of the war will be found in the article PERU. "If," says the British writer before quoted, "we accept, as we may at least provisionally, the Chilean version of the events which led to the war, it can hardly be disputed that Chili had a legitimate *casus belli* against Bolivia, if not directly against Peru. But it is another question how far it was wise of her to imperil her merited reputation and her comparative prosperity for the chance of punishing the wrongdoers."

We give below translations of the more important stipulations of the Chilo-Bolivian boundary treaties of 1866 and 1874:

ARTICLE I. The boundary-line between Bolivia and Chili, in the desert of Atacama, shall be the parallel of latitude 24° south, from the Pacific coast to the eastern limits of Chili; so that Chili on the south and Bolivia on the north shall enjoy possession and dominion of the territory extending to said parallel of latitude 24° south, and may exercise over such territory all acts of jurisdiction and sovereignty belonging properly to the "lord of the soil." The exact establishment of the boundary between the two countries shall be made by a commission of competent judges, half of whom shall be appointed by each of the high contracting parties. After the boundary-line shall be determined, it shall be indicated by visible and permanent signals, the expense of which shall be borne pro rata by the Governments of Chili and Bolivia.

ARR. II. Notwithstanding the territorial division stipulated in the previous article, the Republics of Chili and Bolivia shall share in equal proportions the products of the guano deposits discovered in Mejillones, and of those which may be discovered in the territories included between the 23d and 25th parallels of south latitude, as well as the export duties which may be collected on the minerals extracted from the territory just mentioned.

ARR. III. The Republic of Bolivia binds itself to open the bay and port of Mejillones, establishing there a custom-house, with the number of employees necessary to the development of industry and commerce. This custom-house shall be the only fiscal office which shall have the right to receive the products of guano deposits and export duties on metals mentioned in the preceding article. The Government of Chili may appoint one or more fiscal employees, who, invested with full powers of inspection, etc., may examine the records of the receipts at the said custom-house of Mejillones, and receive from the said custom-house directly, and in quarterly installments, or in any other manner which may be stipulated by both states, the share of proceeds pertaining to Chili as expressed in Art. II. The Government of Bolivia shall enjoy the same rights should Chili establish a fiscal office on the territory contained within the parallels of latitude 24° and 25°, for the collection of duties, etc., as stipulated in the foregoing article.

ARR. IV. The products from the territory comprised within the 24th and 25th parallels of south latitude, and which may be exported through Mejillones, shall be free of duty. The same exemption shall be extended to the natural products of Chili which may be imported through the same port.

ARR. V. The system of working, or the sale of guano, and the export duties on minerals, as indicated in Art. II. of this compact, shall be determined con-

jointly by the high contracting parties, either by means of special conventions or otherwise, as they may deem most convenient.

ART. VI. The contracting powers bind themselves not to sell or transfer to any other state, company, or individual their rights to possession or dominion over the territory which they share or divide between themselves in consequence of this treaty. In case either of them shall desire to make such sale or transfer, the purchaser can be none but the other contracting party.

ART. VII. In view of the damage accrued, as is well known, from the boundary question between Bolivia and Chili to the parties who, in company, first seriously began the working of the guano deposits of Mejillones, and whose labors were suspended by order of the Chilian authorities, on the 17th of February, 1863, the high contracting parties bind themselves in equity to pay to said parties an indemnity of \$80,000,* to be appropriated at the rate of 10 per cent. from the surplus revenues derived from the custom-house at Mejillones.

ART. VIII. The present treaty shall be ratified, and ratifications exchanged at the city of La Paz, in Bolivia, or at Santiago de Chili, within the term of forty days, or sooner if possible.

In testimony of which the undersigned Plenipotentiaries of the Republics of Chili and Bolivia have signed the present treaty, and affixed their respective seals, in Santiago, on the 10th day of the month of August, A. D. 1866.

(L. s.) ALVARO COVARRUBIAS.
(L. s.) JUAN R. MUÑOZ CABRERA.

TREATY OF AUGUST 6, 1874.

ARTICLE I. The boundary-line between the Republics of Chili and Bolivia shall be at the parallel of latitude 24° south, from the sea to the Cordillera of the Andes, at the watershed.

ART. II. For the interpretation of this treaty the parallels 23° and 24° fixed by the Commissioners Pissis and Mujia, as recorded in the minutes of February 8, 1870, shall be considered as permanent.

Should any doubts as to the true and exact situation of the Caracoles mining district, or of any other mining region, arise from their being considered beyond the zone comprised between 23° and 24° south latitude, their situation shall be determined by two experts appointed, one by each of the two contracting parties, and the experts shall, in their turn, in case of

discord, appoint a third party; and, should these not be able to agree as to the third party, the appointment shall be made by his Majesty the Emperor of Brazil. So long as no proof shall appear in opposition to this determination, it shall be understood, as heretofore, that that mining district is comprised between the parallels indicated.

ART. III. The guano deposits existing, or which may hereafter be discovered, within the territory mentioned in Art. II., shall be shared in equal proportions by Bolivia and Chili, and the system of working, management, and sale be effected by common arrangement between the Governments of the two republics, as heretofore.

ART. IV. The export duties which may be levied upon minerals worked within the zone mentioned in the preceding article shall not exceed the rates which are at present collected, and Chilian residents, their industries and capital shall not be subject to taxes other than now exist. The stipulation contained in this article shall be enforced for the term of twenty-five years.

ART. V. The natural products of Chili, which may be imported through the Bolivian coast comprised between parallels 23° and 24° shall not be subject to any taxes or duties whatever; and reciprocally the same exception is extended to the natural products of Bolivia which may be imported on the Chilian coast between parallels 24° and 25°.

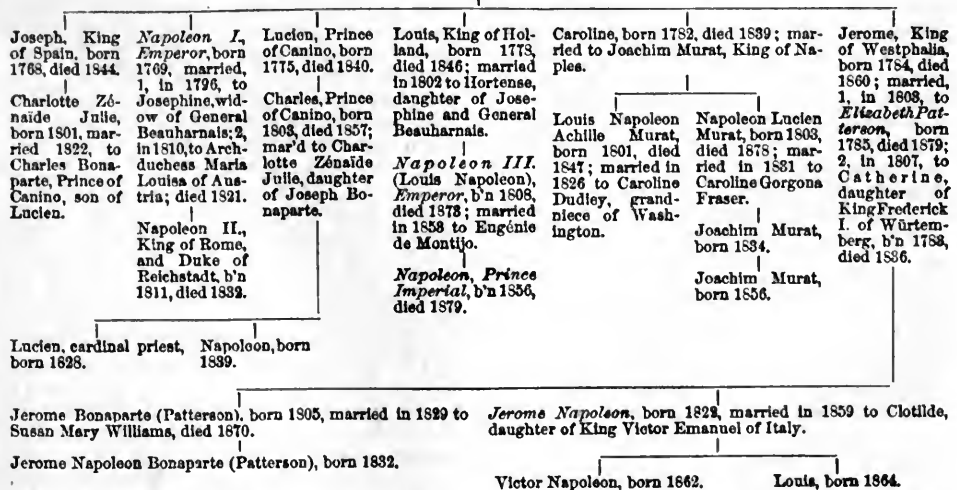

ART. VI. The Republic of Bolivia binds herself to open the ports of Mejillones and Antofagasta, as the chief ports on her seaboard.

ART. VII. The treaty of August 10, 1866, is hereby annulled in all its parts.

(Here follow the signatures of Mariano Baptista, Bolivian Plenipotentiary, and Carlos Walker Martinez, Chilian Plenipotentiary.)

BONAPARTE. The Bonaparte family lost in 1879 two of its prominent members—the Prince Imperial, who was the head of the family and claimant to the throne of France, and Madame Bonaparte-Patterson, the first wife of King Jerome Bonaparte. The following genealogical table shows the relationship of these two members of the family, as well as such others as still occupy a high position:

Charles Bonaparte, born 1746, married to Marie Lættia Ramolino in 1764, died 1785.

* That is to say, \$40,000 each. Chili's moiety was promptly paid, while that of Bolivia, after various subterfuges and delays, is now repudiated by the Bolivian Government on the plea of non-liability in consequence of the annulment of the treaty by which the indemnity was stipulated.

BONAPARTE, Mrs. ELIZABETH PATTERSON, was born in Baltimore in 1785. She was of Scotch-Irish descent. Her father, William Patterson, emigrated from Ulster to America when quite a lad. He pushed his way steadily upward, became the owner of a line of clipper ships, and, by shrewdness and a steady eye to his own interests, ended by amassing a fortune. He then improved his social position by marriage. His wife was the daughter of a retired officer in the British army, and sister of General Samuel Smith, who served with distinction during the Revolutionary War, and was twenty-three years United States Senator from Maryland. Mr. Patterson writes of himself, that from early life he "believed and practiced that money and merit are the only sure and certain roads to respectability and consequence." Another of his maxims is that "every citizen should contribute more or less to the good of society, when he can do it without too much loss or inconvenience to himself." It is not surprising that he reached the height of his ambition, and was, "Charles Carroll of Carrollton only excepted, the wealthiest citizen of Maryland." His daughter Elizabeth inherited no small share of his characteristics. At the age of ten she is said to have known by heart the maxims of La Rochefoucauld, in addition to those which had been instilled into her by her parent. Her favorite poem was Young's "Night Thoughts." Thus accomplished, Elizabeth Patterson reached womanhood. She is described as tall and graceful, fair of face, with dark hair and eyes. Her contemporaries agree in ascribing to her charms of person and mind of which in later days not a vestige remained. Fully aware of her own advantages, she informs us that she began life with the intention of using them for her own advancement.

In the autumn of 1803 Captain Jerome Bonaparte arrived at New York in command of a French frigate, returning home after a cruise in the West Indies. He journeyed to Baltimore to visit Captain Barney, who had formerly served with him in the French navy. The brother of the First Consul was fêted everywhere. At a ball at the house of Samuel Chase, a signer of the Declaration of Independence, the handsome young officer was introduced to Miss Patterson. She was in the first freshness of her beauty, eighteen years of age. He was a few months her senior. They were mutually pleased. During a dance her long hair became entangled in his chain, which the young couple willingly accepted as prophetic of their fate. Mr. Patterson foresaw that his daughter's marriage with a youth with such brilliant prospects would prove distasteful to the First Consul, and forbade the courtship. Elizabeth proving recalcitrant, he sent her into Virginia. They contrived to correspond, and in a short time she reappeared on the scene of her triumph. They became engaged, and Jerome went so far as to procure

a marriage license. Their acquaintance was then only four weeks old. Mr. Patterson represented to his daughter the difficulties before her, but she insisted that she "would rather be the wife of Jerome Bonaparte for an hour than the wife of any other man for life." The match was postponed to December 24, 1803, when Jerome would have passed his nineteenth birthday. All legal formalities were carefully complied with. The contract was drawn up by Alexander Dallas, afterward Secretary of the Treasury. The Vice-Consul of France, the Mayor of Baltimore, and many other dignitaries witnessed the ceremony, which was solemnized with great pomp in the Cathedral by the Most Rev. John Carroll, Archbishop of Baltimore.

In order to impress the First Consul with the respectability of the family and the validity of the marriage, letters were procured from Thomas Jefferson, President of the United States, and from the Secretary of State, The Hon. Robert Livingston, Ambassador to France, agreed to present the affair in its most favorable light. Robert Patterson, brother of the bride, who was then traveling in Europe, was ordered to Paris by his father to advocate his sister's interests. His personal appearance, good manners, and good sense produced a pleasing impression on the Bonaparte family. Lucien, in particular, told him that the marriage was approved by Madame Lætitia, and that he and all his brothers except Napoleon would cordially receive Jerome's wife as a member of their family. Joseph and Lucien advised Jerome to become an American citizen, and took steps to procure him a provision enabling him to live there in accordance with his rank. From first to last Napoleon remained obdurate. The young couple were in New York waiting to embark for France, when the will of their august brother was made clear to them by the following order, transmitted by Dacres, then Minister of State: "Pichon, the French consul-general in New York, is instructed to withhold Jerome's supplies. The commanders of French vessels are prohibited from receiving on board the young person to whom he has attached himself." Accompanying this was an enactment of the French Senate: "By an act of the 11th Ventose prohibition is made to all the civil officers of the Empire to receive on their registers the transcription of the act of celebration of a pretended marriage that Jerome Bonaparte has contracted in a foreign country during his minority, without the consent of his mother, and without previous publication in his native land." At the same time Jerome received a message from his brother to the effect that if he left the "young person" in America, his youthful indiscretion would be forgiven; if he brought her with him, she should not put a foot on French territory. Undismayed, they tried to embark on a French man-of-war, but British cruisers outside detained it in New

York harbor. They next took passage on an American vessel, which was wrecked off the Delaware coast, the passengers narrowly escaping with their lives. "Mme. Bonaparte," says the narrative, "was the first person who jumped into the boat." Finally they sailed in March, 1805, on one of Mr. Patterson's ships. They reached Lisbon, and found a French frigate there to prevent her landing. By the suggestion of Madame Mère, seconded by the advice of Mr. Patterson, Jerome left his young wife, and went to Paris to plead her cause with the Emperor, and be won over by him. This separation proved final. The vessel proceeded to Amsterdam. At the mouth of the Texel two men-of-war awaited her. The Continent was forbidden ground to Elizabeth Bonaparte, and she was forced to seek an asylum in England. Pitt sent a regiment to Dover to prevent mischief, so great was the multitude that thronged thither to witness her landing. A few days later her son, Jerome Napoleon Bonaparte, was born, July 7, 1805, at Camberwell. Here she continued to reside, constantly receiving messages and letters from Jerome, protesting his fidelity and his undying affection for her and his infant son. He was doubtless sincere at that moment, being still hopeful of the Emperor's consent. Napoleon applied to Pius VII. to dissolve the marriage, which the Pontiff steadfastly refused. The decree of divorce was passed by the imperial Council of State. He wrote to Jerome: "Your marriage is null both in a religious and legal point of view. I will never acknowledge it. Write to Miss Patterson that it is not possible to give things another turn. On condition of her going to America, I will allow her a pension during her life of sixty thousand francs a year, provided she does not take the name of my family." Napoleon feigned to consider her residence in England as a special offense. Madame Bonaparte consented to return to America, hoping thus to conciliate her imperial brother-in-law. When Jerome, after vexatious delays, was admitted to Napoleon's presence, he upbraided him rudely for his folly, and concluded: "As for your affair with your little girl, I do not regard it." As a reward for his desertion, Jerome was created a Prince of the Empire, and was promoted Admiral. He received subsequently the rank of general. In 1806 he was made by the Senate successor to the imperial throne in the event of Napoleon leaving no male heir. On the 12th of August, 1807, he married Catherine Frederica, Princess of Würtemberg. By his second marriage he had three children, of whom two survive, the Princess Mathilde Demidoff, and the youngest son, Prince Napoleon, dynastic heir to the Prince Imperial.

Jerome's marriage dispelled the illusions of Elizabeth Patterson. A cynical and disappointed woman, she saw herself condemned to what she termed her "Baltimore obscurity." She loathed her native city so that she

says that when residence there seemed the sole alternative she determined to commit suicide, but her courage failed. In 1817 she sailed for Europe, and remained abroad for seven years. Business considerations inducing her to return to Baltimore, she bewailed the time she was forced to spend in a country where "there is no court, no nobility, no fit associates" for her. Although feeling and expressing an unbounded contempt for the worthless man who abandoned her, she was ever a passionate adherent of Bonapartism. She employed every means to prove the legality of her marriage and the legitimacy of her son. When Napoleon III. mounted the throne a formal trial was granted her. Jerome, the father, was not ashamed to appeal to the Council of State to forbid "Jerome Patterson" to assume the name of Bonaparte. Nevertheless, the Council decreed that the son of Madame Elizabeth Patterson was entitled to the name of Bonaparte, although he could not be recognized as a member of the imperial family. After the death of Jerome she again brought suit for a share in his estate. In spite of complete documentary proof and the fact that the validity of her marriage had been sustained by the Church, all the zeal and eloquence of her advocate, Berryer, did not prevent an adverse decision, probably inspired by the Imperial Court. Her son was, however, formally recognized by official decree, that "Jerome Bonaparte was a legitimate child of France."

Ambition, which had been so cruelly nipped in her own case, was equally crushed when she endeavored to advance her son. He was recognized by Madame Mère, and petted by Pauline Borghese, who at one time declared him her heir. Mrs. Patterson bent all her energies to make a fit match for him. Her choice was one of Joseph Bonaparte's daughters. The young man preferred the life of an American citizen, which his mother despised. He chose for himself, and married Miss Williams of Baltimore. His mother wrote to Mr. Patterson on the subject: "I had endeavored to instill into him from the hour of his birth the opinion that he was much too high in birth and connection ever to marry an American woman. . . . I would rather die than marry any one in Baltimore. . . . As the woman has money, I shall not forbid a marriage which I never would have advised. . . . I hope most ardently that she will have no children." She goes on to say that she washes her hands of him and his affairs, that she regrets the economies practiced by her to increase his wealth, and that henceforth she will double her expenditures. But the love of money was too strong for her, and she never carried out this threat. Her letters are full of moans over the expenses of her foreign journeys. She lived and died in a boarding-house, and her expenses did not reach two thousand a year, when her income exceeded one hundred thousand dollars. Her father, with whom she was ever at

variance, threatened to disinherit her. In his will he asserts: "The conduct of my daughter Betsey has through life been so disobedient that in no instance has she ever consulted my opinions or feelings." Therefore he refused to give her an equal share in his estate, but he relented so far as to bequeath her for life nine houses in Baltimore. The rapid rise in rents and her penurious habits enabled her to accumulate property estimated at a million and a half. Her jewels were of considerable value. She never parted with her old dresses, and was fond of exhibiting them and descanting on the scenes where she had worn them, and the compliments she had received. She passed many winters in Florence, and counted with infinite pride many royal and distinguished personages among her acquaintance. After their tender parting at Lisbon in 1805, Jerome and Elizabeth saw each other but once. One day in the gallery of the Pitti Palace the ex-King of Westphalia came suddenly upon his ex-wife. He evinced great embarrassment. Whispering to his Würtemberg princess, "There is my American wife," they turned rapidly away. The next morning their *ci-devant* royalties quitted Florence, leaving Mrs. Patterson in possession of the field. By birth she was a Protestant. She became an avowed free-thinker, but professed always "a great respect for the Roman Catholic belief as the religion of kings and princes."

As a beautiful girl who had married for love, as a wife of youth deserted at the bidding of a despot, there hung about her a certain romance which for a period made her a notability wherever she traveled abroad. It might have retained for her the sympathy of the world. Unfortunately her letters are an unconscious revelation of vanity, selfishness, and niggardliness naively displayed. She appears an adroit schemer, quite capable of capturing a thoughtless boy. Jerome almost escapes the scorn which his pitiful conduct merits. It is to be regretted that their publication has been permitted. Mr. Patterson evinced a discretion worthy of imitation when he wrote to his daughter Betsey: "I have received your two letters. They have been seen or heard of by no person but myself, and to be candid with you I would have been ashamed to expose them to any one else."

At the downfall of the second empire and the death of Napoleon III., the hopes of this indomitable schemer revived. With the weight of ninety winters heavy upon her, she actively endeavored to put forward the claims of her grandson, Colonel Bonaparte, who had served with distinction in the French army. She prophesied that he would be called to the regency, perhaps to the imperial throne. The American Bonaparte needed only recognition as an "official" member of the family to stand next in succession to the Prince Imperial. This was the last flicker of that restless ambition which was doomed to be ever baffled.

She died in April, 1879, at the age of ninety-four. Mrs. Patterson survived her divorce nearly three quarters of a century. She was already eleven years of age when General Bonaparte first assumed command of the army in Italy. Had she lived a few weeks longer, she would have seen the death-blow of Bonapartism dealt by ignorant savages in Zululand.

BONAPARTE, NAPOLEON EUGÈNE LOUIS JEAN JOSEPH, Prince Imperial of France, born March 16, 1856, died June 1, 1879. The only son of the Emperor Napoleon III., he was born at the time when the Second Empire was at the height of its glory, and his birth was welcomed with the greatest demonstrations of joy. His christening at Notre Dame, on June 5th, was one of the most magnificent spectacles ever witnessed even in France. An English nurse was provided for the Prince, and he remained under her charge until his seventh birthday; so that he could speak English before he could his own tongue, and he always spoke it with remarkable fluency and a pure accent. All through his childhood and boyhood he had an inseparable companion in the young Louis Conneau, son of the Dr. Conneau who aided his father to escape from Ham; and his influence is said to have been highly beneficial to the Prince. The greatest attention was paid to his education, and under General Frossard he made good progress. He was a quiet mannered boy, naturally shy, and disposed to become more so by the diplomatic reserve continually inculcated upon him. He had from his childhood a considerable amount of shrewdness, and frequently said, "I always take off my hat to the Parisians, because they take off one's crown so easily when they are offended." When he was three years old he was placed on the roster of the Imperial Guard. At five he was promoted to a corporalship, was made a sergeant at seven, and wore his sub-lieutenant's epaulet for the first time when he started for the German war with his father. He was not fortunate, however, with his military experience. His appearance on the field brought upon him ridicule; his second military enterprise resulted in death. After the battle of Saarbrücken, the Emperor sent a dispatch to the Empress couched in the most extravagant terms, saying that the Prince had just received his baptism of fire, that the men had wept to see him so calm, and that he had picked up a spent bullet which had fallen at his feet. After the overthrow of the Empire he accompanied his mother to England. There he entered the Royal Military Academy at Woolwich, where he acquitted himself with considerable distinction. At the final examination in 1875 he stood seventh in a class of thirty-four; and he was always regarded as having inherited, not the personal characteristics, but some of the military instincts of his family. A banquet was given in August, 1875, to a few of the older adherents of the Bonapartes, while the Empress and her son were enjoying a holiday at the castle of Are-

enberg in Switzerland, and the young Prince addressed his friends with considerable tact and political ability in the following words: "Should the people some day recall me to power, I will force all honest men to rally round the Empire, by erasing from the French language the words *exile* and *proscription*. If it could only be known what lessons I have learned from the past, what resolutions I have drawn from experience of the events which have passed under my own eyes, it would be seen how well I understand that I must look backward only for instruction and example, but not for objects of vengeance or bitterness. A great people is not to be governed by hatred or revenge." When the British were defeated at the Cape, and reinforcements were sent out, the Prince resolved to join the expedition as a volunteer. His desire was considered and well discussed by those responsible for his actions, and it was decided that he should apply to the War Office for leave to serve in the army to which he had for a time belonged. His request was but partly complied with, and he went out, not as he had asked to do as a soldier, but as a spectator "to see as much as he could of the war." His own reasons he gave in the following letter, dated February 25th:

MY DEAR M. ROUHER: I am about to leave Europe, and my absence may continue for some months. I have too many faithful friends in France for me to remain silent as to the reasons for my departure. For eight years I have been England's guest. I completed my education in one of her military schools, and have kept up my connection with the British army by joining it, on several occasions, during its great manœuvres. The war Great Britain is now carrying on at the Cape of Good Hope has lately assumed a much more serious aspect than it had previously. I felt anxious to watch the operations, and I sail in two days.

In France, where, thank Heaven, party spirit has not extinguished the military spirit, people will comprehend that I am anxious to share the fatigues and dangers of those troops among whom I have so many comrades. The time I shall devote in assisting in this struggle of civilization against barbarism will not be lost to me.

My thoughts, whether I am near or far, will constantly turn toward France. I shall watch the phases she will gradually pass through with interest and without anxiety, for I am convinced that God protects her!

I trust that during my absence the partisans of the imperial cause will remain united and confident, and will continue to hold before the country the spectacle of a party which, faithful to its doctrines, remains constantly animated by the most ardent patriotism.

Accept, mon cher Monsieur Rouher, the assurance of my sincere friendship.

NAPOLÉON.

He set sail on February 27th. Having arrived at the Cape, he was at first prevented from taking part in the military operations through illness, but afterward joined Lord Chelmsford and shared in different skirmishes, distinguishing himself by his courage. On June 1st he set out with Lieutenant Carey, six soldiers, and one friendly Zooloo, for a reconnaissance. An attack was made on the party when about ten miles from camp, in which the Prince was killed. His body when found contained seventeen assegai-wounds, but no bullet-

wound. It was sent to England, where it arrived on July 11th, and on the following day was deposited in the little church of St. Mary at Chiselhurst beside the remains of his father. His funeral was attended not only by his own adherents, but by the royal family of Great Britain and by many other distinguished persons, while his mother received a large number of expressions of sympathy and condolence from all parts of Europe. By a strange coincidence, the surgeon and physician who established the identity of the corpse, Larrey and Corvisart, were the sons of the surgeon and physician of Napoleon I., and the Bishop who accompanied Cardinal Manning to the house at Chiselhurst was Las Cases, the son of the author of the "Memoirs of St. Helena," the most faithful friend of the great Emperor. In his will the Prince constituted his mother his sole legatee, charging her with attending to various legacies amounting to 800,000 francs. At the close of the will he says:

I have no need to recommend to my mother to neglect nothing in order to defend the memory of my great-uncle and of my father. I beg her to remember that as long as there shall be Bonapartists the imperial cause will have representatives. The duties of our house toward the country will not cease with my life. At my death the task of continuing the work of Napoleon I. and Napoleon III. devolves upon the eldest son of Prince Napoleon; and I hope that my well-beloved mother, in seconding him with all her power, will give us who shall be no more this last and supreme proof of her affection.

A proposition was made, and the sanction of Dean Stanley secured, to erect a monument to the Prince in Westminster Abbey. His reasons for this consent were, that the Prince had died in the service of the country which had received him, and that the country had learned to honor him personally for his blameless and engaging character. This plan was bitterly opposed by the Liberal papers, which had also condemned the public military funeral of the Prince as an insult to the French Republic, and while regarding a monument in Westminster Abbey as the highest honor of its class that could be rendered to the memory of men or women of extraordinary merit, who had done great service to the public, they declared that all these conditions were wanting in the Prince, and that "the English people are heartily sick of the outburst of folly, adulation, and falsehood that has followed the very commonplace incident of an incautious volunteer being surprised and killed."

The death of the Prince Imperial had a very injurious influence upon the prospects of the Bonapartist party, as Prince Jerome Napoleon, who succeeded him as head of the family, was greatly disliked by a considerable portion of the party. (See FRANCE.)

BRAHMO SOMAJ. The Brahmo Somaj of India is the most prominent and active among the sects of high-born Indians which are trying to cultivate a Brahmanism free from the polytheism, superstition, and demonism

with which popular Hindooism has become encumbered. It owes its origin to an effort to restore the pure doctrine of the Vedas; the aim was modified, first in the direction of a religion of theism, then of a religion of nature, in which stage the attitude of the society appeared unfriendly to Christianity, if not antagonistic to it. Within two years, however, the progressive and most active section of the society, as represented by its best known leader, the Baboo Keshub Chunder Sen, has shown a growing friendliness toward Christianity and a disposition to approach it.

The "Brahmo Somaj of India" was formed by a separation from the "Brahmo Somaj," an older society for the reform of the Hindoo worship, which was formed by the Rajah Ram Mohun Roy. This leader, a Brahman who believed fully in the inspiration of the Vedas, was also acquainted with the teachings of the New Testament and esteemed them. He founded a church in Calcutta, published a work called "The Precepts of Jesus," and entered into fraternal relations with the Unitarian Christians who had been established at Madras since 1813. Ram Mohun Roy died in 1813; and, while the influence he had exercised suffered a decline, the society which he had formed was kept up by the accession of students from the religionless Government schools, who had lost their old faith without receiving a new one. A new impulse was given to the movement for religious reform by the accession in 1839 of the Baboo Debendranath Tagore, who soon became the leader of the society. At first he gave a more exclusive adherence to the religious books of the Hindoos than Ram Mohun Roy had done; but the continued study of the Vedas showed that they did not teach a pure monotheism, and doubts began to be entertained about 1845 of their divine origin. Instead of the whole books, the Brahmins employed collections of isolated texts and sentences from the ancient sages as expressions of their common faith, and at length came to reject the possibility of a written revelation. About the same time the theists became readers of the writings of Francis Newman, and received the ideas of an inward light and a mystical kind of intuition. Soon afterward a movement in the direction of Christianity set in, occasioned, according to the "Indian Mirror," by the accession from the missionary schools of members who became leading men. A new epoch in the history of the society was marked by the accession of Baboo Keshub Chunder Sen in 1857. Mr. Sen was born in 1838, a member of the Vaidya caste. He became dissatisfied with the religion of his fathers while a student at the Presidency College, Calcutta, and turned to the Brahmo Somaj in the hope of finding a better one there. At first he followed the lead of Baboo Debendranath Tagore, but soon became the leader of a progressive party. In 1865 he presented, in the name of his party, three demands as an ultima-

tum, on the rejection of which they would separate and form a new society. They were: 1. That external marks of caste, such as the Brahmanical thread, should no longer be used; 2. That those Brahmins only should be permitted to conduct divine service in the Somaj who were of sufficient ability and bore a good moral character, and whose life accorded with their profession; 3. That nothing should be said in the Somaj which breathed hatred or contempt toward other religions. The conservative party were not ready to give up the use of the Brahmanical thread, and a disruption took place. The progressive party took the name of the Brahmo Somaj of India, while the old party styled itself the Adi (or original) Brahmo Somaj.

The "Brahmo Public Opinion," of India, at the beginning of 1879, in giving a review of the history and development of the Brahmo Somaj from its origin in 1830, divided the history into three epochs—the Vedantic, the Puranic, and the Eclectic. In the first period, which closed with the death of Ram Mohun Roy, there were, it says, strong and earnest protests against idolatry, along with evident indications of a belief in the infallibility of the Vedas. In the hymns and songs there were symptoms of a belief in the transmigration of souls, along with traces of a corresponding faith in the Vedantic doctrine of Unification with the Divine Essence." When the Vedas were given up, Baboo Debendranath Tagore came forward with the doctrine that religion is based on the intuitions of the soul, and directed his attention to the construction of a new form of church service and a new and unidolrous code of ceremonies. In doing this he did not depart from the Hindoo Shastas, but collected his texts from them alone, and published the book known as the "Brahma Dhurma." This period is styled the Puranic period, because the development of the Puranic idea of separate entity of the Godhead from the human soul, and the development of the Puranic practice of worshiping that Godhead, took place in it. Another leader was growing up in the mean time—Baboo Keshub Chunder Sen, who with his friends "fretted, as it were, under the conventional barriers of the Shastras, and longed to proclaim a broader and more catholic faith to the world, and to inaugurate an era of nobler self-sacrifice." From the day of the separation, the "Public Opinion" continues, dates an unusual expansion of the Brahmo Church. "From that day Brahmoism has been presented to the world as a perfectly broad and catholic faith, eclectic in its principles and universal in its character."

The old party, or Adi Somaj, suffered a loss of religious influence after the disruption, while the Brahmo Somaj has been brought into wide notice by the preaching of Keshub Chunder Sen. Other societies, as the Prarthana Somaj, the Aria Somaj, the Ekimishvarionandali, etc., professing similar principles, are allied with the

Brahmo Somaj. The Prarthana Somaj of Bombay is, however, more conservative than the Brahmo Somaj, and was engaged as late as 1876 in a discussion of the question whether its members should give up the mark on their foreheads, caste, and idolatry.

The "Brahmo Public Opinion" reported concerning the condition of the Church at the beginning of 1879, that there had been in the past year an unprecedented revival in every direction. A separate and powerful organization, the Sadharan Brahmo Somaj—a schism caused by difference concerning the marriage of Mr. Sen's daughter, and the use of idolatrous rites and symbols which were insisted upon by the bridegroom—had been formed. One weekly English and a number of Bengalee papers had come into existence; as many as six marriages according to theistic rites had taken place; two new houses of prayer had been consecrated, and subscriptions had been opened for four or five more; and active and friendly correspondence had been opened with Mofussil Somajes. Furthermore, the Somaj had sent its missionaries to the Punjab and to the most remote corners of Eastern Bengal. Its executive committee had regularly held meetings every week, had raised and expended money, issued two journals, secured a press, and bought a piece of ground for the purpose of building a house of prayer of their own.

An enumeration of the Somajes in India published in July, 1879, gave the whole number as 149, of which 20 were in Calcutta, 54 in Bengal, 7 in Assam, 3 in Chota Nagpore, 7 in Behar, 2 in Orissa, 8 in the Northwest Provinces, 1 in the Central Provinces, 5 in the Punjab, 3 in Sind, 6 in Bombay, and 6 in Madras. Forty-four of them had "mandirs," or places of worship. In connection with the society, 18 periodicals were published, of which 6 were in English, 9 in Bengalee, 1 each in the Hindoo and Oriya languages, and 1 in Anglo-Mahratti. Four schools were kept up by the organization, independently of schools and classes provided by the local Somajes for their own districts.

The Brahmo Somaj and its affiliated societies have accepted the Bible and the fundamental principles of Christianity as entitled to respect along with the sacred books of other religions, but have placed on nearly the same level masterpieces of literature which have not been regarded as religiously inspired; they speak of the Fatherhood of God, and consider Christ as the wisest and best man that ever lived, but superior only in degree to other prophets and great and good men. Gradually the Brahmo Somaj, particularly the section led by Keshub Chunder Sen, has adopted one Christian practice and doctrine after another, has become accustomed to employ Christian terms, and has made the Bible more prominent among its books and Christ among its leaders. Some of their more recent expressions in articles have been very remarkable in this respect. The "In-

dian Mirror," the periodical organ of the Brahmos, frequently publishes contributions in its devotional department in which admiration and reverence for the character and ministrations of Christ are expressed with Oriental warmth. In one of these articles the wish is expressed that Christ had been an Indian instead of a Jew, because, as Rama is endeared to all Hindoos by reason of his sufferings, with no bitter mixture of dogmas, "a prophet like Christ would not have fared worse." Creeds and formulas would not have come to disfigure him, but "he should have devoted an epic to his glory, sung his name through every city and village, comforted the weak in their sorrows and the dying on their death-bed, remembered him in every act of daily life, and died finding consolation and strength in his holy example." In one of the prayers which the "Mirror" publishes regularly are the words: "Unspeakably consoling unto me is the tender ministry of Jesus, and his blessed memory more dear to me than the empty lives of so many who profess his religion. God of love, bind the souls of the ailing and penitent in holy sympathy with the wondrous life and death of Jesus. Cause us to feel that his glorious ministry is still exercised in the world, and bring us in contact with those men who are truly his ministers."

On April 9, 1879, the Baboo Keshub Chunder Sen delivered a lecture in Calcutta before a large audience of educated Bengalees, in which many Christians were included. His remarks indicated a closer sympathy with Christians than any of the Brahmos had yet shown, and were much commented upon by those who desire to promote the growth of the Christian religion in the country. He opened his address by saying: "I desire to speak of Christ. Christ rules British India, and not the British Government. England has sent us a tremendous moral force in the life and character of that mighty Prophet, to conquer and hold this vast empire. . . . If, then, India is encompassed on all sides by Christian literature, Christian civilization, and a Christian government, she must naturally endeavor to satisfy herself as to the nature of this great power in the Christian realm, which is doing such wonders in our midst. . . . She is unconsciously imbibing the spirit of this new civilization, succumbing to its irresistible influence. . . . If unto any army appertains the honor of holding India for England, that army is the army of Christian missionaries, headed by their invincible captain, Jesus Christ. . . . They have given us the high code of Christian ethics, and their teachings and examples have directly influenced and won thousands of non-Christian Hindoos. Let England know that, thanks to the noble band of Christ's ambassadors sent by her, she has already succeeded in planting his banners in the heart of the nation." At the close of his address he said: "The Bridegroom is coming; let India be prepared and ready in due season. And you, my friends,

rest assured that if there is any truth in Christ, it will overtake and conquer you." The anniversary address of the Baboo for 1879 was devoted to answering in the negative the question whether he pretended to possess prophetic gifts, and to the relation, with much of Oriental imagery and vagueness, of his religious experience. In it he avowed his belief in the omnipresent spirituality of God. "Of what good," he said, "is religion if it does not teach us to believe in a Deity ever near to us? . . . If he is not found here, then the down-trodden sinner perishes at once, lost in sin. Shall I go to the clouds and seek my God there? Shall I go to the height of the Himalayas to understand and find him? It is impossible for a poor sinner to achieve these impracticable feats. My God must himself come into the sinner's cottage and save him. He goes forth not only to save, but to seek and save the sinner. The omnipresent Lord is here and everywhere, and I have faith in that fact." Further, he said: "The Bible has never of itself animated or inspired any one, nor can it. But the Spirit of God converts its dead letters into living forms. If you wish to see God with your eyes, if you wish to hear him, pray. . . . Trust that all things shall be revealed unto me and unto you in the fullness of time. The Lord's inspiration shall satisfy our understanding, and remove all our doubts and misgivings." "The spirit of truth," he said near the close of his address, "I have been so long teaching, has silently, quietly, and almost imperceptibly leavened the heart of educated India. It is a wonder and a marvel that, in spite of civilization, there is so much of spirituality growing up in the midst of young Bengal and young India. Take away this Brahma church, take away this grand theistic organization, and what is left? It is all secular education and material prosperity. . . . This living faith is not contrary to the spirit of Christianity, or Mohammedanism, or Hindooism. It is religion pure and simple. It is the religion of love, the religion of the living God."

A conference of missionaries of the Somaj, which met in the fall of 1878, issued an address to the societies against sensuality and skepticism, which included the instructions: "The Lord has in all ages rebuked men of little faith, treating the least skepticism on the part of his people as a sin and an abomination. Every believer is bound to believe thoroughly and firmly, never doubting, never wavering. Who-so deliberately harbors doubts in regard to the essentials of faith, or scoffs at the vital truths of religion, is an enemy of God and our church. Who suffers himself to decline in spirituality, devotion, and faith, and boasts of his growing rationalism, is a renegade, whose contact defileth the church to which he belongs. . . . We humbly request the leading men of all the Brahma Somajes in India to protect the vital doctrines of our church, namely, the Reality of Divine Presence, Providence, Inspiration,

Daily Prayers, Communion, Immortality, etc., and to promote by every means in their power the highest spirituality and devotion among the Brahma community. And we beg, too, that our dear church may be kept free from the influence of doubters, materialists, skeptics, and scoffers of all classes."

In the latter part of 1879 the periodicals of the Brahma Somaj took notice of a new movement in the body, as a tendency toward a more active and definite spiritual life. The "Theistic Quarterly Review" remarked that "such significant words as these—*seeing, hearing, and touching the Spirit of God,*" were becoming quite familiar among advanced Brahmans, and that their devotional literature abounded in striking metaphors and expressions of intense religious emotion. The "Indian Mirror" remarked: "A great change has evidently come over the spirit of the Brahma Somaj movement. Never was our church so spiritual, so devout, so earnest, or so thoroughly imbued with faith in the realities of the unseen world. . . . Imagination and unbelief, unpractical transcendentalism and dreamy sentimentalism are fast dying out, and the vision of faith is extending, both in area and in vividness. The prophets, 'Christ and other masters,' are finding a home in the hearts of our devotees such as they never had before. A strong desire to live in them and with them in God is manifest among our ranks. Formal prayers and stereotyped addresses to an imaginary and abstract deity are giving way to sustained conversation with Heaven's King, and the pleasant flow of deep, unutterable sentiments. The Brahma's prayer to-day is neither soliloquy nor an unanswered petition, but the soul's spirited dialogue with the indwelling Friend."

BRAZIL (IMPERIO DO BRAZIL). (For territorial divisions, population, etc., see "Annual Cyclopædia" for 1878.) The government of Brazil is a constitutional monarchy. The Emperor is Dom Pedro II., born December 2, 1825; proclaimed April 7, 1831; regency until July 23, 1840; crowned July 18, 1841; married September 4, 1843, to Theresa Christina Maria, daughter of the late King Francis I. of the Two Sicilies. The Cabinet was composed of the following Ministers: Interior, Councilor F. M. Sodré Pereira; Justice, Councilor Lafayette R. Pereira; Foreign Affairs, Councilor A. Moreira de Banos; Finance, Senator Affonso Celso; War, Marquis de Herval, Senator; Navy, J. F. de Mouza; Public Works, Commerce, and Agriculture, J. L. V. Cansancio de Sinimbu, Senator and President of the Council of State. The beginning of the year was marked by a ministerial crisis, Senhor Andrade Pinto resigning the portfolio of the Navy, ostensibly, and perhaps solely, on account of the removal of Viscount de Prados from the presidency of the Province of Rio de Janeiro. The new Cabinet* had resolved that no member of the central legislative body

* See "Annual Cyclopædia" for 1878.

should be president of a province while the Legislature was in session, on the ground that the former system of governing provinces by vice-presidents while the presidents were attending the Legislature at the capital of the empire was prejudicial to the provincial interests. Senhor Andrade Pinto, though not opposed to that measure as a rule, was of opinion that an exception might be admitted in the case of the presidency of Rio de Janeiro, in view of the proximity (twenty-two minutes) of the seat of government of that province to the capital, and the Viscount's continuance in his provincial office being furthermore necessary to the completion of the reforms begun by him. The remainder of the Cabinet, however, insisted on the uniformity of the rule, assigning as a special reason against the advisability of an exception in the present instance, the fact that the Viscount had been elected President of the Chamber of Deputies. This presidency the Viscount resigned on his removal from that of Rio de Janeiro. Senhor Prados is a distinguished astronomer, and was for some years in charge of the Imperial Astronomical Observatory. The new Minister of the Navy is a wealthy planter from Bahia, which province he represents in the Chamber of Deputies, and is reputed a most honorable and active administrator. The Council of State is composed of the following members in ordinary: The Princess Imperial, Donna Isabel; Prince Gaston d'Orleans, Count d'Eu; the Senators Viscounts de Abaeté, do Rio Branco, de Muritiba, de Bom Retiro, de Jaguary, de Nitheroy, and de Araxá; the Duke de Caxias, J. P. Dias de Carvacho, J. J. Teixeira, Vice-Admiral J. R. de Lamare, and Dr. P. J. Soares de Souza; and of six members extraordinary: Senators J. L. O. Paranaguá and M. P. S. Dantas, Viscount de Prados, Councilors Martin Francisco and B. A. de M. Taques, and Dr. J. G. de Andrade. The President of the Senate, which comprises 58 life members, is Viscount de Jaguary; and the Vice-President, Count de Bacpondy. The Chamber of Deputies is composed of 122 members elected for four years: President, —; Vice-President, F. de Almeida.

The Presidents of the several provinces were as follows: Alagoas, Dr. C. Pinto da Silva; Amazonas, Baron de Maracajú; Bahia, Dr. Aragão Bulcao; Ceará, Dr. J. J. de Albuquerque Barros; Espirito Santo, Dr. E. S. Martins; Goyaz, Dr. A. S. Spinola; Maranhão, Dr. L. O. Lino de Vasconcellos; Matto Grosso, Dr. J. J. Pedroza; Minas Geraes, Dr. M. J. G. Rebello Horta; Pará, Dr. J. C. da Gama e Abreu; Parahyba, Dr. U. M. Pereira Vianna; Paraná, Dr. M. P. S. Dantas Filho; Pernambuco, Dr. A. de Barros Cavalcante; Pianhy, Dr. J. P. Belfort Vieira; Rio de Janeiro, Dr. A. M. Marcondes de Andrade; Rio Grande do Norte, Dr. R. L. Marcondes; Rio Grande (or São Pedro) do Sul, Dr. F. Pereira da Silva; Santa Catharina, Dr. A. A. Oliveira; São Paulo, Dr. L. A. de

Brito; Sergipe, Dr. T. F. dos Santos. The Archbishop of Bahia, J. G. de Azevedo (1875), is Primate of all Brazil; and there are eleven bishops, viz., those of Pará, São Luiz, Fortaleza, Olinda, Rio de Janeiro, São Paulo, Porto Alegre, Marianna, Diamantina, Goyaz, and Cuyabá. The Brazilian Minister to the United States is Councilor A. P. de Carvalho Borges, Envoy Extraordinary and Minister Plenipotentiary, accredited October 9, 1871; and the Brazilian Consul-General (for the Union) at New York is Senhor Salvador de Mendouça.

In pursuance of the law of February 27, 1875, military service is obligatory for all subjects; but there are numerous exceptions admitted, and substitution is allowable. The period of service is six years in the regular army and three in the reserve. The regulation strength of the army in time of peace is 15,000, and in case of war 32,000. The real strength of the army in 1878, however, was 16,806, including 1,753 officers. The arms are distributed as follows: Infantry, 21 battalions, 8 garrison companies, and 1 depot company for the instruction of recruits; cavalry, 5 regiments, 1 squadron, and 5 garrison companies; artillery, 3 regiments of horse and 5 battalions of foot; sappers and miners, 1 battalion; gendarmes, 7,642, of whom 1,070 are at Rio de Janeiro. The National Guard had been disbanded for reorganization on the completion of the new census.

For the most recent naval statistics, reference may be made to the "Annual Cyclopædia" for 1877. In 1878 the Adjutant-General proposed the following classification of the officers of the navy, involving a reduction of their number and a change of denomination for certain ranks: 1 admiral, 2 vice-admirals, 6 rear-admirals, 15 first-class captains (*commandantes*), 30 second-class and 40 third-class captains, 100 first-class lieutenants, and 120 second-class; total, 314. This modification, if adopted, would reduce the number of officers by 207, and constitute an economy of \$103,130 per annum in the pay-lists alone.

The estimated revenue and expenditures for the fiscal year 1879-'80 figured as follows in the budget read by the Minister of Finance at the first session of the Legislature:

REVENUE.	
General receipts (ordinary and extraordinary)....	\$50,500,000
Slave-liberation fund.....	450,000
Total.....	\$50,950,000
EXPENDITURES.	
Ministry of the Interior.....	\$4,411,863
“ of Foreign Affairs.....	516,347
“ of Finance.....	23,439,832
“ of Justice.....	3,389,422
“ of Agriculture.....	10,694,592
“ of War.....	7,432,114
“ of the Navy.....	5,676,325
Total.....	\$60,559,795
Deficit.....	\$9,609,795

This deficit it was proposed to provide for by further taxation.

Notwithstanding systematic retrenchment in the various ministerial departments (a distinguishing feature of the policy of the new Cabinet), the appropriations demanded are about \$7,000,000 in excess of the votes for the same year. Among these appropriations stands an item of \$1,800,000 for the redemption of paper money. With regard to assisting planters, the Government asked authorization to apply the necessary sum for guaranteeing the interest and redemption of hypothecated bills to be issued by land-banks of loan. The aggregate amount, from all sources, received into the Treasury during the seven years from 1871-'72 to 1877-'78 inclusive, to be applied for the liberation of slaves, was \$4,043,206.

The national debt was as follows April 30, 1879:

Foreign debt.....	\$79,141,777
Home debt (funded).....	186,784,850
Debt before 1827.....	168,867
Orphans' and other funds.....	23,706,297
Treasury notes (at 2, 4, and 6 months)....	13,627,950
Paper money (Government notes).....	94,629,177
Total.....	\$893,053,418

The imports and exports for the year 1876-'77 were of the values of \$77,462,000 and \$93,389,500 respectively. The values of the chief staples of exports in 1876-'77 were as exhibited below:

COMMODITIES.	Values.
Coffee.....	\$56,055,300
Raw cotton.....	6,042,300
Sugar.....	14,996,150
Maté (Paraguay tea).....	1,191,700
Skins.....	4,063,600
Tobacco.....	3,437,500
India-rubber.....	5,516,950
Diamonds.....	520,900

The value of Brazilian exports to the United Kingdom in 1876 was \$26,844,675, against \$36,053,480 and \$47,829,775 in 1874 and 1872 respectively. The striking decrease in this trade from year to year during the decade ending in 1876 is presumed to be attributable, in part at least, to the progressive development of direct relations with some markets which formerly derived their supplies through Great Britain. No marked change has occurred in the quantity of gold and silver (coin and bullion) shipped to the British Isles, the annual value of which varies little from \$2,500,000. The mean annual value of the imports from the United Kingdom is about \$35,000,000.

The shipping movements at the various ports of the empire in 1876-'77 were as follows:

VESSELS.		Number.	Tonnage.
ENTERED.			
Sea-going vessels	Foreign.....	2,992	2,226,539
	Brazilian.....	812	133,254
Coasting vessels.....		5,885	1,581,981
CLEARED.			
Sea-going vessels	Foreign.....	2,973	2,215,534
	Brazilian.....	297	141,620
Coasting vessels.....		4,461	1,507,369

In 1878 there were 1,720 miles of railway in the empire, and 4,250 miles of telegraph, with

106 offices. The number of dispatches for 1875 and 1876 was 119,358. The number of letters transmitted by mail in 1878 was 14,762,144, and the number of post-offices was 1,061.

Statistics relating to public instruction will be found in the "Annual Cyclopædia" for 1877 (p. 78).

The subjoined brief extract contains the more important matters touched upon in the Emperor's speech at the opening of the Legislature on December 15, 1878:

"It is pleasing to me to have to announce to you that the public tranquillity which this empire has now enjoyed for so many years has remained undisturbed, thus affording an incontestable proof of the progress achieved by the spirit of order through the agency of our institutions. The usual friendly relations have likewise been maintained between Brazil and the foreign Powers. The following diplomatic arrangements have been concluded: a postal convention with the Republic of Chili, an extradition treaty with Germany, an additional extradition treaty with Belgium, a consular convention with Spain, and Brazil's adhesion to the International Telegraph Convention, celebrated at St. Petersburg. Unfavorable markets in Europe, the increase in our expenditures, and a heavy drain upon the revenue to relieve suffering provinces, have embarrassed our finances."

BUDINGTON, Rev. Dr. WILLIAM IVES, a distinguished clergyman of the Congregational order, was born in New Haven, Connecticut, on April 25, 1815, and graduated at Yale College in 1834. He commenced the study of theology at the school in New Haven, and completed it at Andover Seminary in 1839. In April, 1840, he was installed as pastor of the First Church in Charlestown, Massachusetts, and remained there until 1854, when he removed to Philadelphia. He expected there to enter upon a pastorate, but his plans were changed in consequence of the death of his wife. In December of the same year the Clinton Avenue Congregational Church in Brooklyn invited him to become its pastor, and he accepted the invitation. The church under his charge became one of the prominent ones in the city. He was self-sacrificing, sympathetic, studious, and devoted to the welfare of his people. Decided in his religious convictions, he withstood all innovations, and was warmly supported by his people. Thus he continued in good health and vigor until July, 1877, when a little sore that appeared on his lip developed into a cancer. It was removed, but subsequently reappeared; and thus several operations were performed. Meantime he resigned the active duties of the pastorate, but at the request of the congregation retained the position and emoluments. His disease continued to advance, and a week before his death he began to fail rapidly. The cancer attacked his throat, and it became impossible to give him nourishment. He took to his bed, and for several days suffered intense pain. On

November 26th he gave the last indications of consciousness, and expired on the 28th. Dr. Budington's published literary efforts were confined to the "History of the First Church of Charlestown," his sermon on "Patriotism and the Pulpit," delivered at the anniversary of the American Educational Society of Boston in 1861, and his address on "The Relations of Science to Religion," delivered at Yale College in 1871.

BULGARIA,* a principality of Southeastern Europe, which was created in 1878 by the Treaty of Berlin. Art. I. of this treaty provides that Bulgaria shall be "constituted an autonomous and tributary principality, under the suzerainty of his Imperial Majesty the Sultan. It will have a Christian government and a national militia." Reigning Prince, Alexander I., elected in 1879 (see ALEXANDER I.). Area, about 33,000 square miles; the accurate settlement of the boundaries of the principality was left to a European commission, appointed by the signatories of the Treaty of Berlin. The population is calculated to number 1,859,000, of whom about 600,000 are Mohammedans. Nearly all the others belong to the Bulgarian Church, which agrees in doctrine with the Greek Church of Turkey and Greece, and with the Russian and other branches of the Eastern Orthodox Church, but has had for many years an independent organization.

Bulgaria has one line of railway, from Ruschuk to the port of Varna on the Black Sea, 140 miles in length. It was constructed by a private company for the Turkish Government, and by Article X. of the Treaty of Berlin all the outstanding obligations of the railway fall to the charge of the Government of the principality.

The first Bulgarian Parliament, or Assembly of Notables, as it is called, met at Tirnova on February 22d, after having been previously adjourned from time to time. Prince Dondoukoff-Korsakoff, the Russian Imperial Commissioner, read the opening address to the deputies as follows:

HONORED REPRESENTATIVES OF THE BULGARIAN PRINCIPALITY: By the will and designation of my master, the Emperor of Russia, I congratulate you upon the opening of the first National Assembly of your emancipated country, which is to establish a firm foundation for a state Government of the new principality. In my capacity as Russian Imperial Commissioner, I present to you for approval the project for your organic Constitution, which determines in a general manner the rights of the future Bulgarian Prince and people. With this project I also communicate to you the regulations which will govern you in discussing the proposed Constitution. It is incumbent on you to fully discuss this Constitution in all its bearings, without any partisan feelings, and solely with a view of advancing the social and moral interests of your country. The programme now presented is only a skeleton Constitution, designed to facilitate your labors. This programme should not in any way hamper your convictions as to any changes you may deem necessary.

The regulations for your discussions will be read to you. I may remind you that the existing Russian administration has been acting under adverse circumstances, which I hope will justify in your minds my previous orders and regulations, as I have only endeavored to replace disorder by order, thus preparing the population for a higher political life. I hereby appoint M. Loukianoff as my substitute in presiding over your labors. He will give you all needed explanations of matters arising in your discussions and details of your Constitution; but the last and decisive word belongs to you alone. May God assist you in the accomplishment of your sacred task for the good of your country, so dear by blood to the Russians, by the sacrifices Russia has made for you, and by the magnanimous feelings toward you of our Emperor, the liberator of your nation! I announce as opened the first Bulgarian National Assembly. I call upon you now to repair to the Old Cathedral of Tirnova to pray for the successful termination of your important labors, and to offer thanks to the King of kings, who has enabled us to witness the great historical work of the regeneration of your long-oppressed country.

The Bulgarians of Eastern Roumelia and Macedonia had elected deputies, who, however, were admitted as visitors only. The National Assembly consisted of 286 members, who were divided into three groups. The first group comprised: 1. The presidents of the municipal, judicial, and administrative councils of each district, and, as there are 38 districts in Bulgaria, there were 114 members under this class; 2. The presidents of the superior administrative and judicial councils of each sanjak or gubernios. There are five gubernios. The presidents of both the judicial councils being appointed by the Government, there were in the first class 43 members appointed by the Government, while the other 81 members (the presidents of the municipal and administrative councils) were elected by the people. In the second group there were 120 members, who were elected from 120 districts, each with 10,000 inhabitants. Every Bulgarian twenty-two years of age, who possesses real estate or who follows a profession, is a voter. Servants, apprentices, and day-laborers are excluded. To the third group belonged: 1. Nine Bulgarian bishops, and the Greek bishop; 2. The mufti of Widin, and the grand rabbi of Sophia; 3. Thirty members to be appointed by the Governor of Bulgaria. The Assembly adopted a set of rules for its government, of which the following are the most important: The National Assembly now in Tirnova is a *Constituante*, called by special order of the Imperial Russian Commissioner for the examination of the project of the organic Constitution for the government of the Bulgarian Principality. The Assembly consists of members by nomination, election, and *ex officio*, but constitutes a harmonious whole, no distinction between members being made on account of the manner of their appointment; and the deputies not only represent the locality from which they come, but also the whole population of the Bulgarian Principality. The credentials of each deputy can not be canceled until the Assembly has accomplished its high mission. The persons of the national deputies, so long as their cre-

* For an account of the history of the race, of the progress of education, of newspapers, of industry, and of the Bulgarian Church, see "Annual Cyclopaedia" for 1878, art. BULGARIA.

dentials remain in force, are inviolable. For crimes committed before or after the opening of the Assembly a deputy can only be prosecuted after the consent of the Constituante has been secured. A deputy can not be prosecuted for opinions expressed in the discussions of the Assembly. There will be three sessions each week—Monday, Wednesday, and Friday; but the sessions may be increased or diminished by a vote of the Assembly. The sessions shall be public, and can only be made secret by the demand of the President, or upon the written request of twenty members, and even then must be sustained by at least one-third of the members present. On March 6th the Assembly elected the former Exarch its President. No work of any importance was done, the Assembly confining itself to speeches on the condition of the Bulgarian race. On March 18th the Assembly adopted the address drawn up by the committee in reply to Prince Dondoukoff-Korsakoff's message. It expressed the gratitude of Bulgaria to the Russian Emperor, and alluded to difficulties placed in the way of the future of the principality by the presence of Turkish troops in the Balkans. On March 19th Prince Dondoukoff-Korsakoff sent a message to the Assembly expressing his regret at hearing that the Assembly had deviated from the line of duty marked out by the Treaty of Berlin, and had been occupying itself with matters entirely outside its jurisdiction. He strongly desired that no more time should be wasted in discussing matters concerning which the Constituante had no power of action or even of suggestion. A motion was then made and carried that the consideration of the Constitution should be immediately proceeded with, and the secretary was ordered to read the draft prepared by Prince Dondoukoff-Korsakoff. A committee of fifteen was appointed to revise the draft, and on April 2d it handed in its report. In regard to religious matters, proselytism should be forbidden. With regard to the Prince, it rejected the clause of the original draft which stated that the relations of the Prince to the Porte should be those of a vassal, and maintained the stipulation that the princely dignity should be hereditary in the direct male line. The civil list was fixed at 600,000 francs per annum. Education was to be compulsory and free. All who paid taxes to the amount of 100 piasters should have a vote; and it proposed to abolish the Great National Assembly, and to constitute a National Assembly and a Senate, partly nominated and partly elected. Of three ecclesiastical senators, one should be the representative of the Mohammedan clergy. The present National Assembly, strengthened by two elected members from each of the 120 districts, should elect the Prince. On April 3d the Assembly began the discussion of the Constitution, and considered the first thirty-five articles, and made several modifications in the original draft. Sophia was selected as the capital of Bulgaria, and the salary of

the Prince was fixed at 600,000 instead of 1,000,000 francs. Articles 36 and 37 were passed on the 4th, and Articles 38 to 62 on the 5th. The recommendation of the committee that proselytism be prohibited in the principality was rejected. New articles were added, declaring that slavery should not exist in Bulgaria, that no titles of rank should be instituted, and that only military merit should be rewarded by a decoration, which the Prince alone would have the right to confer. On the 7th the statute for the election of a Prince was considered, and after a short discussion it was decided that the composition of the present Chamber precluded its proceeding with the appointment, and that new elections would be necessary. A resolution was accordingly passed by a large majority requesting Prince Dondoukoff to take steps for the new elections without delay, on the basis of three deputies for each ten thousand of the population. On April 8th the Bishop of Sophia introduced a motion to insert an article in the Constitution requiring all religious publications to be subjected to the censorship of the Holy Synod before being put on sale in Bulgaria. The motion was rejected by an almost unanimous vote. Articles 73 to 78 inclusive were adopted, with the following modifications: Article 73 now reads, "Primary education is gratuitous and obligatory." In Article 74 the freedom of the press and of all publications was more emphatically asserted than in the original clause. The discussion over Article 78 became very bitter and personal in its character. A number of members desired to have a Senate as well as a Lower House of Representatives. This was resented by a majority of the deputies as an attempt to establish a privileged class of national legislators, and the motion to establish a Senate was rejected. On the 9th Articles 79 to 117 were passed. Article 79 was entirely remodeled, and it was decided that the ordinary Assembly should be entirely elective, one member representing ten thousand persons of both sexes; the Assembly to sit for three years. Any citizen over twenty-one years of age, enjoying political rights, should be qualified to vote; in order to be eligible to the Assembly, a man must be thirty years of age and able to read and write Bulgarian. On the 19th Articles 118 to 149 were disposed of. Article 137, relating to the composition of the future Constituantes, was changed so as to make these assemblies purely elective by the people, in the same manner as provided for the ordinary Legislative Assembly. Articles 142 to 147 were rejected entirely. These articles provided for the creation of a Council of State, which was regarded as unnecessary. Article 148, defining the duties and jurisdiction of the Council, was thoroughly changed, and the duties of the Council were distributed among the National Assembly, the Court of Cassation, and the Council of Ministers. On the 21st the remainder of the Constitution was disposed of.

The last article, 170, was rejected. It prohibited any change being made in the Constitution in less than five years. The sessions of the 24th and 25th were almost entirely devoted to the reading of the protocols of the sessions in which the Constitution had been discussed. The clause on freedom of association was modified so as to exempt from its privileges all societies aiming at the subversion of good manners, religious observances, or the recognized social decencies of life. A paragraph was added to Article 74, providing that the religious books used in the orthodox churches and schools should be previously examined by the Holy Synod. The former Exarch, the President of the Assembly, and the bishops and their friends, who had withdrawn after the rejection of the intolerance clauses, now took their seats again. On the 28th the session of the Constituent Assembly was closed by Prince Dondoukoff. In his closing speech he alluded to the difficult conditions under which the Assembly had been opened. He congratulated the House upon the accomplishment of their task, and said that the deputies had proved that they possessed qualities hitherto unknown among Bulgarians. The work they had accomplished would be judged by its results; but he was satisfied that the verdict of the future would be a favorable one, and he rejoiced that the labors of the Assembly had been so thoroughly performed.

The Assembly for the election of a Prince of Bulgaria opened on April 29th. Prince Dondoukoff opened the proceedings with a speech, in which he stated that no Russian subject was eligible. The protocol of the Constitution was signed by Prince Dondoukoff and the foreign delegates, with the exception of the Ottoman representative, who refused to sign it. The Assembly then proceeded with closed doors to the election of a Prince. The Archbishop of Tirnova addressed the Assembly, and said that three princes had been prominently put forward as candidates for the throne—Prince Waldemar of Denmark, Prince Reuss, and Prince Alexander of Battenberg. He said that the last was much the best known to them, and was the best choice they could make. The Assembly then elected Prince Battenberg without opposition (see ALEXANDER I.), after which the Assembly adjourned. Immediately upon the election of the Prince, a delegation was appointed to wait upon him. The deputation sent to him the following address:

The representatives of the Bulgarian people, appreciating your noble qualities, and certain that your Highness will not only be imbued with the interests of Bulgaria, but will defend them to the utmost of your power, as you have already defended them during the war of liberation, have confided to your lofty sentiments the future destinies of their country, electing your Highness voluntarily and with unanimity Prince of Bulgaria. A deputation will wait on your Highness with the notification of your election, we having learned through the medium of the present Government of our country that your Highness has honored us with your acceptance. We offer you our

humble congratulations, and assure you of our sincere devotion. We pray God to grant us the happiness of soon seeing you in a country which rejoices at the choice it has made.

Prince Battenberg, after his election, made a tour of the European courts, and on July 6th arrived at Constantinople, where he received the *berat* of investiture, and on the same day sailed for Varna. His visit to Constantinople was at first opposed by the Turkish Government, as it was feared that it might give rise to excesses; but, upon being informed of the fact by the Turkish Ambassador in Rome, the Prince stated that he would regret it exceedingly if he were not permitted to present himself to his sovereign, and to receive the investiture from his hands. It would be remarked all the more in Europe, as he had visited all the courts; and, in order to avoid any hostile demonstrations, he could make his stay a short one. This proposition was accepted in Constantinople. On July 6th he arrived in Varna, and on the 8th in Tirnova. He was everywhere received with great demonstrations of joy and enthusiasm, his progress through the country being like a triumphal procession. On the 14th he entered Sophia. After he had taken the oath of fidelity to the Constitution in Tirnova, Prince Dondoukoff-Korsakoff immediately departed for Russia. Considerable dissatisfaction made itself felt in Russia with the course of Prince Alexander. Instead of using a proclamation prepared for him by Prince Dondoukoff, in which expression was given to the everlasting gratitude the Bulgarians owed their deliverers, he issued an address of his own, short and having no reference to the Russians—an omission also characterizing his replies to the addresses presented to him. The Russian press bitterly complained that the Prince had not a single word of thanks for the Czar, Russia, or the Slavs in general. On July 18th the Prince appointed the following ministry: M. Bourmof, President and Interior; M. Balabanoff, Foreign Affairs; M. Grecoff, Justice; M. Natchovitch, Finance; and General Baronzoff, War. The ministry belonged to that section of the Bulgarians which is less opposed to foreign (i. e., Russian) influence than the Nationalists, who had been in the majority in the Assembly, and who were led by M. Zancoff, the Governor of Varna. The Russian evacuation of the country was completed on August 3d, when the last Russian troops left Sophia. The transport of war material, however, took some time longer.

Besides the Mohammedans, who continued to disturb the peace of the country, and who proved but unwilling subjects of Prince Alexander, the Greeks, who live in considerable numbers in the large cities, and form the more intelligent and wealthy part of the population, did not take kindly to the new order of things. Thousands of the more wealthy and intelligent at Varna, Shumla, Rustchuk, and other places declared themselves subjects of the King of

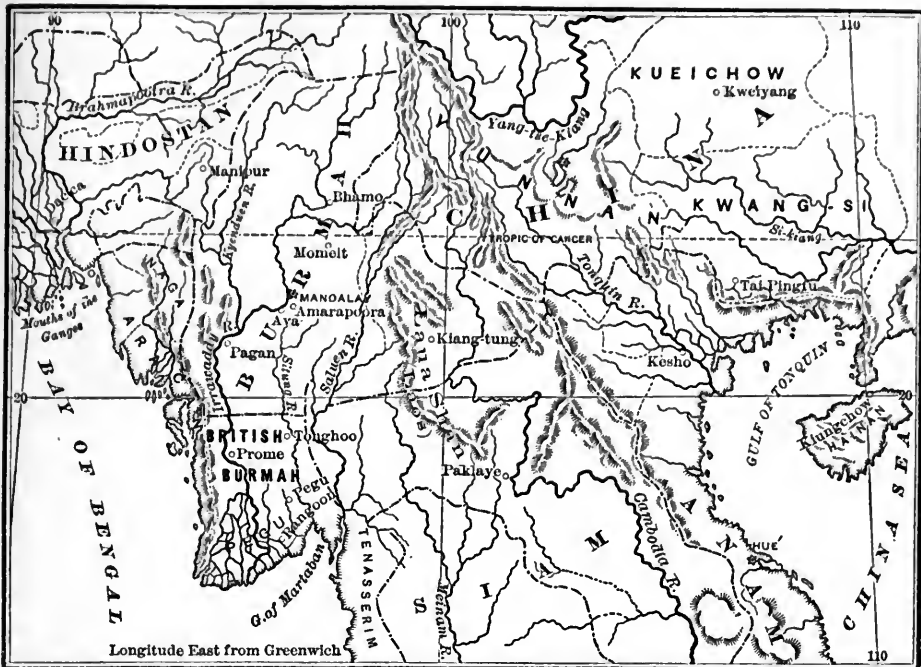

Greece, and secured passports from the consuls of that country. The poorer classes of the Greeks, on the other hand, joined the Mohammedans, making common cause with them in disturbing the order and peaceful establishment of the new *régime*. In the middle of August the Bulgarian Cabinet addressed a manifesto to the nation, in which it enjoined the observance of the constitutional laws and the preservation of the peace of the country, and stated its determination to take all possible measures for preventing disturbances in the principality; at the same time it declared its intention to direct its energies without delay to the work of internal organization, and to endeavor to merit the sympathy of the foreign Powers. At a monster meeting held at Tirnova in the first week of September, a vote of want of confidence in the ministry, for what the speakers described as the anti-constitutional acts of the Government, was unanimously passed, and the fact was telegraphed directly to Prince Alexander at Sophia. The session of the Assembly was opened on November 2d by Prince Alexander in person, who in the speech from the throne expressed gratification at the friendly treatment he had met with from the great Powers, who had recognized the principality. He alluded to the warm welcome given him in Servia and Roumania, and expressed the profound gratitude and unlimited veneration felt for the Czar-Liberator by himself, his Government, and his people. He announced that he had inaugurated good and amicable relations with neighboring states. He enumerated several bills to be presented to the Chamber, among others one relative to railways, a plan of which would be submitted for examination; and he also expressed a desire for the establishment of obligatory military service. He then alluded to the brigandage which had made its appearance in the eastern portion of the country after the departure of the Russians, which had necessitated the proclamation of a state of siege; but, he added, the evil had not spread. Speaking of the financial situation, he said that the present revenue was not sufficient, and that he counted upon the patriotism of the Chamber, upon whom the eyes of Europe were fixed, to supply the deficit. After the delivery of the speech, the House proceeded to elect its officers. M. Calaveloff was chosen President, and MM. Stoyandoff and Fischeff Vice-Presidents. As the Liberals were in a large majority, the ministry on the 3d offered its resignation.

Disturbances occurred in the latter part of July in Rasgrad, in which Mohammedans attacked the Bulgarians. They were quelled within a few days, and forty-two of the insurgents being killed, the rest, after a short resistance, took to flight, sheltering themselves in the forests of Osman-Bazar. Other disturbances occurred in various parts of the principality, caused chiefly by bands of robbers; and even Bashi-Bazouks and furloughed

Turkish soldiers took part in them. The Government, therefore, proclaimed a state of siege in the department of Varna, and in some districts of the departments of Tirnova and Rus-tchuk, and at the same time complained to the Turkish Government.

BURMAH, a kingdom in Farther India; area, 190,000 square miles; population, 4,000,000. The capital is Mandalay, on the Irrawaddy, about 200 miles beyond Thyetmayoo and Tonghoo, two fortified towns of British Burmah, the former situated on the Irrawaddy, the other on the Sitang River, which flows nearly parallel with the Irrawaddy, and is connected with it through the Pegu River and a recently opened navigable canal. Mandalay is separated from the Irrawaddy by two miles of swampy country, cut up by creeks. In July, August, and September, when the river is at its highest, light gunboats could approach the city by some of these creeks. The city itself is about one mile square, surrounded by a wall of sun-burnt brick 20 feet high, which is further protected by an embankment of the same height and by a ditch 90 feet wide and 10 feet deep. The ditch is crossed by five bridges. The palace is in the center of the city, a quarter of a mile square and strongly stockaded. The British residency is between the river and the city. About 350 miles above Mandalay, and near the junction of the Tapeng River with the Irrawaddy, is Bhamo, a town well stockaded. The Tapeng is navigable for 20 miles above Bhamo, by steamer in the rains, and by large boats at other seasons. The Kakhyeng range of hills is reached at 25 miles beyond Bhamo, and 110 miles farther is Momein, an important place, situated in a valley 4,500 feet above the sea, and the occupation of which would probably fall within the scope of operations if the British should ever come again into serious collision with the Burmese Empire.

Burmah is not yet open for travelers, and the official reports of the Government of British India are still our only source of information. The government of the country is a pure despotism. There is no hereditary high nobility of princes and nobles, who in times of danger would rally for the support of the throne; and the Buddhist clergy, however numerous and influential they are in many respects, are not allowed to have any influence upon political and secular affairs. The only kind of aristocracy in the country consists of the numerous princes, princesses, and their families in the palace-city, and to them may be added the highest dignitaries. The numerous state officers of lower rank can in no way be regarded as a support of the throne, because its members may at any moment be removed at the pleasure of the King. Thus the members of the embassy which was sent in 1872 to England, the first sent to any European Court, have been degraded to inspectors in workmen's shops, because their reports on the great power of England were not to the liking of the Bur-

man King. From this condition of affairs results a chronic state of rebellion. People and officers submit to the permanent rebellion as an unavoidable evil. The numerous princes know no other means to realize their wishes than the usurpation of the supreme power, and for every rebellion they find friends and supporters. In 1866 such a plot was almost successful, and the suppression of the insurrection, which cost the crown prince (brother of the King) and numerous members of the royal court their lives, completely paralyzed for a time all trade and commerce. Still more dangerous was the insurrectionary attempt of 1870, by which one of the younger sons of the King, who had been excluded from the palace, aimed at the throne. His mother and her friends had sold their jewelry, bought arms, and gained leaders; but the torture extorted from one of the conspirators a full confession, and the prince with forty accomplices was imprisoned. A royal edict announced that the execution of the prisoners had been stayed at the request of a priest, but a year passed before the insurrectionary movements which broke out in all parts of the kingdom were fully quelled.

The predecessor of the present King, Mendone Meng (also called Mung Long), was raised by a palace revolution following the humiliating surrender of Pegu in 1853, and died on October 1, 1878. During the last decade of his reign he tried to introduce some of the institutions of civilized countries, expecting to turn them to his personal advantage. At first he began to purchase river steamers and some

expensive machines, especially for cotton-spinning and weaving; but for many years the steamers were exclusively employed for government purposes. These measures exhausted the royal treasury, and, in order to procure money, the commerce was monopolized in favor of the King. The importers from British India, and the leaders of the caravans from China and Siam, were obliged to sell to and purchase from the King exclusively. His agents bought enormous quantities of goods, especially of Indian cotton goods. In order to get rid of them, the King forced them, in payment of salaries, upon all officers of the kingdom, who in turn disposed of them as well as they could; and then he found no longer any purchasers, because the merchants had bought their supplies at second hand. As the ships continued to bring new goods, the King refused to fulfill his contracts, and compelled the people of his country to take those already imported. At the same time the peasants were compelled to sell to the King their crops; royal steamers carried the rice to Rangoon, and foreigners were also excluded from the export trade. These acts of the King led to many complaints of the Indian merchants, of which even the English Parliament took notice; but the Government declined to take any action, because the King had violated no treaty.

In March, 1872, the first embassy was sent to England. The preparations were kept secret, but it was known in British India that the ambassadors had held no influential post,

and the King was notified that they would be received in England at court, but that he must apply to Calcutta if he wanted any new treaty. The embassy visited Rome, as the year before an Italian naval officer had concluded in Mandalay a commercial treaty between Italy and Burmah. In England they visited all the centers of trade and manufactures. On January 24, 1873, a commercial treaty was concluded at Paris between Burmah and France, which if literally carried out would have secured to France a commercial ascendancy in Burmah, at which it had aimed since 1857. It was however found out that the ambassador who had signed the treaty as first plenipotentiary held in Burmah only the rank of secretary, and the whole treaty turned out to be valueless. Other embassies were sent in 1874 to France and Italy, in 1875 to Calcutta, in 1876 to Spain, and in 1877 to Persia. Thus Burmah became better known in Europe, but its internal progress was not promoted. The King did not try, like the ruler of Japan, to secure with the aid of the ambassadors of foreign powers the services of distinguished foreigners; but the foreigners who were appointed were mostly adventurers.

The relations between the English and Burmese Governments began more than a hundred years ago. At that time Burmah extended to the sea; Assam and the valley of the middle Brahmapootra were subjected to its rule, and even from the Ganges tribute was sometimes offered. In 1757 Burmah allowed the establishment of an English factory on the coast; but, though it yielded on this and several other occasions, as a general rule it insulted and even plotted against the life of the ambassadors of British India. Not even the campaign of 1823 to 1826, by which Burmah lost two coast provinces, Aracan in the north and Tenasserim in the south, led to the establishment of regular diplomatic intercourse; and at times the life of the English Resident at Mandalay was endangered to such a degree that the position remained unfilled for years. The campaign of 1852, which was made necessary by continued provocations on the part of Burmah, proved again the superior power of England, cost Burmah its last coast province, Pegu, and led to a change of rulers. The new King, Mendone Meng, continued however to exhibit the same overbearing arrogance toward the British, and even the annexation of Pegu to British India has not been recognized by Burmah up to the present day. The first treaty of commerce and amity between Burmah and Great Britain was concluded in November, 1862. On October 25, 1867, permission was given to Great Britain to appoint a diplomatic agent at Bhamo. It was agreed to appoint, for conflicts between English and Burmese subjects, a mixed court in which English agents were to preside. The capital of the country, Mandalay, was connected by electric telegraph with British India. On the other hand, the

traditional mistrust against foreigners continued to manifest itself on many occasions. The Indian steamers were at first altogether forbidden to go up the Irrawaddy beyond Mandalay, and even now a steamer is allowed to ascend as far as Bhamo only once a month. No permission is given to establish a telegraph bureau outside of the royal palace. No concession was made in the "shoe question," or in the demand that an English ambassador shall approach the King barefooted. In 1875 Sir D. Forsyth was reluctantly allowed to step on a carpet instead of the bare floor. Subsequently the late King intended to draw a gauze curtain between himself and the foreigners, in case the latter should insist on not putting off their shoes. In August, 1878, the King is reported to have received the new British Resident, Mr. Shaw, in shoes, but no definite arrangement was made with regard to the subject.

In the last days of his final illness (1878) King Mendone named as his successor one of his oldest sons, the Nyoung Yan Prince, a great favorite in the palace, and much liked by all the British visitors in Mandalay. The daughter of the chief Queen, however, was engaged to be married to Thebaw, the youngest son, about twenty-one years old, and the "Queen of the South" forthwith resolved that her future son-in-law should succeed. She bought over the ministers. The Mendone's death was kept a secret until the plans were matured, and a strong following secured for Thebaw. The Nyoung Yan and his brother, the Nyoung Oke, got wind of what was going on, and, to escape assassination, took refuge at the British Residency. This settled the matter, and Thebaw ascended the throne without bloodshed, a thing unknown in the previous history of Burmah. But all his brothers were thrown into prison, with their wives and children, as a precautionary measure. The young King, with the assistance of the Kin-woon-Mingyee, or Prime Minister, who has twice been to Europe on embassies, then formed a ministry. At first all seemed to be going well. All the monopolies instituted by the late King were abolished; the strict observance of the treaty with the British Government was promised, and hopes of a solution of the "shoe question" were held out. Unfortunately, however, the presence of the Nyoung Yan at the British Residency unsettled the King's mind. The constant suspense in which he had been kept, coupled with the sudden release from the monastic restraint to which he had been accustomed, drove the young King to drink; and he very soon showed signs of the hereditary madness of his family. His fears continued to gain upon him as one after another of the princes pined away and died in the frightful underground prisons of the palace, loathsome with the filth never removed since these dens were constructed years ago. Fear of British intervention alone

prevented him from putting them all to death months ago. Suddenly (February, 1879) the news of the disaster in Zoolooland reached Mandalay. That apparently decided him, and a work of cold-blooded butchery began which will hardly find a parallel in history. At first the massacre was carried on according to old Burmese use. The victims were led out of their cells in twos and threes, brought to pay homage to the King, and then disposed of in the ordinary Buddhist fashion. The head of the victim was tied down to his ankles, and a blow on the back of the neck from a heavy club put him out of pain. But this soon proved too mild a spectacle for Thebaw. The Thongzai Prince, on being brought to do reverence to his young brother, professed an utter scorn for what could be done to him, and was flogged to death. The late King's eldest son, the truculent Mekhaya Prince, who used to look on all foreigners as so much dirt under his feet, turned craven, and was taunted and driven to madness before receiving the blow which only half stunned him, when his writhing body was thrown into the gigantic trench dug to receive the victims. The massacre was carried on in a leisurely fashion, extending over several days, fiendish ingenuity being taxed to the utmost to devise fresh horrors. Moug Oke—who was Governor of Rangoon when it was captured by the British in 1856—had his nose and mouth filled with gunpowder, a light was applied, and he was then flung into the trench to be stifled by the bodies of succeeding victims. The daughter of the Nyoung Yan, a young girl of sixteen, was handed over to eight soldiers of the Royal Guard, to be pitched insensible into the same heaving grave when they had gratified their brutal lust. The wife of one prince far advanced in pregnancy was ripped up, and the agonized husband was brought to see his wife and child once more before he died. After some days of this sort of thing, the executioners got weary and hurried through their task. Little children were put in blankets and swung against the palace walls; women were battered over the head, as being less trouble than tying them up so as to get a blow at the neck. Altogether about ninety persons are believed to have been put to death in this way. No one was allowed to leave the palace while the massacre was going on, but it seems certain that Mr. Shaw, the British Resident, was inside the palace walls within a very short time of its commencement. He had been to a concert given by one of the ministers. One object of this *paui* was to drown the cries of the victims. The remonstrance which Mr. Shaw, at the instance of the British Government, addressed to the King, was received with the utmost contempt. The guard of thirty Sepoys conceded to him arrived a short time afterward, but was not allowed to land for the day, and the detachment for Mr. St. Barbe, at Blamo, was not allowed to disembark at all,

though the gentleman was in Mandalay. A letter from the special correspondent of the "Daily News," dated Mandalay, April 27, asserted that the King was very much hated by his own people, and that his subjects would murder him were he to leave the Myo or walled town. According to this correspon-

BURMESE LADY AND GENTLEMAN.

dent, "the Nyoung Yan is the man they desire for King. He was always good-natured and jolly, and he is the image of his father, the late King. Moreover, he is not without some claim to military distinction. In the rebellion of 1866 he commanded a division of his father's army, and defeated the rebels in several engagements. Had he been killed with the rest of his brothers, they would have accepted the situation; but now that he is safe in Calcutta, there is always a lingering hope that he may appear and claim the throne his father intended for him."

The Government of the Viceroy of India watched the strange events passing in Mandalay with great anxiety. Reinforcements nearly double the ordinary strength of the garrisons in British Burma were ordered to the frontier. The Rangoon and Irrawaddy State Railway, 161 miles long, and running three trains daily each way, connects Rangoon with Prome. There is a telegraph from Rangoon to Mandalay, but the line beyond the British frontier, maintained by the Burmese authorities and working irregularly, is now interrupted. The extensive military preparations made by the King caused great anxiety for the safety of British residents and Europeans in Mandalay.

The British Resident at Mandalay, Mr. Shaw, died on June 15, 1879. Notwithstanding the complications existing between Eng-

land and the Burmese Empire, the Burmese showed considerable regret, and the funeral was attended by most of the King's ministers. Mr. Shaw was a man thoroughly acquainted with Asiatic politics. He originally went to India as a tea-planter, and was first brought into notice by his journey to Yarkand, where he resided for some time at the court of Yakoob Beg.* His knowledge of Central Asian affairs recommended him for political employment, and he was appointed British agent at Ladakh. On the conclusion of the treaty with Yakoob Beg, Mr. Shaw was selected to carry it to Yarkand for signature. Subsequently he was sent to England as officer in charge of the Yarkand envoy. On his return to India he was appointed Resident at Mandalay. He was succeeded in that office by Colonel Horace Browne, who on his arrival at Mandalay was escorted to the Residency by several Burmese officials. On the following day the Premier, the Minister of the Interior, the Judge of the Mixed Court, and others paid official visits to him. Nevertheless, Colonel Browne's gun and sword were detained at the custom-house for a short time, though foreigners are allowed to land these ordinarily without a pass.

The relations between Burmah and the Government of British India became still more strained when Thebaw claimed sovereignty over the East Karenee country. After the close of the Burmese war in 1852, it was first proposed to carry the boundary line between the British province of Pegu and Upper Burmah on to the river Salwen, which forms the western frontier of the Shan States tributary to Siam; but it was ascertained that the Karenee country, lying between the Salwen and Sit-tang, was independent of the King of Burmah. The British frontier line, therefore, after crossing the latter river, was abruptly turned off to the southeast, so as to avoid Karenee and meet the Salwen at a point considerably lower down its course. The independence of Karenee, thus recognized by the British, was respected by Burmah till the spring of 1875, when the late King laid claim to the western portion of the country, and proceeded to occupy it with troops. The Government of India remonstrated against this movement, and sent Sir Douglas Forsyth on a special mission to Mandalay. For some time war seemed to be imminent, but finally the difficulties were amicably settled. The King of Burmah agreed to recognize the independence of Western Karenee, and the boundaries between that country and Upper Burmah were demarkated by a mixed British and Burmese Commission. The Karenee country has for the Government of British India a strategical importance, as in the case of war it would enable the Burmese to turn the British flank and threaten the British communications between the frontier posts and the seaports.

In July Thebaw again ordered twelve per-

* See "Annual Cyclopædia" for 1874, p. 468.

sons, including several relations of the Nyoung Yan Prince, to be murdered. About the same time a disturbance broke out at Bhamo, due to the King's officials having been sent to collect unusually heavy taxes. They met with armed resistance, and were all killed.

In the beginning of October the British agent and his party left Mandalay, without being in the least molested. The Prime Minister of Burmah wrote to the agent a polite letter, and sent carefully on board the steamer all property left at the Residency. Soon afterward the King dispatched an embassy to the Government of British India. Having arrived at Rangoon, the embassy was not permitted by the British Deputy Commissioner to proceed pending further explanations of the object of his mission.

BURRITT, ELIHU, a scholar and philanthropist, was born at New Britain, Connecticut, on December 8, 1810, and died there on March 9th. In 1828 he became apprentice to a blacksmith, and at the same time devoted all his leisure to obtain an education. So ardent was his desire for knowledge that he wrought mathematical problems while working at the anvil. At the suggestion of his brother, the principal of a small boarding-school, he studied the French, Latin, and Greek languages, and in order to devote more attention to his studies he took a short course in the school. He attempted to perform the duties of a teacher as a means of support, but ill health prevented success. He tried business pursuits, but the financial crisis of 1837 left him destitute. He then went to Worcester, Mass., and resumed work at the anvil and the study of languages. Here he translated all the Icelandic Sagas relating to the discovery of America, and obtained the name of the "Learned Blacksmith." Mr. Burritt made his first public appearance in 1841 as a lecturer, claiming in his addresses that all attainments were the result of persistent study and effort. In 1842 he started the "Christian Citizen" at Worcester, a weekly journal, devoted to antislavery, peace, temperance, and self-culture. Four years later he went to Europe, and during a visit of three years devoted himself to coöperation with the English peace advocates. During this time, also, he developed the basis of an international association known as the League of Universal Brotherhood, which aimed at the abolition of war and the promotion of fraternal relations and feelings between different countries. He was prominent in organizing the first Peace Congress, and took part in two subsequent congresses, in 1849 and 1850. In 1852 he became the editor of the "Citizen of the World" in Philadelphia. In this paper he urged the compensated emancipation of Southern slaves. The John Brown movement, at Harper's Ferry, was the death-blow of this plan, which was rapidly gaining advocates. His disappointment at the failure of his project was great. He had advocated it clearly and forcibly; he

saw no other way of removing the evil. To its advancement he had devoted all his time and resources, living at times almost in poverty. Mr. Burritt then retired to a small farm which he owned at New Britain, and gave his attention to farming. He made a brief visit to England in 1863, and during the following two years he published three new books and several volumes of general writings. He was appointed United States Consul at Birmingham in 1865, and held the office until the changes in the English consulates by President Grant. He returned to America in 1870, and spent the remainder of his days in his native village. He had published "Sparks from the Anvil," London, 1848; "Miscellaneous Writings," 1850; "Olive Leaves," 1853; "Thoughts of Things at Home and Abroad," Boston, 1854; "A Walk from John O'Groat's to Land's End," 1865; and "Lectures and Speeches," 1869.

BUTT, ISAAC, an Irish lawyer and statesman, born in 1813, died May 5, 1879. He was educated at Trinity College, Dublin, where he took high classical and mathematical honors and distinguished himself as a speaker in the debates of the College Historical Society. He was elected at an early age to the Professorship of Political Economy there, and was one of the first editors of the "Dublin University Magazine." He was called to the bar in 1838, and practiced on the Munster Circuit with great success. On his first entrance into public life he was a strenuous champion of the Conservative and Protestant party, and was chosen an Alderman of the Corporation of Dublin by that party, in order that he might be opposed to Alderman Daniel O'Connell. His Parliamentary career commenced by his election for Harwich in May, 1852. A general election followed soon after, when he stood at Youghal against Hon. John Fortescue, and was elected by a majority of two. He continued to sit for Youghal until 1865. At that

time Mr. Gavan Duffy and Mr. George Henry Moore were the most conspicuous members of the Irish party. Mr. Butt kept aloof from them, remaining a Liberal-Conservative, and avoiding the tenant-right and other popular causes. Finally he became in the House an assiduous though unattached follower of Lord Palmerston. His speeches at that time were short and devoid of any pretension to oratory. It was only in 1871, after his return for Limerick in the National and Home-Rule party interest, that the position of leader was accorded to him by the Irish Liberal representatives. The dissolution was preceded in 1873 by the Home-Rule conference in Dublin, at which a definite programme was adopted for the Home-Rule movement; and on that programme the constituencies were appealed to in 1874. The general election resulted in the return of fifty-six or -seven followers of Mr. Butt, the Liberal representatives having adopted the programme of the conference, and Mr. Butt thus became in the present Parliament the first Irish Parliamentary leader of a majority of Irish representatives. In 1875 the Irish Parliamentary party assumed a definite organization, and under Mr. Butt's leadership procured considerable modification in the Peace Preservation Acts of the Government. In the next session the Home-Rule question came prominently forward, and Mr. Butt drew up a series of bills for the redress of Irish grievances, which were committed to the charge of various members of the party. Prominent among these were the Irish University measure, the franchise bills, and the land bills. The intermediate education bill of 1878 was suggested by Mr. Butt, and his last appearances in the House were those in which he advocated that measure. When a section of the Home-Rule party adopted the policy known as obstruction, Mr. Butt strenuously opposed that proceeding as unconstitutional, and thereby lost a considerable share of his influence.

C

CALIFORNIA. The great subject of interest in California during the year was the new State Constitution. The Convention adjourned on March 3d, after having been in session one hundred and fifty-seven days, and the document it presented to the people was received probably with more denunciations from the press than had ever before been bestowed upon a similar instrument. These were even accompanied with reproaches against the members of the Convention. This Constitution was submitted to a vote of the people for acceptance and approved, at an election held on May 7th.

The chief feature of the Constitution consists in some new regulations which it introduces in the affairs of society, and which were

supposed by many to be ruinous to present methods, or to the interests involved in them; while others considered that these provisions would tend to remove unjust and unequal privileges which had grown up under the operations of civil affairs. Some of the provisions which are different from those generally incorporated in the State Constitutions are here presented.

In the Bill of Rights it is provided that a trial by jury may be waived in all criminal cases not amounting to felony by consent of parties, and in civil actions by consent of the parties in such manner as may be prescribed by law. In civil actions and misdemeanors the jury may consist of twelve or any less number the parties may agree upon. Three fourths

of a jury may render a verdict in civil actions.

The section regulating the right of suffrage closes with the following provision: "No native of China, no idiot, insane person, or person convicted of any infamous crime, and no person hereafter convicted of the embezzlement or misappropriation of public money, shall ever exercise the privileges of an elector in this State."

The sessions of the Legislature after 1880 commence on the first Monday after the first day of January, and are biennial. The election of members of the Legislature after 1879 will be held on the first Tuesday after the first Monday in November. Senators are chosen for four years and Representatives for two years. There are forty of the former and eighty of the latter. In adjusting the representation of districts, no persons who are not eligible to become citizens of the United States, under the naturalization laws, shall be counted as forming a part of the population of any district. No pay shall be allowed to members after sixty days; and no bill shall be introduced in either House after fifty days except on the consent of two thirds of the members. On the final passage of all bills they shall be read at length and receive the vote of a majority of the members of each House to become laws. The Governor may veto some items of appropriation bills and approve of others. No person holding any lucrative office under the United States or any other power shall be eligible to any civil office of profit under the State. Local officers or postmasters with a salary less than five hundred dollars and militia officers are excepted. "No person convicted of the embezzlement or defalcation of the public funds of the United States, or of any State, or of any county or municipality therein, shall ever be eligible to any office of honor, trust, or profit under the State; and the Legislature shall provide by law for the punishment of embezzlement or defalcation as a felony."

"No money shall ever be appropriated or drawn from the State Treasury for the use or benefit of any corporation, association, asylum, hospital, or any other institution not under the exclusive management and control of the State as a State institution; nor shall any grant or donation of property ever be made thereto by the State; provided, that notwithstanding anything contained in any section of the Constitution, the Legislature shall have the power to grant aid to institutions conducted for the support and maintenance of minor orphans or half orphans, or abandoned children, or aged persons in indigent circumstances—such aid to be granted by a uniform rule, and proportioned to the number of inmates of such respective institutions; provided further, that the State shall have at any time the right to inquire into the management of such institutions; provided further, that whenever any county, or city and county, or city,

or town shall provide for the support of minor orphans, or half orphans, or abandoned children, or aged persons in indigent circumstances, such county, city and county, city, or town shall be entitled to receive the same pro rata appropriations as may be granted to such institutions under church or other control. An accurate statement of the receipts and expenditures of public moneys shall be attached to and published with the laws at every regular session of the Legislature."

"Every act shall embrace but one subject, which subject shall be expressed in its title. But if any subject shall be embraced in an act which shall not be expressed in its title, such act shall be void only as to so much thereof as shall not be expressed in its title. No law shall be revised or amended by reference to its title; but in such case the act revised or section amended shall be reenacted and published at length as revised or amended."

"The Legislature shall have no power to authorize lotteries or gift enterprises for any purpose, and shall pass laws to prohibit the sale in this State of lottery or gift-enterprise tickets, or tickets in any scheme in the nature of a lottery. The Legislature shall pass laws to regulate or prohibit the buying and selling of the shares of the capital stock of corporations in any stock board, stock exchange, or stock market under the control of any association. All contracts for the sale of shares of the capital stock of any corporation or association, on margin or to be delivered at a future day, shall be void, and any money paid on such contracts may be recovered by the party paying it by suit in any court of competent jurisdiction."

In all elections by the Legislature the members shall vote *in voce*.

"Neither the Legislature, nor any county, city and county, township, school district, or other municipal corporation, shall ever make an appropriation, or pay from any public fund whatever, or grant anything to or in aid of any religious sect, church, creed, or sectarian purpose, or help to support or sustain any school, college, university, hospital, or other institution controlled by any religious creed, church, or sectarian denomination whatever; nor shall any grant or donation of personal property or real estate ever be made by the State, or any city, city and county, town, or other municipal corporation, for any religious creed, church, or sectarian purpose whatever." The Legislature, however, is not to be prevented from granting aid in the manner above mentioned.

"The Legislature shall have no power to give or to lend, or to authorize the giving or lending, of the credit of the State, or of any county, city and county, city, township, or other political corporation or subdivision of the State now existing, or that may be hereafter established, in aid of or to any person, association, or corporation, whether municipal or otherwise, or to pledge the credit thereof,

in any manner whatever, for the payment of the liabilities of any individual, association, municipal or other corporation whatever; nor shall it have power to make any gift, or authorize the making of any gift, of any public money or thing of value to any individual, municipal or other corporation whatever; provided, that nothing in this section shall prevent the Legislature granting aid" as above mentioned; "and it shall not have power to authorize the State, or any political subdivision thereof, to subscribe for stock, or to become a stockholder in any corporation whatever."

"The Legislature shall have no power to grant, or authorize any county or municipal authority to grant, any extra compensation or allowance to any public officer, agent, servant, or contractor, after service has been rendered, or a contract has been entered into and performed, in whole or in part, nor to pay, or to authorize the payment of, any claim hereafter created against the State, or any county or municipality of the State, under any agreement or contract made without express authority of law; and all such unauthorized agreements or contracts shall be null and void."

"The Legislature shall pass laws for the regulation and limitation of the charges for services performed and commodities furnished by telegraph and gas corporations, and the charges by corporations or individuals for storage and wharfage, in which there is a public use; and where laws shall provide for the selection of any person or officer to regulate and limit such rates, no such person or officer shall be selected by any corporation or individual interested in the business to be regulated, and no person shall be selected who is an officer or stockholder in any such corporation."

"Any person who seeks to influence the vote of a member of the Legislature by bribery, promise of reward, intimidation, or any other dishonest means, shall be guilty of lobbv, which is hereby declared a felony; and it shall be the duty of the Legislature to provide by law for the punishment of this crime. Any member of the Legislature who shall be influenced in his vote or action upon any matter pending before the Legislature by any reward, or promise of future reward, shall be deemed guilty of a felony, and upon conviction thereof, in addition to such punishment as may be provided by law, shall be disfranchised and for ever disqualified from holding any office or public trust. Any person may be compelled to testify in any lawful investigation or judicial proceeding against any person who may be charged with having committed the offense of bribery or corrupt solicitation, or with having been influenced in his vote or action, as a member of the Legislature, by reward, or promise of future reward, and shall not be permitted to withhold his testimony upon the ground that it may criminate himself or subject him to public infamy; but such testimony shall not afterward be used against him in any

judicial proceeding, except for perjury in giving such testimony."

The term of office of the Governor and State officers is four years. The Governor's salary is fixed at \$6,000 per annum, and those of the State officers at \$3,000 per annum. These salaries may be reduced by the Legislature, but they can not be increased. No fees are allowed to either of these officers. The Governor is made ineligible to the United States Senate during his term of office.

The Chief Justice and the six Associate Justices of the Supreme Court are to be chosen at the State elections, and their term of office is fixed at twelve years. A Superior Court is created for each county. "The salaries of the Justices of the Supreme Court shall be paid by the State. One half of the salary of each Superior Court Judge shall be paid by the State; the other half thereof shall be paid by the county for which he is elected. During the term of the first Judges elected under this Constitution, the annual salaries of the Justices of the Supreme Court shall be \$6,000 each. Until otherwise changed by the Legislature, the Superior Court Judges shall receive an annual salary of \$3,000 each, payable monthly, except the Judges of the city and county of San Francisco, and the counties of Alameda, San Joaquin, Los Angeles, Santa Clara, Yuba and Sutter combined, Sacramento, Butte, Nevada and Sonoma, who shall receive \$4,000 each." "No Judge of a Superior Court nor of the Supreme Court shall, after the first day of July, 1880, be allowed to draw or receive any monthly salary unless he shall take and subscribe an affidavit, before an officer entitled to administer oaths, that no cause in his court remains undecided that has been submitted for decision for the period of ninety days."

"The public-school system shall include primary and grammar schools, and such high schools, evening schools, normal schools, and technical schools as may be established by the Legislature or by municipal or district authority; but the entire revenue derived from the State school fund and the State school tax shall be applied exclusively to the support of primary and grammar schools." As to the use of appropriations, it is provided that "no public money shall ever be appropriated for the support of any sectarian or denominational school, or any school not under the exclusive control of the officers of the public schools; nor shall any sectarian or denominational doctrine be taught, or instruction thereon be permitted, directly or indirectly, in any of the common schools of this State."

Private property shall not be taken or sold for the payment of the corporate debt of any political or municipal corporation. "No county, city, town, township, board of education, or school district shall incur any indebtedness or liability in any manner or for any purpose, exceeding in any year the income and revenue

provided for it for such year, without the assent of two thirds of the qualified electors thereof voting at an election to be held for that purpose, nor unless before or at the time of incurring such indebtedness provision shall be made for the collection of an annual tax sufficient to pay the interest on such indebtedness as it falls due, and also to constitute a sinking fund for the payment of the principal thereof within twenty years from the time of contracting the same. Any indebtedness or liability incurred contrary to this provision shall be void." "No public work or improvement of any description whatsoever shall be done or made in any city, in, upon, or about the streets thereof, or otherwise, the cost and expense of which is made chargeable or may be assessed upon private property, by special assessment, unless an estimate of such cost and expense shall be made, and an assessment in proportion to benefits on the property to be affected or benefited shall be levied, collected, and paid into the city treasury before such work or improvement shall be commenced or any contract for letting or doing the same authorized or performed. In any city where there are no public works owned and controlled by the municipality for supplying the same with water or artificial light, any individual or any company duly incorporated for such purpose under and by authority of the laws of this State shall, under the direction of the Superintendent of Streets or other officer in control thereof, and under such general regulations as the municipality may prescribe for damages and indemnity for damages, have the privilege of using the public streets and thoroughfares thereof, and of laying down pipes and conduits therein, and connections therewith, so far as may be necessary for introducing into and supplying such city and its inhabitants either with gaslight or other illuminating light, or with fresh water for domestic and all other purposes, upon the condition that the municipal government shall have the right to regulate the charges thereof."

"Each stockholder of a corporation or joint-stock association shall be individually and personally liable for such proportion of all its debts and liabilities contracted or incurred during the time he was a stockholder, as the amount of stock or shares owned by him bears to the whole of the subscribed capital stock or shares of the corporation or association. The directors or trustees of corporations and joint-stock associations shall be jointly and severally liable to the creditors and stockholders for all moneys embezzled or misappropriated by the officers of such corporation or joint-stock association during the term of office of such director or trustee."

"No railroad or other transportation company shall grant free passes, or passes or tickets at a discount, to any person holding any office of honor, trust, or profit in this State; and the acceptance of any such pass or ticket,

by a member of the Legislature or any public officer, other than Railroad Commissioner, shall work a forfeiture of his office." The State is to be divided into three districts, in each of which a Railroad Commissioner shall be elected by the voters. Some of the duties assigned to these Commissioners are thus stated: "They shall have the power, and it shall be their duty, to establish rates of charges for the transportation of passengers and freight by railroad or other transportation companies, and publish the same from time to time, with such changes as they may make; to examine the books, records, and papers of all railroad and other transportation companies, and for this purpose they shall have power to issue subpoenas and all other necessary process; to hear and determine complaints against railroad and other transportation companies, to send for persons and papers, to administer oaths, take testimony, and punish for contempt of their orders and processes, in the same manner and to the same extent as courts of record, and enforce their decisions and correct abuses through the medium of the courts. Said Commissioners shall prescribe a uniform system of accounts to be kept by all such corporations and companies. Any railroad corporation or transportation company which shall fail or refuse to conform to such rates as shall be established by such Commissioners, or shall charge rates in excess thereof, or shall fail to keep their accounts in accordance with the system prescribed by the Commission, shall be fined not exceeding \$20,000 for each offense; and every officer, agent, or employee of any such corporation or company, who shall demand or receive rates in excess thereof, or who shall in any manner violate the provisions of this section, shall be fined not exceeding \$5,000 or be imprisoned in the county jail not exceeding one year. In all controversies, civil or criminal, the rates of fares and freights established by said Commission shall be deemed conclusively just and reasonable; and in any action against such corporation or company for damages sustained by charging excessive rates, the plaintiff, in addition to the actual damage, may, in the discretion of the judge or jury, recover exemplary damages. Said Commission shall report to the Governor, annually, their proceedings, and such other facts as may be deemed important."

Land and improvements thereon shall be separately assessed. Cultivated and uncultivated land, of the same quality and similarly situated, shall be assessed at the same value.

"The Legislature shall have the power to provide by law for the payment of all taxes on real property by installments." "The Legislature shall by law require each taxpayer in this State to make and deliver to the county assessor annually a statement under oath setting forth specifically all the real and personal property owned by such taxpayer, or in his possession, or under his control, at 12 o'clock

meridian on the first Monday of March." "All property, except as hereinafter provided, shall be assessed in the county, city and county, city, town, township, or district in which it is situated, in the manner prescribed by law. The franchise, roadway, road-bed, rails, and rolling stock of all railroads operated in more than one county in this State shall be assessed by the State Board of Equalization, at their actual value, and the same shall be apportioned to the counties, cities and counties, cities, towns, townships, and districts in which such railroads are located, in proportion to the number of miles of railway laid in such counties, cities and counties, cities, towns, townships, and districts; and all other property of railroads shall be assessed by the counties in which such property is situated."

"Income taxes may be assessed to and collected from persons, corporations, joint-stock associations or companies resident or doing business in this State, or any one or more of them, in such cases and amounts, and in such manner, as shall be prescribed by law." "The Legislature shall provide for the levy and collection of an annual poll-tax of not less than \$2 on every male inhabitant of this State, over twenty-one and under sixty years of age, except paupers, idiots, insane persons, and Indians not taxed. Said tax shall be paid into the State School Fund."

"The Legislature shall not, in any manner, create any debt or debts, liability or liabilities, which shall, singly or in the aggregate with any previous debts or liabilities, exceed the sum of three hundred thousand dollars, except in case of war to repel invasion or suppress insurrection, unless the same shall be authorized by law for some single object or work to be distinctly specified therein, which law shall provide ways and means, exclusive of loans, for the payment of the interest of such debt or liability as it falls due, and also to pay and discharge the principal of such debt or liability within twenty years of the time of the contracting thereof, and shall be irrevocable until the principal and interest thereon shall be paid and discharged; but no such law shall take effect until, at a general election, it shall have been submitted to the people and shall have received a majority of all the votes cast for and against it at such election; and all moneys raised by authority of such law shall be applied only to the specific object therein stated, or to the payment of the debt thereby created."

Article XIX. contains the following provisions relative to the Chinese:

SECTION 1. The Legislature shall prescribe all necessary regulations for the protection of the State, and the counties, cities, and towns thereof, from the burdens and evils arising from the presence of aliens who are or may become vagrants, paupers, mendicants, criminals, or invalids afflicted with contagious or infectious diseases, and from aliens otherwise dangerous or detrimental to the well-being or peace of the State, and to impose conditions upon which such persons

may reside in the State, and to provide the means and mode of their removal from the State upon failure or refusal to comply with such conditions; provided, that nothing contained in this section shall be construed to impair or limit the power of the Legislature to pass such police laws or other regulations as it may deem necessary.

SEC. 2. No corporation now existing or hereafter formed under the laws of this State shall, after the adoption of this Constitution, employ, directly or indirectly, in any capacity, any Chinese or Mongolian. The Legislature shall pass such laws as may be necessary to enforce this provision.

SEC. 3. No Chinese shall be employed on any State, county, municipal, or other public work, except in punishment for crime.

SEC. 4. The presence of foreigners ineligible to become citizens of the United States is declared to be dangerous to the well-being of the State, and the Legislature shall discourage their immigration by all the means within its power. Asiatic coolism is a form of human slavery, and is for ever prohibited in this State, and all contracts for cooly labor shall be void. All companies or corporations, whether formed in this country or any foreign country, for the importation of such labor, shall be subject to such penalties as the Legislature may prescribe. The Legislature shall delegate all necessary power to the incorporated cities and towns of this State for the removal of Chinese without the limits of such cities and towns, or for their location within prescribed portions of those limits, and it shall also provide necessary legislation to prohibit the introduction into this State of Chinese after the adoption of this Constitution. This section shall be enforced by appropriate legislation.

Among the miscellaneous provisions of the Constitution are some new ones. Any citizen of the State "who shall, after the adoption of this Constitution, fight a duel with deadly weapons, or send or accept a challenge to fight a duel with deadly weapons, either within this State or out of it, or who shall act as second, or knowingly aid or assist in any manner those thus offending, shall not be allowed to hold any office of profit, or to enjoy the right of suffrage under this Constitution." "All property, real and personal, owned by either husband or wife before marriage, and that acquired by either of them afterward by gift, devise, or descent, shall be their separate property." "Every person shall be disqualified from holding any office of profit in this State who shall have been convicted of having given or offered a bribe to procure his election or appointment. Laws shall be made to exclude from office, serving on juries, and from the right of suffrage, persons convicted of bribery, perjury, forgery, malfeasance in office, or other high crimes. The privilege of free suffrage shall be supported by laws regulating elections and prohibiting, under adequate penalties, all undue influence thereon from power, bribery, tumult, or other improper practice." "Mechanics, material men, artisans, and laborers of every class shall have a lien upon the property upon which they have bestowed labor or furnished material, for the value of such labor done and material furnished; and the Legislature shall provide by law for the speedy and efficient enforcement of such liens." "Eight hours shall constitute a legal day's work on all public work." "No person shall, on account

of sex, be disqualified from entering upon or pursuing any lawful business, vocation, or profession.”

The following most ample provisions were made for the election relative to the Constitution :

Sec. 4. The Superintendent of Printing of the State of California shall, at least thirty days before the first Wednesday in May, A. D. 1879, cause to be printed at the State printing-office, in pamphlet form, simply stitched, as many copies of this Constitution as there are registered voters in this State, and mail one copy thereof to the post-office address of each registered voter; provided, any copies not called for ten days after reaching their delivery office shall be subject to general distribution by the several postmasters of the State. The Governor shall issue his proclamation, giving notice of the election for the adoption or rejection of this Constitution, at least thirty days before the said first Wednesday of May, 1879, and the boards of supervisors of the several counties shall cause said proclamation to be made public in their respective counties, and general notice of said election to be given at least fifteen days next before said election.

Sec. 5. The Superintendent of Printing of the State of California shall, at least twenty days before said election, cause to be printed and delivered to the clerk of each county in this State five times the number of properly prepared ballots for said election that there are voters in said respective counties, with the words printed thereon, “For the new Constitution.” He shall likewise cause to be so printed and delivered to said clerks five times the number of properly prepared ballots for said election that there are voters in said respective counties, with the words printed thereon, “Against the new Constitution.” The Secretary of State is hereby authorized and required to furnish the Superintendent of State Printing a sufficient quantity of legal ballot paper, now on hand, to carry out the provisions of this section.

It was provided that the Constitution should take effect and be of force on and after the 4th of July, 1879, at 12 o'clock meridian, so far as related to the election of all officers and the commencement of their terms of office and the meeting of the Legislature. In all other respects and for all other purposes it should take effect on January 1, 1880, at 12 o'clock meridian.

The Convention adjourned on the 3d of March, about two months previous to the election, and a vehement campaign against it was commenced. It was conducted with so much virulence that it probably in the end produced, as is usual in such cases, a reaction in favor of the instrument. A canvass of the position of the press of the State on the question, including some papers of neighboring States with business interests closely identified with California, showed on April 19th one hundred and fifty papers arrayed against the Constitution, and only forty-seven urging its adoption.

A Republican mass meeting on March 19th, at Sacramento, adopted the following among other resolutions :

Fifth. That, inasmuch as the ruffian king of the sand-lots has ordered his followers to support the new Constitution, and has, through his brutal speeches and his self-appointed and unscrupulous newspaper organ, made support of that instrument the test of membership in his so-called Workingmen's party; and as the proposed new Constitution is dangerous in

its tendencies, experimental in its main provisions, lacking in the essential qualities of a Constitution, conspicuous for its sins of omission, and generally unworthy the confidence of the people, we call upon all good citizens to unite in defeating him and his schemes and Constitution, believing that the adoption of the new Constitution under such auspices would work irreparable damage to California; that as Republicans we oppose it, as citizens we oppose it, and we ask the party and people to aid us in defeating Kearney and the new Constitution at one and the same time.

One speaker said: “The election of May 7th for or against the new Constitution was to be the most important one in which the people of California were ever called upon to take part. The Kearney party had made the adoption of the new Constitution a party plank, and the Republican party must declare against it and defeat Kearney and his Constitution also; for a victory for Kearney in May would go far toward giving him victory in September, when Congressmen are to be elected and a Legislature chosen. The people must in May decide whether they will leave the safe retreat in which they have prospered for thirty years, and sail away into experimental seas under a Constitution which the men who made it can't explain and the people who read it can't understand. The Republicans of the State must take position against the instrument, this mongrel Constitution which it is sought to crowd down the throats of the people.”

The vote on the Constitution was a very full one. In the counties of the State which were equally settled, the vote cast was nearly as large as that given at the Presidential election in 1876. The following counties serve as an illustration :

COUNTIES.	1876.	1879.
Alameda.....	8,296	8,221
Colusa.....	2,235	2,200
Contra Costa.....	2,022	1,999
Fresno.....	1,296	1,226
Lake.....	1,092	1,006
Monterey.....	2,195	2,100
Napa.....	2,113	1,934
Sacramento.....	6,824	6,210
San Benito.....	1,099	919
San Bernardino.....	1,281	1,204

The same rule is observable in all the agricultural counties with one or two exceptions. Three counties exhibited an increase over 1876, two agricultural and the third mining, viz. :

COUNTIES.	1876.	1879.
Marin.....	1,279	1,318
Mono.....	278	1,120
Mendocino.....	2,212	2,879

These changes agree with observed facts. Railroad extension has been settling up Marin and Mendocino very rapidly. The recent mineral discoveries in Mono have attracted a large population. But nearly all the other mining counties have been losing, viz. :

COUNTIES.	1876.	1879.
El Dorado.....	2,772	1,496
Nevada.....	4,205	3,416
Placer.....	2,888	2,081
Sierra.....	1,428	654

The vote in San Francisco was 3,760 behind that of 1876, although three years' growth should be added.

The vote on the Constitution, as canvassed by the Governor and other officers, lacking the returns from Mariposa County, was 77,959 for the Constitution, 67,134 against the Constitution; total vote, 145,212. Majority for the Constitution, 10,825.

Grand demonstrations of the Workingmen in San Francisco and Sacramento were made on the adoption of the Constitution. The resolutions adopted by the former related chiefly to some local grievances. Those adopted by the latter are expressive of the sentiment of the meetings, some of which were as follows:

Whereas, The Workingmen's party is the party of reform, honesty, integrity, and manhood;

Whereas, The new Constitution emanated from the Workingmen's party, and through its instrumentality and by its votes became the law of the land; therefore,

Resolved, That the Workingmen are the men to administer the government of California according to the Constitution we have given her, a right we must and shall enjoy; and be it further

Resolved, That we thank our brothers in New York and Chicago, the Internationalists and Socialists, for the sympathy generously tendered us, and the admiration expressed for our noble and gallant leader, Denis Kearney.

The political divisions of the State have been greatly modified by the new Constitution. There are to be no more judicial districts. Every county in the State is to elect a Superior Judge, with the following exceptions: Yuba and Sutter are to elect one; San Francisco is to elect twelve; and Sacramento, San Joaquin, Los Angeles, Sonoma, Santa Clara, and Alameda, two each. In addition there are three railroad districts, as follows: First Railroad District—Alpine, Amador, Butte, Calaveras, Colusa, Del Norte, El Dorado, Humboldt, Lake, Lassen, Mendocino, Modoc, Napa, Nevada, Placer, Plumas, Sacramento, Shasta, Sierra, Siskiyou, Solano, Sonoma, Sutter, Tehama, Trinity, Yolo, and Yuba. Second Railroad District—San Francisco, Marin, and San Mateo. Third Railroad District—Alameda, Contra Costa, Fresno, Inyo, Kern, Los Angeles, Mariposa, Merced, Mono, Monterey, San Benito, San Bernardino, San Diego, San Joaquin, San Luis Obispo, Santa Barbara, Santa Clara, Santa Cruz, Stanislaus, Tulare, Tuolumne, and Ventura. The Legislature has the power to alter or change in any way that it sees fit these districts. The other district officers to be elected are the members of the Board of Equalization, who are four in number, with the Comptroller as chairman. They are to be chosen from the Congressional Districts, which are as follows: First Congressional District—

San Francisco. Second Congressional District—Contra Costa, Alameda, San Joaquin, Calaveras, Amador, El Dorado, Sacramento, Placer, Nevada, Alpine, and Tuolumne. Third Congressional District—Marin, Sonoma, Napa, Lake, Solano, Yolo, Sutter, Yuba, Sierra, Butte, Plumas, Lassen, Tehama, Colusa, Mendocino, Humboldt, Trinity, Shasta, Siskiyou, Klamath, and Del Norte. Fourth Congressional District—San Diego, Los Angeles, San Bernardino, Santa Barbara, San Luis Obispo, Tulare, Monterey, Fresno, Kern, Merced, Mariposa, Stanislaus, Santa Clara, Santa Cruz, San Mateo, Mono, and Inyo. The members of the Board of Equalization are to be taken from these districts, while the Railroad Commissioners are assigned to larger and different groups of counties. The Third Railroad District takes in more than the Fourth Congressional District. The Second Railroad District is larger by two counties than the First Congressional District, while the First Railroad District very nearly embraces the Second and Third Congressional Districts. These divisions within divisions will require much forming and reforming on the part of the State Conventions. Having made the nominations for State officers, they must separate first into three parts to nominate Railroad Commissioners, and then into four parts to nominate members of the Board of Equalization and members of Congress.

An active campaign preparatory to the State election was immediately commenced. Five distinct parties soon held their conventions to make nominations for State officers and a declaration of their principles.

The State Convention of the Workingmen's party assembled at San Francisco on June 3d for the nomination of candidates for State officers. Denis Kearney, president of the party in California, presided. The following ticket was nominated: For Governor, William F. White; for Lieutenant-Governor, W. R. Andrus; for Secretary of State, A. A. Smith; for State Treasurer, L. B. Clarke; for State Comptroller, Hugh Jones; for Attorney-General, C. W. Cross; for Surveyor-General, H. J. Stevenson; for Superintendent of Public Instruction, H. D. Trout; for Chief Justice of the Supreme Court, R. F. Morrison.

The following platform was reported by the Committee, considered *seriatim*, and adopted with some additions:

The Workingmen of California, in convention assembled, do adopt and proclaim the following as their platform and declaration of principles:

1. That we recognize the Constitution of the United States of America and the Constitution of the State of California as the great charters of our liberties and the paramount law of the land, and California as an inseparable part of the American Union, and the system of government thereby inaugurated as the only wise, free, just, and equal government that has ever existed—the last, best, and only hope of man for self-government.

2. The letter and spirit of the new Constitution must be enforced.

3. We utterly repudiate all spirit of communism or agrarianism.

4. No land or other subsidies shall ever be granted to corporations.

5. Vested rights in property must be respected, but land monopoly must be prohibited.

6. Money, mortgages, and bonds must be taxed.

7. The dignity of labor must be upheld, and labor of male and female, when of equal value, must be equally compensated.

8. Any official who shall violate the pledges given to secure his election should be punished as a felon.

9. The contract system of labor of criminals should be abolished, and criminal labor so regulated as not to conflict with free labor throughout the United States.

10. All public officers shall receive fixed salaries, and all fees must be accounted for as public money.

11. That the honors and legal pay of all officials should be considered equivalent for the best services they can render the State, while official jobbery, bribery, or corruption must be visited by sure and severe punishment.

12. All labor on public works shall be performed by the day at ruling rates, and eight hours must constitute a day's work.

13. A system of compulsory education for children between the ages of eight and fourteen years must be adopted; education free in public schools, and all books paid for by the State. That the State should acquire a copyright for school text-books, which must be the property of the State for ever, and the State print the same at the State printing-office.

14. We pledge this party to maintain in its purity the public-school system authorized by the Constitution, and will, when in our power, establish in connection therewith departments for industrial education.

15. Article XI. of the Constitution must not be construed in favor of the appointment of public officials whenever their election by the people direct is at all practicable.

16. Lobbying having been declared a felony in the new Constitution, we demand that the Legislature shall enforce said provision of the fundamental law by the most stringent enactments.

17. Foreigners ineligible to citizenship shall not be licensed to peddle goods or commodities of any character throughout the State of California.

18. Land monopoly being contrary to the spirit of republican institutions and detrimental to the progress of society, and conducing to the creation of a wealthy class of landholders side by side with a landless multitude, therefore we hereby declare ourselves in favor of adopting every legitimate means to prevent the monopoly of the soil in a few hands.

19. Malfeasance in a public office must be punished as a felony.

20. That the laws now existing for the punishment of buying and selling votes are insufficient, in that, both the buyer and seller being equally guilty, neither can be obliged to give evidence of the guilt of the other. We therefore favor the enactment of laws by which the person bribing or attempting to bribe an elector shall alone be punished.

21. We demand that the fullest investigation be had, under the authority of the ensuing Legislature, into the alleged scandalous character of the opposition to the adoption of the new Constitution; and if the charges prove true, that condign punishment be visited upon the guilty ones.

22. The Legislature should cause to be examined and prosecuted land frauds in the State of California.

23. The same value should not be taxed twice the same year under the same system of taxation.

24. Interest on money should not exceed 6 per cent. per annum.

25. We demand the immediate restoration to pre-emption and sale of all forfeited railroad lands, and that no further extensions be granted.

26. We condemn the action of our Senators and

Representatives in Congress in depriving this State of representation for one year, when her most important interests are at stake, as an unwarrantable perversion of their official duties, made under a false pretense of economy, but really in the hope to gain a political advantage over the W. P. C.

27. That we condemn the inaction of our Senators and Representatives in Congress not attempting to have the withdrawal from preemption and sale of lands illegally claimed by the defunct Atlantic and Pacific Railroad Company removed, and said lands restored to the people and reopened to preemption and sale.

28. We condemn the "Desert Land Bill" and all other land-grabs, under whatever name or on whatever pretense.

29. Contracts by debtors for the payment of fees of the attorneys of creditors should be prohibited.

30. Laws should be passed providing for deductions of debts due *bona fide* residents from unsecured credits in matters of taxation.

31. That notaries public should be elected by the people, one from each county. That the best protection of our frontier will be a population of settlers owning their own lands, and that it will be the part of wisdom for the Government to expend the money now squandered for such protection by settling the people on the unoccupied land.

Whereas, Great apprehension exists in the mining counties that some legislation under the new Constitution might be unfavorable to mining interests, we declare that under the protection of our party their vested rights shall be respected.

That the President and Vice-President of the United States and United States Senators should be elected by direct vote of the people, and that no man should be elected to the office of President or Vice-President of the United States for two consecutive terms.

We are tired of the dreary discussion of dead issues in our National Congress, while great living issues are confronting the country. The people want bread and not stones. We hail the awakening of the oppressed workmen and impoverished farmers to a sense of their power and the cause of their sufferings as the harbinger of a new revolution in behalf of human rights against vicious systems and dishonest politicians.

That the national bank law should be repealed, and all moneys issued by the United States be a full legal tender for all debts public and private.

Congress ought to pass fare and freight bills and bills to prohibit unjust discriminations and other abuses in the management on the overland routes.

That the Government of the United States should establish throughout the States a system of postal savings banks.

Charges for freights and fares on railroads and for the use of water, gas, etc., must be so regulated that there shall be no discrimination between persons and places, and that capital actually invested in railroad, water, and gas rights should yield no greater net income than capital invested in farming and other productive industries. The Legislature must pass laws to carry into effect the police power of the State in order to prevent the importation of Chinese, and Congress should abrogate all treaties that come in conflict with the nineteenth article of the new Constitution.

We hold that the State and county tickets formed under the auspices of the W. P. C. must be made up of friends of the new Constitution, irrespective of party predilections. To further secure the efficiency of the new organic law, we will attack its opponents with the most effective weapons; but among ourselves, in difference of opinion, we will allow liberal discussion, give considerate attention, and exercise the largest charity. To these ends we invite the cooperation of all the friends of the new Constitution. We must do all in our power as a party to prevent any conflict between the interests of mining and agriculture, by just laws, engineering skill, and public aid.

That the cardinal principles of true reform in politics is that the office shall seek the man and not the man the office, and that honesty, capability, and faithfulness to our republican system of government are the main requirements in the selection of candidates for office.

That the Democratic and Republican parties have signally failed to apply these principles, inasmuch as both have been completely controlled by "rings," seeking office only to betray the people. That we denounce and condemn the efforts of both the old political parties to create a solid North or a solid South, and thereby sectionalize the country; that in the organization of our party we know no North, no South, no East, no West, that we are determined the government of our country shall be so administered as to secure equal rights to all our people, be they high or low, rich or poor, black or white, and that by so doing the Union can and will be perpetuated for ever.

The following are some of the additions made to the platform: "That all lands belonging to the State or to the General Government should be disposed of to actual settlers only, and in limited quantities—not to exceed 320 acres." This declaration was simply added to the original plank. To the resolution relating to the punishment for bribing a voter, leaving the guilt wholly on the one who offers the bribe, Mr. Sweasey offered an additional clause to declare men who attempt to intimidate their employees as guilty of bribery. Adopted. Postmasters were added to the list of public officials to be elected by the people. The clause relating to the suppression of Chinese immigration was amended by the addition of a resolution asking the Workingmen of the East to pledge their candidates for Congress to vote for the abrogation of the Burlingame treaty. A separate resolution was passed condemning President Hayes for his veto of the anti-Chinese bill. The resolution added that cooly labor is a form of slavery, and that the Chinese must go. It was also resolved that "judicial officers shall take no active part in politics"; that "corporations must discharge their Chinese or go out of business. Laws must be passed to purge the communities of the presence of Chinese and to prevent their acquiring any further foothold among us," etc., etc.

The Republican State Convention for the nomination of State officers under the new Constitution assembled at Sacramento on June 18th. Frank Pixley was made chairman. The following nominations were made for State officers: For Governor, George C. Perkins; for Lieutenant-Governor, General John Mansfield; for Secretary of State, D. M. Burns; for Comptroller, D. M. Kenfield; for Treasurer, John Weil; for Attorney-General, A. L. Hart; for Surveyor-General, J. W. Shanklin; for Clerk of Supreme Court, Frank W. Gross; for Superintendent of Public Instruction, F. M. Campbell; for Chief Justice, A. L. Rhodes. The following platform was reported, accompanied by a minority report upon one point:

Resolved, That we reaffirm our allegiance to the principles of the grand national party of free soil, free labor, equal rights of the people, honest money, good public faith, and the integrity of the national Union—the party whose record furnishes some of the grand-

est and most illustrious chapters of our national history.

Resolved, That the attempt by the Democratic majorities in Congress to repeal the laws for the preservation of the purity of the ballot-box at elections for members of Congress, is in keeping with the history of the party whose crimes against the ballot in New York City under the Tweed dynasty in 1868 led to the enactment of those laws; that the method by which they seek to accomplish this result, by withholding appropriations for the courts of the United States unless the President will join them in their conspiracy, is revolutionary; and that the denial of the power of Congress to make regulations for the conduct of Congressional elections—a power specifically granted in the Constitution of the United States—is a palpable attempt to revive the baneful doctrine of State supremacy, which was the cause of the great rebellion.

Resolved, That the firm and united opposition of the Republican party in Congress and of the President to this new revolt against the nation should be sustained by all patriotic and law-abiding people throughout the land.

Resolved, That the new Constitution is the organic law of the State, adopted by the people in accordance with our republican form of government. It must and will be sustained by the Republican party in loyalty. It must and will receive honest legislation. It must and will receive a just and generous judicial interpretation. It must and will be enforced by an honest executive administration; and we condemn any effort to evade its provisions as unwise and treasonable to the popular will legally expressed.

Resolved, That an independent and intelligent agricultural population is the chief element of a nation's strength and prosperity, and it should be the policy of the State and General Governments to encourage the acquisition of lands in small holdings for actual use, and to discourage the monopoly by individuals or corporations in large bodies.

The Chinese question is one of national importance, demanding the consideration of the National Congress. Unrestricted Chinese immigration imperils the best interests of our coast, and ultimately that of the whole country. It menaces the labor class with an unequal competition, and is dangerous to our civilization. Not unmindful of its history and our own part therein, regarding the rights of present immigrants acquired, we demand of the General Government such legislation as shall restrict or control Chinese immigration in the future, and the repeal or modification of so much of the Burlingame treaty as interferes with the accomplishment of that object. We will spare no effort within our own State to secure by legislative enactment a judicial enforcement of the same results. Chinese immigration must be restricted and controlled.

Resolved, That it is a paramount duty and interest of the State to provide ample educational opportunities for its youth, and to permit none to be deprived of their enjoyment, and that, so far as the provisions of the new organic law will permit, legislation should facilitate and encourage the adoption of a uniform standard of qualifications for teaching, courses of study, and text-books for the public schools.

Resolved, That the Republican party—always the true friend of labor, in all its varied forms—pledges itself to secure the passage of such laws under the new Constitution as will foster, protect, and promote the development and growth of all the industries of the State.

Resolved, That the Republican party, as a just arbiter of the people, pledges itself to insist upon the passage of such laws as will prevent any conflict between the mining and certain portions of the agricultural districts and interests of the State; and we declare that vested rights of all parties shall be scrupulously respected and protected.

The Republican party, claiming to represent the principles of justice, honesty, and moral sentiment, declares its fidelity to the law and its unalterable op-

position to any attempt on the part of any class to disturb the ownership of property; and while it would disfavor the accumulation of great landed estates in the possession of individuals or corporations, it would as firmly protect all the rights of all persons to all the wealth that they may legally and honestly acquire.

Whereas, The regulation of fares and freights upon all inter-State railroad travel and traffic is subject to the action of the Congress of the United States, and the regulation of fares and freights within a State is subject to local legislative jurisdiction and control;

Resolved, As the opinion of this Convention, that the Railroad Commissioners who shall be nominated by the District Conventions should make such reductions in the rates of fares and freights upon all local travel and traffic carried over railroads which have received national or State aid, operated within this State, as will reduce the same by a certain specified percentage upon the rates declared, collected, or charged by published rate-bill in force upon any such road on the first day of June, 1879; and that such Commissioners shall hereafter make such further reductions as may seem to them just and demanded by the interests of the people, but shall in no case authorize or permit any increase thereafter upon such rates so ordered.

Mr. Gorham moved that all the report except that referring to railroad matters be adopted. Carried unanimously.

Mr. Gorham then read the minority report at great length. In substance it sets forth that the figures of the annual reports of the Central Pacific Railroad show it has received \$182,000,000 for transportation of freight and passengers, and that the cost therefor has been but \$58,000,000, leaving a net profit of \$74,000,000 on property derived through Congressional and State legislation, and valued by the company at \$100,000,000. That the people have paid on the average per year to the Central Pacific Railroad \$15,522,714. That during six years the average operating expenses of said road have been but \$6,856,091 per annum. That the net earnings have thus been \$8,666,623 per year. That the condition of the country demands that the power vested in the State to regulate tolls on the roads between points within the State be exercised. That there should be no longer a waiting for voluntary reductions of rates by the road. That to circumvent fraud and corruption, every candidate for Governor, Lieutenant-Governor, the Legislature, or Railroad Commissioner should take a pledge to afford the relief demanded. That the rates between points within the State, for freights and fares on railroads which have received national or State aid, should be one fourth less than the rates actually charged June 1, 1879. That as only experts can make a tariff of equitable rates between various kinds of railroad service, and fairly adjust the discriminations which should be made on account of the difference in kinds of freight, quantities carried, grades, distances, curves, etc., the meaning of the resolution is that for each dollar usually and actually demanded by the railroad companies which have received national or State aid for any service whatever, a reduction shall be made of 25 cents. That until these results are accomplished transpor-

tation is of the most vital importance, and must be settled in advance of all other State questions. That pledges be exacted of the candidates, and that they can not be broken after election without endangering the peace of society.

PLEDGE OF RAILROAD COMMISSIONER.

I do solemnly pledge my word of honor that I will, if elected a Railroad Commissioner, faithfully support, without any modification or change whatever, the following order: Ordered, that the rates of fares and freights on all railroads between all points within this State which have received national or State aid, shall, from and after the 1st day of February, 1880, be fixed at three fourths the usual rates demanded and received on the 1st day of June, 1879, or at any time during the six months prior thereto, and the words usual rates above used shall be deemed to mean the rates usually and actually charged in each case, whether the same be nominally fixed or special rates; and it is further ordered that no change shall be made in the mode of computing charges or in the weight and measurement of freight, or on the classification of service which shall affect the substantial rights of parties under this order, the true object being to reduce all charges for services rendered by railroads, between points within the State over roads which have received national or State aid, one fourth below present rates. And I further solemnly pledge myself that during my term of office I will never vote for any increased rate of charge for any railroad service, but that any charge voted for by me after February 1, 1880, shall be a reduction.

PLEDGES FOR GOVERNOR, LIEUTENANT-GOVERNOR, ASSEMBLYMEN, AND RAILROAD COMMISSIONERS.

I do solemnly pledge myself to the earnest and faithful support of the new Constitution, and that I will exert all the influence I possess to aid in the election of Railroad Commissioners pledged to a reduction of one fourth on all railroad fares and freights on roads which have received national or State aid, and if elected I pledge myself in the performance of my official duties to act in accordance with this pledge.

A delegate of Solano moved to lay the report upon the table. Mr. Gorham claimed that he had not yielded the floor, and moved the adoption of the minority report as a substitute for that part of the majority report referring to railroad matters.

Mr. Gorham then spoke at length in favor of the adoption of his substitute. Afterward Mr. Houghton of Santa Clara offered as a substitute the following resolution, which was adopted:

Resolved, That in the opinion of this Convention justice demands that the present rate of freights and fares upon all lines of railroads in this State that have received State or national aid ought to be reduced at least 25 per cent.

At the same time the subject of Mr. Gorham's remarks and the original railroad resolution were referred to the District Conventions—yeas 205, nays 200.

The State Convention of the New Constitution party was held at Sacramento on June 26th. Marion Biggs of Butler County was chosen President. The following nominations were made: For Governor, Dr. Hugh J. Glenn, by 128 votes to 115 for Jonathan V. Webster; for Lieutenant-Governor, J. P. West; for Secretary of State, Lawrence E. Crane; for Comptroller, H. M. Larue; for State Treasurer, Cy-

rus Jones; for Attorney-General, C. W. Cross; for Surveyor-General, F. J. Clark; for Clerk of the Supreme Court, Edwin F. Smith; for State Superintendent of Schools, A. L. Mann; for Chief Justice, Nathaniel Bennett.

The following platform was adopted:

Whereas, In the recent election on the adoption of the new Constitution the voters of this State, without regard to party lines, obtained a glorious victory over the combined power of the moneyed rings, banks, and corporations, and have thus shown to all the world that they have sufficient intelligence, honor, and patriotism to preserve, guard, and protect the liberty bequeathed to them by the illustrious fathers of the republic; and whereas, the banded cohorts of capital are now endeavoring by their usual corrupt means to wrest the fruits of the recent victory of the people of this State from them by electing to office those who are inimical to the new Constitution, for the purpose of constraining and administering the same in behalf of the moneyed power, and against the rights of the laboring and producing classes; and whereas, the opposition to the new law was unequalled in violence, and the efforts to defeat it were characterized by bribery and coercion theretofore unparalleled; and whereas, a Constitution can not execute itself, but must be vitalized by appropriate legislation, and be enforced by just interpretation and friendly construction; and whereas, a single transportation company is collecting from the people an annual revenue so enormous as to cripple all the industries of the State; and whereas, from the commencement of its existence that company has been operating on capital furnished entirely by the people of the State and nation; and whereas, the Democratic and Republican party organizations, which, openly professing to ignore the subject of the adoption of the new Constitution, did in fact use the machinery of those parties in the interests of the enemies of the new Constitution in order to defeat it; and whereas, the people adopted the new Constitution without the aid of either the Democratic or Republican party organizations; and whereas, the presence of the Chinese in California is an unmitigated evil and an intolerable nuisance; therefore, be it

Resolved, That the new Constitution embodies principles just to all, oppressive to none, dear to ourselves, and of untold benefits to posterity.

Resolved, That the people of the State of California would prove recreant to their own interests, false to their professions of friendship to the new Constitution, and deficient in a proper spirit of manhood, if they were to submit that instrument to the hands of its enemies, and thus permit it to be strangled in its infancy.

Resolved, That the New Constitution party, organized for the purpose of releasing the people from the oppressions and thralldom of capital in the State of California, can not have and is not intended to have any influence whatever on the national politics of any individual.

Resolved, That in a republic, where the people are the source of all political power, and where the avenues to promotion and wealth are open and free to all alike, there is not and can not be any room for agrarianism, socialism, or communism.

Resolved, That the New Constitution party will protect the liberty, labor, and property of every citizen, and that therefore it commends itself to the support of all.

Resolved, That the first Legislature elected under the new Constitution shall put into immediate effect the stringent clauses of that instrument against the Chinese, and that everything that can be done shall be done to make the Chinese cease coming and to cause those now here to speedily depart.

Resolved, That the State and County Central Committees of this party be and they are hereby directed to print upon their tickets at the next election, "Against Chinese immigration."

Resolved, That our principles are embodied in the new Constitution; that while we believe in the doctrine that principles and not men should be subscribed by party action, we can not safely submit the execution of the instrument that embodies our principles to men who were but yesterday violently opposed to them, and who have shown no better evidence of conversion than a desire to hold office.

Resolved, That the rates of freights and fares of those railroad companies in California which have received Government aid should be reduced at least one third, and that each person receiving a nomination from the New Constitution party for an office in the exercise of which, and whose duty it shall be, to establish rates of charges for the transportation of passengers and freights, shall be deemed and held to be pledged to carry out in good faith the policy enunciated in this resolution, and, as far as possible, relieve the people of California from the extortion and oppression by those great corporations.

Resolved, That laws shall be passed to carry into effect the provisions of the new Constitution, that all property shall be taxed, according to its value, once in each year, strictly avoiding all species of double taxation.

Resolved, That it is the duty of the Legislature to provide for the election by the people of all State and county officers under the Constitution, except in cases where their appointment is specially provided for in the Constitution.

The following additional resolution was adopted:

Whereas, For many years after California became a State mining for gold was the leading industry—even now it is the second; many of her most enterprising citizens, as individuals and as associations under incorporation laws, have invested millions of dollars in developing placers and constructing ditches to enable the miners to work the same; and with the foregoing facts in view,

Resolved, That the New Constitution party pledges itself that it will stand firm as the miners' friend, and in case any attempt shall be made at any time to pass unfriendly legislation the New Constitution party will openly and boldly oppose any and all attempts to infringe upon the vested rights of the miners and ditch-owners.

The following was adopted in lieu of the resolution on Chinese:

Resolved, That, in accordance with a joint resolution passed by the last Legislature, the Governor be urged to submit to the people of the State at the general election in September next the question of Chinese immigration to this State; and that, whether such question be submitted officially or not, we hereby recommend that every ticket of the New Constitution party have printed immediately following the names of the candidates the words "Against Chinese immigration."

The Democratic State Convention assembled at Sacramento on July 2d. Dr. J. B. Shorb was chosen chairman. The following nominations were made: For Governor, Hugh J. Glenn; for Lieutenant-Governor, Levi Chase; for Secretary of State, W. J. Tinnin; for State Treasurer, G. T. Pauli; for Comptroller, W. B. C. Brown; for Attorney-General, Joseph Hamilton; for Surveyor-General, William A. Minnis; for Clerk of Supreme Court, D. B. Woolf; for Superintendent of Public Instruction, Henry C. Gesford; for Chief Justice, R. F. Morrison.

The following platform was adopted:

1. That the Democratic party is the only party which has always observed, obeyed, and maintained

the Federal Constitution, and is therefore the only political party which the people can safely trust to administer the organic law of the State.

2. The Democratic sentiment is an indissoluble union of indestructible States under the paramount authority of the Federal Constitution in all powers which have not been reserved by the States.

3. That as suffrage is a privilege conferred exclusively by the States, each State for itself agreeably to the constitutionally expressed will of the people thereof, any attempt of the General Government to interfere with the elections in the States, or in any of them, is dangerous to the liberties of the people and destructive of the sacredness of the elective franchise; and therefore we condemn as unconstitutional and subversive of the freedom of the ballot the odious laws of Republican origin and adoption, by which Federal supervisors of elections and deputy marshals are empowered to interfere with the registration of voters and at the polls, and United States troops are stationed at polling-places to intimidate or disfranchise citizens, native and naturalized.

4. That in unison with their party brethren throughout the republic, the Democrats of California denounce the repeated abuses of the veto by Rutherford B. Hayes, acting as the executive officer of the Government, in defeating the will of the people, as expressed by Congress, in his rejection of the bills passed by that body to repeal obnoxious and unconstitutional laws during the present special session.

5. That the Democracy of California earnestly approve the conduct of the Democrats in both Houses of Congress for their firm adherence to the just determination to repeal the laws by which the rights of voters are interfered with, at the instance and under the authority of the Republican Administration, to the extremity of depriving citizens of suffrage for the purpose of carrying elections by force and fraud.

6. That the Democracy of California are united and devoted in support of, and obedience to, the new Constitution, and maintain it as a sacred duty to administer the State government in strict and unqualified accordance with the spirit and letter of that instrument.

7. That the Democratic party is pledged by its principles and immemorial usages to reform, retrenchment, and the utmost economy compatible with good government in the administration of public affairs; that it adheres to the cardinal doctrines of its founders that taxation and representation should go together, that the lowest practicable tax-rate commensurate with the expenses of the State should be levied, and taxation should be equally and justly imposed on all property to the end that one class shall not be burdened with the taxes fairly due from another, and that no exemption of tax should be allowed to capital which is withheld from other species of property.

9. That the Democrats of California were the first in the early establishment of the State government to proclaim antagonism to Chinese immigration and cooly cheap labor; that it was under a Republican Administration that the Burlingame treaty was made, by which Chinese were admitted to the rights and privileges accorded to emigrants from Europe; that it was a Republican occupant of the Presidential chair who vetoed the bill passed by a Democratic Congress to prohibit the further immigration of Mongolians, and that the Republican minority in Congress prevented the passage of the bill over the veto; and that therefore it is only to the Democratic party the people can confidently look to secure legislation that shall abate and abolish the evil and curse of cooly importation, which cripples trade and palsies the arm of white labor.

10. That the Democrats of California approve the action of the Democrats in Congress who secured the passage of the Thurman bill, by which the Pacific Railroads are compelled to pay to the Government the just share of interest annually due from them upon the bonds, agreeably to the terms of the charters granted to the respective companies.

11. That the railroad and other transportation corporations in California should be subject to State regulation of rates for passengers and freight, in order that a material reduction should be made, that unjust and discriminating rates shall not be imposed or extorted, and that the enforcement of the reduction should particularly apply to the railroads which have been subsidized.

12. That mining, as the original and still a very important interest of California, is entitled to the fostering care and should be fostered and receive the fullest protection from the State government, and the property and possessions of all engaged in mining enterprises should be guarded by the legislative, judicial, and executive departments of the State and Federal governments.

13. That the large reduction of expenditures in the public service in the administration of the State government during the past four years under Democratic management, at this time of general depression in trade and labor, especially commend to the people of this Commonwealth the election of the candidates of the Democratic party at the coming election to administer the State government for the ensuing constitutional term.

The following was adopted as a substitute for the twelfth resolution:

Resolved, That mining and agriculture, as the overshadowing interests of California, should equally receive the fullest protection from the State government, and the property and possessions of all engaged in either pursuit should be carefully guarded by the legislative, judicial, and executive departments of both the State and Federal governments.

The Prohibition party also put up candidates for State officers, as follows: For Governor, A. G. Clark; for Lieutenant-Governor, Reed; for Secretary of State, A. A. Smith; for Treasurer, W. O. Clark; for Comptroller, M. C. Winchester; for Surveyor-General, J. W. Shanklin; for Attorney-General, Charles W. Cross; for Superintendent of Public Instruction, S. N. Burch; for Chief Justice, A. L. Rhoades.

The following nominations were also made for members of Congress: Republican—1. Horace Davis; 2. Horace F. Page; 3. Joseph McKenna; 4. Romualdo Pacheco. Democratic—1. Charles A. Sumner; 2. T. J. Clunie; 3. C. P. Berry; 4. Wallace Leach. Workingmen—1. Clitus Barbour; 2. H. P. Williams; 3. C. P. Berry; 4. James J. Ayres.

The following nominations were made for Associate Justices: Workingmen—S. B. McKee, S. M. Buck, J. R. Sharpstein, W. T. McNealy, C. A. Tuttle, and J. H. Budd. Republican—A. P. Catlin, E. G. Belcher, Garrett T. Richards, E. D. Wheeler, J. E. Hale, H. M. Myrick. Democratic—E. W. McKinstry, S. B. McKee, J. D. Thornton, E. M. Ross, T. B. Stoney, T. B. Reardon.

The following nominations were made for Railroad Commissioners: Republican—1st dist., Joseph S. Cone; 2d dist., — Phelps; 3d dist., C. H. Philips. Democratic—1st dist., — Carpenter; 2d dist., — Thomas; 3d dist., G. H. Stoneman. Workingmen—1st dist., Henry Larkin; 2d Dist., — Beerstecher; 3d dist., G. H. Stoneman.

The following nominations were made for members of the State Board of Equalization,

one from each Congressional district: Republican—1st dist., — King; 2d dist., Moses M. Drew; 3d dist., Warren Dutton; 4th dist., J. A. Clayton. Democratic—1st dist., — Bradford; 2d dist., C. H. Randall; 3d dist., C. E. Wilcoxson; 4th dist., T. B. Heiskell. Workingmen—1st dist., — Hoagland; 2d dist., W. B. Keller; 3d dist., J. P. Cavanagh; 4th dist., O. T. Chabb. The election was held on the 3d of September. The laws which regulate it, especially in San Francisco, are worthy of notice. The subdivision into precincts is so extensive and minute that it prevents crowding and secures quiet. Every voter is registered and published previously, avoiding delay at the polls. Ballots are of one size, one tint, and one style. It is unlawful to address a voter within one hundred feet of the polls; the limit is conspicuously marked. The judges can not leave the room that evening till the votes are counted and dispatched to headquarters.

It will be seen that many persons nominated in the conventions were not voted for. They declined the nomination, and others were substituted and received the votes.

The state of parties in the Legislature was such as to give the Republicans a small majority. At the time when the vote was given on the new Constitution, 154,638 votes were cast to prohibit Chinese immigration.

The fiscal year of the State expires on June 30th, and the reports embrace a period of two years, as the sessions of the Legislature are biennial. The amount of the State debt on June 30, 1879, was as follows:

Outstanding bonds of 1857.....	\$5,000 00
Outstanding bonds of 1860.....	1,500 00
Outstanding soldiers' relief bonds.....	95,500 00
Outstanding State Capitol bonds of 1870.....	250,000 00
Outstanding State Capitol bonds of 1872.....	250,000 00
Outstanding funded debt of 1873.....	2,501,000 00
Total bonds outstanding.....	\$3,408,000 00
Outstanding Comptroller's warrants.....	68,170 25
Total debt.....	\$3,456,170 25

The decrease of the debt since 1875 amounts to \$356,214.29. The increase of assets during the same period amounts to \$1,099,371.57.

Receipts from all sources for the 29th fiscal year	\$4,071,294 45
Receipts from all sources for the 30th fiscal year	3,709,570 77
Total.....	\$7,781,165 22
Balance on hand July 1, 1877.....	1,408,177 48
Grand total.....	\$9,189,282 65
Disbursements for the 29th fiscal year.....	\$3,873,687 12
Disbursements for the 30th fiscal year.....	3,512,144 98
Total.....	\$7,690,832 10
Balance in Treasury June 30, 1879.....	1,498,450 53
Grand total.....	\$9,189,282 65

The tax levy for the 30th fiscal year (ending June 30, 1879) was, for the general fund (from which is paid the current expenses of the State government), \$1,320,000, or a rate of 25.6 cents on each \$100 valuation of property, which was the smallest tax levied for said current expenses since the year 1871; and yet, at the end of said year, June 30, 1879, there was in the general fund a balance of over \$384,000. The amount levied for the general fund for the 31st fiscal year, commencing July 1, 1879, is \$1,450,000, or a rate of 30 cents on each \$100 valuation of property. This is the smallest levy for general purposes since the year 1871, except that of 1878-'79. The rate for said general fund for the 31st fiscal year is 4.4 cents on each \$100 greater than it was for the preceding year; the most of this increase is due to the fact that the assessment roll upon which the tax was levied is less by nearly \$37,000,000 in 1879-'80 than it was in 1878-'79. There has been a greater amount of fees of office and commissions paid into the State Treasury by the Harbor Commissioners, Surveyor-General, Secretary of State, and Clerk of the Supreme Court during the last three years and a half than was paid in during the same length of time by their predecessors, and the taxes have been more closely and cheaply collected than ever before. There has been a material reduction in the running expenses of the State government during the past three and a half years, and the financial condition of the State is sound and healthy. The State also holds a claim against the United States Government of \$241,625 for sums advanced in the suppression of Indian hostilities.

The progress of the public schools of the State during the last twenty-five years has been very rapid. In 1855 the State had but 227 schools, with an attendance of 13,000, and 26,077 census children. In 1865 it had 947 schools, with an attendance of 50,089, and 95,067 census children. In 1875 it had 2,190 schools, with 130,930 scholars in attendance, and 171,563 census children. In 1879 it had 2,743 schools, with an attendance of 144,806, and 216,404 census children. In 1855 teachers were paid \$181,906; in 1879, \$2,285,732.39. Up to the present time the people of California have devoted to the cause of public education for pub-

lic schools \$33,743,819.84; for State Normal School, about \$566,600; for State University, about \$4,150,000. In percentage of average attendance on school population California stands ninth among the States. The following details belong to the year 1879:

White boys between 5 and 17.....	108,235
White girls between 5 and 17.....	105,513
Negro boys between 5 and 17.....	647
Negro girls between 5 and 17.....	625
Indian boys between 5 and 17.....	591
Indian girls between 5 and 17.....	498

Total census children between 5 and 17....	216,404
Increase over 1877.....	16,337

White children under five years, 85,870; average number of census children belonging to public schools, 105,837; average daily attendance, 98,468. From July 1, 1878, to June 30, 1879, 144,806 were enrolled in the public schools, while the average number belonging, the actual pupils of the schools, were 105,837, and only 98,468 were in daily attendance during the whole time school was maintained. Census children attending private schools at any time during school year, 15,432; percentage of census children enrolled in public schools, 66.91; percentage in private schools, 7.04; percentage attending no schools, 26.05; per cent. of children of native-born parents, 46.15; per cent. of children who had one foreign parent, 12.68; per cent. of children who are of foreign parents, 41.17; school districts, 1,999; increase over 1877, 171; first-grade schools, 999; increase, 85; second grade, 1,081; increase, 98; third grade, 663; increase, 36. Total number of schools, 2,743; increase, 258. By the first grade are meant high, grammar, and first-grade schools; by second grade are meant intermediate and third grade; and by third grade are meant primary and third-grade schools. Number enrolled in high schools or the advanced grade, 4,871; number enrolled in grammar or first-grade schools, 20,197; number enrolled in intermediate or second-grade schools, 38,693; number enrolled in primary or third-grade schools, 91,788; number of male teachers, 1,236; number of female teachers, 2,217; average monthly salary paid male teachers, \$82.13; average paid female teachers, \$66.37; decrease in monthly salary paid male teachers, compared with 1877, \$1.65; decrease in monthly salary paid female teachers, compared with 1877, \$3.31; new schoolhouses erected, 122; institutes held, 34; cost of institutes, \$2,988.22. Total receipts of the school department from all sources, State and county apportionments, city and district taxes, etc., for 1878, \$3,820,661.26; for 1879, \$3,653,798.96; State apportionments per census child—1878, \$7.67; 1879, \$6.60; decrease since 1877, 77 cents; county apportionments per census child—1878, \$3.54; 1879, \$3.59; total receipts of all kinds per census child—1878, \$18.59; 1879, \$16.84; decrease since 1877, \$1.20.

The expenditures for teachers' salaries, school libraries, school apparatus, rents, repairs, etc., have been as follows:

	1878.	1879.
Teachers' salaries.....	\$2,272,551 19	\$2,285,732 89
Rents, repairs, fuel, contin- gents.....	426,707 66	371,992 18
School libraries.....	53,947 55	46,490 50
School apparatus.....	12,518 65	18,565 78
Total current expenses...	\$2,765,720 35	\$2,717,750 75
For sites, buildings, and school furniture.....	300,094 92	298,126 39
Total expenditures.....	\$3,155,815 27	\$3,010,907 18

The valuation of school property is as follows:

	1878.	1879.
Valuation of sites, school- houses, and furniture.....	\$5,990,276 50	\$6,477,028 00
School libraries.....	242,676 25	253,045 00
School apparatus.....	110,417 10	122,316 00
Total valuation.....	\$6,343,369 85	\$6,557,389 00
Increase since 1877.....		\$1,299,479 05

The State Superintendent of Schools makes the following recommendations:

Greater attention to the school library system; in favor of free text-books and the abolition of the text-book from the school-room whenever possible; to secure permanency to teachers' positions; that the exaggerated estimate placed upon the supposed virtue of examinations be corrected; that steps be taken to prevent the waste of one half of the school money because of the incapacity and neglect of local officers; the adoption and teaching of the metric system; in favor of the reform or phonetic system of spelling; the encouragement of the kindergarten system in the larger cities by permitting graduates of kindergarten normals to serve for three months without salary as a preparatory course.

The condition of the insurance business in the State on January 1, 1879, is shown in the following statements:

FIRE INSURANCE.	
Amount written.....	\$238,639,040 98
Amount of premiums received.....	8,539,622 28

The railroads of the State have been chiefly constructed during the last ten years, and the larger part of the entire system was either built or subsequently constructed by the Central Pacific Railroad Company. This Company was incorporated in 1862, and in 1865 it had only 56 miles of road in operation. This was increased to 187 in 1867. During the ten succeeding years, the miles of road operated were increased from year to year as follows: 1868, 468; 1869, 742; 1870, 900; 1871, 1,094; 1872, 1,222; 1873, 1,222; 1874, 1,219; 1875, 1,309; 1876, 1,425; 1877, 1,783. The figures for the last two years include leased railroads. A long stride was made in 1877, when 368 miles of railroad came under the control of the Company, the largest for any one year in its history up to that time. The Southern Pacific is built to Casa Grande, 182 miles from Yuma and 913 miles from San Francisco. This is a longer single stretch of rail than the northern branch. Commencing at the westerly end of Oakland wharf, the road runs northerly to Martinez, thence easterly to Tracy, thence in a south-easterly direction to its present terminus at Casa Grande in Arizona, passing through such towns as Merced, Fresno, Visalia, Bakersfield, Los Angeles, Colton, Yuma, and Maricopa. At Visalia there is a branch to Halford, and at Los Angeles there are three branches, one running to Santa Monica, one to Wilmington, and one to Santa Ana. Much of this southern road has been built within the past three years. The work of extending it is still in progress, and it will soon reach a point where connections can be made with the roads traversing the Atlantic States, thus giving two roads across the continent.

The gross earnings of the Central Pacific Railroad Company for the year 1877 were \$16,000,000, as follows:

Coin receipts.....	\$10,637,329
Currency receipts.....	5,383,515
Total.....	\$16,471,144
Operating expenses.....	7,774,413
Net receipts of Central Pacific.....	\$8,696,736
Net receipts of California Pacific.....	506,826
Net receipts of both roads.....	\$9,203,552

These net receipts were subject to deduction by some items as follows:

Interest.....	\$3,716,984
Taxes.....	330,346
Miscellaneous and general expenses.....	432,559
Legal expenses.....	146,112
Civil engineering.....	22,045
Discount on currency.....	810,893
Land Department expenses.....	18,610
Leased railroads.....	2,266,186
Total.....	\$7,288,240

Deducting these items of legitimate expenditures from the net total receipts, we have the following as the net income for that year:

Net receipts for 1877.....	\$9,208,563
Expenditures.....	7,288,240
Real net income.....	\$1,915,313

This amount was too small to justify the usual April dividend, and so it was passed. This balance is subject to a further deduction of \$1,200,000 under an act of Congress known as the Thurman act. Early in 1878 Senator Thurman of Ohio introduced and was instrumental in the passage of a bill by Congress which compels the Union and Central Pacific Railroad Companies to pay 25 per cent. of their annual net earnings, including the whole of the compensation due them for services rendered to the Government, to the Treasurer of the United States, to be by him applied partly in payment of the accrued interest upon the bonds issued by the Government to the two companies, and partly to the establishment of a sinking fund in the United States Treasury for the final payment of the Company's bonded indebtedness. The companies contested the law in the courts, claiming that it was unconstitutional. The decision rendered by the Supreme Court early in 1879 was not unanimous, three judges dissenting from the opinion, but it probably settles the question.

The report of the Central Pacific Railroad Company for 1877 shows the following indebtedness to the United States for bonds:

Central Pacific.....	\$25,885,120
Western Pacific.....	1,970,560
Total.....	\$27,855,680

The amount of interest paid on these bonds by the Government to May 1, 1879, is \$17,600,000, as follows:

ROADS.	For mails.	In cash.	Total.
Central.....	\$2,561,349	\$13,902,224	\$16,463,573
Western.....	9,367	1,126,830	1,136,197
Totals.....	\$2,570,716	\$15,029,054	\$17,599,770

The annual interest on the bonds held by the Central and Western Pacific is \$1,671,341, which hereafter must be annually paid over to the Treasurer of the United States, less the amount reserved for carrying the mails. This decision of the U. S. Supreme Court is noticed above.

The amount of bonds issued by the United States to Pacific Railroads is as follows:

Central Pacific.....	\$25,885,120
Kansas Pacific.....	6,308,000
Union Pacific.....	27,236,512
Central Branch Union Pacific.....	1,600,000
Western Pacific.....	1,970,560
Sioux City and Pacific.....	1,628,820
Total.....	\$64,628,512

These bonds were issued under the acts of July 1, 1862, and July 2, 1864. They all bear 6 per cent. interest, and are payable thirty years from date. Part of them are therefore payable July 1, 1892, and the remainder July 2, 1894. The annual interest on these bonds aggregates \$3,877,511, and is payable in January and July. Thus far the interest has been paid by the United States. As an offset, the compensation that should have been paid to the companies for carrying the mails has been withheld by the Government.

According to the surveys which have been made, the area of the State is 100,500,000 acres, which is divided as follows:

Agricultural and mineral lands surveyed to June 30, 1879.....	49,054,114
Agricultural and mineral lands unsurveyed.....	39,065,654
Private grants surveyed to June 30, 1879.....	8,459,694
Mission Church property.....	40,707
Pueblo lands.....	183,749
Private grants unsurveyed.....	15,000
Indian and military reservations.....	618,631
Lakes, islands, bays, and navigable rivers.....	1,531,700
Swamp and overflowed lands surveyed.....	1,610,037
Swamp and overflowed lands unsurveyed.....	110,714
Salt-marsh and tide-lands around San Francisco Bay.....	100,000
Salt-marsh and tide-lands around Humboldt Bay.....	5,000
Aggregate area.....	100,500,000

The exports of wool for the six months ending June 30, 1879, were 23,291,500 lbs. The spring clip was under the average of the previous five years. That for 1871-'73 was from 12,600,000 to 14,600,000 lbs.; in 1874, it was 19,400,000 lbs.; in 1875, 23,600,000 lbs.; in 1876-'77 there was an average of 23,000,000 lbs.; in 1878 the crop fell off to 18,800,000 lbs.; and in 1879 it was 20,651,000 lbs.

The export of wheat and flour from San Francisco during the eleven months ending May 31, 1879, was as follows:

MONTHS.	Flour, barrels.	Wheat, centals.
July, 1878.....	31,600	850,700
August.....	52,900	1,534,300
September.....	43,800	1,774,600
October.....	36,000	1,106,300
November.....	58,900	964,600
December.....	82,900	818,900
January, 1879.....	40,900	516,600
February.....	44,200	574,500
March.....	47,100	719,500
April.....	65,900	795,700
May.....	35,500	516,900
Totals.....	457,800	9,671,600

Including flour reduced to wheat, there was cleared over 31,000 tons of wheat in the month of May, making the total for eleven months ending on May 31st, 556,675 tons of 2,000 lbs. The month of June scarcely increased the total to 575,000 tons. More than 270 ships and barks were dispatched loaded with this export.

The climate of the State is most admirable for the success of grain-crops. While farmers in other parts of the world are in constant fear of rain during haying and harvest, and often lose the work of an entire year during one storm, the California farmer has nothing to fear from this source. He has from April to October almost entirely exempt from storms of any kind, in which to secure all his crops. Even the dews do not fall to bleach his hay, and his wheat may lie in the field in the bundle or bunch or stack, or even in the sack, without damage from rain. No time is lost from showers or winds, or other natural causes, but the work begun in May is continuously and constantly pushed without interruption all through that month and June and July, August and September. In the Eastern States it costs much more to cut and secure grain than it does in California, because of the advantages secured by its favorable climate. There they can cut the grain with the header, taking only the heads, which are elevated into an attendant wagon with a capacious box, and deposited directly into the hopper of the machine to be immediately threshed, or into a pile to remain in bulk till a convenient time for threshing it.

The lumber trade of the State has its chief center at San Francisco. The hard woods used for wheelwright purposes, cabinet-work, veneering, and ornamental work are imported, with the exception of California laurel or myrtle, mountain mahogany, maple, and alder. The staple lumber, used for house- and ship-building, street and dock work, fencing, boxing, and the like, is obtained on the coast within the limits of the State and the neighboring forests of Oregon and Washington. The chief varieties of staple lumber obtained on the coast are sugar-pine, white cedar, redwood, spruce, Oregon pine or fir, and yellow pine, named in the order of their commercial value. White or sugar-pine comes from the Sierra; white cedar from Port Orford north to Coos Bay, exclusively; fir or Oregon pine from Puget Sound and many sections of Oregon, or more particularly from Coos Bay north; spruce from Coos Bay, Umpqua, Shoalwater Bay, and the coast of Oregon, generally; redwood, from the great redwood region of the California Coast Range. Oregon pine or fir, known commercially as "Oregon," is used in Pacific coast ship-building almost exclusively, and for the rafters, beams, scantlings, furring, flooring, and stepping of houses, for piles, planking, and side walking, and for nearly all purposes where lateral strain is an *essential*, and comparative inexpensiveness desirable. Redwood is used altogether for the outside construction of frame houses, in the form of rustic siding, batting, and shingles, and in inside finish, as "tongue and groove" for ceiling, wainscoting, and the like, and for cornices and moldings. For all purposes where durability is not affected by friction or strain, redwood is the most durable

of the domestic woods, with the single exception of white cedar, standing exposure to the weather as nothing else can. The receipts, consumption, and stock on hand of lumber in the San Francisco market for ten years ending January 1, 1879, were as follows:

YEAR.	On hand January 1.	Receipt for year.	Consumption.
1869	15,668,672	244,879,577	226,449,642
1870	83,596,605	217,477,251	225,121,882
1871	25,952,524	192,420,840	196,726,971
1872	21,616,893	231,201,537	220,701,058
1873	32,146,847	201,831,095	195,969,288
1874	85,008,654	250,964,826	252,732,230
1875	33,241,250	303,184,189	287,977,519
1876	45,447,619	310,185,974	303,227,914
1877	53,465,679	257,045,228	295,665,580
1878	46,815,377	264,942,465	266,934,225
1879	44,558,617
Totals	2,508,682,951	2,474,506,034

Home consumption—in which are included shipments made to the interior, and from San Francisco to foreign ports—was highest in the centennial year, 1876; falling off in the years 1877 and 1878 about thirty-seven million feet.

The shipment of fruit to the Eastern cities has become quite extensive. Its profitability or unprofitableness has depended chiefly on the carefulness with which the requirements of success have been heeded. This has been seen in those who have selected the kinds of fruit that would bear shipping the best; those who have taken the most pains in assorting the fruit to be shipped; those who have boxed with the most care; those who have packed in the cars so as to secure the greatest circulation of air through and between the boxes; those who have shipped in cars attached to the express and passenger trains, and thus secured the quickest transit. Pears and plums have been found the best fruits to ship, and of pears the Bartlett has proved a good shipper and the most profitable to send to the Eastern market. This pear can be picked in California and placed on the markets in the East before any other kinds of fruit are plentiful there, and consequently is insured a good demand and good prices. Plums are also a profitable kind of fruit to ship. They stand the voyage well, and meet the markets in a good time for good prices. Peanuts are grown largely in the State on sandy river-bottoms, and some years ago they proved a very profitable crop, but the markets are now liable to be overcrowded. Still they yield so well that even at a small price there is room for some profit. It takes from one bushel to a bushel and a half of good seed to plant an acre. The seed must be fresh, plump, and of a good bright color. If the rows are put three feet apart, and the hills eighteen inches in the row, the best satisfaction will be given.

A most important legal case came before the State courts. It related to the injury done to the Sacramento and San Joaquin Valleys by the *débris* from the mines. From surveys made by the State Engineer it has been ascertained

that over 18,000 acres of valley-land on the Yuba—land that was once the finest bottom-land in the State—have been utterly destroyed and buried beneath the mining *débris*, so that now this vast area has been transformed into a desert of sand and slickings, alternating with impenetrable jungles of willow swamp. Probably as much if not more of equally good land has been similarly destroyed on Bear River. Although these lands have been exposed to sunshine and rain for years, they produce not a blade of grass—nothing but willows and kindred semi-aquatic plants, that derive their nourishment chiefly from the stratum of water percolating underneath the surface, and not from the soil itself. From the beginning of hydraulic mining to the present time over 150,000,000 cubic yards of solid material have passed the foot-hills, and have been deposited on the bottom-lands of the Yuba and into the waters of the Feather and Sacramento Rivers, the Bays of Suisun and San Pablo, and finally into the Bay of San Francisco. Such a mass deposited on a farm of 160 acres would cover it to a depth of 581 feet; or, if spread evenly, one foot in depth, would cover 93,000 acres, or 145 square miles of land, and absolutely destroy it for agricultural or any other purpose. The bed of the Yuba at Marysville is now filled up to the level of the streets of that city, where prior to the era of hydraulic mining there was a well-defined channel of clear water from 20 to 25 feet in depth. The Feather and Sacramento Rivers have shoaled in a lesser degree, but still sufficiently to almost destroy their usefulness as a highway of commerce. The suit is between farmers and miners, and in the lower court an injunction was obtained against the latter. In the Supreme Court the merits of the case were passed over, and it was decided that there was a misjoining of the defendants. Thus far only has it advanced.

An ordinance of the city and county of San Francisco provided that every male person imprisoned in the county jail, under the judgment of any court, should have "the hair of his head cut or clipped to a uniform length of one inch from the scalp thereof." The case of *Ho Ah How vs. Matthew Nunan*, involving the validity of the ordinance, was decided by Justice Field in the U. S. Circuit Court. The complaint was filed to recover \$10,000 damages, and came before the Court on the plaintiff's demurrer to the defendant's plea of justification. Justice Field said:

It appears that in April, 1876, the Legislature of California passed an act "concerning lodging-houses and sleeping-apartments within the limits of incorporated cities," declaring, among other things, that any person found sleeping or lodging in a room or an apartment containing less than 500 cubic feet of space in the clear for each person occupying it, shall be deemed guilty of a misdemeanor, and on conviction thereof be punished by a fine of not less than ten dollars nor more than fifty dollars, or imprisonment in the county jail, or by both such fine and imprisonment. (Laws, sessions of 1875-'76.) Under this act the plain-

tiff in April, 1878, was convicted and sentenced to pay a fine of ten dollars, or in default of such payment to be imprisoned five days in the county jail. Failing to pay the fine, he was imprisoned. The defendant, as sheriff of the city and county, had charge of the jail, and during the imprisonment of the plaintiff cut off his queue as alleged. The complaint avers that it is the custom of Chinamen to have the hair from the front of the head, and to wear the remainder of it braided into a queue; that the deprivation of the queue is regarded by them as a mark of disgrace, and is attended, according to their religious faith, with misfortune and suffering after death; that the defendant knew of this custom and religious faith of the Chinese, and knew also that the plaintiff venerated the custom and held the faith, yet, in disregard of his rights, inflicted the injury complained of; and that the plaintiff has in consequence of it suffered great mental anguish, been disgraced in the eyes of his friends and relatives, and ostracized from association with his countrymen; and that hence he has been damaged to the amount of \$10,000.

Two defenses to the action are set up by the defendant; the second one being a justification of his conduct under an ordinance of the city and county of San Francisco. It is upon the sufficiency of the latter defense that the case is before us. The ordinance referred to was passed on the 14th of June, 1876, and it declared that every male person imprisoned in the county jail, under the judgment of any court having jurisdiction in criminal cases in the city and county, shall immediately upon his arrival at the jail have the hair of his head "cut or clipped to a uniform length of one inch from the scalp thereof," and it is made the duty of the sheriff to have this provision enforced. Under this ordinance the defendant cut off the queue of the plaintiff.

The validity of this ordinance is denied by the plaintiff on two grounds: 1. That it exceeds the authority of the Board of Supervisors, the body in which the legislative power of the city and county is vested; and, 2. That it is special legislation imposing a degrading and cruel punishment upon a class of persons who are entitled, alike with all other persons within the jurisdiction of the United States, to the equal protection of the laws. We are of the opinion that both these positions are well taken. . . .

The cutting off the hair of every male person within an inch of his scalp, on his arrival at the jail, was not intended and can not be maintained as a measure of discipline or as a sanitary regulation. The act has no tendency to promote either discipline or health. The close cutting of the hair which is practiced upon felons at the State Penitentiary, like clothing them in striped pants, is to distinguish them from others, and thus facilitate their capture in case of escape. They are measures of precaution. Nothing of the kind is practiced or would be tolerated with respect to persons confined in a county jail for simple misdemeanors, most of which are not of a very grave character. The plaintiff in this case, who had the option of paying a fine of ten dollars, or of imprisonment for five days, required no such clipping of his hair for the purpose of discipline or detention. It was done designedly to add torture to his confinement.

But even if the proceeding could be regarded as a measure of discipline or as a sanitary regulation, the conclusion would not help the defendant, for the Board of Supervisors had no authority to prescribe the discipline to which persons convicted under the laws of the State should be subjected, or to determine what special sanitary regulations should be enforced with respect to their persons. That is a matter which the Legislature had not seen fit to intrust to the wisdom and judgment of that body. A discipline to which disgrace is attached, and which is not enforced as a means of security against the escape of the prisoner, but merely to give torture to his confinement or to aggravate its severity, can only be regarded as a punishment additional to that imposed by the sentence. If inflicted in consequence of the sentence, it is punish-

ment in addition to that imposed by the Court; if inflicted without regard to the sentence, it is wanton cruelty.'¹

CAPE COLONY AND BRITISH SOUTH AFRICA. The area and population of the British possessions in South Africa were as follows at the beginning of the year 1879:

COLONIES.	Area.	Population.
1. Colony of Cape of Good Hope:		
<i>a.</i> Cape Colony proper, inclusive of British Caffraria.....	199,950	730,984
<i>b.</i> Basuto Land.....	8,450	127,701
<i>c.</i> Griqua Land West.....	16,682	43,277
<i>d.</i> Caffraria, exclusive of Pondo Land.....	12,452	254,500
2. Natal.....	18,750	826,959
3. Transvaal.....	114,840	275,000
Total.....	370,574	1,750,421

The population of Cape Colony proper was divided as follows according to race:

Europeans or whites.....	236,783
Malays.....	10,817
Hottentots.....	98,561
Fingoes.....	78,506
Caffres and Bechuanas.....	214,133
Half-breeds and others.....	87,184
Total.....	720,984

The different denominations were represented as follows:

DENOMINATIONS.	White.	Colored.	Total.
Anglican churches.....	26,543	13,493	40,041
Protestants and Christians not classified.....	32,522	25,768	58,290
Presbyterians (including Free Church of Scotland, Reformed Presbyterians, Scotch Protestants, and United Presbyterians.....)	8,430	4,243	7,673
Independents (including Congregationalists, London Mission, Dutch Independents, Nonconformists, Union Church, Free Church).....	2,574	21,178	23,747
Wesleyans and Methodists.....	7,960	24,317	32,277
Baptists.....	2,173	218	2,391
Lutherans.....	6,278	11,143	17,421
Dutch Reformed Church.....	143,076	28,420	171,496
Moravians.....	125	10,270	10,395
Unitarians.....	26	40	66
Other Protestants.....	414	875	1,292
Catholics.....	8,666	1,001	9,667
Other denominations.....	15	8	23
Jews.....	639	639
Mohammedans.....	18	11,196	11,214
Belonging to no church.....	178	277,377	277,555
Unknown.....	2,242	54,656	56,898
Total.....	236,783	484,201	720,984

The gross revenue of Cape Colony proper in 1877, including loans, was £2,631,602; the expenditure, £3,428,392; and the public debt on December 31, 1877, £5,028,959. The imports during the same year amounted to £5,457,000, and the exports to £3,663,000.

In the course of the year certain portions of the Transkei and Nomans Land, containing about 8,600 square miles, were incorporated with the Cape Colony. Moreover, the war against the Zooloos resulted in making Zoolooland to a large extent a dependency of the British Government. (See ZOOLOOS.)

The conflict with Cetywayo or Ketchwhyoy,

King of the Zooloo Caffres, which threatened the colony during 1878, actually broke out in January, 1879. Sir Bartle Frere, the British High Commissioner in South Africa, reviewed in a memorandum the causes which led to it. He stated that during the lifetime of King Panda the Government of Natal had rarely had occasion to complain of any unfriendly act on the part of the Zooloos. When Panda died in 1872, he was succeeded by his son Cetywayo, whose peaceable succession was mainly due to his recognition by the British Government of Natal some years before, when there were many rival candidates for the succession, and to the presence of the British representative at his installation. Cetywayo then made many solemn promises and engagements. None of these had been fulfilled. The cruelties and barbarities which deformed the internal administration of Zoolooland in Panda's reign had been aggravated during the reign of Cetywayo. He had also maintained a formidable military despotism, which had become a standing menace to all his neighbors, and had sought to gain the consent of the British Government to wars of aggression, particularly against the inhabitants of a large tract of land between the Buffalo and Pongolo rivers, which had long been regarded as Transvaal territory. But since his installation the tone of Cetywayo in his communications with the Natal Government had essentially altered, notably in reply to a remonstrance addressed to him by the Lieutenant-Governor of Natal regarding the barbarous massacre of a number of young women by the King's orders. Cetywayo addressed the Government of Natal in terms of unprecedented insolence and defiance, affirming his irresponsibility to the Natal Government for anything he might please to do, denying his solemn promises at his installation, and declaring his intention of shedding blood in future on a much greater scale. These declarations were in 1876 followed by raids upon the missionaries, who were driven from the country, while at least three of the converts were killed. After the annexation of the Transvaal, he sent a military force to the territory between the Buffalo and the Pongolo, and ordered the inhabitants to quit. Sir Theophilus Shepstone, who then governed in the Transvaal, endeavored to come to an amicable arrangement, but his advances were received with very scant courtesy; and in reply to his invitation to discuss the matter, a peremptory demand was made in the King's name for the immediate cession of all that the Zooloos claimed. Cetywayo, however, ultimately accepted the suggestion of the Natal Government that the matter was one for inquiry, and at his request a commission was appointed to inquire into the merits of the dispute, with a view to its settlement by arbitration. This commission decided that the greater portion of the land in dispute, of which the Zooloos had lately taken forcible possession, had never ceased to belong of right to them. This ver-

of bearing arms. Every youth on attaining the age of fifteen is drafted into a regiment, and after a year's service permanently posted to a military kraal, of which there are twelve in the country. There are thirty-three regiments in the Zooloo army, each having its own distinguishing dress and ornaments. The organization of all is alike. They are divided into right and left wings, each commanded by a wing officer, and subdivided again into eight or ten companies, each of which has a captain and three subalterns. Of the thirty-three regiments, eighteen are composed of married, fifteen of unmarried men. The former shave their heads, which are then bound round with a band made of the skin of some beast, leopard and otter predominating; they carry white shields. The unmarried regiments wear their hair naturally and carry black shields. Drill, in our sense of the word, is unknown in the Zooloo army, but they perform a few simple movements with ease and celerity. Their discipline, however, is most severe. When on service, falling out of the ranks is punishable with death, which, indeed, seems to be inflicted for the most trivial offenses. All officers have their proper duties, and the men obey them without hesitation. The system of commissariat and transport is simple in the extreme. Three or four days' provisions, consisting of maize or millet, are carried by a number of boys or women, who also bring up mats, ammunition, and blankets, and help to drive a herd of cattle. The Zooloos invariably attack in a crescent formation, enveloping the flanks of their enemy, on whom they pour a ceaseless fusillade directly he is surrounded; when within 200 or 300 yards they, with loud yells, make a rush, and, after having expended their assegais (spears) in the charge, dash in with their short swords. The Zooloo army, until lately, was armed with the usual Caffre weapons—rifles of divers patterns, Birmingham muskets, and such like. Of late, however, the King, whose power was despotic, insisted on each soldier providing himself with a breech-loading weapon. Thousands of arms in the course of a few months were landed at Delagoa Bay, and then rapidly passed into the hands of the Zooloos. The Portuguese authorities at that port were not powerful enough to stop the traffic. A correspondence on this subject passed between Sir Bartle Frere and the Portuguese Governor, which resulted in the latter official pledging himself to stop the trade, and a gunboat was accordingly dispatched to Delagoa Bay to protect the inhabitants.

The communications in Zoolooland are of the most primitive description, being merely wagon-tracks leading from the principal fords to the capital. Two, crossing the Tugela opposite Fort Williamson, run to Ulundi; a third from Rorke's Drift makes for the same point, and a fourth runs from Utrecht across the Blood River also to the capital. It was by these roads

that the English troops were advancing—Colonel Pearson, with No. 1 column, by the westernmost road; Lord Chelmsford, with columns Nos. 2 and 3, by that from Rorke's Drift; and Colonel Evelyn Wood, from Utrecht. The first column crossed the Lower Tugela Drift at Fort Pearson on January 12th. On the 23d they were attacked by the enemy in force at the Abroi River, five miles from Ekowe. The Zooloos were defeated with a loss of 300, while the loss of the British was but small. The same day Colonel Pearson proceeded on his march to Ekowe, which he reached in safety, and where he entrenched himself and formed a permanent post. The third column crossed the Buffalo River at Rorke's Drift also on the 12th, and on the same day a successful attack was made on Sirayo's place. On the 21st the main body of the British, under Lord Chelmsford, having advanced beyond Rorke's Drift on the Tugela River, left a small force, consisting of five companies of the 24th and about 600 natives, in charge of a valuable convoy, consisting of 102 wagons, 1,400 oxen, two pieces of artillery, 400 shot and shell, 1,200 rifles, 250,000 rounds of ammunition, one rocket trough, and £60,000 worth of commissariat stores. This convoy guard, under Colonel Palleine, which was left some ten miles beyond Rorke's Drift at a point called Isandlana or Isandlana to await the arrival of the column under Colonel Durnford, was attacked by the main body of the Zooloo army, reported to be 20,000 strong, who simply overwhelmed the British force by numbers. The attacking body of the Zooloos, consisting of the flower of Cetywayo's army, swarmed like bees around the British position, upon which they advanced under a heavy fire regardless of consequences, and came at once to hand-to-hand fighting with their short assegais. The result was an almost entire destruction of the British force, the total loss being stated at 30 officers and 500 men of the imperial troops and 70 men of the colonial troops, and the capture of the whole train together with the colors of the 24th by the Zooloos. They remained in possession of the camp until Lord Chelmsford's return at the close of the day, when they retired with the spoils, having previously destroyed everything they could not carry away. The General made his bivouac that day on the battlefield, and proceeded next morning to Rorke's Drift, at which place a company of the 24th Regiment had resisted the attack of a vastly superior body of Zooloos through the entire night, killing 370 of them with the loss of 12 men. The loss of the Zooloos was estimated at 2,000. The battle of Isandlana was regarded as a national calamity in England and the Cape. In order to repair the damages, considerable reënforcements were ordered to the Cape, comprising the 57th, 58th, 91st, and 94th Foot, the 1st Dragoon Guards, the 17th Lancers, two batteries of Royal Artillery, the 30th company of Royal Engineers, the 2d battalion of the 21st Foot, and the 3d

battalion of the 60th Foot—in all, nearly 7,500 men and officers. About the same time, on the 24th, Colonel Wood's column, which started from Utrecht in the Transvaal, engaged between 3,000 and 4,000 Zooloos in the Tambua mountains, with little loss on his side; but owing to the disaster at the Isandlana Camp or Rorke's Drift, he took up a defensive position to cover Utrecht, and to be able to move if necessary in the direction of Colonel Glyn's column. After the victory at Isandlana, which Cetywayo failed to improve, most of the Zooloo warriors were dismissed to secure the crops. On February 17th two messengers arrived in Colonel Wood's camp from Oham, half-brother of Cetywayo, stating that he had escaped from the King's kraal, where he had been kept a prisoner since the end of last December. Oham was at this time in his own kraal, about twenty-five miles from the camp. He stated that he was still anxious to come over to the British, and suggested that Colonel Wood should name a place of meeting, where matters might be arranged. Oham had always wavered in his allegiance to his brother, and for this reason Cetywayo ordered him to Ulundi when war became inevitable. He finally surrendered on March 4th, together with his son and 300 men. Another serious reverse befell the British troops on March 12th. At daybreak a convoy of 100 men of the 80th Regiment, under Captain Moriarty, in charge of 20 wagons from Derby to Luneburg, was surprised by a large body of the enemy. Captain Moriarty fell in the action, and 60 of his men were lost, killed and missing. Lieutenant Harward, who escaped with 45 men, said that he was encamped with his men on one side of the river Intombi, and that Captain Moriarty with the remainder of the men was on the other side. Although some previous alarms had been given, they were surprised at daybreak by the irruption of a body of over 4,000 Zooloos. The Zooloo loss was heavy, but seemed to make no impression on them. The wagons with the supplies were removed by the enemy, but some rockets and ammunition were recovered.

In March King Cetywayo sent messages to Bishop Schroeder, of the Norwegian missions, asking for peace. He begged that the Bishop would explain to the Government that he never desired this war; he had never refused the terms proposed at the Lower Tugela; he had already collected 1,000 head of cattle to pay the demand made on him. Sirayo's sons had escaped, and he was looking for them when he heard the English armies had crossed the Tugela; they attacked and killed many of Sirayo's people, but even then he did not despair of peace, for he then succeeded in arresting Sirayo's sons. He sent them bound with his army under Mavungwana's charge, to be delivered up to the General at Rorke's Drift; three men were sent on to try and obtain a hearing, but they were fired at, and returned.

The fighting at Isandlana was brought about accidentally; the English horse attacked outlying parties of Zooloos, who returned their fire; more came up and joined in the fray, till the battle became general. The King protested that he never ordered his army to attack the English column, and Mavungwana was in disgrace for having permitted it. Cetywayo also said that Colonel Pearson provoked the attack made on him by burning kraals and committing other acts of hostility along the line of march. He now asked that both sides should put aside their arms and resume the negotiations with a view to a permanent settlement of all questions between himself and the Government. The King further stated that he would have sent in a message before, but was afraid; because the last time he sent eight messengers to the Lower Tugela they were detained, and he now begged they might be sent back.

Colonel Pearson, who had advanced as far as Ekowe in February, and had there fortified himself, had been cut off completely from his friends. Communication had, however, been kept up with him by means of the heliograph, an instrument composed of mirrors, which by reflecting the sun's rays transmitted messages to a distance of eighty or a hundred miles. In this way the British were kept advised of the condition of Colonel Pearson's column. In the middle of March Colonel Pearson signaled that his supplies were almost at an end, and that he had a large number of sick persons in his hospital. A relief column was at once fitted out, and on March 29th set out under the personal command of Lord Chelmsford. The column consisted of 2,600 infantry, 640 naval brigade, and 50 mounted Europeans, 150 mounted natives, two 9-pounder guns, four 24-pounder rockets, two Gatlings, and 2,150 native contingent. The plan of relief was to force a passage through to Ekowe with all possible speed; to exchange the garrison and provision the fort for a fresh period of thirty days; to form another post on the Ingingzuni heights, leaving it supplied for a similar period, and perhaps establish a third at the Inyoni. The relieving column formed in *laager* at Ginglelova on the afternoon of April 1st. There were heavy rains throughout the evening, and the Zooloos were hovering about the camp. At 6 in the morning of the 2d the Zooloos attacked the *laager* on each side in succession, two distinct forces being employed. At 7.30 the attack was repulsed, and the enemy retreated, followed by Barrow's mounted infantry and the native contingent. On the 3d Lord Chelmsford with the greater part of the relief column started for Ekowe, leaving the remainder to guard the baggage. After a successful march of fifteen miles, Colonel Pearson, with a few companies of the 99th and the seamen of the Active, were met. The force reached Ekowe at 9.30 in the evening. On the 4th the garrison marched for the Tugela,

and on the 5th Lord Chelmsford's column left for Ginglelova, and Ekowe was completely evacuated. On March 28th Colonel Wood, in order to create a diversion in favor of the relief of Ekowe, made a reconnoissance in force, marching twenty miles to Zlobani Mountain, the stronghold of Umbelini, a disaffected Swazi chief. The mountain was stormed and taken, and a large number of cattle were captured. After four hours' rest, the British, about 400 strong, found themselves surrounded by about 20,000 Zooloos. As the mountain was accessible at only one point, they had to cut their way through. On March 30th Colonel Wood's camp at Kambula was attacked by four Zooloo regiments of Cetywayo's army under Mnyane, who were repulsed with great loss, the British loss also being very heavy. During April and the greater part of May the operations ceased almost entirely, the British being engaged in preparing for a combined advance. This work was considerably delayed owing to a want of facilities for transportation. On May 16th Cetywayo dispatched an envoy to Colonel Crealock, asking him to send a European to discuss terms of peace. John Dunn, who formerly possessed great influence with the Zooloo King, accordingly went to Cetywayo's kraal, but returned within a short time, the negotiations having failed, because the British refused any terms but unconditional surrender, as Cetywayo's good faith was doubted by the military authorities. It was known that Cetywayo had repeatedly sent messengers to sue for peace. Bishop Colenso, of Natal, stated that he had reason to believe that since the battle of Isandlana the King had sent messengers three times to ask for terms of peace. The statement was not contradicted, and it was well known that the Bishop spoke, not from hearsay, but from a knowledge of the efforts which the Zooloos were making. He thought that there was reason to believe that on the first occasion Cetywayo's messengers were informed that their master must make what was equivalent to an unconditional surrender. Cetywayo's second attempt to open negotiations with the military authorities was made at the beginning of April. A party of Zooloos bearing a flag of truce arrived at the Middle Drift, and the flag was fired upon, in order, as was said, "to test its sincerity." The Bishop ascertained that the messengers who made their appearance at the above place were two Zooloos named Infunzi and Nkismane, who were perfectly well known in Natal as being trustworthy agents of Cetywayo. In the third case it seemed that messengers came down to Ekowe with an offer from the King "to allow Colonel Pearson's force to fall back upon Natal unmolested." These natives were "put in irons," a statement which was confirmed by a native known to Dr. Colenso, who had been shut up at Ekowe with Colonel Pearson's column. It was further known that Cetywayo sent messengers to Colonel Wood's

camp on March 30th, with the message that "he wanted to surrender." Cetywayo's overtures were regarded by the British as of very doubtful sincerity, the British saying that the fact that while the King's messengers were at the English camp, the Zooloos continued their fire upon the outlying parties of the British, did not show any desire to stay the fighting.

A complete change was made in the last week of May in the chief command of the forces, as well as in the civil administration of the colonies of South Africa. Lieutenant-General Sir Garnet Wolseley was appointed to take the supreme military command, and to direct the civil government both of Natal and of the Transvaal, having the authority of High Commissioner to deal with Cetywayo and all other native chiefs and tribes to the northward on the frontier of those eastern provinces. Sir Bartle Frere was to remain Governor of the Cape Colony, but was to act as High Commissioner only for native affairs, such as those of Caffraria, Griqualand, and the Basutos, concerning the western and southern portions of the British dominions. Sir Henry Bulwer, as Lieutenant-Governor of Natal, and Colonel Lanyon, as Administrator of the Transvaal, were to continue in office, but would henceforth be subordinate to Governor Sir Garnet Wolseley. Lord Chelmsford was also to remain, but in a subordinate military command. Sir Garnet Wolseley arrived in Cape Town on June 23d, and proceeded immediately to Natal. A general advance of the British troops was begun in the early part of June. This was made very slowly, so that the British forces under Lord Chelmsford did not reach Ulundi, the King's kraal, and the objective point of the expedition, until early in July. During the march several of the King's military kraals were destroyed. Messengers arrived from the King stating his anxiety for peace. Lord Chelmsford told them Cetywayo must send to headquarters the High Induna, and as an earnest of his sincerity the two small cannon captured at Isandlana. Until these preliminary conditions were complied with, the army would advance in every part of Zoololand. Cetywayo had power to stop further fighting by agreeing to the terms; but a permanent peace could only be obtained by the Zooloo people themselves agreeing to the conditions dictated to the King. Under these conditions the young men could marry whenever it suited them, and would no longer be liable to be called away from their kraals to assemble in military bodies. On June 30th messengers again came from Cetywayo bearing a sword and a letter. The letter was from Mr. Venn, a Dutch trader, a prisoner with the Zooloos. In it Cetywayo reiterated his desire for peace, but said he had been unable to collect the cattle and arms. Would the great white chief grant a little longer time to do so? On the envelope containing the letter, Mr. Venn, at great risk to himself, had written in pencil: "If you come,

be strong. Cetywayo has 20,000 men." The gist of the King's message was verbally conveyed by the two envoys. They declared that Mundala, one of the King's head Indunas, was coming on the following day to meet Lord Chelmsford, bringing with him the two guns and some more cattle taken at Isandlana. On being questioned, they said that the old men were opposed to further hostilities, but the young men would not be guided by them. Cetywayo intended taking his army away, but had not sufficient influence to make a regiment come in and lay down their arms. Lord Chelmsford, in reply, said that if the Zooloos did not fire upon him, he would give orders to cease burning the kraals, and would halt upon the left bank of the White Umvolosi until noon on July 3d. If attacked, he would at once march on Ulundi; and as Cetywayo declared his inability to send in a regiment to lay down arms, he agreed to accept instead a thousand stand of rifles, which must be delivered at once. As Cetywayo failed to comply with Lord Chelmsford's demands, the latter crossed the river early on the morning of the 4th, his movements being watched by a number of the enemy who had collected on the surrounding hills. The British troops were formed into a hollow square on the plain near Ulundi, and while in this formation the Zooloos commenced a desperate attack on all four sides. They advanced repeatedly with great gallantry and determination during about an hour; but being met with a steady fire, they wavered each time and fell back. At length the British cavalry charged them, and a complete rout ensued. After the troops had rested for a short time at Ulundi, detachments were sent out in all directions, who burnt every kraal within a distance of three miles. In the course of the afternoon the British returned to the left bank of the Umvolosi. The loss of the Zooloos was variously estimated at from 800 to 1,500, while the loss of the British was only 10 killed and 53 wounded.

Even before the battle of Ulundi, a large number of chiefs came into the British camp to submit. After the battle the numbers continually increased, so that by July 12th all the principal chiefs except Cetywayo and Sirayo had given in their submission. The King after the battle retreated to the Ngame mountains in the north. Lord Chelmsford after the destruction fell back to Kwamagwasa (afterward called Fort Albert), as his supplies were about giving out. Sir Garnet Wolseley now took the entire management into his own hands, and went to Zoolooland, making his headquarters at Intanjani, and arriving at Ulundi on August 10th. On the 8th messengers had arrived from Cetywayo, who said that the King was ready to submit and pay taxes, but the country must be clear of soldiers. They were told that Cetywayo could not be treated with as the King. He was no longer the King, and must surrender unconditionally, except on the guar-

antee that his life would be spared and that he would have fair treatment. Another message was received to the effect that the King had no messengers to call his chiefs together, and could only send the same messenger to each chief in turn. He was told not to trouble himself about the other chiefs, as the Government would communicate with them directly. Cetywayo in his flight was accompanied by his prime minister and by several chiefs of the royal house. The royal cattle were driven with him wherever he sought shelter. These symbols of his royal estate he would never suffer to stray from him. Indeed, the rumor that the herds were being driven to the junction of the Black and White Umvolosi gave to the British the first clew to the King's hiding-place. They started in pursuit of him on August 13th, after burning Ambakage, his new kraal. Though they kept close in his tracks, he always managed to escape them. On the morning of the 15th the cavalry arrived at the kraal where he had spent the night. Lord Gifford was then ordered to continue the pursuit with a party of natives. Then Cetywayo's misfortunes began. His followers left him one by one. His prime minister, two of his sons, and three of his brothers surrendered, with 650 of his cattle; and almost every day arms and cattle were surrendered to the British, so that toward the end of his flight Cetywayo had but very few followers who remained faithful to him. Finally, on August 28th he was captured without resistance by Major Marten. When captured he was utterly prostrated, and his followers were too weak to resist. They were taken to Ulundi, whence Cetywayo was sent to Port Durnford, and then by sea to Cape Town, to be kept there as a state prisoner until the Queen should signify her pleasure in regard to him. The final disposition of Zoolooland was as follows: The country was divided into thirteen districts, over each of which a chief was appointed. A British resident was appointed to each district, while a Governor resident over all was appointed in the person of John Dunn. On September 1st Sir Garnet Wolseley met six of the chiefs at Ulundi, and submitted to them the following treaty, which was signed by them, and shortly after by the remaining chiefs:

1. I will observe and respect whatever boundaries shall be assigned to my territory by the British Government through the Resident of the division in which my territory is situated.

2. I will not permit the existence of the Zooloo military system, or the existence of any military system of organization whatever, in my territory; and I will proclaim and make it a rule that all men shall be allowed to marry when they choose and as they choose, according to the good, ancient customs of my people, known and followed in the days preceding the establishment by Chaka of the system known as the military system; and I will allow and encourage all men living within my territory to go and come freely for peaceful purposes, and to work in Natal and the Transvaal and elsewhere for themselves or for hire.

3. I will not import or allow to be imported into my territory by any person, upon any pretext or for any object whatever, any arms or ammunition from

any part whatsoever, or any goods or merchandise by the sea-coast of Zoolooland, without the express sanction of the Resident of the division in which my territory is situated; and I will not encourage or promote, or take part in, or countenance in any way whatever, the importation into any other part of Zoolooland of arms or ammunition from any part whatever, or goods or merchandise by the sea-coast of Zoolooland without such sanction; and I will confiscate and hand over to the Natal Government all arms and ammunition, and goods and merchandise, so imported into my territory; and I will punish by fine or by other sufficient punishment any person guilty of or concerned in any such unsanctioned importation, and any person found possessing arms or ammunition, or goods or merchandise, knowingly obtained thereby.

4. I will not allow the life of any of my people to be taken for any cause, except after sentence passed in a council of the chief men of my territory, and after fair and impartial trial in my presence and after the hearing of witnesses; and I will not tolerate the employment of witch doctors, or the practice known as smelling out, or any practice of witchcraft.

5. The surrender of persons fugitive in my territory from justice, when demanded by the Government of any British colony, territory, or province, in the interests of justice, shall be readily and promptly made to such Government; and the escape into my territory of persons accused or convicted of offenses against British laws shall be prevented by all possible means, and every exertion shall be made to seize and deliver up such persons to British authority.

6. I will not make war upon any chief or chiefs, or people, without the sanction of the British Government, through the Resident of the division in which my territory is situated.

7. The succession to the chieftainship of my territory shall be according to the ancient laws and customs of my people, and the nomination of each successor shall be subject to the approval of the British Government.

8. I will not sell, or in any way alienate, or permit or countenance any sale or alienation of, any part of the land in my territory.

9. I will permit all people residing in my territory to there remain, upon the condition that they recognize my authority as chief; and any persons not wishing to recognize my authority and desiring to quit my territory I will permit to quit and to pass unmolested elsewhere.

10. In all cases of dispute in which British subjects are involved I will appeal to and abide by the decision of the British Resident of the division in which my territory is situated. In all cases where accusations of offense or crime committed in my territory are brought against British subjects, or against my people in relation to British subjects, I will hold no trial and pass no sentence, except with the approval of such British Resident.

11. In all matters not included within these terms, conditions, and limitations, and in all cases provided for herein, and in all cases when there may be doubt or uncertainty as to the laws, rules, or stipulations applicable to matters to be dealt with, I will govern, order, and decide in accordance with the ancient law and usage of my people.

The duties of the Residents and the policy to be followed in future were set forth in the instructions given them. The principal points of these instructions were as follows:

You will be the eyes and ears of the British Government, and it will be your duty to watch the manner in which the chiefs appointed to rule over the several territories of the country carry out the terms to which they assented as the conditions of their chieftainship.

While always ready to give advice to the chiefs of Zoolooland, you will exercise no authority over them or their people. Should you observe in them any departure from the conditions of their chieftainship to

which they have assented, you may remonstrate with them, stating to them that you must report upon their conduct to your Government; but you will be careful to issue no order to them in regard to the matter of complaint. In future no land to the north or west of the Pongolo will be recognized as forming any part of Zoolooland. The western boundary of Zoolooland will start from the Pongolo River, where that river joins the Bevana River, and will run up along the Bevana River to the junction of the Bevana River with the Pemvana River; thence it will run up the Pemvana to the Kambula Mountain, and from the Kambula Mountain down the Lyn or Dabusi River to its junction with the Blood River, whence it will run down the Blood River to the Buffalo River. In dealing with the chiefs you will impress upon them that all the King's cattle now belong to the British Government and must be handed over to you. . . . You will be careful to hold yourself entirely aloof from all missionary or proselytizing enterprises. If any chief desires that a missionary should reside in his territory, there can be no objection to the missionary occupying ground as a site for a mission station and ground to serve for a pastureland and for a garden; but it is to be clearly understood that the chief in no way thereby alienates the land so assigned, and that at any time he may resume the land should he wish to do so. Grants of land by the former King to missionaries can not be recognized by the British Government; but there is no reason why occupation of such land should not be resumed by the now deposed missionaries, provided the chief in whose territory the land in question is situated wishes for the return of the missionaries among his people. You will not prevent any chiefs from corresponding with or visiting the Governor or Lieutenant-Governor of Natal, should they wish to do so.

The settlement with the Zooloos was almost universally condemned in Natal and Cape Colony. The principal objections of the colonists were, that the powers of the Residents were too limited; that the thirteen chiefs possessed as much power for harm as the one King had possessed before, and that consequently the borders would still continue to be in a state of quietness. The appointment of John Dunn was also severely criticised. He is described as a white man who had lived twenty years or more among the Zooloos, had married Zooloo wives, and had been for many years the right-hand man of King Cetywayo. He was regarded in the colonies as one who had made himself an outcast from all decent society.

An event of the war that for a time created considerable excitement in England and on the continent was the death of the Prince Imperial of France. (See BONAPARTE.) On June 1st he left General Wood's camp on a reconnaissance, accompanied by Lieutenant Carey and a few troopers. The party dismounted in a meadow field near the Hyotoyozi River. The enemy crept up and assailed the Prince and two troopers. The English Government was bitterly attacked in the press and in Parliament for accepting the services of the Prince. On June 23d the Duke of Cambridge, the Commander-in-Chief, felt compelled to make the following statement in Parliament:

There is very great doubt as to the circumstances in which the Prince Imperial went to South Africa, and I think it is much to be deplored that that doubt should remain for a moment longer than necessary.

Indeed, it seems to me that I should be neglecting my duty if I did not read to your lordships the two private letters which the unfortunate Prince took out with him as letters of introduction to Sir Bartle Frere and Lord Chelmsford. They are private letters, and are the letters under which the Prince attached himself to the army in Zoolooland :

"February 25, 1879.

"MY DEAR CHELMSFORD: This letter will be presented to you by the Prince Imperial, who is going out on his own account to see as much as he can of the coming campaign in Zoolooland. He is extremely anxious to go out, and wanted to be employed in our army; but the Government did not consider that this could be sanctioned, but have sanctioned my writing to you and to Sir Bartle Frere to say that if you can show him kindness and render him assistance to see as much as he can with the columns in the field, I hope you will do so. He is a fine young fellow, full of spirit and pluck, and having many old cadet friends in the Artillery, he will doubtless find no difficulty in getting on; and if you can help him in any other way, pray do so. My only anxiety on his account would be that he is too plucky and go-ahead.

"I remain, my dear Chelmsford, yours most sincerely,
"GEORGE."

That is the letter to Lord Chelmsford, and I should also like to read to your lordships that which was addressed to Sir Bartle Frere, in order that there may be no mistake :

"February 25, 1879.

"MY DEAR SIR BARTLE FRERE: I am anxious to make you acquainted with the Prince Imperial, who is about to proceed to Natal by to-morrow's packet to see as much as he can of the coming campaign in Zoolooland in the capacity of a spectator. He was anxious to serve in our army, having been a cadet at Woolwich; but the Government did not think that this could be sanctioned. But no objection is made to his going out on his own account, and I am permitted to introduce him to you and to Lord Chelmsford in the hope and with my personal request that you will give him every help in your power to enable him to see what he can. I have written to Chelmsford to the same effect. He is a charming young man, full of spirit and energy, speaking English admirably, and the more you see of him the more you will like him. He has many young friends in the Artillery, and so I doubt not with your and Chelmsford's kind assistance he will get on well enough.

"I remain, my dear Sir Bartle, yours most sincerely,
"GEORGE."

My lords, having read these letters, all I can say is that I think, so far as the authorities at home are concerned, everybody must feel that nothing has been done by them to place the unfortunate Prince in the position which unhappily resulted in his death. We all deeply regret his loss, and I am sure there is not a man, woman, or child in the country, from her Majesty downward, who does not sensibly deplore what has occurred; but, certainly, so far as the authorities here are concerned, I feel that we had nothing to do with bringing about such a catastrophe as that which we now all so greatly lament.

Lieutenant Carey, the officer who accompanied the Prince Imperial, was tried by court martial, and at its close was sent home under arrest pending the Queen's decision upon the verdict. In the first days of August the proceedings of the court were quashed on account of an informality. At first Lieutenant Carey was severely censured throughout the United Kingdom; but as the facts of his case became known, public sentiment completely changed, and upon his arrival in Portsmouth he was to be presented with a numerously signed address, expressive of sympathy for him in his trying position and of confidence in him as a brave officer and a true Englishman. Although this address was not presented in consequence of an intimation from the authorities, the sentiments it contained were expressed to him in other ways, and he was everywhere treated as one who had been unjustly accused.

In the Transvaal the war showed a very bad state of affairs. The Boers, in their hostility to England, went so far as to refuse all assistance against the Zooloos. None of the promises made by Sir Theophilus Shepstone when he annexed the country had been carried out, and the Boers even went so far as to talk of reasserting their independence by force. The news of Isandlana had hardly spread itself throughout the Transvaal before the first threats of displacing the British by force were heard. In order to come to an understanding with the Boers, Sir Bartle Frere set out for Pretoria, and arrived on April 10th. He was received with an address of welcome. In his reply he stated that he had come to see that the existing laws were obeyed, and that the inhabitants enjoyed the same protection as other portions of the Queen's dominions. "I find," he said, "that there are those who think the country may be given up again; but I think you will see in the promptitude with which the reinforcements lately asked for were sent a clear proof and guarantee that no territory over which the British flag has once waved will ever be abandoned." On the 12th he entered the camp of 2,000 or 3,000 malcontents who threatened an attack on the seat of government at Pretoria, and succeeded in convincing them that it was best for them to submit quietly. The camp was broken up, and the people quietly dispersed to their homes.

In the Transvaal the Caffres under Secocoeni, who had defeated the Boers in 1877, also became hostile, and Colonel Lanyon was sent in the early part of the year to that province to keep them in check. Several successful patrols were made against them, and Colonel Lanyon had just completed his arrangements for attacking the stronghold of the chief, when in June Sir Garnet Wolseley sent instructions to him to stop and send his men to Derby to protect that part of the border, and prevent Cetywayo from breaking through.

After the pacification of Zoolooland had been accomplished, Sir Garnet Wolseley went to the Transvaal, arriving in Pretoria on September 28th. He was met by a deputation of the people, who presented him an address of welcome. The General read a written answer to the address, which he supplemented with a speech of the same tenor and tone, as to the irrevocable nature of the annexation.

The Zooloo war again brought the question of a South African confederation prominently before the public. On June 12th Sir M. Hicks-Beach addressed a dispatch to Sir Bartle Frere, in which he intimated that "a determined effort" should be made to extend the system of self-government possessed by the Cape to other portions of South Africa, so that the Queen's representative there might be aided by a Union Ministry and Parliament in dealing with the "singularly difficult and intricate problems of government" of the whole country. Setting aside previous suggestions

for a conference of delegates from the several colonies to be convened in Cape Town, he called upon the Cape Government, as the principal colony, at once to submit to its Parliament, then assembled, general proposals for the establishment of a South African Union or Confederation on the lines of the South African Act of 1877. In the case of rejection of this demand, it was stated that measures initiated with respect to the lately disturbed territories on the eastern frontier could not be proceeded with; in other words, that the annexation of Galekaland, Tambookieland, and other parts of the Transkei would not be sanctioned. It was further intimated that in future colonists must not rely upon Imperial troops for defense against native attacks or insurrections, and that her Majesty's soldiers would only be permanently placed as a garrison at or near Cape Town for the protection of the neighboring naval station, this station being of great importance to the interests of the whole Empire. In these circumstances, it was suggested that a regular defensive force be organized for maintaining security on the inland borders of the several colonies, toward the maintenance of which force Government would be prepared to contribute from Imperial funds for a period of five years an annual sum equal to that voted by the Union Legislature, provided a pledge was given by the Cape Parliament—to be afterward confirmed by the Union—that no further aid would be required from the mother country for military purposes. The general disapproval of the treaty which had been made by Sir Garnet Wolseley with the Zooloo chiefs caused the proposition for a confederation to be regarded unfavorably, and nothing was done in the colonies with regard to it.

There were also during the year troubles with the Basutos, and with the Caffres in Pondoland. Slight engagements were had in both cases, the British coming out victoriously in the end.

By two proclamations of Sir Bartle Frere, certain portions of the Transkei and No-man's Land were finally incorporated with the Colony of the Cape of Good Hope on October 1st. The area defined in the order includes two distinct districts: First, a three-cornered strip of land bordering the east bank of the river Kei, which may be roughly described as being embraced between that river and its tributary the Geuwa and the Xwexweni Mountains, including Fingoland and the Jantywa Reserve, and containing an area of about 1,600 square miles. This territory is to be known as the territory of the Transkei. The second area, to be known as Griqualand East, includes the territory between the Drakenberg Mountains on the west, the Mataana Mountains on the south, Amapondoland and Alfred County, Natal, on the east, and the Imgwangwane and Umzumkulu rivers on the east. This territory covers about 7,000 square miles.

CAREY, HENRY CHARLES, a writer on political economy, was born in Philadelphia December 15, 1793, and died October 13, 1879. He was the son of Mathew Carey, once a prominent publisher in Philadelphia. He was brought up in the business of his father, and in 1835, having been successful, withdrew to devote himself to the preparation and publication of works on political economy. His discussions of the relations of labor and capital, of finance, and other fundamental questions in that science, soon attracted attention both at home and abroad. His books have been reproduced in Germany, France, Sweden, Italy, Russia, and other European countries. To the close of his life he was the champion of the American protective system, of which his works constitute the most complete exposition. They defend it by a series of facts and an array of figures unsurpassed. He was enthusiastic in his pursuit, and devoted himself to it with great industry and ability. His most important work is his "Past and Present" (3 vols. 8vo, 1848), but his works on the general subject to which he gave his life have been very exhaustive, covering the period from 1835, the date of his "Essay on Wages," to his paper on the "Unity of Law" in 1873. Mr. Carey was fully recognized the world over as a leading and original writer on political economy, and, while his views were not generally accepted, they were always thought to be too important to escape analysis in the leading treatises on the subject. Mr. Carey led a blameless, genial life, full of work; and he was highly respected by a large circle of friends.

CHANDLER, ZACHARIAH, a Senator, member of the Cabinet, and politician, was born in Bedford, New Hampshire, December 10, 1813, and died suddenly in Chicago, November 1, 1879. His education was limited to that of the common schools and an academy in his native State. In 1833 he removed to Detroit and engaged in the dry-goods business, in which he was energetic and successful. In 1851 his public life began by his election as Mayor of Detroit. In 1852 he was nominated for Governor by the Whigs, and, although his success was hopeless, the large vote which he received brought him to public notice. Thenceforward he took an active interest in State and national politics. In the winter of 1856-'57 he was elected to the United States Senate, to succeed General Lewis Cass, who had been a distinguished representative of the State. During this Congress Senator Chandler served as chairman of the Committee on the District of Columbia and of the Committee on Commerce. It was during this term, on February 11, 1861, that he wrote the famous so-called "blood letter," which he acknowledged and defended in one of his latest speeches in the Senate. It can be found in vol. i. (1861) of this work. He was reelected in 1863, and during that term again served as chairman of the Committee on Commerce, and also on the Committees on Revolu-

tionary Claims and Mines and Mining. He was also a member of the National Committee which accompanied the remains of President Lincoln to Illinois, and was a delegate to the Philadelphia Convention of 1866. In 1869 he was again elected. During the important period of his first term in the United States Senate Mr. Chandler was identified with all the leading measures of Congress. During the term that expired in 1875 he continued chairman of the Committee on Commerce. In October, 1875, President Grant tendered him the post of Secretary of the Interior, to fill the place made vacant by the resignation of Columbus Delano. He served in this position until President Grant's retirement. When Senator I. P. Christiancy resigned his place in the Senate, early in 1879, to accept the post of Minister to Peru, Mr. Chandler was elected by the Legislature of Michigan to fill the unexpired term of the man who had succeeded him in the Senate four years before. His term of service would have expired in 1881. Mr. Chandler took an active part in the exciting Presidential campaign of 1876, being the hard-working president of the Republican National Executive Committee. He was, during the greater portion of his life, engaged in large business enterprises, from which he had realized a handsome fortune. He was a man of commanding appearance, and possessed an excellent practical judgment, great energy, and perseverance.

CHEMISTRY. *Oxygen in the Sun.*—On the 18th of June last Professor Henry Draper laid before the Royal Astronomical Society of London the evidence by which he claims to have demonstrated the existence of oxygen in the sun. From a summary of his paper published in the London "Times" we take the following, which gives a fair idea of the nature of the problem, and of the results of Dr. Draper's investigations. It will be remembered that when in 1859 Kirchoff showed how the dark lines of the solar spectrum enable us to analyze the vaporous envelope of the sun, the substances the presence of which was recognized belonged with one exception to the family of metallic elements. Iron, zinc, copper, aluminum, sodium, magnesium, cobalt, nickel, calcium, chromium, titanium, and manganese were found to be present; and, besides these metals, hydrogen was also recognized. The absence of all evidence respecting some of the other elements might not have seemed remarkable, because it could well be believed that they were present in quantities relatively so small that our means of analyzing the sun failed to detect them. But that such elements as oxygen, nitrogen, and carbon, all of them important constituents of our earth, should be absent from the sun, or should not be present in quantities large enough to make their detection easy, seemed surprising. In the case of the two latter elements the wonder was increased by the circumstance that Huggins recognized the presence of nitrogen in the

gaseous nebulae, and that of carbon in certain comets. But, though no spectroscopic evidence of the presence of oxygen in any of the self-luminous celestial bodies had been obtained, so that the absence of any evidence of its presence in the sun was in one sense less remarkable, it was in another sense the most remarkable of all the negative results of solar spectroscopic analysis.

Oxygen is commonly believed to form one third of the mass of our earth's crust, and is known to form eight ninths of the water, where it is combined with hydrogen, and one fifth of the air, where it is mixed with nitrogen. It can not be assumed that the structure of the sun is identical with that of the earth; yet it would be difficult to understand how in the great central mass, in which the denser elements would be the more abundant, the lightest of all, hydrogen, should be present in enormous quantities, while oxygen, so much denser under the same conditions, should be absent, or present only in such small amount as to afford no evidence of its existence. The natural inference would be that oxygen and the other non-metallic elements, though really present in the sun, are situated below that visible surface which is called the photosphere. That at any rate they are not present above that surface in any considerable quantity is clearly shown by what happens during total eclipses of the sun; for whereas, at the moment when the sun is just fully hidden by the moon, the metallic elements usually recognized by the absorptive action of their vapors on the sun's light can be recognized by their emissive action, a rainbow-tinted array of bright lines suddenly replacing the rainbow-tinted streak crossed by a corresponding array of dark lines, the bright lines of oxygen, nitrogen, carbon, and other non-metallic elements have never been recognized, even under these favorable conditions. But if oxygen existed in enormous quantities within the visible globe of the sun, its presence might be recognized in another way. Besides the dark lines in the solar spectrum, there are bright lines certainly at times, and probably always. Some, indeed, have said that as the glowing vapors which produce the rainbow-tinted array of lines just mentioned are at all times present over the sun's surface, there are always bright lines; but as the question is one of relative brightness, and as these particular tints are fainter—corresponding, in fact, to the dark lines—this mode of speaking seems as incorrect as it would be to describe the dull disk of a small red-hot globe, seen projected on a bright background at a white heat, as forming a bright instead of a dark spot on that bright white background. When, however, as sometimes happens, the known lines of some element disappear and presently reappear as bright lines, we perceive that for the time being the spectroscopic evidence respecting that particular element is changed in character. We know that that element is present in the

part of the sun examined, but we know this because we see the bright lines, not (as usual) the dark lines of that element.

If oxygen were present in very great quantities in the sun, but always lay below the visible solar surface, and were at a higher temperature than that prevailing at the surface, then oxygen might indicate its presence by its bright lines, and could certainly indicate it in no other way. Now, it is evidence of precisely this kind that Professor Draper seems to have obtained respecting this most important element. He had been engaged since 1863 in obtaining simultaneous photographs of parts of the solar spectrum and of corresponding parts of the spectra of hydrogen, nitrogen, and carbon. In examining a series of such photographs in which the fluted spectrum of nitrogen was in juxtaposition with the solar spectrum, he found reason to suspect that some of the bright lines of nitrogen agreed exactly in position with bright bands in the spectrum of the sun. Pursuing his researches, he found, even at that early stage of his labors, very striking evidence of agreement between the bright lines of oxygen and solar bright bands. It was not, however, till the year 1877 that he was so far satisfied as to announce "the discovery of oxygen in the sun." The paper thus named was illustrated by enlarged views of the negatives he had obtained. In these photographs a part of the spectrum of the sun was seen side by side with the bright-line spectrum of air. The bright lines of iron were shown in company with those of air, in order to indicate the exact agreement of the juxtaposed spectra by the coincidence of the iron bright lines with the corresponding solar dark lines. Every one of the oxygen bright lines was seen to coincide with a bright part of the solar spectrum. In some cases the coincidence was very striking, because the bright line of the air-spectrum not only agreed exactly in position, but very closely in character also, with a bright band in the solar spectrum. This close resemblance could not in every case be recognized—a circumstance by no means surprising when we remember that if these bright bands in the solar spectrum are really due to the presence of great quantities of oxygen below the visible solar surface, the light of this oxygen can only reach us after passing through the cooler envelope of metallic vapors which produces the dark lines, and must be affected by the absorptive action of those vapors; which, of course, was not the case with the oxygen of the air from which Professor Draper obtained the bright-line comparison spectrum.

Many experienced spectroscopists remained unconvinced by the evidence which Professor Draper thus advanced in 1877; and in the true scientific spirit Professor Draper set to work to apply more searching tests to his result. The scale of his enlarged photographs had been half that of Angstrom's well-known "normal spectrum." Those which he exhibited at the

Astronomical Society were on a scale four times greater. The evidence derived from each coincidence was thus increased fourfold in value, the evidence from two coincidences sixteenfold; from three, sixty-fourfold; and from the eighteen recognized coincidences about 68,725,000,000 times. He effected also an improvement likely to have great value in other spectroscopic researches. The electric spark through air which gave the air-spectrum pursued a zigzag course, like a lightning-flash on a small scale. He wanted a straight flash, or at any rate a flat flash, so that seen from one direction it should appear as a straight line. So he invented what he calls the spark-compressor. The terminals between which the spark passes are introduced into a small block of soapstone, and between them a small flat aperture is prepared, between the walls of which the electric flash has to travel. This space is left open on one side, somewhat like the slit of a money-box, and the spark seen from that side necessarily appears as a straight line, though it may have a considerable amount of zigzag play in the plane of the flat space left for its passage. The result of this arrangement is that the spectrum of the air-lines (oxygen and nitrogen), as also of the iron-lines (obtained by having a little iron at one of the poles), is much better defined and more trustworthy than it had been before this plan was adopted.

Most spectroscopists will doubtless admit that Professor Draper does not pass beyond the limits of scientific caution in claiming that the coincidence, shown in his photographs, between the bright lines of oxygen and bright parts of the solar spectrum, establishes the probability of the existence of oxygen in the sun. The burden of proof, or rather of disproof, should now fall on those who consider that the coincidence may, after all, be merely accidental. If such evidence as Professor Draper has obtained is rejected, it would seem as if hardly any spectroscopic evidence can suffice to prove the existence of an element in the sun. The evidence is certainly not stronger in the case of sodium or magnesium, which every physicist regards as present in the sun, than Professor Draper has obtained in the case of oxygen.

A New Explosive.—The discovery of a compound more violent than gun-cotton or dynamite has recently been announced by M. Nobel under the name of blasting gelatine, and this again has been endowed with a still greater energy by a modification of its nature effected by Professor Abel, chemist of the British War Department. Nearly all the explosives brought before the public are nitro-compounds or modifications of them. One class owe their origin to gun-cotton and the other to nitro-glycerine; and these are essentially the same thing, gun-cotton being made by the nitrification of a solid body, and nitro-glycerine by the nitrification of a liquid substance. The methods of

manufacture and the agents employed to bring about the nitrification are similar.

In the application of the two explosives, however, there is a wide difference. Guncotton is in a form which makes it conveniently available; but nitro-glycerine, being a liquid, is difficult to use, and this fact led Nobel and others to seek for some suitable vehicle to contain the preparation. A silicious clay, called *Kieselguhr*, which will absorb three times its weight of the liquid, has been found the most favorable vehicle, and dynamite consists of about 75 per cent. of nitro-glycerine and 25 per cent. of this inert substance. In blasting-gelatine the objection to employing an inert material is overcome, the mass being explosive throughout. "Blasting or explosive gelatine is a mixture of nitro-glycerine and guncotton. M. Nobel, to whom is due the credit of having placed the valuable properties of nitro-glycerine at the disposal of mining engineers, has discovered, in pursuing further investigations, that the liquid in question acts as a solvent upon guncotton. Like a mixture of alcohol and ether, nitro-glycerine is found to dissolve nitro-cellulose, and form a description of colloidion, or, as M. Nobel terms it, gelatine. It is not, of course, the highly explosive guncotton that will thus dissolve, but that known as photographer's pyroxiline, which does not contain so much nitrogen. Military guncotton, indeed, or tri-nitro-cellulose, to call it by its chemical name, should not be soluble at all, or at any rate only to a slight extent, if properly manufactured, and one of the tests to ascertain if it is of good quality is in fact to treat it with an alcohol-ether mixture to ascertain how far it will dissolve. The soluble guncotton, however, if not so highly nitrified, to coin a term for our purpose, is still a sufficiently explosive body, and this M. Nobel finds he can dissolve to a greater extent in nitro-glycerine than it is possible to do in alcohol and ether. Whereas the latter will dissolve no more than 4 or 5 per cent. of pyroxiline, and frequently less than 2, nitro-glycerine has been found to take up upward of 7 per cent. The operation of dissolving is presumably done when the liquid is warm, and the result is, as we have said, a jellified mass, which has all the attributes of a definite combination. There is no separation of liquid from the mass, and cartridges may be made by simply rolling up the material in paper envelopes. . . . In blasting-gelatine there is no inert body, and the consequence is that, weight for weight, the gelatine is superior in its destructive action to dynamite. The latter, as we have seen, contains 75 per cent. of nitro-glycerine, whereas blasting-gelatine consists of from 90 to 93 per cent. of this liquid, and from 7 to 10 per cent. of soluble guncotton. But there exists another reason still why the detonation of blasting-gelatine should be more energetic, namely, because the combustion of the charge, from more perfect oxidation, is well-nigh complete. . . . By converting the gelatine

into a more solid body by the addition to it of some 10 per cent. of military guncotton, or tri-nitro-cellulose, Mr. Abel appears to have secured a still more vigorous explosive, and one besides that, by reason of its firmness, is more convenient to handle than the soft and pliant jelly. The destructive action of this modified gelatine upon iron plates and heavy masses of lead has been found greater than that of any other form of nitro-glycerine or guncotton; and there is no room for doubt that for torpedoes and military mining, where the object is to secure the greatest degree of violence, regardless of consequences, the compound will find valuable application."

New Aniline Salts.—Messrs. Beamer and Clarke, of the University of Cincinnati, describe in the "American Chemical Journal" several new salts of aniline which they have lately obtained and partially examined. *Aniline chlorate* is formed by cautiously adding chloric acid to an alcoholic solution of aniline, and then evaporating under the receiver of an air-pump. The salt quickly appears in the shape of white, slender prisms about an inch long. This compound is readily soluble in alcohol and ether, but less so in water. On exposure to air or to a gentle heat, its solutions blacken and decompose. It detonates sharply when struck, and explodes when brought in contact with sulphuric acid or when heated to a temperature of 75°. *Aniline perchlorate* is prepared in the same way as the preceding. Its crystals take the form of large rhombic plates, are more stable than the chlorate, and when dry are permanent in the air. They detonate feebly when struck or heated, and are decomposed by sulphuric acid. *Aniline iodate* is obtained by adding aniline to a solution of iodic acid. It is slightly soluble in cold, but more soluble in hot water, and still more so in boiling alcohol. All of its solutions slowly decompose on standing, and even the dry substance becomes discolored by long exposure to the air. When heated slowly to 110° it blackens, but suffers no further change even when the temperature is carried to 150°. By sudden heating, however, it explodes at 125°—130°. On percussion it detonates very feebly, yielding a dense cloud of smoke, which is light-brown by reflected and violet by transmitted light. When thrown upon sulphuric acid, it instantaneously decomposes, yielding the same dense vapors. Specific gravity, 1.48 at 13°. *Aniline fluohydrate* is formed by the union of aniline and fluohydric acid, appears in beautiful pearly scales, and is very soluble in boiling alcohol. *Aniline phthalate* is formed by the addition of aniline to an alcoholic solution of phthalic acid. Its melting-point is 145°—146°. *Aniline monochloracetate* is deposited in a flocculent mass of white crystals on adding aniline to a solution of monochloroacetic acid. *Aniline dichloracetate*, formed like the preceding, crystallizes in long white prisms, which melt at 122°. *Aniline trichloracetate* is pre-

pared by dissolving aniline in an aqueous solution of trichloroacetic acid.

The Constitution of the Elements.—In a paper read before the Royal Society, and also in an article published in the "Nineteenth Century," Professor J. N. Lockyer has given an account of the remarkable series of experiments which in his opinion confirm the hypothesis that the so-called elements are really compound bodies. This view, as is well known, was already held by many long before these investigations were begun; indeed, the progress of chemistry has proved several substances to be compound that were previously ranked as elements, and left the list of simple bodies to consist of such only as have hitherto resisted all efforts at decomposition. It was believed that the relations among the atomic numbers furnish strong evidence of the composite nature of many substances now classed as elementary, and spectrum analysis has served greatly to heighten this probability. Writing on the subject several years ago, Herbert Spencer took the ground that the elements are not known to be elementary; that no intelligent chemist holds them to be absolutely so; and that many concurrent considerations compel the inference that they are compounded, and perhaps re-compounded, of a few and possibly a single primordial constituent. For his views of the bearings of spectroscopic research on this question, see article "Chemistry" in the "Annual Cyclopædia" for 1878. In a suggestive paper entitled "Evolution and the Spectroscope," published in "The Popular Science Monthly" for January, 1873, Professor F. W. Clarke of Cincinnati expressed similar views. He announced on spectroscopic grounds the hypothesis that the evolution of planets from nebulae has been accompanied by an evolution of complex from simple forms of matter, basing the idea upon the gradation of chemical complexity in the celestial spectra.

The important facts and fresh illustrations brought forward by Professor Lockyer were published in a summary of his paper before the Royal Society, prepared by a chemist who heard it for the London "Times," and from this the subjoined extracts are taken:

There are many facts and many trains of thought suggested by solar and stellar physics which point to the hypothesis that the elements themselves, or at all events some of them, are compound bodies. Thus it would appear that the hotter a star the more simple is its spectrum; for the brightest, and therefore probably the hottest stars, such as Sirius, furnish spectra showing only very thick hydrogen lines and a few very thin metallic lines, characteristic of elements of low atomic weight, while the cooler stars, such as our sun, are shown by their spectra to contain a much larger number of metallic elements than stars such as Sirius, but no non-metallic elements; and the coolest stars furnish fluted band-spectra characteristic of compounds of metallic with non-metallic elements and of non-metallic elements. These facts appear to meet with a simple explanation if it be supposed that as the temperature increases the compounds are first broken up into their constituent "elements" and that these "elements" then undergo dissociation or decomposition into "elements" of lower atomic weight. Mr. Lockyer next considers what will be the difference in the spectro-

scopic phenomena, supposing that A contains B as an impurity and as a constituent. In both cases A will have a spectrum of its own. B, however, if present as an impurity, will merely add its lines according to the amount present, as we have above explained; whereas, if a constituent of A, it will add its lines according to the extent to which A is decomposed and B is set at liberty; so that as the temperature increases the spectrum of A will fade if A be a compound body, whereas it will not fade if A be a true element. Moreover, if A be a compound body, the longest lines at one temperature will not be the longest at another. The paper chiefly deals with a discussion from this point of view of the spectrum of calcium, iron, hydrogen, and lithium, as observed at various temperatures; and it is shown that precisely the kind of change which is to be expected on the hypothesis of the non-elementary character of the elements has been found to take place. Thus each of the salts of calcium, so long as the temperature is below a certain point, has a definite spectrum of its own; but as the temperature is raised the spectrum of the salt gradually dies out, and very fine lines due to the metal appear in the blue and violet portions of the spectrum. At the temperature of the electric arc the line in the blue is of great intensity, the violet H and K lines, as they are called, being still thin; in the sun the H and K lines are very thick, and the line in the blue is of less intensity than either, and much thinner than in the arc. Lastly, Dr. Huggins's magnificent star photographs show that both the H and K lines are present in the spectrum of *α* Aquila, the latter being, however, only about half the breadth of the former; but that in the spectrum of *γ* Lyrae and Sirius, only the H line of calcium is present. Similar evidence that these different lines may represent different substances appears to be afforded by Professor Young's spectroscopic observations of solar storms, he having seen the H line injected into the chromosphere seventy-five times, the K line fifty times; but the blue line, which is the all-important line of calcium at the arc temperature, was only injected thrice. In the spectrum of iron two sets of three lines occur in the region between H and G, which are highly characteristic of this metal. On comparing photographs of the solar spectrum and of the spark taken between poles of iron, the relative intensity of these triplets is seen to be absolutely reversed; the lines barely visible in the spark-photograph being among the most prominent in that of the solar spectrum, while the triplet, which is prominent in the spark-photograph, is represented by lines not half so thick in the solar spectrum. Professor Young has observed during solar storms two very faint lines in the iron spectrum near G injected thirty times into the chromosphere, while one of the lines of the triplet was only injected twice. These facts, Mr. Lockyer contends, at once meet with a simple explanation if it be admitted that the lines are produced by the vibration of several distinct molecules.

The lithium spectrum exhibits a series of changes with a rise of temperature precisely analogous to those observed in the case of calcium.

In discussing the hydrogen spectrum, Mr. Lockyer adduces a number of most important and interesting facts and speculations. It is pointed out that the most refrangible line of hydrogen in the solar spectrum, *h*, is only seen in laboratory experiments when a very high temperature is employed, and that it was absent from the solar protuberances during the eclipse of 1875, although the other lines of hydrogen were photographed. This line also is coincident with the strongest line of indium, as already recorded by Thalén, and may be photographed by volatilizing indium in the electric arc; whereas palladium charged with hydrogen furnishes a photograph in which none of the hydrogen lines are visible. By employing a very feeble spark at a very low pressure, the F line of hydrogen in the green is obtained without the blue and red lines which are seen when a stronger spark is used, so that alterations undoubtedly take place in the spectrum of hydrogen similar to those observed in the case of calcium. In concluding this portion of his paper Mr. Lockyer

states that he has obtained evidence leading to the conclusion that the substance giving the non-reversed line in the chromosphere, which has been termed *helium*, and not previously identified with any known form of matter, and also the substance giving the 1,474 or coronal line, are really other forms of hydrogen, the one more simple than that which gives the *h* line alone, the other more complex than that which gives the *F* line alone.

In closing his paper in the "Nineteenth Century" Professor Lockyer thus sums up the results of his investigations:

First, the common lines visible in the spectra of different elements at high identical temperatures point to a common origin. Secondly, the different lines visible in the spectra of the same substance at high and low temperatures indicate that at high temperatures dissociation goes on as continuously as it is generally recognized to do at all lower temperatures.

In my paper I attempt to show that if we grant that the highest temperatures produce common bases—in other words, if the elements are really compounds—all the phenomena so difficult to account for on the received hypothesis find a simple and sufficient explanation. And, with regard to the second count, I discuss the cases of calcium, iron, lithium, and hydrogen. I might have brought, and shall subsequently bring, other cases forward. In all these I show that the lines most strongly developed at the highest temperatures are precisely those which are seen almost alone in the spectra of the hottest stars, and which are most obviously present in the spectrum of our own sun. Now, if it be true that the temperature of the sun breaks up the elements, then the higher temperature of the sun should do this in a still more effective manner.

New Processes for protecting Iron Surfaces.
—A new process for protecting iron from rust has been invented by M. Dodé. It consists in coating, either by means of a bath or a brush, any objects in cast or wrought iron (freed from the damp that may adhere to them) with a composition of borate of lead, oxide of copper, and spirits of turpentine. This application soon dries on the surface of the iron, and the objects are then passed through a furnace, heated from 500° to 700° F., according to the thickness of the articles under treatment, so as to bring them to a cherry-red heat when passing through the center of the furnace. At this point the fusion of the metallic pigment takes place; it enters the pores of the iron, and becomes homogeneously adherent thereto, covering the objects with a dark coating, which is not liable to change under the action of the air, gases, alkaline or other vapors, nor to scale off from the surfaces to which it has been applied. When any considerable depth of "inoxidation" is desired, the object may be immersed in the composition for the time requisite to absorb a sufficient quantity of it. This process supersedes painting and varnishing, and iron objects thus treated are impervious to rust. The cost of application is about half a cent per superficial square foot.

A new process for coating iron surfaces with magnetic oxide, for the purpose of preventing rust, has recently been patented in England by Mr. George Bown. The following is the method of procedure: "The articles are first of all heated, and acted on for a certain period

by the products of combustion largely mixed with air from a peculiarly constructed furnace (designed by Mr. Anthony Bown), burning slack or small coal. In this way a coating of magnetic oxide is formed close to the surface of the iron, but this is often slightly covered with red oxide, Fe_2O_3 . The admission of air to the furnace is then so arranged by a suitable apparatus that a stream of carbonic oxide is passed over the articles for a short time, and the red oxide very speedily reduced to magnetic oxide." The red oxide, first formed, is easily detached from the iron, but the magnetic oxide is hard and perfectly homogeneous. The coating formed by this process has been thoroughly tested, and found to withstand all ordinary oxidizing influences.

The Spectrum of the Sun's Corona.—Before the occurrence of the solar eclipse of 1878, Mr. W. T. Sampson, U. S. N., made elaborate preparations for studying minutely the corona's spectrum, with the sole view of deciding, by the absence or the presence in it of dark lines, whether the light is reflected sunlight, whether it is due to the self-luminous matter of the corona, or whether it is due to both of these causes combined. In the "American Journal of Science and Arts" he describes the instruments used for this research, and the manner in which they were employed. His conclusion is that, inasmuch as he failed to see in the corona spectrum the dark lines of the sun's spectrum, therefore the light of the corona is *not all* reflected light. The following considerations confirm him in this conclusion: "Until this eclipse no observer has ever seen the dark lines in the spectrum of the corona except M. Janssen, who reported dark lines, notably D, in 1871, but much more difficult to see than the bright lines. Several observers during the recent eclipse failed to see the dark lines, though they looked for them carefully. While I do not question the results of observers who report the presence of dark lines, I think all the observations taken together show that the continuous spectrum of the corona is not the spectrum of the sun. Aside from this, Professor Arthur W. Wright made measurements of the polarization of the light of the corona (the first time, I think, it has been attempted), and has found the polarization to be but a small percentage of the whole light emitted. Although all reflected light does not reach us as polarized light, yet I think the small percentage of polarization, taken with the faintness of the dark lines, indicates that the corona is, to a considerable extent, self-luminous. The meteoric dust not only reflects the sun's light, but it is continually showering upon the sun, and in its passage through the atmosphere is rendered incandescent."

A New Base.—From a compound produced by the action of dry chlorine on toluene, and having the formula $C_{21}Cl_{16}$, Mr. Edgar F. Smith has obtained a new base, the properties

of which he describes in the "American Chemical Journal." The process of separation was as follows: A quantity of the compound $C_{21}O_{12}$, finely divided, was heated in a sealed tube with an excess of aniline for six or eight hours, the temperature during the time not exceeding $180^{\circ} C$. On examination after cooling, a deep-red viscid product was found, which was transferred to a shallow dish, water added, and the whole then heated on a water-bath. Much of the adherent aniline was got rid of in this way, and by repeatedly distilling the residue left after evaporation it was finally obtained in a pure form. The new base thus produced contains chlorine and nitrogen. It forms salts with acids, is easily soluble in water and other solvents, and from concentrated aqueous solutions after long standing it separates in thin, broad scales, that are nearly colorless, refract light strongly, carbonize slightly at $225^{\circ} C$, and fuse at $230^{\circ} C$. It forms a salt with hydrochloric acid, characterized by very long, broad, colorless crystals, that are readily soluble in water and alcohol.

Nitric Acid from the Electric Light.—It is known that when combustion takes place at high temperatures, small quantities of the nitrogen and oxygen of atmospheric air combine, forming several oxides of nitrogen, many of which are strong corrosive acids. This is the case when electric sparks are passed through air, also during combustion in air of hydrogen. It therefore appears probable that, as the temperature of the electric arc is undoubtedly very high, nitric acid or some other oxide of nitrogen might be produced by the electric light. This subject has been investigated experimentally by Mr. T. Wills, with results strongly confirmatory of this theoretical inference. The first experiment was rather surprising. A glass cylinder placed over an electric lamp (Foucault's regulator) for two minutes, and afterward examined, was seen to contain a perceptible amount of red fumes due to peroxide of nitrogen (N_2O_4). The air surrounding the lamp was next drawn through a solution of potash, and the amount of nitric acid estimated; this gave ten to twelve grains of nitric acid produced per hour (it may eventually prove to be more, the difficulty being to collect the whole of it). The next step in the research will be to examine the various forms of electric light, with a view to determine the amount of nitric acid produced by each.

Water Examination as related to Health.—Dr. F. Holdeleiss, in a recent paper on the examination of water in its relation to the health of men and animals, claims that chemical analysis alone is insufficient to determine the character of water. Microscopic examination promises more satisfactory results, in as far as the organisms observed have been found to bear certain relations to the sanitary value of the water. For purposes of examination, only natural, freshly drawn water should be taken, and that from the bottom or sides of

the well or tank. Not the number of organisms present, but their nature, must be regarded as indicating the condition of the liquid. In their connection with this subject he classifies organisms as follows: 1. Such as can live only in good, sound water; 2. Organisms free from chlorophyll, nourished solely from putrescent organic matter, and directly promoting the decomposition of organic matter, nitrogenous or non-nitrogenous—organisms which can live only in waters that evince putrefactive processes; 3. An intermediate group, or organisms which can live either in good or bad waters.

Well-water is to be regarded as good when free from all organisms, from ammonia, nitrous acid, and hydrogen sulphide.

Open waters, flowing or standing, are good when they contain living green algae and diatoms with the contents of the shells normally colored, but no colorless algae (*Beggiatoa*, *Leptomitus*, etc.), and none, or but few, *Schizomyces*.

Drinking-water for human use, in addition to freedom from all organisms, from ammonia, nitrous acid, and sulphuretted hydrogen, should not exceed $18-20^{\circ}$ of hardness. If river-water is so purified by filtration that it possesses these properties, and that suspicious organisms do not reappear on standing, it may be used without scruple.

Open waters containing green algae and living diatoms, and free from ammonia and nitrous acid, may be consumed with safety.

For cattle traces of ammonia and nitrous acid in pond- and river-water may be tolerated if green algae and living diatoms are present.

Water for fish-ponds should be free from sulphuretted hydrogen, and should be rejected if *Beggiatoa alba* is present in a state of normal vitality. *Leptomitus lacteus* is probably dangerous.

The mere vicinity of waters containing *Beggiatoa* and the *Schizomyces* is dangerous, as they may infect the atmosphere and communicate germs of a dangerous nature to the ground-water and the wells.

Derivation of Indigo-Blue.—Mr. Edward Schunck has recently published the results of an interesting series of experiments on the leaves of the common woad (*Isatis tinctoria*), undertaken for the purpose of determining whether, as has heretofore been supposed, the indigo-blue obtained from them exists as such in the plant, or is the product of some chemical change occurring to one or more of its constituents during the process of extraction. He finds that the leaves of the plant do not contain either indigo-blue or its hydride ready formed; but that they yield by careful treatment *indican*, a peculiar glucoside, which, when subsequently treated by acids and other reagents, breaks up into indigo-blue and indigo-glucine, the latter resembling glucose. He further ascertained that *indican* is a highly unstable substance, undergoing when its watery solution is heated for some time, or more rapidly when acted upon by caustic alkalies, an entire change, on the completion of which it no longer yields indigo-blue by decomposition with acids, but in place of the latter gives indigo-red, indifulvine, leucine, and other products. The investigation was afterward extended so as to include *Polygonum tinctorium*,

Blitia Tankesvillia, and other indigo-yielding plants, to see if they contained indigo-blue ready formed, or if, like the common woad, the coloring matter exists in the vegetable cells in the form of indican or some other glucoside. The experiments with the *Polygonum tinctorium* led to the conclusion that the leaves of this plant contain a substance not to be distinguished from the indican of *Isatis tinctoria*, which by decomposition with acids yields indigo-blue and glucose, accompanied by some by-products; and that there is no proof of the existence of ready-formed coloring matter in the plant while the latter is living and in a healthy state; and, further, that in all indigo-yielding plants hitherto examined the coloring matter is derived from a glucoside which splits up with great ease into indigo-blue and glucose, and that this glucoside is probably in all cases the same, and identical with the indican of *Isatis tinctoria*.

Solubility of Solids in Gases.—In an investigation undertaken for the purpose of studying the conditions of liquid matter as it approaches and passes the "critical point"—that is, the point at which it changes from the liquid to the gaseous state—Messrs. J. B. Hannay and James Hauston have obtained some very curious and interesting results, which appear to show that solids may be dissolved in gases. The experiments were conducted with such solvents as alcohol, ether, carbon disulphide and tetrachloride, paraffines, and olefines, and such solids as sulphur, chlorides, bromides, and iodides of the metals; and such organic substances as chlorophyl and the aniline dyes were employed. In a preliminary report, the authors explain that, in order to gain some insight into the condition of matter just beyond this critical point, they dissolved in the liquid a solid substance fusing much above the critical point of the liquid, and observed whether, on the latter passing its critical point and assuming the gaseous condition, the solid was precipitated or remained in solution. It was not precipitated, but continued in solution, or rather in diffusion, through the atmosphere of vapor, even when the temperature was raised 130° above the critical point, and the gas was considerably expanded. When the side of a tube containing a strong gaseous solution of a solid is approached by a red-hot iron, the part next the source of heat becomes coated with a crystalline deposit, which slowly redissolves on allowing the local disturbance of temperature to disappear. Rarefaction seems to be the cause of this deposition, because, if the temperature be raised equally, and the volume retained at its original value, no deposition takes place.

An attempt to examine the spectroscopic appearances of solutions of solids, when their liquid menstrua were passing to the gaseous state, was unsuccessful in most cases, owing to the fact that the substances capable of assuming both states gave banded spectra with nebulous

edges. At the suggestion of Professor Stokes, the substance obtained by the decomposition of the green coloring matter of leaves by acids was tried, and this, which yields a very fine absorption spectrum, was found to exhibit the phenomenon in a marked manner whether dissolved in alcohol or ether. This compound is easily decomposed by heat under ordinary circumstances, and yet it can be dissolved in gaseous menstrua and raised to a temperature of 350° without suffering any decomposition, showing the same absorption spectrum at that heat as at 15°.

When the solid is precipitated by suddenly reducing the pressure, it is crystalline, and may be brought down as a "snow" in the gas, or as a "frost" on the glass, but it is always easily redissolved by the gas on increasing the pressure. These phenomena are shown to the best advantage in a solution of potassic iodide in absolute alcohol. "We have then," say the authors, "the phenomenon of a solid with no measurable gaseous pressure dissolving in a gas, and not being affected by the passage of its menstruum through the critical point to the liquid state, showing it to be a true case of gaseous solution of a solid."

Determination of the Organic Purity of Potable Waters.—In a long and valuable paper on this subject, read before the London Chemical Society, Mr. C. M. Lidy, after an extended discussion of the various methods which have been proposed for estimating the organic matter in potable waters, gives the preference to a special modification of the permanganate process, to which he has applied the name of "the oxygen process." This consists in adding to a known volume of the water measured quantities first of dilute sulphuric acid, and then of permanganate solution. The author takes two equal portions of the same water, adds equal volumes of permanganate and sulphuric acid to each, and allows the one to stand one and the other three hours. The amount of permanganate remaining is then measured by means of potassic iodide and sodic hyposulphite. The results are expressed in the quantities of oxygen required to oxidize the organic matters in one gallon of water. The relation of the result obtained in one hour's to that in three hours' time permits a conclusion as to the nature of the organic matter, i. e., its susceptibility to oxidation, or of the relation between the readily oxidizable and putrescent, and the less easily oxidizable or non-putrescent, matters. The paper closes with certain important conclusions, which are summed up, as follows:

The ammonia process furnishes results which are marked by singular inconstancy, and are not delicate enough to allow the recognition and classification of the finer grades of purity or impurity. The errors incidental to the process form an array of difficulties which become infinitely serious, seeing that the range (from 0.05 to 0.1 part per million) between pure and dirty waters is comparatively so small. The combustion process has all the evils of evaporation to encoun-

ter, but the organic carbon estimation is trustworthy; the organic nitrogen determination, however, scarcely yields absolutely trustworthy evidence on which to found an opinion as to the probable source of the organic matter. The oxygen process avoids the errors incidental to evaporation; its results are constant and extremely delicate; it draws a sharp line between putrescent or probably pernicious and non-putrescent or probably harmless organic matter. By it a bad water would never be passed as good. As far as the three processes are concerned, the oxygen and combustion processes give closely concordant results, while those yielded by the ammonia process are often at direct variance with both.

New Elements.—Toward the end of last year M. Marignac discovered in erbia, which up to that time had been considered as the oxide of a single metal, erbium, the oxide of a new element, which he called ytterbium. On March 24, 1879, M. Nilson announced the discovery of another new element, which he had extracted from ytterbia, and which he named scandium. M. Cléve some weeks later found the same metal in the gadolinite and yttritanite of Norway. He has examined its characters, and finds that it occurs only in minute quantities, and forms but one oxide, scandia, which has the formula Sc_2O_3 , and is a perfectly white, light, infusible powder, resembling magnesia. The strongest acids attack it with difficulty, though it is more soluble in acids than is alumina. It dissolves more readily in hydrochloric than nitric acid, and is insoluble in an excess of ammonia or of caustic potash. The specific gravity of scandia is given approximately as 3.8. Its hydrate is a white bulky precipitate resembling hydrate of alumina. The atomic weight of scandium is 45.12. M. Cléve also announces the probable existence of two other new metals in erbia, to which he has given the provisional names of *tholium* and *holmium*.

A New Volatile Alkaloid.—In a preliminary note in the "American Chemical Journal," Mr. W. L. Dudley reports the discovery of a volatile alkaloid in *Spigelia marilandica* or pinkroot, the existence of which he was led to suspect by the circumstance that the peculiar medicinal properties of the plant are apt to deteriorate with time. The several steps of the process by which the new alkaloid was isolated are given by the author, together with some of the more important reactions which serve to distinguish it from other volatile alkaloids. The investigation is not yet completed, "but enough was done to distinctly indicate the presence of a new volatile base, to which I naturally apply the name *spigelina*."

CHEVALIER, MICHEL, a French political economist, born January 13, 1806, died November 28, 1879. He was educated at the Polytechnic School and the School of Mines, and shortly before the Revolution of July, 1830, was appointed engineer in the department of Nord. Ardently embracing the doctrines of Fourier and St. Simon, he wrote several articles for the "Organisateur," and then became editor-in-chief of the "Globe," which was the

organ of the St. Simonists. Upon the outbreak of their schism he followed Enfantin, and took a leading part in the preparation of the "Livre Nouveau." The circular announcing the death of Madame Enfantin, mother of "Notre Père Suprême," was signed by "Michel Chevalier, Apôtre." He was a cardinal in Enfantin's sacred college, and in 1835 was sentenced to twelve months' imprisonment. M. Thiers procured his release at the end of six months, and his dispatch to the United States to study railway and water communications. He wrote a series of letters to the "Journal des Débats," which were afterward collected and published under the title "Lettres sur l'Amérique du Nord" (2 vols., 4th edit., 1842), and attracted much attention. In 1837 he was sent to England to report on the commercial crisis, and upon his return published "Des Intérêts Matériels en France, Travaux Publics, Routes, Canaux, Chemins de Fer" (7th edit., 1843). He was successively appointed Councilor of State in 1838, Professor of Political Economy in the Collège de France in 1840, and Chief Engineer of Mines in 1841; and in 1845 he was elected a deputy from Aveyron. In the Chamber he voted with the Conservative majority, while at the same time he advocated the most liberal industrial ideas in the "Journal des Débats." After the Revolution of 1848, he combated the socialistic theories of Louis Blanc, and in his "Lettres sur l'Organisation du Travail" (1848) defended the old system of political economy, which was then bitterly attacked by the different new schools. He accepted the Empire in 1852, and was appointed an ordinary Councilor of State; but the protectionists prevented his readmission to the Supreme Council of Commerce. He was an ardent free-trader, and took a leading part in negotiating the Anglo-French commercial treaty of 1860, after which he was elevated to the Senate. He presided over the French juries at the South Kensington Exhibition of 1862, and edited the reports on the Paris Exhibition of 1867. After the overthrow of the Empire he took no part in political affairs, which with him were always subordinate to political economy. At the time of the Californian and Australian gold discoveries he advocated a silver standard, but of late years was an opponent of Cernuschi's plan of bimetallism. Among his principal works are: "Cours d'Économie Politique" (3 vols., 1842-'50; new edit. of vol. iii., under the title "La Monnaie," 1866), "Essais de Politique Industrielle" (1843), and "Examen du Système Protecteur" (1851); besides works on the United States, the war in Mexico, ancient and modern Mexico, and on the Isthmus of Panama. Many of his works have been translated into English.

CHILI (REPÚBLICA DE CHILE). The most recent phases of the pending Patagonian question between Chili and her eastern neighbor have been recorded in the article ARGENTINE REPUBLIC in the present volume; but it will

not be uninteresting to insert in this place the following extract from an Argentine publication of undoubted authority, as the genuine expression of popular sentiment in both countries concerning the possible ultimate mode of settlement. The writer says:

We have given considerable thought and attention to the Argentine-Chilian question through its successive phases, and especially to the condition in which it was left at the breaking down of the last two attempts to consummate a treaty. The Fierro-Sarratea treaty provided that arbitrators should settle all questions at issue, the form, nature, and extent of said questions to be arranged by the respective plenipotentiaries of the two republics, provided an arrangement could be reached, in default of which the Court of Arbitrators were to take them in hand and finally dispose of the question from beginning to end. It has puzzled us ever since to see any good reason why such a treaty could not have been accepted by both parties. Chili accepted the arrangement, and by so doing has gained a very significant moral advantage over the Argentine Republic, which hailed its acceptance by Chili with great joy, and whose Executive sent the announcement over the world with congratulatory words, the united press of the land calling it a great victory for peace; but as soon as Chili found itself at war with two nations, the same press and people repudiated it without new light or reason. Subsequent to this a *status quo* arrangement, which involved all elements of danger and trouble, and which afforded no safeguard whatever, was very properly thrown out.

This leaves the matter unsettled from first to last. The original dispute remains. Such aggravating instances as the seizure of the Jennie Amelia and the Devonshire remain without adjustment, and therefore liable at any moment to be brought into the case. By the action before mentioned, this republic has declared that it will not arbitrate the pretensions of Chili, so that there are only three alternatives: 1. Chili must yield her pretensions to any part of Patagonia; 2. The Argentine Government must recede from the position which it has deliberately assumed; or, 3. There must sooner or later be war. Of these alternatives it is exceedingly improbable that the first will occur. Unfortunately, this republic has made no material or vigorous protest to six or seven years of assumed and actual jurisdiction over the disputed territory; and after Chili has exercised the highest functions of government, in capturing ships of friendly powers in disputed waters because of assumed violation of Chilian edicts, she can not recede without so much as making a case in a Court of Arbitration; and, in our opinion, when it comes squarely to an issue between this and war, Chili will accept war. It is idle to deceive ourselves on this point. It may and will probably be delayed; but it will come at last. Chili—we mean the people of Chili—has come to think it has a just claim to the disputed territory. We do not believe it has a just claim, nor do we believe the projectors of the pretension ever thought so; but they have made public opinion in Chili believe so, and so it comes about that, while cabinets may change, the people will not let go unchallenged this claim. The Argentine Government, at the outset, were grievously remiss in not meeting the first pretension with a most vigorous and decided policy, admitting no such pretension for a moment. This laches, to some extent, gives the case a status at law, and now it is too late to assume that position. It would have been the highest wisdom to have proceeded with an arbitrament; but we have decided otherwise. We have now to decide whether we will insist upon our policy. If so, we should lose no time in preparing for war, for it will come; and if we are bent on it, we should take advantage of time and circumstances. We are utterly opposed to the policy of our Government at the present juncture. Inaction is our worst possible course. We should lose no time in getting at the question, and keeping at it until it is

decided what is to be done. Delays were never more dangerous than in this case, and there should be no further procrastination, but prompt and decided action.

The real interpretation of all this is, that the theory, right or wrong, of a lawful claim to the territory in dispute* has, thanks to Argentine supineness, taken possession of the people's minds in Chili; that Chili's prompt and hitherto successful retort on Bolivian usurpation of her asserted rights may be regarded as premonitory of the course she might, under pressure of popular opinion and flushed with one victory, be led to adopt in pursuit of another; and consequently that the Argentine Government should, while Chili's hands are full, lose no time in preparing for all issues.

The Republic of Chili is divided for administrative purposes into seventeen provinces and two territories (*de colonizacion*), the former being subdivided into departments, and these into sub-delegations, each of which is apportioned into districts. The provinces, with their population on January 1, 1878, and their capitals, are as follows:

PROVINCES.	Population.	Capitals.
Aconcagua.....	185,190	San Felipe.
Arauco.....	53,413	Angol. †
Atacama.....	73,405	Copiapó.
Biobío.....	79,622	Los Angeles.
Chiloé.....	67,440	Aneud.
Colchagua.....	153,657	San Fernando.
Concepcion.....	156,635	Concepcion.
Coquimbo.....	161,970	La Serena.
Curicó.....	96,202	Curicó.
Linares.....	120,932	Linares.
Llanquihue.....	50,763	Puerto-Montt.
Maule.....	119,963	Cauquenes.
Ñuble.....	142,224	Chillan.
Santiago.....	877,110	SANTIAGO.
Talca.....	112,537	Talca.
Valdivia.....	82,575	Valdivia.
Valparaiso.....	179,538	Valparaiso.
Territories:		
Angol.....	21,633
Magallanes.....	1,213	Punta-Arenas.
Total.....	2,186,724	

Of this total about 50,000 were Indians.

The foreign population, estimated at 26,635 in 1875, was composed of the following elements approximately:

Argentines.....	7,183
Germans.....	4,673
British subjects.....	4,267
French.....	3,314
Italians.....	1,953
Spaniards.....	1,223
Americans (United States).....	981
Peruvians.....	681
Austrians.....	383
Portuguese.....	319
Bolivians.....	252
Swedes.....	175
Spanish Americans (not classified).....	397
Europeans (not classified).....	638
Asiatics.....	186
Total.....	26,635

The number of males in the republic, according to estimates of 1878, based on the census returns of 1875, was 1,065,169. The cities of

* See "Annual Cyclopædia" for 1875.

† New province.

‡ Formerly *Angeles*.

more than 10,000 inhabitants in 1875 were: Santiago (the capital), 129,807 (or 150,367 including suburbs); Valparaíso, 97,737; Chillan, 19,044; Concepcion, 18,277; Talca, 17,496; La Serena, 12,298; Copiapó, 11,432; Quillota, 11,869. The number of marriages registered in the republic in 1877 was 13,576; of births, 82,295; of deaths, 62,349.

The chief magistrates of provinces are Intendants, those of the departments Governors: both are appointed by the President of the Republic, the former for a term of three years, the latter for two years. The salary of the Intendants is \$4,000 per annum; that of the Governors, \$2,000. The local administration in the departments is vested in municipal corporations elected by the people.

The executive power resides in a President, elected for a term of five years (salary \$18,000 per annum), and a Council of State, composed of the Cabinet Ministers (salary \$6,000 each), three members elected by the Senate, three members elected by the Chamber of Deputies, one member of the courts of justice, one ecclesiastical dignitary, one general, the chief of one of the boards of direction of finance, and one ex-minister or ex-intendant, the last five being appointed by the President of the Republic, who is also President of the Council. The legislative power is vested in a Senate, composed of 37 members, whose term of office is six years each, and in a Chamber of Deputies with 109 members elected for three years (at the rate of one deputy for 20,000 inhabitants). The chief of the judicial power is the President of the Supreme Court of Santiago. The President of the Republic is Señor Don Anibal Pinto (September 18, 1876). The Cabinet is composed of the following Ministers: Interior, Don Domingo Santa María; Foreign Affairs and Colonization, Don Miguel Luis Amunátegui; Finance, Don Augusto Matte; Justice, Public Worship, and Public Instruction, Don José Antonio Gandarillas; and War and the Navy, Don Rafael Sotomayor.

The Chilean army in 1878 was made up as follows: Regulars—10 generals, 10 colonels, 29 lieutenant-colonels, 57 majors, 134 captains, and 249 lieutenants; 5 battalions of foot (2,000 men), 2 regiments of horse (712 men), 1 regiment of artillery (804); total, rank and file, 3,516. Such was the usual strength, being all that was required for service on the Araucanian frontier and the maintenance of military instruction in the country. When war with Bolivia became imminent, the strength of the regular army was raised to 20,000 (distributed in three divisions: 1st, 10,000; 2d, 8,000; 3d, 2,000), which, with the National Guard, increased to 30,000 at the same time, constituted an aggregate force of 50,000. The National Guard in time of peace is composed of 1,200 horse, 21,200 foot, and 1,900 artillery; total, 24,300.

The navy comprises 22 vessels, classified as follows:

VESSELS.	Horse-power.	Canon.	Marines.	Crew.
2 iron-clad frigates.....	2,000	19	572	4,064
4 corvettes.....	1,140	33	525	4,500
1 monitor.....
1 gunboat.....	140	8	105	412
1 steamer.....	100	..	48	240
8 pontoons.....	40	8,000
10 transports (5 of which are mounted with guns)
Total.....	3,380	55	1,820	12,216

The national revenue amounted in 1878 to \$20,443,977, made up as follows: Ordinary receipts, \$14,031,868; extraordinary receipts, \$4,063,918; balance from 1877, \$2,348,191. The expenditures in the same year were as follows: Ordinary, \$16,093,981; † extraordinary, \$566,308; payment of balances from previous year, \$4,715,439; total, \$21,375,728, leaving a consequent deficit of \$981,751. The chief sources of revenue and their mean annual yield are: Customs, \$8,000,000; state railways, \$2,800,000; agricultural tax, \$2,000,000; tobacco monopoly, \$1,500,000. The public debt of Chili stood as follows on December 31, 1878: Foreign debt (exclusively to England), \$35,535,000; home debt, \$27,647,544; total, \$63,182,544. The foreign debt, amounting to rather more than \$35,500,000, being guaranteed by mortgage on state railways, the value of which has recently been estimated at \$38,329,635, commands at all times a fair price in the London market. The rates of interest on seven loans embodying this debt vary from 3 to 7 per cent. On the home debt, for the most part held by bankers and private capitalists, the Government pays interest at rates varying from 6 to 9 per cent. per annum.

The crisis of 1878, the immediate cause of which was a crushing drain on gold and silver, but which was really determined by the failure of the wheat-crop and the depression in the price of copper, Chili's main staples of export, necessitated the emission by the banks of paper money to the extent of \$16,500,000, guaranteed by the state, and redeemable in coin on August 31, 1879, up to which date the banks were authorized by the Government to suspend payments in specie. Before the country had had time to recover from the effects of the crisis, the Government, in the spring of 1879, found it necessary to resort to another emission (\$6,000,000) of paper money, but, having failed in the attempt to negotiate therefor with the banks, resolved upon an issue on its own account. Here follows a translation of the decree to that effect:

SANTIAGO, May 8, 1879.

Having been unable to make with the banks an arrangement compatible with fiscal interests, in accordance with the power conferred upon me by the law of April 12, 1879, I decree:

ARTICLE I. The Ministers of the General Treasury will proceed to sign bills (*notes*) payable to bearer, for \$1,000 each, without interest, and for a term of five

* The Huáscar, captured from the Peruvians. (See PERU.)
† Including the expenses of the executive power.

years. The Ministers will open a book, in which they will register these obligations and their number. The Ministry of Finance will decree monthly the quantity to be emitted, up to the sum of six million dollars.

ART. II. The Treasury bills mentioned will serve as legal tender for the payment of all kinds of obligations, whatever be the date thereof and the terms in which they are drawn, in conformity with Art. I. of the law of the 10th of April last.

ART. III. The chief accountant will sign these obligations, and will keep a register of the number corresponding to each.

ART. IV. The Mint will keep an account of the Treasury bills issued under this decree, up to the sum of six million dollars, and the superintendent will sign and seal them with the seal of the Mint.

ART. V. In each successive year, in forming the estimates of the national expenditures, a sum will be set apart for the quantity to be withdrawn from circulation. The Government will propose to Congress in due time that the product of a new tax, or a part of those already existing, shall be devoted to the redemption of said bills.

ART. VI. The Mint will incinerate annually bills to the amount referred to in the preceding article, and will credit the account ordered to be opened by Art. IV. with the sums set down in the estimates for this purpose. The Ministers of the Treasury are ordered to present to the Mint the bills that are to be destroyed. The operation will be witnessed by the chief accountant, the Superintendent of the Mint, and the Ministers of the General Treasury; and a record of the destruction will be drawn up in triplicate, as a voucher for the acquittances to be made by the three offices respectively that intervene in the emission of the bills.

ART. VII. Until these operations are effected, the Ministers of the General Treasury and the chief accountant will sign provisional bills for 100, 50, 20, and 10,000 dollars each, which will possess provisionally the character assigned to the obligations created under Art. V. of this decree. These provisional bills shall be withdrawn when the General Treasury shall have come into possession of the definitive bills.

PINTO
AUGUSTO MATTE.

The foregoing measure was received with uniform good will. "The bonds," writes an English journalist from Valparaiso, under date of May 24th, "which the Government has begun to float in the market, and which will reach the amount of \$6,000,000, are well received by the public, who are ready to make any sacrifice for the safety of the nation. Chili's fiscal resources are amply sufficient to meet the expenses of the war. The most convincing proof of this lies in the fact that, notwithstanding the large expenses incurred by the army, the Government has limited itself merely to the suspension of the sinking fund of the foreign debt, upon due arrangement made with the bondholders, and has continued to pay the interest on her bonds with the usual punctuality. This will strengthen the credit of the republic, and allow her to recover herself rapidly after peace is restored to the Pacific. The capitalists of Santiago and Valparaiso have petitioned Congress to authorize an income-tax to meet the expenses of the war; this idea has been well received, and in a few days longer will become a reality."

The extensive failure of the crops and reduced price of copper, already referred to, produced a decrease of little less than \$15,000,000

in the value of the exports for 1877, as compared with those of the year immediately preceding. In this falling off the agricultural products figured to the extent of 8.61 per cent.; minerals, 23.61 per cent.; and manufactures, 15.55 per cent. Comparing the value of the exports with the population of the republic, the following relations are observable: Agricultural products, \$3.94 per capita; mining products, \$7.23; manufactures, \$0.12; miscellaneous, \$0.02.

The shipping movements at the various ports of the republic were as follows in 1877:

There are at the present time in Chili 1,015 miles of railway completed and in operation. Of these, 594 miles are the property of the state. The total cost of construction and rolling stock for these lines was \$49,857,037, of which \$38,329,635 stands for the Government lines. Chief among the latter are those from Santiago to San Felipe, from Santiago to Curicó and Palmilla, from Curicó to Chillan, from Chillan to Concepcion and Talcahuano, and from Los Angeles to Angol on the Araucanian frontier. The principal lines belonging to private companies are those from Caldera to Copiapó and Chañarillo, from Copiapó to the mines of Páquios, from Coquimbo to La Serena, and from Coquimbo to Ovalle; besides which there is a number of others chiefly engaged in the service of the silver and copper mines. The more densely populated portion of the republic is intersected by a network of telegraphs wires, of an aggregate length of 3,659 miles, with 68 officers, many of which are in charge of female operators. The Transandine telegraph, from Santiago to Buenos Ayres, was constructed by a Chilean company, whose principal office is at the first-named city. The postal service is conducted through 347 post-offices. The number of letters transmitted in 1878 was 14,921,168, and that of money

orders, 40,000, for an aggregate amount of \$1,014,607.

Article 153 of the present Constitution, promulgated in 1833, contains the following provision: "Public education is one of the chief concerns of the Government." The instruction given in all the public schools, from the *escuelas de párvulos* or infant schools up to the highest university courses, is absolutely free. The amount of national funds expended on this branch in 1878 was little short of a million dollars; in 1876 it reached \$1,125,579. Higher instruction is given in the Santiago University and in the professional courses at the lycées of Copiapó, La Serena, Valparaiso, and Concepcion, comprising the faculties of belles-lettres, jurisprudence, medicine, and mathematics. The number of alumni of the university in 1878 was 1,017. For secondary instruction (*enseñanza secundaria*) there are 16 lycées distributed through the different provinces, and the National Institute in Santiago, in which last 5,596 received instruction. Primary instruction is given in 1,585 schools, 987 of which are supported by the state; the remaining 598 are private. Of the first mentioned, 23 are designated as *escuelas superiores*. The attendance in 1878 was 122,000. In the same year there were 47 night schools supported by the Government and by private associations, with an aggregate attendance of 3,956 adults of both sexes. There are, besides, the following special educational establishments, all supported by the Government: The Section of Belles-Lettres in the National Institute, comprising schools of design, of painting, of sculpture, and of architecture, with 113 pupils; the Conservatory of Music, with 249 pupils, of whom 249 were females; the National School of Arts and Trades, with 83 pupils; the Agricultural Institute, 43 pupils; the Military Academy, 80; the Naval School, 50; the Nautical School, 120; and the school for deaf-mutes, with an average of 50 pupils. Lastly, there are seminaries supported by the bishoprics in the cities of Santiago, Valparaiso, La Serena, Talca, Concepcion, and Aneud, for the education and preparation of youths intended for the Church, the number of whom in 1878 was 958.

Details relating to the origin and declaration of the war between Chili and Bolivia and Peru are given in the article BOLIVIA, in the present volume; and the military and naval operations of the campaign, etc., will be narrated in the article PERU.

CHINA, an empire in Asia. Emperor, Kwang-Su, formerly called Tsacteen, born in 1872, a son of Prince Ch'un, and grandson to the Emperor Tau-Kwang, who died in 1850; he succeeded to the throne in 1875. The area of China proper is 1,554,000 square miles; the population is about 405,000,000. The area of the dependencies is estimated at 3,062,000 square miles, with a population of about 29,580,000; making in all 4,616,000 square miles, with a population of 435,000,000.

A census of the foreign residents taken in 1878 gave the following particulars:

NATIONALITY.	Firms.	Persons.
English.....	220	1,958
American.....	85	420
German.....	49	884
French.....	9	224

Japanese.....	9	841
Sundry, uncertain.....	6	841
Total.....	851	8,814

The total population of the treaty ports was estimated at 4,990,000.

The returns of trade at the treaty ports in 1878 were as follows (1 Haikwan tael = \$1.346):

	Haikwan taels.
Imports.....	70,804,027
Exports.....	67,172,179
Total.....	137,976,206

This total is less than in 1877 by 2,702,712 taels. The decrease in 1878 was mainly in the imports. The import of cotton goods declined from 18,800,232 taels in 1877 to 16,029,231 taels in 1878. The customs revenue in 1878 gave a very favorable result, being 12,483,988 taels. Of the new ports, Wu-hu and I-chang show a considerable rise, the trade at the former advancing in 1878 to 3,219,476 taels, or more than double the amount in the preceding year, and I-chang showing a rise from a very small sum to 71,014 taels. The trade at Kiungchow has also increased, though to a small extent; but at Wenchow it has slightly declined, and at Pakhoi no trade at all appears to have been carried in foreign vessels in the year 1878.

The importation of opium into China is gradually increasing, as well as the cultivation of opium in the country itself. The imports from 1871 to 1878 were as follows (1 picul = 133 lbs.):

YEARS.	Piculs.	YEARS.	Piculs.
1871.....	59,670	1875.....	66,461
1872.....	61,193	1876.....	68,042
1873.....	65,797	1877.....	69,052
1874.....	67,468	1878.....	71,492

Most of the opium finds its way into China by Hong-Kong, and the greater portion of it is of the Malwa kind, the remainder being from Patna, Benares, and other parts of India. The trade in opium is gradually passing out of the hands of foreigners into those of natives. The agencies of the large opium-houses in Shanghai, which existed until quite recently, were withdrawn one after the other, and were replaced by guilds of Chinamen, who, instead of entering into a ruinous competition with the large foreign houses, have in several cases paid them a good sum to close their agencies.

The influence of the Chinese Government extends far beyond its own dependencies over other native states of Asia. An embassy from the King of Nepal to Peking last year called attention to the tributary relation in which the King of Nepal (or, as the Chinese call him, the King of the Ghoorkas) places himself with regard to the Chinese Emperor. Nepal is the largest of the so-called Himalaya states which line the northern frontier of British India, and, though entirely independent, are sometimes classed among the tributary states. Its area is about 56,700 square miles, and its population is estimated at 3,300,000. The exact relations between Nepal and China have hitherto been but imperfectly known. An embassy, it was said, was sent every five years, but no trustworthy accounts of them were published. Early in 1879 the new embassy arrived in the frontier province of Sechuen. They bore a letter from the King of Nepal dated in July, 1878, and worded as follows: "A dweller in a remote corner of the earth, in a distant and barren land, the King turns with longing toward the civilization of the Middle Kingdom. It has been his practice to gain glory to himself by the dispatch of an envoy, who was admitted to the presence, and he has been entirely dependent upon the rays of his august Majesty's awe-inspiring influence and prosperity for securing peace and tranquillity in his borders." By order of the Chinese Government, the tribute and letter of the ambassador were, on his arrival at Chingtu, the capital of the province, taken charge of by an officer specially appointed for the purpose, and forwarded to Peking.

In Burmah, also, the Chinese influence is a far stronger and more active political power than the British. The King is a submissive vassal to his feudal lord in Peking, and he courts the good will of the Chinese frontier generals and governors with as much assiduity as if he were dependent on it for his existence.

The establishment of the first steam cotton-mill in China is regarded as another stage in the commercial development of the empire. Being one of the projects of the young China party of progress, the first mill is, however, to be a semi-governmental institution, with an imperial edict for a charter and mandarins for foremen. The prospectus of the company is a lengthy document consisting of copies of official correspondence between the promoters and the Governor-General, Li-Hung-Chang. The prospectus begins by reciting that for China to be powerful and wealthy there are two great requisites: Chinamen should export articles which foreign countries require of China, and they should manufacture themselves those articles which China requires of foreign countries. Scores of millions of taels are sent out of the country to pay for imported cotton piece-goods, and if Chinamen wove these in their own mills this terrible leakage in the

resources of the country would be stopped. Accordingly, it is proposed to establish a cotton-weaving company in Shanghai to work the native raw cotton, which the promoters assert to be equal or superior to Indian cotton, into yarn, and to weave it into cotton cloths. For the first three years English workmen will be engaged to teach the Chinese factory-hands, and at the end of that time, if the native workpeople are thoroughly expert, the English teachers will be dismissed. If, however, the Chinese workmen have not learned the art of weaving in that time, the Englishmen are to be fined. On all piece-goods woven by foreign processes in China shall be levied a tax equal in amount to the import tariff on the same class of goods of foreign make. The factory is to have 800 looms, capable of producing from raw cotton 260,000 to 450,000 pieces of finished cloth. There is to be no work done on Sundays. It is estimated that 13,000 piculs (of 133 lbs. each) of raw cotton and 2,000 piculs of starch and clay will be worked yearly. On the lowest scale of production, it is calculated that a profit of 30 per cent. will be made. The capital of the company is £125,000, and the annual charge for the wages of the hands is set down as £2,000.

The mineral wealth of China includes diamonds in the district of Shantung, on which interesting information was published last year by M. Fauvel. The stones are mostly very minute, varying in size from a millet-seed to a pin's head, though occasionally larger ones are found. One as large as a pea was brought to Chefoo and sold to a mandarin there. A peculiar mode has been adopted for collecting the diamonds. Men wearing thick straw shoes walk about in the sands of the valleys and streams of the diamond mountains of Ching-kangling, about fifteen miles southeast of Yichow-foo. The diamonds, which are ragged and pointed, penetrate the straw and remain there. The shoes are then collected in great numbers and burned, the diamonds being searched for in the ashes. As is the case with amethysts and rock-crystal in the Lao-Chan, the priests in the temples of Ching-kangling are the principal dealers in these small diamonds. From them they are bought by glaziers at the large fairs held every year at Chuchow, Laichow-foo, and Hwang-hsien. They are not to be found in shops, and are packed in quills.

The insurrection which toward the close of 1878 broke out in the southern province of Kwang-si, under the leadership of Li-Yung-tsai* (see "Annual Cyclopædia" for 1878, p. 101), assumed larger dimensions at the beginning of the new year. Before Li took up arms against the Government, he addressed a letter to the Tartar General of Canton, explaining the nature and reason for the steps he was about to take. He states therein that he was on bad terms with the Governor of Kwang-si, who

* In some reports the name is given as Li-Yung-Chol.

treated him like a common fellow and sent him to Canton to be rid of him. He had no money to pay his traveling expenses, could not go to Canton, and, as he had been generally badly used by his official superiors, he intimated his intention of seeking the throne of the kingdom of Anam, to which he claimed to have an hereditary right. He asserted that Anam, under its present government, was a constant menace and danger to China, and this state of things he proposes to put an end to by making himself king. When Anam comes into his hands, he will without the least hesitation pay the tribute which it has been customary for Anam to pay, and freely acknowledge the supremacy of the Ta-Ising Empire. In October, 1878, Li, along with a famous Anamese rebel, gathered together a number of disaffected and unpaid soldiers, set out to recover the throne of his fathers, and notified the Viceroy of Canton, Liu-Kunyi, that his designs were not treasonable to China. He thereupon proceeded to capture the Chinese city of Tai-Ping-foo, forty miles from the frontier of the Anamese province of Tonquin, and to endear himself to the population by freeing them from all obligation to pay taxes—acts somewhat inconsistent with his manifesto to the Tartar General. The Viceroy at once denounced him as a dangerous character, and, thinking his real aim was to make a descent on the turbulent but impoverished provinces of Kweichow and Yunnan, sent three thousand men under four mandarins after him. Seventy-five per cent. of the expedition and three of the commanding officers at once went over to the rebels; and Li's force, thus augmented, proceeded to capture more Chinese towns. Eventually he moved toward the Tonquin frontier. The Viceroy of Tonquin sent an urgent appeal to the Viceroy of Canton to save him from the rebel, but the Chinese replied that they could do nothing without the imperial sanction. The Imperial Government of Peking merely sent a command that the insurrection be put down at once, and declared that the Viceroy of Canton and the Governor of Kwang-si would be held responsible for letting a turbulent rebel like Li escape. So an expedition by sea, by way of the fort of Haiphong, was determined on, and in the beginning of December, 1878, a fleet of junks, crowded with soldiery and escorted by three gunboats of foreign type, sailed from Canton. As soon as intelligence of this expedition reached Li, who in the mean while had occupied the southwest districts of Kwang-si and the two frontier divisions of Tonquin, he marched toward the province of Yunnan, no opposition being offered to him anywhere. As soon as the government of Hong-Kong was apprised of the outbreak of the insurrection, the Governor, Mr. Pope Hennessy, forbade the export of arms and munitions of war from Hong-Kong to the mainland. The insurrection was reported at an end in September, although Li still remained at large.

His lieutenant, his family, and his entire stores had fallen into the hands of the Government troops.

Simultaneously with the insurrection of Li, another rebellion began toward the close of 1878 in the island of Hainan, which belongs to the province of Canton, has an area of 20,000 square miles, and a population of about 2,000,000. The rebellion seems to be a rising of the Hakkas. They are Chinese settlers in the south of China, whose ancestors emigrated many centuries ago from the populous provinces of Central and Northern China, and have never been absorbed by the local populations among whom they took up their abode. They do not speak the Cantonese dialect of Chinese, but a *patois* of mongrel origin; nor do they, except in rare instances, intermarry with the Chinese of the soil. Some dozen years ago a large number of them, wearied of constant bickerings with their irreconcilable countrymen of the south, migrated to Hainan and settled on government land there. They increased so rapidly that the lands assigned to them are now insufficient for their wants, and this insufficiency of territory and the hostility of the Chinese are said to be the chief causes of their rising. In October, 1878, they took up arms to the number of several thousand, and threatened the capital, Kiungchow, which is one of the treaty ports, and has a population of about 200,000. Hainan is a rich, and on the seaboard districts a fairly prosperous island, which since its opening to foreign trade has developed a most promising trade with Hong-Kong and other ports. They committed horrible atrocities along their line of march, and in January, 1879, defeated the imperial troops within forty miles of Hoihow, the port of Kiungchow. The Tao-tai himself, four officers, and five hundred soldiers were among the lost. The rebels, however, were repeatedly defeated afterward, and in August finally laid down their arms outside the city of Kiungchow, after mercy had been promised to them. Numbers were deported to Wychow, Hoi-On, and other places, in order to scatter them and prevent their future concentration in force; but none, it is said, were executed. The total number of imperial troops dispatched to Hainan to quell the outbreak was twelve hundred, and of these about one hundred had fallen in different engagements with the insurgents. The latter are said to have lost upward of a thousand men.

The province of Kulja, which for a number of years had been administered by Russia, was restored to China in the latter part of the year. In 1871 the Russian Minister at Peking was instructed by his Government to inform the Chinese authorities that the Russians had been compelled to occupy the province of Kulja by the disorders prevailing among the Mohammedans there, and also by the growing strength of the Atalik Ghazi south of the Thian-Shan, both enemies of the Chinese; but his Government, he said, had no intention of contesting

their rights, and whenever a Chinese army should be sent of sufficient strength to maintain order in the province, the Czar would order its restoration to China. During the time that has since passed the province recovered somewhat under Russian rule from the depression into which it had sunk during the Mohammedan rebellion. Very little was heard of the Chinese in this region until the close of 1876. With the campaigns against the Tungani and against YakooB Beg, they began to reassert their claims to their territory in Central Asia; and after the overthrow of YakooB Beg's power they claimed the fulfillment of the Czar's promise. But, in spite of the diplomatic representations at St. Petersburg, and the menacing attitude of Tso-Tsung-Tang and his army at Manas and Aksu, the Russian authorities, both at home and in Asia, for eighteen months refused to give the Chinese any satisfaction. A Russian commission was finally appointed to draw up a treaty, and in September it presented its report, containing the draft of a treaty, of which the following are the most important points: First, Russian merchants will be admitted to all the interior markets of China. Secondly, China will pay Russia 5,000,000 rubles. Thirdly, Russia is to receive part of the steppe in the upper regions of the Irth River beyond the Zaisan Sea. The proposed frontier will begin from the fortress of Saur and be continued past the Bostal and Kanas Seas. On the other side of Kulja the frontier is drawn from a point a little more to the south-east of Kanas to the town of Usuntau, from which it runs eastward to the point where the old frontier is cut by the new one. Thus the Tekes River Valley is to remain Russian territory—that is to say, about a fifth part of Kulja. This valley was once a Chinese possession, and was surrendered by treaty to Russia twenty years ago. The possession of this strip of territory will enable Russia to exert a very material influence upon the progress of events both in Kulja and in Eastern Turkistan. She will continue to hold in her hand the means of re-occupying the province if such a course should in future become necessary. The clauses relating to commerce will undoubtedly place in her grasp much of the trade of Western China; and if the Chinese should place restrictions in the way of Russian merchants, an excuse would be available to revert to the present condition of things. In spite of these disadvantages the treaty was accepted by the Chinese.

In May, Hakim Khan Tufi, the pretender to the Kashgar throne, quitted his exile on Russian territory, and, entering Kashgar with a large number of followers through the Pamir, endeavored to raise a rebellion against the Chinese. This step was taken by Hakim Khan in order to profit by the angry excitement then reigning among the Mussulmans of Kashgar on account of the burning of the remains of YakooB Beg, their late ruler, by order of the Chinese. In consequence of the rebellious at-

titude of the Mussulmans of Kashgar, and their openly expressed regrets at the loss of their beloved YakooB Beg, the Chinese authorities ordered the bodies of YakooB Beg and of his son, Ishana Beg, to be disinterred and publicly burned to cinders. The ashes of YakooB were, moreover, sent to Peking. Such a proceeding only served to give new force to the existing discontent, and a conspiracy among the Mohammedans was the result. Hakim Khan endeavored to take advantage of this conspiracy, but the Chinese troops put a speedy end to the troubles.

At the time that Eastern Turkistan again passed into the hands of China, there were taken prisoners four sons, two grandsons, two granddaughters, and four wives of YakooB Beg. Some of these were executed and others died; but in 1879 there remained in prison at Lanchan-foo, the capital of Kan-suh, Maiti Kuli, aged fourteen; Yima Kuli, aged ten; K'ati Kuli, aged six, sons of YakooB Beg; and Aisan Ahung, aged five, his grandson. These wretched little boys were treated like state criminals. They arrived in Kan-suh in February, 1879, and were sent on to the provincial capital to be tried and sentenced by the Judicial Commissioner there for the awful crime of being sons of their father. In the course of time the Commissioner made a report of the trial, which he concluded as follows:

In cases of sedition, where the law condemns the malefactors to death by the slow and painful process, the children and grandchildren, if it be shown that they were not privy to the treasonable designs of their parents, shall be delivered, no matter whether they have attained full age or not, into the hands of the imperial household to be made eunuchs of, and shall be forwarded to Turkistan and given over as slaves to the soldiery. If under the age of ten, they shall be confined in prison until they shall have reached the age of eleven, whereupon they shall be handed to the imperial household to be dealt with according to law. In the present case, YakooB Beg's sons Maiti Kuli, Yima Kuli, and K'ati Kuli, and the rebel chief Beg Kuli's son, Aisan Ahung, are all under age, and were not, it has been proved, privy to the treasonable designs of their parents. They have, therefore, to be handed to the imperial household to be dealt with in accordance with the law, which prescribes that, in cases of sedition, the sons and grandsons of malefactors condemned to death by the slow and painful process, if it be shown that they were not privy to the treasonable designs of their parents, shall, whether they have attained full age or not, be delivered into the hands of the imperial household to be made eunuchs of, and shall be sent to Turkistan to be given as slaves to the soldiery. But, as these are rebels from Turkistan, it is requested that they may, instead, be sent to the Amoor region, to be given as slaves to the soldiery there.

As Maiti Kuli is fourteen, it is requested that he may be delivered over to the imperial household as soon as the reply of the Board is received. Yima Kuli is just ten, K'ati Kuli and Aisan Ahung are under ten; they have, therefore, to be confined in prison until they attain the age of eleven, when they will be delivered over to the imperial household to be dealt with according to law.

Kuo-Tung-tao, formerly Chinese Minister in England, returned to China in April, 1879, having been recalled by his Government. He

was denounced, it appears, by a member of the body of censors, in a memorial to the throne, which, while accusing him of too great admiration for England, of being on bad terms with his assistant envoy, and of having written an indiscreet account of his voyage to England, based its principal accusations against him on the criticisms of his policy and social demeanor which have from time to time appeared in a Chinese newspaper, called the "Shên-Pao," published at Shanghai, and owned by a British subject. Immediately on his arrival at Shanghai, the Minister set to work to take the opinion of counsel in relation to bringing an action for libel against the "Shên-Pao," and intimated his intention of using every remedy, legal as well as political, against a journal which had done him such wrong. The steps taken by him induced the Shanghai paper to retract all it had said against Kuo, and the latter accepted the apology as sufficient. The Shanghai correspondent of the London "Times" calls Kuo "the most intelligent Chinaman that Englishmen are ever likely to see accredited to England, and the best and rarest type of the Chinese official." Tsêng Howyeh, son of Tsêng Kuo-fan, the famous Viceroy of Nanking, has been appointed, in place of Kuo, Chinese Ambassador to England. He will have two secretaries of legation, one stationed at London and one at Paris, two attachés, several interpreters, and a number of servants—about forty persons in all.

In May and June General Grant paid a visit to China. At Tientsin, on May 20th, a grand

foreigner. Calls were exchanged between him and General Kung.

The "Shên-Pao" of Shanghai, the leading native paper in China, published an edict issued by the two Empresses-Regent of China which systematized and reorganized the diplomatic service of the empire in foreign countries. Henceforth China will be represented abroad by ambassadors as well as envoys, and will have consuls-general, consuls, etc. The monthly salaries are fixed as follows: For ambassadors, £350; for envoys extraordinary, £300; for resident ministers, between £200 and £250; chargés d'affaires and consuls-general, £150; consuls, £125; and vice-consuls, £100. The resident medical officer on an embassy will receive a monthly salary of £50. These salaries are to be paid through the custom-house at Shanghai. The Chinese diplomatic representatives will also be repaid all expenses to which they may be put for lodgings, traveling, diplomatic dinners, horses, and carriages. Henceforward every ambassador and envoy will be bound to telegraph direct to the two Empresses in all cases of emergency or pressing importance. But the regulation that no ambassador, envoy, or consul-general should be continued in the same post for longer than three years is still retained as a fundamental principle of Chinese diplomacy.

After the subjugation of the rebels in Yunnan, the Chinese Government set to work to convert the Mohammedan rebels to the state religion. The Yunnanites had hitherto withstood persuasion, theological argument, and torture with stolid resolution; so the mandarins intrusted with the task of weaning them from their dogmatic errors adopted the cunning expedient of making it worth their while to become idolaters. A recent imperial decree ordained that every Mohammedan publicly renouncing his faith should be exempt from taxation, and that this privilege should be extended to his descendants for the period of one hundred years. The actual convert, moreover, should be distinguished by a mark of imperial favor—a peacock's feather or cap-button, accord-

CUSTOM-HOUSE, SHANGHAI.

banquet was given to him by the Chinese authorities in the principal native temple. The Viceroy of Chihli, the Commander-in-Chief and Grand Secretary Li-Hung-Chang, presided. At Peking he received attentions such as had never before been bestowed upon any

ing to his condition in life. Meanwhile, the Chinese Government caused five thousand gods, of every orthodox variety, to be manufactured for the especial benefit of the Yunnan-metropolis alone. These deities were set up by the police in the porches and court-

yards of every house in the town, and the heads of families were compelled to burn incense once a day before their unwelcome Lares, as well as to provide them with new clothes from head to foot at certain stated periods. The Chinese police is instructed to "look up" any householder proving a defaulter in the performance of these obligatory rites, and to stimulate him to the fulfillment of his duties by every convenient inducement.

The desire of the Chinese Government to reestablish its rule over all territory that had ever been under its dominion, which had been manifested in the past years in the cases of the Tungani, Kashgaria, Kulja, and even in Burma and Nepal, also showed itself in the case of the Loochoo Islands, which were claimed and occupied by Japan. Although the authority of China in these islands had long been merely nominal, it resented their occupation by Japan, and serious difficulties between these two countries seemed to be imminent. (See JAPAN.)

A treaty was concluded with Spain relating to the condition of the Chinese in Cuba, and a special embassy was sent to that island. (See SPAIN.)

Twenty-six Protestant missionary societies have agents and churches in China. Ten of them are American, one is Canadian, thirteen are British, and two are Continental societies. The missions have grown very fast within a few years. The most careful estimate that has been made of their aggregate force showed that in 1877 there were connected with them 91 stations, 431 out-stations, 312 churches, 478 missionaries and missionaries' wives, and 13,035 communicants. Later reports from only a part of the societies make the number of missionaries and assistants not less than 938, and of communicants 16,335, showing an increase of more than 10,500 communicants since 1868, when the number was 5,743, or of about one thousand a year. The principal denominations are represented in the missions, each by two or more societies, as follows: Baptist, 85 missionaries and assistants, 1,819 members; Congregationalist, 53 missionaries and preachers, 2,986 members; Episcopal and Anglican, 173 preaching agents, 1,330 members; Methodist, 149 missionaries and assistants, 2,860 members; Presbyterian (with which is included the Reformed Church in America), 213 preachers, 2,687 members; undenominational missions, 99 agents, 905 members; Continental Lutheran and Reformed missions, 79 missionaries and assistants, 1,748 members. Educational work has not been prosecuted by the missionaries as rapidly as the organization of churches, and appears less prominent than do the educational efforts of missionaries in other fields. The reports to the Shanghai Missionary Conference in 1877 gave 207 boarding and day schools for boys, and 120 for girls, with a total of 5,680 pupils; 20 theological schools, with 231 students; 115 Sunday-schools, with 2,605

scholars and 290 school-teachers. Missionaries have been employed as professors in the Imperial College at Peking, and the Protestant Episcopal Church is endeavoring to establish a missionary college at Shanghai. One thousand and seventy-six religious and more than two hundred secular publications, in the general language and eleven dialects, were issued from the missionary presses between 1810 and 1875. Sixteen missionary hospitals reported 3,730 in-patients treated and 87,505 applications from out-patients in 1876, besides which 41,281 cases were administered to in the same year in 24 missionary dispensaries.

COLLINS, Judge THOMAS WHARTON, born in Louisiana, June 23, 1812, died November 3, 1879. He was admitted to the bar in 1833. Though self-educated, he was a man of great attainments. He was a remarkable linguist. In 1834 he was appointed French and Spanish translator to the State Senate. After this he edited the "True American." He was Chief Deputy Clerk of the United States District and Circuit Court of Louisiana from 1836 to 1838; District Attorney for New Orleans from 1840 to 1842; Judge of the City Court of New Orleans from 1842 to 1846. In 1852 he was a member of the Constitutional Convention. In 1856 he was elected, by a majority of 5,000 votes, Judge of the First District Court of the Parish of Orleans. At the close of the war in 1865 he resumed the practice of the law. In 1867 he was made Judge of the Seventh District Court, which position he retained until that court was abolished. He was the author of "Humanities," "The Eden of Labor," and of various political, scientific, and ethical essays.

COLOMBIA (ESTADOS UNIDOS DE COLOMBIA).* The President of the Republic is General Trujillo (inaugurated April 1, 1878); and the Cabinet is composed of the following Ministers: Interior and Foreign Affairs, Dr. Ancizar (1879); Finance and Public Works, Dr. Wilson (1879); Treasury and National Credit, Señor S. Camacho Roldan; War and Marine, Señor M. Hurtado.

The chief magistrates of the nine States are: Antioquia, General T. Renjifo; Bolivar, Señor B. Noguera; Boyacá, Señor J. E. Otalora; Cauca, Señor M. Garecs; Cundinamarca, Señor D. Delgado; Magdalena, Señor L. A. Robles; Panamá, Señor B. Correo; Santander, Señor M. A. Estrada; Tolima, Dr. J. Manique. There is at present no Colombian Minister accredited to the United States. The Colombian Consul-General in New York is Señor Miguel Salgar. The United States Minister Resident at Bogotá is Hon. E. Deichman.

The strength of the Federal army in time of peace is 3,000; in time of war, each of the States is required to furnish a contingent of one per cent. of its population.

The subjoined table exhibits the amount and

* For territorial divisions, and detailed statistics concerning area, population, etc., reference may be made to the "Annual Cyclopaedia" for 1874 and 1877.

several branches of the Colombian revenue for 1878-'79 :

REVENUE.	
Customs	\$4,025,112
Salt monopoly	1,451,529
Panamá and Sabanilla Railways	354,923
Post-Office	84,524
Telegraphs	29,060
Mint	11,613
National property	9,508
Church property	27,477
Sundries	848,551
Total	<u>\$6,572,292</u>

In 1877-'78 the following were the

EXPENDITURES.	
Ministry of the Interior (\$240,024) and of Foreign Affairs (\$63,700)	\$308,724
Ministry of Justice	27,832
" of Finance	1,963,607
" of War and Marine	1,138,160
National debt	1,372,994
Ministry of Public Works	2,821,433
Treasury Department	76,034
Public Instruction	891,120
Pensions	116,220
Post-Office	433,986
Total	<u>\$5,085,110</u>

It should here be observed that in the expenditure of the Finance Department is included an item of \$813,177, amount of the cost of collection of the revenue, or rather more than one eighth of the entire national income! On comparing the revenue for 1878-'79 with that for the year immediately preceding, an increase of \$2,033,992 is observable in the former. The year 1877-'78 was marked by a deficit of \$2,433,113.

In the budget for 1878-'79, the revenue and expenditures were estimated at \$5,998,644.84 and \$9,622,709.81 respectively; a state of things which, had it become real, would have saddled the country with a deficit almost equal in amount to the revenue itself, and embarrassed the Government beyond all hope of immediate recovery, or indeed of relief otherwise than by resorting to a new loan, which, under existing circumstances, could not have been negotiated without considerable sacrifice. As it is, President Trujillo in his message to Congress frankly stated that the financial situation was not good, and that he saw no probability of improvement before peace should be reestablished throughout the country, and more serious and united efforts made toward the development of the sources (abundant in themselves) of national wealth. In order to the attainment of this end, "it is indispensable not to damp the public spirit of the people by inaction, or suffer the destruction of the results of labor, but to direct the endeavors of the State authorities and of Colombian capitalists in one common channel with those of the Federal Government." To obviate the serious difficulties attendant upon a deficit, the President found it necessary to avail himself of the powers with which he was invested by the law (No. 60) of 1878 to order, in just such an emergency as the one referred to, the emission of Treasury notes (*pagarés del Tesoro*) to the amount of \$2,500,000. Means

were used to effect certain payments which, like those on account of the foreign debt, etc., have to be made in coin; and it was suggested as expedient to unify the various public obligations, at present so confusing from their variety in the market as "not only to prejudice public interests, but also to affect at times the good name of the Government itself." Financially speaking, however, the Trujillo Administration has not proved less successful than those immediately preceding it; bonds payable out of the proceeds of the custom-house and of the salt monopoly have been redeemed to the amount of \$1,004,431; and other liabilities, contracted in part by former Administrations, have been liquidated to the amount of \$1,586,614; the disbursements in coin on account of the foreign debt having reached \$745,388.60, and those for ordinary current expenses, \$1,509,691.60, during the same period.

As seen by the foregoing tables, the yield of the customs department for the year 1878-'79 was \$4,025,112, or \$1,025,112 larger than that for the year 1877-'78; but a considerable falling off is apprehended in this branch of the revenue consequent upon a sensible decrease in the exports, while the imports scarcely experienced any change either in quantity or value—a state of things regarded as bidding fair to continue for one or two years at least. One inconvenience immediately attendant upon such a state would be the necessity for merchants to resort to specie shipments to cover their balances abroad; besides which there would be the possibility of a greater evil, dependent on the first, namely, a monetary crisis which might well assume the proportions of a real disaster if added to the already complicated situation. The attention of the Congress was earnestly called to these matters. A revision of the tariff was suggested, together with the expediency of requesting merchants to communicate to the members of the Legislature their views on that important subject. With a view to the extension of the foreign trade, it was recommended that the Executive should be empowered to make treaties with the different friendly commercial nations for the admission, duty-free or at much lower rates of duty than those now in existence, of such Colombian staples as rice, sugar, coffee, hats, etc., with similar concessions on the part of Colombia regarding imports from those countries.

The national debt in 1878 stood as follows:

Foreign debt	\$10,392,500
Home debt	5,606,804
Total	<u>\$15,999,304</u>

The imports in 1877-'78 reached a total value of \$8,708,797, and the exports, of \$11,111,197, against \$7,328,928 and \$14,477,897, respectively, for the year immediately preceding.

The exports in 1877-'78, in regard of destinations, were distributed as follows:

COUNTRIES.	Values.
France.....	\$1,732,708
Germany.....	3,342,875
Great Britain.....	3,389,397
United States.....	1,624,673
Various.....	871,549
Total.....	\$11,111,197

The more important articles sent out of the country in the same year, and their values, were as follows:

COMMODITIES.	Values.
Gold and silver in bars, dust, or coin....	\$3,683,246
Cinchona.....	2,470,246
Coffee.....	1,504,075
Hides.....	810,119
Tobacco.....	564,097
Hats.....	149,440
India-rubber.....	175,252
Cotton.....	139,134

The entries at the various ports of the republic in 1877-'78 comprised 342 steamers, with an aggregate tonnage of 437,044; and 847 sailing vessels, with an aggregate of 42,756 tons.

Coffee culture in the State of Panamá, particularly in the district of Chiriquí, bids fair to prove most satisfactory. The first regular shipment, made in December, 1879, was of 7,140 lbs., being the first crop of an estate the yield of which was expected to reach 300 quintals (of 100 lbs. each). The coffee was represented as of excellent quality, fine color, and delicious aroma, and evidencing careful preparation for market. Indeed, the superior quality and regular fullness of the bean afforded proof of the "entire adaptability of the soil and climate of Chiriquí for the production of a class of coffee second to none on the American Continent."

The article COLOMBIA in the "Annual Cyclopædia" for 1878 contains (page 104) some interesting particulars concerning the export trade of the republic.

Referring to railway matters, President Trujillo, in his message already alluded to, expressed a doubt that Mr. Ross, the contractor of the line which is to place the three northern States of the Union in communication with the Atlantic seaboard, would be able to carry his project into effect. The time fixed upon in the contract for the commencement of the work had expired, and the Executive recommended the raising of a loan of \$2,500,000 for the prosecution of the work. Several railways and other enterprises, for which a Mr. F. T. Cisneros is contractor, were spoken of in commendatory terms. The progress in each was satisfactory. Steamers for the navigation of the upper Magdalena were being built at New York, and would be ready for service within a few months. The benefits of cheap and rapid transport thus secured would be shared by an extensive section of country containing, among other natural sources of wealth, important copper and coal mines. The Antioquia and Cauca Railways were progressing satisfactorily, and the intention was announced

of sparing no efforts to push on the work to completion at an early day.*

The Legislature of the State of Bolívar passed a law tending to encourage the navigation of the Dique and Magdalena Rivers, and offering a subvention and a guarantee of 7 per cent. interest on a capital of \$200,000 to any company willing to embark in the enterprise.

The President's message contained some brief remarks on new mining interests of considerable promise. Satisfactory reports had been made of a survey of the coal mines of the valley of Dupar and of the Goajira Peninsula. The San Andrés coal mines in the State of Bolívar were represented as of great value, and the assurance given that their development would prove most profitable to the country. A company had been organized for the working of the Samacá iron mines in Boyacá, on which American engineers had reported favorably. General Trujillo suggested the expediency of giving Government aid to the enterprise, either by purchasing stocks or by granting a subvention to the company. The Torrá gold mines were spoken of, on the authority of a competent engineer, as being as rich as any that ever excited the cupidity of the *conquistadores*. Measures were being adopted for their development.

But more than even the building of new railways or the organization of companies for the working of her mines, the navigation of her rivers, and the extension of her commercial relations abroad, Colombia needs the establishment of peace and order at home and the permanent conciliation of State and Federal interests. The revolutionary era, reopened a few years ago after a lull hitherto unexampled for its duration in the annals of Spanish America, has since been perpetuated by party strife and rebellions aimed, now at one or other of the local governments, now at the Central Government, and causing in some instances considerable effusion of blood. An atrocious episode of one of these outbreaks was reported as follows from Ocaña on September 11, 1879:

Horrible butchery in Bucaramanga! The day before yesterday the Commune was proclaimed in that city, and, headed by the Alcalde, Pedro Collazos, took full possession. The German Consul, Schrader, and Messrs. Obdulio Estevez and Eduardo Mutiz, were assassinated. Another German was seriously wounded. Several stores were destroyed. The greatest consternation prevails among people possessing any means. The Communists are entrenched and hold two *cuarteles* (military barracks). General Wilches will attack them to-day. Families are fleeing to the mountains for safety. Stores and dwellings are completely sacked and destroyed. It is not known in Barranquilla whether the movement is purely communist, or the beginning of a revolution against the State government. In either case it will no doubt be promptly suppressed and vigorously punished.

The occurrence of election riots in Cundinamarca, the capital of which State is Bogotá, elicited from President Trujillo remarks in his

* For railways and telegraph lines already in operation in Colombia, see "Annual Cyclopædia" for 1877.

message on the absurd position of a Government which, according to the Constitution, is bound to preserve peace, secure its servants in the exercise of their functions, render effective the guarantees for the safety and well-being of its citizens, and the immunities and prerogatives of diplomatic agents resident in the capital, and yet is not permitted to call the sectional government to account for the failure or otherwise of its efforts to restore and maintain order. This anomalous state of affairs has received the attention of each President who has at any time been opposed by the government of Cundinamarca, and various States have petitioned to set apart a section of territory for the use of the national Government; but the evil still continues. Colombia has no capital. Its Federal head is located in a city where the municipality has more absolute authority than the Executive of the nation. A very important paragraph is that relating to the means of conciliation adopted by the Government toward those who were lately in rebellion against its authority. Amnesty is declared, and the banished may return to resume the occupations, associations, and, in many cases, the properties which their own acts destroyed or placed in peril. Sales of confiscated properties have been stopped, and they have, as far as possible, been returned to their owners, who are guaranteed protection under the laws.

"The triumph of the Independent party," writes a Colombian journalist in November, 1879, "in almost all the States of the Union—a party (the Liberal) whose platform is respect for all rights, strict and honest administration of all departments, and individual guarantees to citizens of all political parties—is an evidence that the country is about to enter upon a course which will lead to days more happy and bright with promise for the future than those through which the republic has so lately passed. Peace is necessary to prosperity and progress, and the great natural wealth of the country but awaits a period of prolonged tranquillity for an amazing development. A large proportion of the public men of all parties are disposed to rally around the government of Dr. Núñez, the President-elect, and lend their assistance in the great work of the regeneration of the country. Every friend of Colombia will hope sincerely that such happy auguries may be fully realized."

The candidates for the Presidency were four: Dr. Rafael Núñez, above mentioned, Sr. Tomás Renjifo, Sr. Camargo, and Sr. J. R. Carsola. The last two appear to have obtained but one vote each, so that Núñez (10,059 votes) and Renjifo (559), the respective representatives of the two recent divisions of the Liberal party, proved the real contestants. (See INTEROCEANIC CANAL.)

COLORADO. The session of the second Legislature of Colorado commenced on January 1st, and closed on Sunday morning, February 9th. In the Senate, James P. Maxwell

was elected President *pro tem.*; in the House, Kienzi Streeter was chosen Speaker.

One of the first measures after organization was a joint session of the two Houses to canvass the votes given at the election in November previous for State officers. The result was as follows:

FOR GOVERNOR.	
F. W. Pitkins, Republican.....	14,808
W. A. H. Loveland, Democrat.....	11,535
K. G. Buckingham, National.....	2,788
FOR LIEUTENANT-GOVERNOR.	
H. A. W. Tabor, Republican.....	13,591
T. M. Field, Democrat.....	11,968
P. A. Simmons, National.....	2,641
FOR SECRETARY OF STATE.	
N. H. Meldrum, Republican.....	14,165
John S. Wheeler, Democrat.....	11,784
J. E. Washburn, National.....	2,770
FOR TREASURER.	
N. S. Culver, Republican.....	14,141
Nelson Hallock, Democrat.....	11,843
W. D. Arnett, National.....	2,635
FOR ATTORNEY-GENERAL.

C. Yeaman, Democrat.....	11,571
Alpheus Wright, National.....	2,676
FOR AUDITOR.	
E. K. Stinson, Republican.....	14,240
John H. Harrison, Democrat.....	11,752
G. W. King, National.....	2,708
FOR SUPERINTENDENT OF SCHOOLS.	
J. C. Shattuck, Republican.....	13,972
O. J. Goldrick, Democrat.....	11,954
A. J. Chittenden, National.....	2,604

On January 14th, which was the second Tuesday after the meeting and organization of the Legislature, an election for Senator in Congress was held. In the Senate the vote was as follows: Nathaniel P. Hill, 19; W. A. H. Loveland, 7. In the House the vote was as follows: Hill, 34; Loveland, 12; Richard G. Buckingham, 1. Nathaniel P. Hill was elected.

The following memorial to Congress passed the House without reference to a committee:

To the Honorable the Senate and House of Representatives of the United States of America, in Congress assembled:

Your memorialists, the Senate and House of Representatives of Colorado, most respectfully represent:

That the present Ute reservation, extending along the western boundary of this State, includes an area three times as great as that of the State of Massachusetts, and embraces more than twelve million acres of land, and is occupied and possessed by three thousand Indians, who cultivate no land, pursue no useful occupation, and are supported by the Federal Government.

That said reservation is watered and enriched by many streams and great rivers, and contains many large and fertile valleys and plains.

That it embraces a great area of the best grazing lands within the State of Colorado, and contains nearly one third of the arable land within the entire State.

That it comprises several districts rich in gold and silver and other precious metals.

That the territory embraced within said reservation will support a population of many thousands, and is destined to become one of the most prosperous divisions of our State.

That the only approach by wagon-roads to five extensive and productive mining districts is across said reservation.

That the Indians view with distrust and jealousy all supposed encroachments now necessarily made in communicating with the mining districts aforesaid, and that the transportation of machinery and supplies to said districts, and communication with them, is attended by great risk and danger to life and property.

That by reason of the vast extent of said reservation, the people of the State of Colorado are deprived of the use of a great area of fertile and productive lands, the development of several districts rich in all the precious metals is prevented or impeded, and the growth of the State is hindered by the absence of thousands who will be attracted to the State as soon as the said reservation is opened to exploration and settlement.

That the interest upon a small portion of the moneys which will be derived by the General Government for the sale of lands in said reservation will support its present occupants on another or less extensive reservation.

Your memorialists therefore most respectfully urge and pray your honorable body to take such action as may be necessary for the opening of said reservation to settlement and the removal of the Indians therefrom.

Within the limits of the above-mentioned tract of land are large mountains, from most of which explorers have been excluded by the Indians. Prospectors, however, have explored some portions of the country and found valuable lode and placer claims, and there is reason to believe that it contains great mineral wealth. The number of Indians who occupy this reservation is about three thousand. If the land was divided up between the individual members of the tribe, it would give every man, woman, and child between three and four thousand acres. It has been claimed that the entire tribe have had in cultivation about fifty acres of land. These Indians are fed by the Government, are allowed ponies without number, and, except when engaged in an occasional hunt, their most serious employment is horse-racing. If this reservation could be extinguished and the land thrown open to settlers, it would furnish homes to thousands of the people of the State who desire homes, would furnish grazing for immense herds of cattle, horses, and sheep, and might prove to be exceedingly rich in minerals. It has been necessary already to construct toll-roads over portions of the reservation in order to transport supplies to the population at Ouray, Mount Sneffles, San Miguel, and other prosperous mining camps in that vicinity, for the shipment of ores and the transportation of the mails. The Indians look with jealousy upon any supposed encroachments upon their rights. An accidental quarrel between them and a party of whites would immediately stop all travel across the reservation, would cut off the supplies in these frontier settlements, and involve that whole country in great trouble.

An act was passed to prevent the defacement of natural scenery by advertisements. During its discussion Mr. Walcott of Clear Creek said that in his county "every available rock was already plastered and painted over." Mr. John opposed the bill in its present form, for the reason that "it provides for the defacement

of all advertisements by the county commissioners, which would bankrupt every county in the State."

In the Senate, an act was introduced to repeal the code, and extensive debate ensued on the merits of the code system and the common-law practice. One of the speakers asserted that Judge Dillon had said in Denver, when deciding a demurrer in the United States Court (a motion having been made to strike out certain parts of the pleadings demurred to), in substance as follows: "There is no use of that. You are just passing through the experience of other States that have adopted a code. Its adoption has always been followed by a large crop of demurrers and motions and violent opposition. Treat the code fairly. It is the correct system; there is no doubt in my mind about that. Get your cases to issue on the merits. You have adopted and are to have the code. No State has gone back to the common-law practice after adopting the code. You will soon be at work all right under it, and will be surprised after a while that it was the occasion of so much trouble." The code was sustained by a vote of 14 to 10. The question arose in the Senate whether Sunday was included among the legislative days of the session. It was decided that it was, and should be so counted.

An act provides for the appointment of sheep inspectors, and the inspection of every flock brought into the State and its subsequent periodical inspection.

A temperance bill was reported in the House, which provided that "every wife shall have a right of action against the man who makes her husband drunk." A person who rents a building to a saloon-keeper shall be responsible jointly with him for the damages; but the lessor may dispossess the saloon-keeper if he unlawfully sells liquor. There was six majority against the bill, and it was laid aside.

The subject of irrigation received careful consideration, owing to its great importance to the State. The bill provides that the county commissioners of each county shall, at their regular January session, hear all applications from parties desiring the use of the water, with all such details as may be necessary, and proceed to fix the price to be charged for the water from the particular ditch in question. This shall not be changed within two years. Limitations are prescribed to this general grant of authority, and also upon the use of the purchaser. "If at any time any ditch or reservoir from which water is or shall be drawn for irrigation, shall not be entitled to a full supply of water from the natural stream which supplies the same, the water actually received into and carried by such ditch, or held in such reservoir, shall be divided among all the consumers of water from such ditch or reservoir, as well the owners, shareholders, or stockholders thereof, as the parties purchasing water therefrom, and parties taking water partly under

and by virtue of holding shares, and partly by purchasing the same, to each his share *pro rata* according to the amount he, she, or they (in cases in which several consume water jointly) shall be then entitled, so that all owners and purchasers shall suffer from the deficiency arising from the cause aforesaid, each in proportion to the amount of water which he, she, or they should have received in case no such deficiency of water had occurred." Restrictions and penalties are prescribed against one causing impurity to the water, as it is the meaning and intent of a portion of the law, "that all the streams, ditches, reservoirs, lakes, and water-courses of every kind in the State shall be kept pure and clean, and fit for household purposes: *provided*, however, that nothing shall be construed to prevent any person from discharging the contents of any sluice, flume, quartz-mill, or other works for mining or saving mineral products into any natural stream." The irrigation districts are defined, and provision is made for the formation of others by the Governor on the application of individuals. In each district water commissioners are to be appointed, whose duty it is "to divide the water in the natural stream or streams of their district among the several ditches taking water from the same according to the prior rights of each respectively; in whole or in part to shut and fasten, or cause to be shut and fastened, by order given to any sworn assistant sheriff or constable of the county in which the head of such ditch is situated, the head-gates of any ditch or ditches heading in any of the natural streams of the district, which, in a time of scarcity of water, shall not be entitled to water, by reason of the priority of the rights of others below them on the same stream." All litigated questions of priority of right, etc., are to be brought before the county district court, to which is given full and exclusive jurisdiction of all cases lying wholly within the county.

The following memorial, prepared and presented in the House, although not passed, probably indicates the manner in which irrigation may hereafter be accomplished:

To the Honorable the Senate and House of Representatives of the United States of America in Congress assembled:

Your memorialists, the Senate and House of Representatives of the State of Colorado, most respectfully represent:

That the portion of this State lying east of the Rocky Mountains, by reason of its extreme aridity, is wholly incapable of successful agriculture without irrigation.

That the soils of this section, when placed under artificial water supply, possess most remarkable qualities of productiveness.

That the agriculture of the State is now confined to the valleys of the water-courses, where the construction of irrigating canals is comparatively inexpensive, and that it will remain so confined unless a more extensive system of irrigation can be established.

That the construction of a system of irrigation which will fully meet the demands of the State in putting these lands into a condition for successful occupancy will be too expensive for either individuals, private corporations, or the State Government without foreign aid.

That immigration to the West is continually increasing; that the public domain subject to the homestead and preemption laws outside the arid regions is already comparatively exhausted; that the immigrating agriculturist is unable to avail himself of the benefit of these beneficent laws because of his financial inability to construct adequate irrigating canals to render the arid lands inhabitable.

That for the reasons set forth these lands will remain unsold and therefore useless to the General Government unless made available as above indicated.

That also without some aid in the premises the vast mineral resources of the State will of necessity remain in comparative undevelopment.

The policy of the United States has always been one of liberality toward internal improvements. Large tracts of swamp-lands have been generally donated to different Northwestern States, which have been reclaimed to the husbandman through the instrumentality of the State governments. Lands have been donated for the construction of canals, railroads, and other purposes. That the aid here asked is an absolute necessity to the State, that her mining interests may be developed and that her area east of the mountains can be utilized.

Therefore your memorialists would respectfully pray your honorable body to enact a law, under such conditions as may seem just and proper, donating to the State of Colorado all the lands within her boundaries now belonging to the United States (except those designated as mineral) for the purpose of constructing a system of irrigation adequate to reclaim said lands from their present unfruitfulness.

In the Senate a bill was introduced to prescribe an intelligence qualification for voters. The remarks of a few speakers illustrate the manner of its reception. Mr. Rhodes opposed it, and thought it came with poor grace from the Republican side, which had advocated conferring suffrage upon 3,000,000 of blacks who could not read and write. He had known as intelligent men as there are in this body, who knew as much about government and politics as any of them, but who can not read or write a word. Mr. Wolcott of Clear Creek moved to refer the bill to the Educational Committee, but the motion was lost. Mr. Rhodes continued that if the State of Georgia were to pass a bill that no negro who could not read and write could vote, every Republican organ in the land would denounce it as an outrage. Mr. Helm said no Republican organ would complain if the State of Georgia were to pass a bill like this, making it applicable to both whites and blacks; but if they made it applicable only to negroes, it would not be right, and there should and would be a howl. Mr. Barela represented a good many people who can not read and write, and he desired to see them educated; but he would not vote against this bill on general principles. Mr. Webster said in introducing the bill he had no thought but to advance the cause of education, and hoped the bill would meet a ready response in the hearts of every member. Mr. De France said there were universal principles lying at the foundation of our government which are infringed upon by this bill. This is a step in the direction opposite from that which was cherished by the founders of our government. He favored education as much as any man, but believed in an

absolute political equality, without any distinctions which would form classes. He said you could provide equally as well that no man should own property until he can read and write. This is an entering wedge, and a step in the direction of an aristocratic and monarchical government. Mr. Webster recognized the right of suffrage as a privilege and not as an inherent right, and that this privilege can be conferred only upon those that the government pleases. Mr. Rhodes said that the question of suffrage was one of inherent right, and quoted from the Constitution of the United States to prove his position. Mr. De Franco read from the Constitution to prove that the right to acquire property is not considered an inherent right, but one of privilege. There is no more sacred right to the people of this nation than the right of suffrage, and none which could not be touched with less danger to the nation. Mr. John maintained that such a bill would not avoid political corruption. In Ohio, Illinois, or Kansas such a bill as this would be hooted at and ridiculed, and ought not to be received here. The States occupying the most advanced grounds on educational questions have no such laws as this, and do not want them. The bill was referred to the Committee on Elections.

An unsuccessful effort was made in the Senate to repeal the act establishing a school of mines. The objections to the institution were, that it had been organized nine years and has nine pupils in attendance. No part of the mining sections of the State ask for the support of this school, and the State is deriving no benefit from its continuance. The same studies taught in the institution are taught in the State University at Boulder, and the State can not afford to support two institutions of the same nature. Nowhere has such an institution as the School of Mines been a success. In many places they have been tried, and always been abandoned. In reply to these assertions it was urged that the institution was founded in 1870 by an appropriation of about \$3,000. In 1872 another appropriation was made to the school, but the Governor pocketed the bill. In 1874 and 1876 appropriations were made, aggregating, with what had before been given, over \$12,300. The mill tax has raised the total to \$14,572.45. The building and apparatus have cost about \$8,000. This shows that the school has been run for about nine years for about \$6,500. This accounts for the little that the school has accomplished. The object of the school was to promote and encourage the mining industry. Can any man think that a school can accomplish much on less than \$1,000 per annum?

A bill to establish impartial suffrage was introduced in the Senate. When under consideration, one of the Senators (Mr. Haynes) said: "The State Constitution provided that the question of female suffrage should be submitted to a vote at the first general election, and

it was so submitted, and one third of the votes were cast in its favor. Now it is asked, three years later, that the question may again be submitted to vote, and we ought not to be opposed to giving them a chance to convince us that we are wrong in refusing the women an equal chance to vote. How will it appear to the world if we few men here arrogate to ourselves the right to decide that what thousands of the most intelligent and respectable people in the State ask shall not be granted? Common fairness and respect call upon us to give them the chance to educate us as they think they can. The question of the propriety and right of women's suffrage is not what we are now called upon to consider; we are called upon only to give a large class of people a chance that they ought to have, and by right are entitled to." The bill passed the Senate and came up for a second reading in the House, when a motion to indefinitely postpone was made and lost, and it was referred to a special committee appointed to confer with the Senate Committee on the bill.

A bill was passed creating the new county of Carbonate, in which Leadville was situated. On the second day after, a new bill was passed changing the name to Lake, which was the name of the entire district before the division.

Persons practicing confidence games are made liable to indictment, and on conviction are punishable by confinement in the penitentiary from one to ten years.

Any animal injured or killed not having any mark or brand upon it, or having marks or brands unknown, by the trains of any railroad company, said company shall, within thirty days next after such injury or killing, pay the value thereof, according to the schedule of prices as now fixed by law, to the treasurer of the district association of cattle-growers, within the district where such animal is thus injured or killed. All neat stock found running at large in the State without a mother and upon which there is neither ear-mark nor brand, shall be deemed a maverick, and may be taken in charge by the captain or foreman of a legal round-up and sold at such time and place and in such manner as shall be determined by the executive committee of the district association of cattle-growers of the district wherein such maverick shall be taken up. The proceeds arising from such sales shall be paid to the treasurer of such district association; and if any stock so sold shall within the period of six months immediately following such sale be claimed, identified, and proven by the rightful owner, it shall be the duty of such treasurer to forthwith pay the money received for such maverick to such owner. If no owner appears, the money goes to the fund of the association.

A bill for the preservation of fish was passed, which provides that it shall not be lawful to kill, take, or have in possession any trout or other food-fish, taken or killed in any of the

public waters of the State, during the months of December, January, February, March, April, May, and June, or in either of the said months in any year; and the possession of trout or other food-fish during the months above mentioned shall be *prima facie* evidence of the violation of the provisions of the act. A Fish Commissioner is appointed under an act of the previous Legislature.

The act relative to the location and representation of placer-mining claims provides that "the discoverer of a placer claim shall within thirty days from the date of discovery record his claim in the office of the Recorder of the county in which said claim is situated, by a location certificate which shall contain—first, the name of the claim, designating it as a placer claim; second, the name of the locator; third, the date of the location; fourth, the number of acres or feet claimed; fifth, a description of the claim, by such reference to natural objects or permanent monuments as shall identify the claim. Before filing such location certificate the discoverer shall locate his claim—first, by posting upon such claim a plain sign or notice, containing the name of the claim, the name of the locator, the date of discovery, and the number of feet or acres claimed; second, by marking the surface boundaries with substantial posts sunk in the ground, to wit, one at each angle of the claim.

"On each placer claim of 160 acres or more, heretofore or hereafter located, and until a patent has been issued therefor, not less than \$100 worth of labor shall be performed or improvements made by the first day of August, 1879, and by the first day of August of each year thereafter. On all placer claims containing less than 160 acres the expenditure during each year shall be such proportion of \$100 as the number of acres bears to 160. On all placer claims containing less than twenty acres the expenditure during each year shall not be less than twelve dollars; but when two or more claims lie contiguous and are owned by the same person, the expenditure hereby required for each claim may be made on any one claim; and upon a failure to comply with these conditions, the claim or claims upon which such failure occurred shall be open to relocation as if the claim had never been made; *provided*, that the original locators, their heirs, assigns, or legal representatives, have not resumed work upon the claim after failure and before such location; *provided*, the aforesaid expenditures may be made in building or repairing ditches to conduct water upon such grounds, or in making other mining improvements necessary to the working of such claim. Upon the failure of any one of several coowners to contribute his share of the expenditures required hereby, the coowners who have performed the labor or made the improvements may, at the expiration of the year—to wit, the first day of August, 1879—for the locations heretofore made, and one year from the date of locations

hereafter made, give such delinquent coowner personal notice in writing, or, if he be a non-resident of the State, a notice by publication in the newspaper published nearest the claim, for at least once a week for ninety days, and mailing him a copy of such newspaper, if his address be known; and if, at the expiration of ninety days after such notice in writing, or after the first publication of such notice, such delinquent should fail or refuse to contribute his proportion of the expenditure required by this action, his interest in the claim shall become the property of his coowners who have made the required expenditures."

A large number of important acts of a local nature were passed.

The last reports of the Auditor and State Treasurer show the State's indebtedness on November 30, 1878, as follows:

Warrants outstanding.....	\$191,948 99
Certificates of indebtedness issued.....	29,361 86
	<hr/>
Total debt.....	\$221,310 85
Deduct cash in treasury.....	68,145 89
	<hr/>
	\$158,164 46
Add interest on warrants.....	19,836 51
Estimated interest on certificates indebtedness..	1,500 00
Approved penitentiary vouchers outstanding November 30th.....	12,125 38
	<hr/>
Total.....	\$186,616 30
Deduct amount of warrants outstanding which will be met by special taxes now due.....	\$4,565 60
Estimated amount of fines and penalties, and receipts from sales of laws and fees of Secretary's office.....	10,000 00
	<hr/>
	14,565 60
Total outstanding debt.....	\$172,060 70
The amount of revenue due for general purposes, including tax of 1878.....	\$247,619 58
Deduct old delinquent tax.....	71,090 06
	<hr/>
Amount due to meet present debt.....	\$176,529 52

It was estimated that at the close of the fiscal year 1879 the State would be out of debt. The taxes of 1878 were expected to accomplish that result, while those of 1879 would pay the expenses of that year. State warrants at the beginning of 1879 sold at one per cent. above par, although two years previous they sold at seventy-five cents on the dollar.

The assessment of taxes has awakened some consideration in the State, but a change was made in the law at this session. It requires that "all property shall be assessed at its full cash value," and the duty of adjusting the rates of assessment in the different counties according to this standard devolves upon the State Board of Equalization. From the assessors' returns there appear in one county five times as many acres assessed in 1877 as in 1878, and the average value per acre in 1877 one third as much as in 1876; in another county one half as much in 1878 as in 1877. Cattle are returned at from \$4 to \$20 per head, horses from \$20 to \$90, and other stock in the same manner. The total assessment of all property for 1878 is \$43,072,648, nearly \$400,000 less than for 1877, while nearly all the items of

which it is composed have increased in number. The Governor, alluding to this subject, says: "The present assessment is about one third of what it should be, and the State is therefore placed in a false light abroad, as the rate of taxation is just three times what it should be. The city and county tax of Denver is about 3½ per cent. Under a proper assessment it would be about one."

The public schools of the State are rapidly increasing in number, and those in the city of Denver are particularly commended for their excellence. The State University is located in the vicinity of Boulder. It consists of a new and extensive building, on an eminence, surrounded by finely cultivated and ornamental grounds. In the interior it is arranged for the accommodation of a large number of students of each sex, with their officers and instructors. The number of students is about one hundred, of whom one half are in the preparatory department. There is also a college attached to the State Agricultural Department, in which much interest is manifested. An Institute for the Mute and Blind is not only well established, but it is crowded with pupils. The School of Mines contains twenty-two students, some of whom were attracted from other States to Colorado on account of the special advantages it offers for the study of certain branches of natural science. At the previous session of the Legislature the office of Commissioner of Mines was created, but no appointment has been made. The law directs the appointment of a deputy and also an assistant Commissioner. The aggregate salaries of the three officers would be \$4,900, which sum, together with their contingent expenses, is required to be paid out of the fund for the School of Mines. As this fund is less than \$4,500, the appointment of these officers would have closed this institution.

The State Penitentiary has been a source of expense to the State. There is a deficiency of \$27,463. The appropriation required from the State for the period of two years is \$89,425.

Of the public land entered by the State, 29,146.33 acres have been approved by the President of the United States for the public building fund, 25,226.83 acres for the penitentiary, and 44,844.43 for the university. There is a deficiency in the number of acres confirmed to the State, and the number donated by the enabling act, which can be settled only by an act of Congress. The State lands were made subject to sale after March 1, 1879. The arid lands of the State are so extensive that it has been proposed to obtain a donation of them from Congress, offer them for sale for grazing purposes, and devote the proceeds to the irrigation fund.

The prosperity of the State during the past two years has greatly increased. Agriculture has succeeded beyond the most sanguine expectations, so that a part of its products can be exported. The flocks of sheep and herds of

cattle show a large increase, with only a slight decrease in their market value. Probably no kind of investment in the country has proved more profitable during the past ten years than that in the stock business in Colorado. During the entire year both cattle and sheep thrive upon the grasses of the valleys and the plains, the former requiring no hay or grain, and the latter only in cases of severe and unusual snow-storms. The losses by death up to the present time have been very small, not usually exceeding two per cent. of cattle, and not a much larger percentage of sheep. As the expenses of herding and caring for the stock are very light, the natural increase in the herds and flocks is mostly profit. No counties in the State are in a more prosperous condition than those which are chiefly devoted to stock-raising. The cattle-herding was in 1878 steadily prosperous. The following winter of 1878-'79 was one of great severity, but the losses were light. The yearly increase was above the average. The increase in the number and value of cattle has been rapid during the past eight years, as shown by the assessor's returns of 1871 and 1878. For the latter year the number of cattle was returned as 483,278, valued at \$4,928,147; for 1871, 145,916, valued at \$2,692,440; the increase in number being 337,362, in value \$2,335,707. The figures do not properly represent the number or value of cattle, which are estimated to be about a third more.

New discoveries of rich mines are constantly made, and towns spring up in localities where a few months previous there was scarcely an inhabitant. The increased production of ore creates a demand for the construction of furnaces and smelting and reduction works. The shipments of bullion and ore for 1879 are expected to exceed \$12,000,000. The closest estimate for the year ending June 30, 1878, was \$8,908,566. The product for the six years ending December 30, 1878, was as follows: 1873, \$4,070,000; 1874, \$5,362,000; 1875, \$5,486,742; 1876, \$6,191,908; 1877, \$7,365,284; 1878, \$9,820,743.

An election was held in the State to fill a vacancy on the bench of the Supreme Court. A Republican Convention to nominate a candidate assembled at Denver on September 19th. J. M. North was elected chairman, and William E. Beck was nominated for Associate Justice. The following resolutions were adopted:

Resolved, That as Republicans we reaffirm the principles upon which the party was founded, in support of which it has achieved such victories as have fallen to the lot of no other party, and to the perpetuation of which we once more pledge our best efforts and our every vote.

Resolved, That it is the duty of Congress at its approaching session, by appropriate and judicious legislation, to restore silver as money metal to its equality with gold; and to this end we demand that it enact a law providing for unlimited coinage of the silver dollar on such terms as shall secure to the people the benefits of gold and silver as a circulating medium.

Resolved, That the Republicans of Colorado, in convention assembled, hear with profound gratification of

the return of General Grant to the country he saved, and should he conclude to be a candidate for reelection we pledge now the six votes of the Centennial State.

The Democratic Convention assembled at Denver on September 23d. G. Q. Richmond was chosen chairman, and subsequently he was nominated as the candidate for Associate Justice. The following platform was adopted:

The Democratic party of the State of Colorado, in convention assembled, renewing its pledges of fidelity to the Jeffersonian doctrine that this is a government of the people, where the will of the people should rule, does hereby declare.

That the grave question to be determined by the American people at the election of 1880 is, whether a republican form of government shall remain to the people, or one republican in name but monarchical in fact. That in the arbitrary action of a fraudulent President, by which he and his party defecated the will of a majority in the Senate and House of Representatives of the American Congress, and maintained the right of the Federal Executive to surround the polling places in all the States with troops, and of deputy marshals to arrest citizens at the polls without oath or warrant, can only mean a determination upon their part to use these agencies to maintain themselves continuously in power; and that in clamoring for the nomination of General Grant for a third term as President they are but seeking the man who, as shown by his repeated acts of usurpation while President, and his unlicensed use of Federal troops to control the domestic affairs of sovereign States, has the will to carry out their revolutionary and wicked designs.

That we denounce the combination of crimes by which the country was cheated and robbed of the rightful possession of the offices of President and Vice President of the United States; that it was a plot and fraud unparalleled in free government, and one which should not be condoned, and must never be repeated.

That the action of the Republican party in demonetizing silver was a perfidious breach of the trust reposed in them by the American people; that the action of the Democratic party in securing its remonetization was an act of justice performed in response to the demands of the people, and one which has made resumption not only possible, but a success.

That as the law now exists the Government discriminates against the silver product of the country, in favor of gold and the creditor classes. That, like gold, the coinage of silver bullion into standard dollars of 41 $\frac{2}{3}$ grains each should be continued.

The result of the election was the success of William E. Beck, who received 16,920 votes, to 12,702 for G. Q. Richmond, and 1,246 for G. B. Sanlisbury. In each of the four judicial districts the Republican candidate for District Attorney was elected.

The returns of the assessors of the various counties of the State, except Arapahoe, to the State Board of Equalization, of the valuation of property of all kinds, give the following summary:

Routt County.....	\$59,665 00
Gilpin.....	1,904,924 00
San Juan.....	320,167 00
Boulder.....	3,269,255 00
Huerfano.....	998,012 30
Rio Grande.....	478,036 00

Some interesting facts were presented at the meeting of the State Board of Health relative to climatic influences in the State. The instance of Leadville was presented, where two years ago there existed a sage-covered valley whose population scarcely numbered a score, but where there has sprung into existence a city with a present population of over 12,000, and whose increase is at the rate of 2,000 per month. This rapid accumulation of humanity—drawn from almost every portion of the continent, transplanted suddenly to an altitude of over 10,000 feet above sea-level, many of them living under circumstances of comparative discomfort, and ignoring the most important hygienic laws—promises to furnish an opportunity for observing the development of exotic diseases under new conditions; and,

although at this time a few facts may be brought in review, they can not, without further and more extended observation, be formulated and made available for purposes of study. By far the larger part of the population live in hastily built houses of wood, unplastered and devoid of most of the concomitants of comfort. In the hotels, boarding-houses, and lodging-houses a system of crowding necessarily prevails, that in many localities would be productive of much disease. In many of the boarding-houses about the mines the conditions are even worse. The bunk-rooms are often arranged to contain two or three times as many occupants as should be lodged in them, often located above the cooking rooms, and receiving through the loose floor or open stairway all the odorous gases from below; beds used both by night and day by alternate occupants, according to their hours of labor, and never subjected to the purifying influence of outdoor air and sunshine; slops, bones, and refuse thrown outside, and remaining near the doors for months. These are the conditions under which many of the miners live—conditions that, under greater degrees of heat and moisture, would breed pestilences from which none could hope to escape. In the city itself the greatest neglect of sanitary precautions may be observed. In the back lots and alleys may be seen heaps of filth and garbage in which are stored the potential germs of manifold disease, only waiting the liberating influence of the spring sun to call them into action and enable them to begin the work of destroying human life, opposed by no disinfection save that which is furnished by the incomparable climate. Thus far the city, notwithstanding its crowded condition and lack of comfort, the irregular hours and hurried unsettled life of the greater portion of the population, and the almost criminal neglect of sanitary measures by the authorities, has not shown an unusual amount of sickness or a large mortality. The total number of deaths occurring in Leadville and the surrounding country during the seven and a half months ending February 15th, as collected from the records of the various undertakers, was 115. The average population for this time by conservative estimates was 9,000. This gives an annual death rate of about 2 per cent. From the above total at least 25 per cent. may be deducted for deaths due to violence, accidental or criminal, and those that may be fairly attributed to intemperance.

Some remarks were made on the subject of clothing. When thermometrical changes are so frequent and sudden and great as in this altitude, the subject of proper clothing becomes at once important and suggestive; and the further fact that nearly two thirds of the present population are to some extent *invalid*, makes it imperative on the medical profession to advise, promptly and positively, as to the changes necessary to protect the bodies and

persons of their patients. The fall and most of the winter months the weather is generally very pleasant during the forenoon of each day, but often soon after noon becomes windy and sometimes quite unpleasant. The morning then is inviting. The invalid feels the necessity and the benefit of a ride or open-air exercise. Late rising unfortunately is the rule, and almost invariably the start is made as late as eleven o'clock. The air is balmy; the sunbeams fall warm and pleasant, and, in spite of the kind advice of mother, wife, or friends, the party insists that the present wrappings are quite sufficient. A cold is the consequence, and several days of confinement and doses of medicine follow. From the first of November until the first of May, and sometimes later, the thermometric changes range from 10° to 30° during the twenty-four hours. True, the atmosphere is dry, and this change does not produce the results that an equal change in the lower altitudes does and will; yet, to preserve health, these changes must be met by a corresponding change in clothing. The body must be protected in all such cases—in the robust as well as the debilitated—or harm to some extent will and must be the consequence. Again, this protection of the body is carried to the extreme in the other direction. How many times the physician stands with stethoscope in hand (when a patient presents himself for the first time at the office for a careful examination of the lungs), waiting and watching. Coat and vest are removed, then shirt after shirt, until several great, heavy flannels—enough to tire a common horse to carry—are laid aside, and the "end is not yet." A complete case of chamois skin, buckskin, or perhaps red flannel lined with some of these, and known as "chest protectors," perfectly impervious to air, water, and perhaps lightning, is then removed. In such cases disease is certain—if not from hereditary or acquired cause, most assuredly from abuse in careful protection.

The following plan was proposed at the session, by which pure air may be introduced into any room or building without the least draught, giving free, pure ventilation without exposure or any possible chance of the air striking the patient or sleeping occupants of the chamber, or seated congregation of a public building, until it has passed the entire circuit of the room. It consists of a single flanged piece of zinc, galvanized iron, tin, or sheet-iron, attached to the upper sash of the window, so arranged that, when the windows are lowered two inches (sufficient for pure ventilation), the flange or protector extends half an inch above the casing, leaving a half-inch space. The side-pieces are fastened to the casing on the inner side at a certain distance from the top, so that the flange, when the window is opened the desired distance, will come exactly even with them, thus forming a complete box, compelling the air as it rushes in to ascend to the ceiling. No air can possibly es-

cape from either side, and, when the window is closed, the side-pieces are not in the way, the whole being no incumbrance or inconvenience, not interfering with any kind of curtain, blind, or drapery.

An exciting contest broke out between the Denver and Rio Grande and the Atchison, Topeka, and Santa Fé Railroads, which at one time reached such a pitch of violence as to make it necessary for the Governor to call out a military force to preserve the peace. The editor of the "Denver Tribune" has furnished full details of the grounds of conflict, from which it appears that about 1870 the Rio Grande road commenced from that city with the intention of ultimately reaching the capital of Mexico. At this time the English road-gauge of three feet was introduced and adopted by the Rio Grande. The road soon became popular, and after several years was extended, first to Pueblo and afterward to Cucharas; from Cucharas to El Moro; from Pueblo by a branch line to Cañon City; and afterward from Cucharas to La Veta, and across the Sangre de Cristo range of mountains to Garland, and thence to Alamosa, on the banks of the Rio Grande. At the time when the construction of the Atchison, Topeka, and Santa Fé road reached Pueblo, the Denver and Rio Grande controlled the trade of southern Colorado in every direction, and was in excellent position to make a move in the way of building. It had the advantage of being nearer important passes in all directions than any other line. From El Moro it commanded the Raton Pass and the route via Las Vegas and the trade about Trinidad and southeastern Colorado and New Mexico, except that portion lying along the Rio Grande River. This latter section and the San Juan country was controlled by the branch to Alamosa or into San Luis Valley. Here also the Rio Grande people had the advantage of having a road built over the Sangre de Cristo mountains, a formidable barrier, and an opening line building along down the Rio Grande as far as it might be desirable to go. The Cañon City branch ended almost in the mouth of the Grand Cañon of the Arkansas, almost the only southern opening to the Upper Arkansas and Gunnison centers, and one of the most desirable and feasible routes to the San Juan. Thus fortunately situated, they controlled the trade of the entire south, besides seeming to possess every advantage. An understanding with this line was indispensable to the Santa Fé, whose terminus was at Pueblo. On the other hand, the Santa Fé became of importance to the Rio Grande. The first road was the great trunk channel for the outlet and inlet of the business collected by the Rio Grande. That the two roads should work together in harmony was the most natural thing in the world. In fact, they were regarded as almost an unbroken line from the Missouri River to Denver and other points covered by the Rio Grande. The most perfect harmony prevailed.

But this blissful state of affairs lasted no longer than until the Santa Fé people began to show their ability and desire to be independent. Such a step as this on the part of the Santa Féians was not for a moment to be thought of. The Rio Grande officers resisted. This led to a strife between the two companies, which has been going forward with occasional remissions since March, 1878. It began on the Raton Mountains, which at the point of crossing constitute the line between Colorado and New Mexico. The Santa Fé began to assert its intention of building into New Mexico and of continuing its line toward the Pacific Ocean, in accordance with its original plans. It was one bright, crisp, frosty morning that the Rio Grande people awoke to the knowledge that the Santa Fé company had decided to run a branch line of their road across the country from La Junta, a station in Colorado some eighty miles east of Pueblo, to Trinidad. Here, the terminus of the Rio Grande road being at El Paso, only four miles distant, the roads would become competitors, and the Santa Fé would have the same chance to command the Raton Pass and the trade of New Mexico as the Rio Grande road. Almost before the parties knew it themselves, each company had a hundred men in the pass asserting its right of way by preparing the way for the road of its line. Intense excitement was the natural consequence, and the wildest rumors were set afloat concerning affairs at the point of contact. It was more than once reported that the employes of the two roads had come together, and that several had been killed. Fortunately, in each instance the report was successfully contradicted. This contest attracted great attention. It soon bounded from a matter of local importance to a place where the entire country looked on with interest. It then became generally understood for the first time that the Santa Fé road had aspirations to cross the continent. The prospect of creating a transcontinental line which should destroy the vast monopoly which was said to be extorting money from the public in all directions was greeted with the heartiest good feeling from every source. Hence the fight on the Raton Pass became a subject widely known and spoken of. The Atchison Company began at the same time to build its line from La Junta. It has now been many months since the road was completed to Trinidad, over the switchback into New Mexico, and it is now striking hard for Las Vegas in the heart of the Territory, with an excellent prospect of opening its line to the Pacific during 1880. It has certainly "scooped" the New Mexico business from the Rio Grande, even if that road should continue in possession of the line which it now holds. It only remains to be said concerning this fight that the Santa Fé people made short work of their opponents, and were soon masters of the entire situation, leaving not even a taste for the Rio Grande.

This affair was followed by another of the same nature, which became even more famous than the one just spoken of. Reference is made to the Grand Cañon war—the fight for the possession of the right of way through the Grand Cañon of the Arkansas—the most sublime and terrible gorge in the eastern slope of the Rocky range. This fight has since figured in one shape or another in nearly all the State and Federal courts, from the police court at Cañon City to the Supreme Court of the United States. It began on the 19th day of April. It was born on the 18th, or perhaps sooner. It is agreed between the parties that there was considerable cipher telegraphing, and it is generally believed that the Rio Grande people possessed themselves of the key to the Santa Fé's cipher; that they sat in their offices at Denver and at Colorado Springs, and became acquainted with the design of the Atchison, Topeka, and Santa Fé company to begin to build a road through the Grand Cañon. While the Raton war was still raging quite furiously, the discovery was made that the Rio Grande people were likely to be attacked at two points at once. Leadville was just then beginning to be an important point for consideration, and the Rio Grande people decided, as between the Grand Cañon and the Raton Pass, to concentrate their efforts on the Cañon. Having ascertained, as above stated, that the Santa Fé people expected to begin operations in that great chasm, the Rio Grande folks attempted to offset them by getting in first, with the idea that if they were the first to obtain possession it would be impossible to oust them. A spirited scramble ensued. Mr. Strong, General Manager of the Atchison, Topeka, and Santa Fé road, was on April 18th at El Moro, where he heard of the preparations which were going forward on the part of the Rio Grande people to cut him out. He at once made application for a special train to carry himself and men from the spot. The Santa Fé Railroad had not then been completed from La Junta. The Rio Grande people refused the train. Thus he was shut up in that little town, without power to get away, when it was so important that he should be elsewhere. Nothing was left to do but to call in the assistance of the telegraph. Engineer Morley of the same road was at La Junta. He was instructed to take a special train to Pueblo and outrun the Rio Grande people for the Cañon. He came into Pueblo as if on wings, arriving there at 3 o'clock on the morning of the 19th. He asked for a train, but it was refused. At the same time the Rio Grande parties were making preparations to send one hundred men, duly equipped, to the site where the interest centered. Morley was in a corner apparently, but he lost no time. He procured the fastest horse that could be found, threw himself astride his back, and turned his head toward the mountains. He had forty-five miles of road before him and a special train to compete with. It is needless to say that he rode

fast. The horse was killed, but the goal was gained. He rode into Cañon thirty minutes ahead of the train. He did not have a man at his back, but this was an obstacle of very little importance to him. He found Cañon City already in arms against the Rio Grande, and ready to do anything in the world to bring another road into the city. They were sick and disgusted with the Rio Grande and its explorations. Almost to a man the citizens threw off their coats—professional and non-professional men; all laid down the shovel and hoe employed in their usual avocations, to take up the pick. When Engineer McMurtrie of the Rio Grande road arrived on the scene with his hundred followers, he found what was to him a surprising state of affairs. Morley with his one hundred and fifty civilians had taken possession of the mouth of the Cañon and had graded a firm piece of road-bed. Thus began the cañon contest, which was unsettled fourteen months afterward. The attorney for the Santa Fé, Mr. Gast, now applied to the county judge of Fremont County, and obtained an injunction against the Rio Grande parties. The matter was soon brought before the United States Court at Denver. The Atchison, Topeka, and Santa Fé Company then was known technically as the Cañon City and San Juan Company, the name of a local organization. The Rio Grande claimed possession because of a special act of Congress, and the Santa Fé people set forth that they had filed the proper plats of surveys as required by law with the Secretary of the Interior, and that the Cañon City and San Juan Company had not done so. Though often enjoined by Judge Hallett of the U. S. District Court from remaining in the cañon, the Rio Grande men staid there day after day and week after week. Up to this time no one had ever penetrated the Royal Gorge, except in winter when the river was covered with ice, and then but very few went in because of the great danger. Now, however, the Royal Gorge was the home of hundreds of men. They swarmed in there like bees in a hive, climbing about from place to place almost like flies on the wall. There were at one time 1,500 men in the cañon attached to one side or the other. They had no communication with the outside world except that afforded by ropeladders suspended over perpendicular walls a thousand feet high. During this time the men were armed, and an open outbreak and bloodshed was at all times imminent. It was feared that there would be war on a great scale, and the militia practically lay on their arms for a fortnight. Several parties were arrested for transgressions of the law. Indeed, the excitement ran up almost to the fighting point, and remained there for two weeks. At last a truce was called. The white flag was raised. That happened in this way: The Rio Grande people had become so thoroughly offended with the Santa Fé people that they had long since annulled all traffic contracts with that road,

and had sold themselves to the Northern combination, including the Union Pacific, the Kansas Pacific, and the Colorado Central. Thus the Santa Fé was cut out of Denver completely. The Rio Grande would do nothing to accommodate them. This was a disagreeable circumstance, and it was agreed that it must be remedied. The most expeditious way in which to accomplish this end was to build a road from Pueblo to Denver. The road was incorporated and the engineers sent out. They located their line, and the money was at once subscribed to construct it. The Rio Grande people were quick to see that such a line as this would ruin them, and hence they agreed to lease the constructed portion of their road to the Santa Fé Company. This lease was effected on the 19th day of last October. The Rio Grande people took their men out of the cañon, but said that they desired to have the case go forward in the courts as to the right of way. The money was paid over for running stock and implements, and the lease sealed and signed for thirty years.

Soon Leadville began to be a most important point. Emigration poured in and business improved immensely. It was then that the Rio Grande people began to wish that they had their road back. They had no other reason, and their wishes in the matter were the hotbed out of which have been sprung any number of schemes. As soon as it was determined to make this effort there was a great gathering at Denver. Very soon after a suit was brought in El Paso County, in the name of the people, requiring the Atchison, Topeka, and Santa Fé Company to show cause why it operated roads in Colorado. The case was appealed to the Supreme Court of the State. Subsequently another bill was brought, in Costilla County, requiring that the Atchison, Topeka, and Santa Fé Company should be enjoined from operating railroads in Colorado. Judge Bowen granted the writ, and it was served, and the Rio Grande people took possession by force of arms, killing three men in doing so, and wounding several. The former company then applied to the U. S. District Court for a writ of restriction against the Denver and Rio Grande Company for a return of the property. Judge Hallett, with Mr. Justice Miller concurring, said:

Without going into discussion whether firearms were used, whether any one was killed during the controversy, whether violence was used, it may be assumed, I think, upon all that is stated upon both sides here, that this road was not peaceably surrendered by the Atchison, Topeka, and Santa Fé Company to the Rio Grande Company; that some force was used under this writ to obtain possession; and, if that be true, the result is the same whether the force was much or little. The fact remains that, under a writ which did not authorize any such proceeding, this company obtained possession of this property; and whether the Atchison, Topeka, and Santa Fé Company quietly yielded to the force of the writ as it was interpreted to them, and gave up under protest, or after some show of force was made, or after

force was actually used, the result is the same in either case—the possession of the property was unlawfully obtained. It only remains to say upon all that, if these things are true, that process of the Court was used in some way to obtain possession of this property, and unlawfully used. And if so, it appears to me that, before any other proceeding is taken in the cause, the parties are entitled to be restored to the possession in which they were before the writ was issued; that is to say, the Atchison, Topeka, and Santa Fé Company is entitled to have this property restored to them.

The controversy continued to rage in the courts and out of them with increased bitterness, until it was finally terminated by the action of the U. S. District Court in placing the Rio Grande road in the hands of a receiver.

Meanwhile the Atchison, Topeka, and Santa Fé Company proceeded with the construction of the road through the Grand Cañon, which was a stupendous achievement in railroad engineering. The Grand Cañon of the Arkansas is now known to be eleven miles in length, and the gorge a mile and a half, being the narrow winding way of that river through a converse palisade of granite rock, rising in many places to the height of 2,500 feet. This rock-bound river pathway became known to the Spanish missionaries as early as the year 1642. From that time it was not known that any animal life had ever passed through it successfully until the summer of 1870. The first train passed over the road on May 7th, and the event is thus described by the Denver paper:

On reaching the cañon the engine was placed in the rear, so as to give a better view to the tourists. The approach to the cañon is gradual. The distant hills draw nearer, and the valley of the Arkansas becomes narrower and narrower until the river is shut in closely on both sides by high mountains, sloping gently away, and covered with verdure. Then the slope of the mountains becomes more perpendicular, and the hills become higher, until suddenly the river is completely shut in by mountains with mighty tops. The roar and rattle of the train grows louder, and echoes up and down. The train is fairly in the cañon. It moves slowly. The mountain walls are of a dizzy height, and so close together that, looking ahead, they appear simply to form a crevice—a huge, awful crevice—through which the miserable little train was timidly crawling. The curves of the cañon are superb. They constitute the finishing touch to its grandeur, and fill the mind with a fuller appreciation of this great miracle of nature. But the Royal Gorge! Imagine two almost perfectly perpendicular walls rising to a height of 2,200 feet, and only thirty feet apart, those walls presenting jagged and irregular masses of rock that on the railroad side hang over the train, all creviced and ready to fall in thousands of tons. The road-bed is cut out of the solid rock, and masses of this hang over it, stretching out a hundred feet. One can not look to the top of this wall on account of these projecting, irregular bluffs; but the height to the top, even as measured by the eye, disturbs the faculties and brings on vertigo. The cooped-up Arkansas rushes madly by, a narrow thread, made still more so by the rocks thrown into it. There is not room to step from the train without pitching into the river. Not a word is uttered. The engineer whistles occasionally, and timid folks look for the rocks to fall. It is really a strain on the mind to take it in, and this can be only feebly done on a single trip. Two thousand feet above you are the tops of the mountain walls. You are imprisoned in a crack thirty feet wide, and

are partially under one mountain wall. You can see on the opposite side the gradations of the verdure, rich below, impoverished above. And the curves become more awful as you look ahead or back. For forty-five minutes the tourists enjoyed this sight. The train stopped at the construction bridge, near the end of the gorge. Salutes were fired, a fifteen-minutes' halt was made, and the engine started the train for Cañon City. There was no sun in the gorge, but it slanted down the opposite mountain wall as the party returned through the cañon, increasing the surpassing beauty of the scene.

Leadville, which has become the most famous spot in the State, was first noticed during the Pike's Peak excitement. At the same time the placer mines of California Gulch, Stray Horse Gulch, and Iowa Gulch were discovered. The population of the region reached 10,000, and in four years about \$13,000,000 in gold was gathered. The miners worked only for gold, and the carbonates, which have since become so valuable, were then only dirt and greatly in the way, getting into their sluice-boxes and making a vast amount of trouble. They piled them up anywhere to get them out of the way. In 1874 the placer mines were practically abandoned, and, although since worked at intervals to some extent, they have caused no great excitement. In 1877 they yielded about \$70,000 in gold, and can only be worked during the warm weather of the summer. In August, 1877, some twenty shanties comprised the whole town of Leadville. In June, 1878, it had a population of only 400. In October, 1878, it numbered 6,000, and in April, 1879, it had a population of 12,000 to 15,000, with an additional daily floating population of from 1,000 to 3,000, and new-comers flocking in at the rate of 300 to 500 a day and seven days in the week. The cause of this sudden growth was the fact that the carbonates which had been rejected by the gold-miners were found to be very rich in silver. In October, 1878, the first smelting furnace at Leadville was blown in. Since that time, up to August 1, 1879, the several smelting establishments have smelted 48,659 tons of ore, from which have been produced 9,958 tons of bullion, containing 3,401,283 ounces of silver. The value of this silver is stated at \$3,725,000, that of lead at \$197,420; and there were also produced 211 ounces of gold, worth say \$4,000. A large quantity of ore was shipped from Leadville to Denver, Omaha, St. Louis, and other reduction works, both before and since the erection of smelters at Leadville. The value of this ore shipped up to August 1st was about \$5,500,000; making a total value of Leadville's production up to August 1, 1879, \$9,426,420. Since that date the ore smelted has amounted to about 600 tons a day, yielding an average of perhaps \$80 per ton; and there have been shipped per day ten tons, averaging \$150 per ton—more than \$1,250,000 a month.

COMMERCE, INTERNATIONAL. The intimate and vital bond of international commerce by which the nations of the world are linked together for their mutual weal, but

which, when it is disturbed, causes the hardest sufferings among the inhabitants of the most advanced and prosperous of the sisterhood, is, with its present delicate and all-pervading ramifications, an entirely modern development, dating from the close of the Napoleonic wars. From 1815 to 1872 the commercial and industrial growth of all countries advanced with an even and almost unbroken progress. Production has everywhere increased faster than the population, and consumption in every commercial nation has multiplied. Wars and natural calamities have temporarily and locally interfered with the regular course of the advancement; and at intervals, with an almost astronomical periodicity, in 1837, 1847, 1857, and 1866, general commercial crises occurred, which swept away many mercantile houses who had made a too free use of their credit in a time of unusual speculation, and entailed severe losses on money-lenders. But the effect of these crises was only momentary; the arrest of productive activity has been very brief and transitory in each case, and in a few months at the most commerce and production, purified by the winnowing process, bounded forward again with renewed and heightened activity.

The growth of the system of commercial interdependence, and the slight and transitory effects of former commercial crises, are apparent in the history of the export trade of Great Britain, the pioneer and chief representative of international commerce. The volume of the exports of British products from the United Kingdom to all countries, for each year from 1836 to 1872, were, in millions of pounds sterling, as follows: 1836, 53; '37, 42; '38, 50; '39, 53; '40, 51; '41, 52; '42, 47; '43, 52; '44, 59; '45, 60; '46, 58; '47, 59; '48, 53; '49, 64; '50, 71; '51, 74; '52, 78; '53, 99; '54, 97; '55, 96; '56, 116; '57, 122; '58, 117; '59, 130; '60, 136; '61, 125; '62, 123; '63, 146; '64, 160; '65, 166; '66, 189; '67, 181; '68, 179; '69, 190; '70, 200; '71, 223; '72, 256. The exportation from France, which amounted to 376 million francs in 1810, and had grown to 515 millions in 1837, in the period from 1867 to 1876 averaged 3,407 million francs a year, the single article of silk goods amounting to 437 millions in 1872, and that of woolens to 314 millions. The exports from the United States increased in the same ratio, the domestic exports of merchandise summing up to the following amounts, given in millions of dollars, in the successive years from 1835 to 1872: 1835, 100; '36, 106; '37, 94; '38, 95; '39, 101; '40, 111; '41, 103; '42, 91; '43 (9 months), 77; '44, 99; '45, 98; '46, 101; '47, 150; '48, 130; '49, 131; '50, 134; '51, 178; '52, 154; '53, 189; '54, 213; '55, 192; '56, 266; '57, 278; '58, 251; '59, 278; '60, 316; '61, 204; '62, 179; '63, 186; '64, 143; '65, 136; '66, 337; '67, 279; '68, 269; '69, 275; '70, 376; '71, 428; '72, 428. This gigantic development has been the result of various combined and reciprocally acting causes—

the application of steam, the perfection of machinery, the development of capitalistic production, and steam transportation over the ocean and across the breast of the continents. One of the main conditions without which this progress would not have been possible has been the removal of restrictions on foreign commerce, first by England, then by France and other countries, and finally by China, Japan, and other remote nations. Another cause, whose importance can not be overestimated, was the increase of the metallic currency of the world, which is the life-blood of trade, by the discovery of the Californian and Australian gold-fields. Before 1848 the stock of metallic money in the world is estimated to have been \$5,000,000,000. In 1868 it was \$7,000,000,000. This enormous increment did not cause a sudden and abnormal disturbance of values, but was gradually assimilated, producing a slow and even rise of prices, quickening production, and stimulating commerce, allowing it to extend its operations to the remotest parts of the earth.

The present aggregate volume of the world's commerce, according to the computation of Professor Neumann-Spallart of Vienna, is \$14,000,000,000. Europe's share is \$9,976,000,000, or 71·26 per cent. of the total international commerce. The aggregate exports of European countries amount to \$5,650,000,000; their imports are \$4,336,200,000. The American nations have a total foreign commerce of \$2,140,000,000, or 15·30 per cent. of the world's total commerce; their imports amount to \$972,800,000, their exports to \$1,167,200,000. The share of Asia and the South Sea Islands in the whole is 8·08 per cent., or \$1,131,000,000, with \$489,000,000 imports and \$641,600,000 exports. Australia and the islands of the Pacific participate to the extent of \$462,000,000, or 3·29 per cent., with imports aggregating \$237,800,000 and exports \$224,400,000. The aggregate commerce of Africa is \$291,000,000, 2·07 per cent. of the whole; its imports are \$134,400,000, its exports \$156,600,000. Reckoning the population of Europe at 289,000,000, the amount of commerce per capita is \$34·52. America, with a population of 84,840,000, has a commerce of \$25·22 per capita. The international trade of Asia, counting its population 806,700,000, is but \$1·40 per capita. Australasia's population is given as 1,800,000; its foreign commerce would therefore amount to \$256·77 per capita. Africa, with an estimated population of 80,000,000, has a commerce of \$3·62 per capita. The total imports of all nations, according to this estimate, sum up \$7,474,400,000, the total exports \$6,526,000,000. The disparity between the aggregate values of the imports and exports is partly explainable by the fact that the cost of freight, marine insurance, and other charges, are included in the valuation of imports, whereas exports are assessed at the bare manufacturer's price, understated also in many exports of dutiable articles.

The foreign commerce of each particular country is given in the following tables:

EUROPE.

COUNTRIES.	Imports.	Exports.
Great Britain.....	\$1,976,000,000	\$1,284,000,000
Germany.....	978,000,000	687,000,000
France.....	797,000,000	715,000,000
Russia.....	384,000,000	322,000,000
Austro-Hungary.....	267,000,000	297,000,000
Netherlands.....	803,000,000	226,000,000
Italy.....	265,000,000	243,000,000
Belgium.....	239,000,000	212,000,000
Spain.....	115,000,000	127,000,000
Turkey.....	92,000,000	60,000,000
Sweden.....	79,000,000	62,000,000
Denmark.....	64,000,000	60,000,000

Since 1872 the whole commercial world has been languishing under some depressing influence which has afflicted production and trade with a progressive paralysis, from which there are yet no hopeful signs of recovery. This drooping atrophy and shrinking away is different from any of the sharp and sudden commercial crises that preceded it, which convulsed and disturbed the whole credit system, but which only for a moment checked the advancing march of production and commercial extension. Various causes are assigned for this fatal and protracted depression and gradual collapse of trade. The exhaustive effects of wars must undoubtedly manifest themselves in a succeeding period of privation and severer labor before the wasted capital is replaced and the lost time regained. The extension of productive facilities in all countries beyond the consumptive requirements of the people must result in a sharp struggle for trade, a lowering of prices, a depression of wages, and a diminution of profits. But this process has taken place before repeatedly with the best ultimate results; and to assign it as the cause of the present decline of consumption is not only to deny in a great measure the destruction of capital in wars, but to contradict all historical precedents. The discontent and revolutionary attitude of the productive classes, and their continual strikes and demands, might have the effect to alarm capital and discourage production and enterprise; but there is no evidence that they have produced any such results. Another cause, which has recently been asserted by merchants and bankers practically versed in the phenomena of international trade, may have more to do with the present unprecedented decay of commerce and prostration of industry than any of the others. This is the threatened demonetization of silver by European countries, and the actual fall in its value in consequence of the change of standards and conversion of its currency by the German Empire. Since the first agitation of the question in Germany prices have been declining, and with declining prices in these days of the telegraph and steamship, when mercantile operations are calculated on a minute fractional margin for profits, it is impossible to produce or export without a constant loss. If the disturbance in values caused by the con-

version into gold of the silver currency of Germany, and the sale of about \$300,000,000 worth of silver, is the cause of the present long and distressing prostration of trade, the action of the other western nations with reference to the 1,500 millions of silver which they still possess is a question of the most vital consequence to civilization. The present prices are based upon the present combined stock of gold and silver in the world, nearly six thirtieths of which consists of silver. Before values can be adjusted to the single standard of gold, the whole fabric of international commerce must fall into ruin, industry and art must decay, population must be thinned out by misery and starvation, and the most advanced races must physically and intellectually deteriorate.

The world's stock of gold and silver money is estimated for 1878 at about 7,850 millions of dollars, of which 4,250 millions is in gold and 3,600 millions in silver coin. The stock of metallic money is distributed in the different countries in the following proportions, given in millions of dollars:

COUNTRIES.	Gold.	Legal-tender silver.	Token silver.
Great Britain.....	675	90
India and British Colonies.....	225	1,500	35
France and Latin Union.....	1,550	650	55

China, Japan, and other countries..	725	560	...
Total.....	4,250	3,155	445

The statistics of international commerce and domestic production show an absorption, during the ten years from 1866 to 1875 inclusive, of the precious metals in the European countries for which official returns are given to the following amounts in millions of dollars: France, 689; England, 356; Belgium, 230; Russia, 209; Spain, 130; Holland, 50; Portugal, 9; Sweden, 9; Austro-Hungary, 8; Norway, 5; Italy, 1. The total absorption in the above eleven countries is 1,699 million dollars. This sum fails to agree with the statistics of the world's production, given by Seetbeer for the same period as 2,008 million dollars, and of the absorption of Asia, calculated at 562 millions. Deducting the 387 millions produced in Europe, the products of extra-European mines would be 1,621 million dollars. If 1,365 millions of this was absorbed in the above European states, the rest of the world would have but 256 millions to dispose of, or 306 millions less than the amount sent to the East; while the United States during the same period retained 65 millions of the 669 millions produced, and other gold- and silver-producing countries must have kept back a portion of their yield.

The effect of the present depreciation of silver is to most seriously interfere with the intercourse between the gold- and the silver-

paying countries, besides its depressing influence on general prices and prosperity. The trade of England with the gold-paying countries showed an actual increase of over 5 per cent. between 1874 and 1878; but in the British trade with most of the bi-metallic countries there was a decline of 32 per cent., and with the countries with the single silver standard of nearly 22 per cent., or of 30 per cent. if India is not counted. Between 1872 and 1878 there was an increase of the exports of British products to countries where the gold standard prevailed of 9 per cent., but a decline of 33½ per cent. in the values of the exports to silver-paying countries. The loss to Great Britain in exchange alone in last year's trade with India is computed at 75 millions of dollars, so great is the disturbance caused by the want of a common medium of exchange. If the single gold standard were permanently adopted in Europe and America, intercourse with the Orient would be reduced to barter trade. Even if the single gold standard were safely and successfully adopted all over the world, and values should accommodate themselves to it without destroying the whole progress of the nineteenth century, there would remain another evil connected with it, one from which the world has abundantly suffered in former centuries, and that is a deficient supply of metal to replace the waste of the coin and correspond to the increase in the population.

The general decline of British exports since 1872, the year when they had attained their greatest magnitude, was in the following progression, in millions of pounds sterling: Exports in 1872, nearly 256; 1873, 255; 1874, 239; 1875, 233; 1876, 200; 1877, 198; 1878, 192. The aggregate decline from 1872 to 1878 amounts to 214 million pounds sterling. The exports of British and Irish products in 1879, estimated on the returns for the first half of the year, show a further decline in values of 8 or 10 millions sterling.

The fall in prices within five or six years, when computed for the aggregate production, presents sums of startling magnitude. Of the decline of 42 per cent. in the exports of the leading British manufactures between the years 1872 and 1875, one fourth corresponds to the diminished demand and three fourths to the fall in prices. Of this fall, one half is offset by the corresponding abatement in the prime cost of materials. The decline of 6s. per ton in coal from 1873 to 1878 represents a fall in value for the quantity mined in Great Britain of 200 million dollars a year.

An important consideration regarding the alteration of the existing standards of valuation is the effect which it would have on the solvency of countries which owe large public debts. This specially affects the nations in which the largest amounts of foreign public securities are held. The aggregate public indebtedness of all nations is computed by Ernest Seyd at 22,245 million dollars. Of this amount,

he considers the following state debts, amounting to 9,150 millions of dollars, as almost entirely held in the countries themselves: England, 3,925 millions; France, 3,750 millions; Germany, 825 millions; Holland, 400 millions; Belgium, 180 millions; Denmark, 70 millions. The remaining 13,095 millions he reckons as held principally by other nations, viz.: the debt of the United States, 2,000 millions; Russia, 1,875 millions; Austria, 1,730 millions; Spain, 1,300 millions; Italy, 1,255 millions; Turkey, 1,075 millions; India, 530 millions; Egypt, 475 millions; Mexico, 395 millions; Brazil, 340 millions; Portugal, 330 millions; the British colonies, 315 millions; South American and other small states, 1,475 millions. The amount of the public debt of these nations held in foreign countries is estimated at 10,000 millions, and its present value at 8,500 millions. This aggregate amount is supposed to be held in a few European countries, among which it is distributed in the following proportions: England, the richest nation in foreign state funds and other foreign investments, owns 3,750 million dollars, or nearly the amount of her own public debt, in the state securities of other nations, estimating them at their present current values and not at the par of issue; France, 2,250 millions; Germany, 2,000 millions; and Holland, Switzerland, and Belgium together, 500 millions. How nearly the above estimate approximates to the actual European holdings of foreign securities, there are no more accurate data for determining than those at the command of Mr. Seyd. The national debt of the United States, however, must be stricken from the list of public securities held abroad, as the main bulk of it has now returned to America. The securities of many of the indebted governments are of very uncertain value under the most favorable commercial conditions. Loud complaints have been heard in Great Britain of late at the swindling foreign loans, public and private, which have been successfully placed in the English market. The losses which have accrued to British investors through worthless foreign investments are immense. A nearer examination of the facts reveals in these operations methods of going to work which well deserve the name of swindling; but the persons who manipulated the loans and deluded the investing public, and who invariably received the lion's share of the plunder, were British bankers and financial agents. The Turkish Government, for instance, can show that it has already paid in interest more than it ever received of its public loan from the English go-betweens. The South American states and a great many financial companies in different parts of the world can relate the same experience.

In France the decline of exports since 1873 has been less marked than with the other great commercial powers of Europe. She is not, however, exempt from the general calamity, but is suffering more and more acutely from a

depression in her textile industries and a prostration of her coal and metal trades. The decline of French exports has been in the following progression: 1873, total exports 3,787 million francs; 1874, 3,701 millions; 1875, 3,872 millions; 1876, 3,575 millions; 1877, 3,436 millions. During the same period her imports have increased, having been 3,554 million francs in 1873, 3,507 millions in 1874, 3,536 millions in 1875, 3,988 millions in 1876, and 3,669 millions in 1877. In all articles except the prime necessities of life, and particularly in all manufactures in which they compete with Great Britain, all the countries of Europe complain of a constantly declining export, or, if an increased export is shown for a single year, of the ruinous prices at which it has been achieved.

While the older settled industrial lands, whose products consist of the luxuries of life or go to satisfy the material requirements of a complex civilization, have been suffering from loss of trade and an industrial stoppage, in certain newer food-producing countries, although they also have had to endure the effects of the general financial derangement, the exports have been steadily growing in value, and have increased in a still more remarkable ratio in quantity, during the present period of depression. The most conspicuous example of this enlargement of trade is America. The extension of manufacturing operations, which preceded the present season of contraction and distress in Great Britain and other industrial lands, was in great measure induced by the demand for extended means of transportation and improved implements of agriculture in the countries which possess a vast area of more fertile and tillable land than Europe; and now these same countries are enabled, with the improved means of transportation, to pay off, even at the present depressed rates of value, the debts incurred for their completion under the inflated prices of a half dozen years ago, by furnishing cheaper food than can be produced in Europe. The United States has thus been in a position, through an excess of exports of merchandise and bullion in the five years from 1874 to 1878, to pay more than \$130,000,000 a year of interest and principal of foreign debts. In the magnitude of their export of food-products the United States now greatly surpass all other nations. The development and importance of the trade of the United States in cereals and provisions is shown in the following *résumé* of the international trade in the articles which best reveal the present condition of the world's commerce.

BREADSTUFFS.—In the ante-bellum period the exports of American grain to Europe were for the most part in the form of flour. Since the opening up of railroad communications with the upper Mississippi valley, and the immense extension of the export trade, the exports of wheat-flour have increased but very little, and are principally confined to the supply of the

West Indies and South America. Even though the grain could be manufactured into flour more cheaply in the United States than in Europe, the greater facility with which the grain can be handled, stored, and transhipped in its raw state, by the aid of modern machinery and appliances, would preclude the exportation of the manufactured product. The elevators of Chicago in 1876 had storage-room for 19½ million bushels of grain, and those of Milwaukee for 4½ million bushels.

The imports of wheat into Great Britain during the years 1872-'77, according to Mr. Caird, amounted, in consequence of three bad harvests, to 87 million pounds sterling more in value than in the preceding period of the same number of years. Before 1860 the average annual importations of wheat into Great Britain were 4,500,000 quarters; in the last five years they have been 12,400,000 quarters. Before 1868 the average consumption of wheat for sixteen years was 311 lbs. per capita; since that date it has increased to 335 lbs. per capita, of which 158 lbs. is grown inland and 183 lbs. imported from abroad; whereas between 1852 and 1860, of the same quantity of wheat, 252 lbs. were of domestic growth and 79 lbs. imported. Besides the growing dependence of England on foreign nations for wheat, the main article of food with her people, the importations of other food-products have increased in a similar ratio. The imports of maize from America have increased from 600,000 to 1,300,000 tons; those of potatoes, principally from Germany, from 43,000 to 300,000 tons. The consumption of foreign products in Great Britain has risen in the last twenty years from 128 million pounds sterling in 1857 to 285 millions in 1877. The consumption of foreign meat has increased within the twenty years 360 per cent.; of cheese, butter, and lard, 280 per cent.; of imported wheat, 157 per cent.; of other grains, 176 per cent. The consumption of sugar during the same period has increased 84 per cent.; that of tea, 102 per cent., or from 69 to 149 million lbs., while that of coffee has declined 7 per cent. The consumption of tobacco has grown 41 per cent. Since the conclusion of the commercial treaty with France the use of foreign wines has constantly been increasing, the percentage of the increment during the period under consideration being 170; while the importation of spirits has also risen 140 per cent. The above statements refer to the average annual imports of 1857 and the two following years, compared with the average imports of the three years preceding 1877. In 1867 the consumption of domestic wheat was 40 million cwt., that of foreign wheat 38 million cwt.; in 1876 the consumption of home-grown wheat was 43 and that of imported wheat 50 million cwt. The consumption of domestic meat in the years 1867 and 1877 was about the same, 25 million cwt., but the use of foreign meat developed in the ten years from 2 to 6 million cwt.

The following table gives the average annual exports of wheat, wheat-flour, and maize from the United States, in English cwt.:

YEARS.	Wheat.	Flour.	Maize.
1849.....	818,822	3,680,028	6,628,654
1850.....	826,063	2,424,584	8,297,546
1851-'55.....	1,762,173	4,602,830	2,890,520
1856-'60.....	4,158,061	6,222,898	2,759,790
1861-'65.....	14,818,597	6,915,206	5,261,208
1866-'70.....	8,746,752	4,009,175	4,799,327
1871-'75.....	24,002,058	5,571,474	14,615,291

The exports from the close of the civil war have been for the different years as follows:

YEARS.	Wheat.	Flour.	Maize.
1865.....	5,823,474	4,557,949	1,406,863
1866.....	2,907,573	3,820,337	6,758,825
1867.....	8,292,790	2,275,155	7,444,911
1868.....	8,589,763	3,638,740	5,578,745
1869.....	9,405,576	4,255,778	8,523,593
1870.....	19,557,822	6,060,538	696,057
1871.....	18,877,628	6,994,222	4,913,154
1872.....	14,155,221	4,400,436	17,345,825
1873.....	21,002,207	4,458,650	19,270,965
1874.....	35,057,104	7,164,664	17,217,803
1875.....	26,418,129	6,914,400	14,429,210
1876.....	29,508,458	6,587,146	24,796,756
1877.....	21,608,006	5,551,414	85,480,491
1878.....	85,788,372	6,907,588	42,780,549

Converting the flour into its equivalent in wheat, we find that while the export in the years 1851-'55 averaged 7,515,000 cwt., in the period 1871-'75 it had risen to 31,341,000 cwt. In the course of twenty-five years it had quadrupled. Far the largest proportion of the exports go to England, and they suffice nearly to supply her demand for foreign wheat. As the European demand at present governs the prices of grain in America, so the supply of American wheat since the extension of railroad communications in the western part of the United States has a controlling influence on the prices in Europe, where the crops are never so abundant as to check the constant stream of American exports, as they may the fitful supplies from Australia, India, and Egypt, and where the farmers everywhere are complaining of the ruinously low prices of American grain with which they must compete. Thirty years ago, from 1846 to 1850, nearly 32 per cent. of the English imports came from Germany, and nearly 20 per cent. from Russia, France furnishing over 9 per cent., and the United States only 6·2 per cent. In the next five years, 1851-'55, the imports from America had risen to 11·6 per cent. of the whole supply, Germany's share being 29 per cent., and Russia's 16 per cent. In the period from 1856 to 1860 America's proportion was 18·8 per cent., Germany's 23½ per cent., and Russia's 19·8 per cent. In the succeeding period, 1861-'65, the imports from the United States advanced to 32·1 per cent., while those from Germany remained at 23 per cent., and those from Russia at 20 per cent. Under the unusual stimulus to exportations furnished by the war, the United States had then driven all the minor

competitors out of the English market, in which they have not been able since to effectually assert themselves. In the following period, 1866-'70, the causes of this abnormally active exportation had ceased to operate, and only 22·8 per cent. of the British imports were derived from America, Russia sending 33 per cent. and Germany 18 per cent. In the next period, 1871-'75, the vast lengths of railroad were completed, which link the pioneer of the prairie more closely to the operative in an English factory than the groaning tenant farmer of the northern shires, and which enabled America to drive Germany out of the field, and even to crowd upon the position of the wretchedly housed and fed and lately enslaved peasantry of Russia. In this last period the imports from the United States into Great Britain were 40·9 per cent. of the whole, those from Russia 27·1 per cent., those from Germany 8·2 per cent.; while Canada furnished 7·5 per cent., and small supplies first began to arrive from British India and Australia. In 1876 the American imports were 43·5 per cent. of the total, the Russian 19·7 per cent., the Indian 7·4 per cent., and the Australian 6 per cent. In 1877 39·3 per cent. came from the United States, 20 per cent. from Russia, 11·3 per cent. from India. All the maize exported from the United States goes to England, where it has almost entirely supplanted the products of Turkey and Moldo-Wallachia, which between 1860 and 1870 supplied 40 to 50 per cent. of the requirements of Great Britain. This grain is not used in Great Britain as human food except to a very limited extent, but is fed to cattle and consumed in the distillation of spirits.

Germany and France, which could formerly supply England from their surplus products of wheat, have become grain-importing countries, France on account of recent bad harvests, and Germany perhaps permanently. Germany, where rye is used principally for bread, has not imported to any amount directly from the United States, although she has received considerable quantities of late from Holland and Belgium, who have to import largely from America to supply their own wants. France with an average crop is able to supply her own necessities. Her importations are very variable, and are partly dependent on an extensive manufacturing and export trade in flour. The values of the total imports and exports of wheat and flour for the last seven years, given in millions of francs, were as follows: 1872, imports 147, exports 247; 1873, imports 229, exports 175; 1874, imports 330, exports 139; 1875, imports 138, exports 202; 1876, imports 239, exports 146; 1877, imports 206, exports 190; 1878, imports 577, exports 58. The failure of the crop in the South of France in 1878 obliged the French dealers to seek abroad for supplies to fill up the large deficiency, estimated at 20 million hectolitres. In the first part of the year Russia shipped large quantities, but later the American wheat

poured in, driving the prices down to a low figure in spite of the poor harvest.

The production of grain in British India and Australia is rendered uncertain and variable by the severe droughts to which both of those countries are occasionally subject. The English Government aims to encourage the exportation of wheat from the colonies, and to enable them to supply as far as possible the requirements of Great Britain. Since the removal of the export duties the exportation of wheat from India has grown to large proportions. From Bombay, Calcutta, and the other ports the exports of wheat in 1877 were 6,105,000 cwt., as compared with 4,839,000 cwt. in 1876, 2,498,000 cwt. in 1875, 1,069,000 cwt. in 1874, 1,756,000 cwt. in 1873, and 349,000 cwt. in 1872. In South Australia and New Zealand, as well as in British America, the production of wheat and other cereals has been greatly extended within a few years.

In potatoes there is not much international trade except between the Continent of Europe and England, who imports large quantities of this food, mostly from Germany. The total European production of potatoes is estimated at 1,317 million cwt. per annum, of which 440 million cwt. are raised in Germany, 245 in Great Britain and Ireland, 224 in Russia, 150 in Austria, 130 in France, 40 in Norway and Sweden, 34 in Belgium, 33 in the Netherlands, 14 in Italy, and 7 in Denmark.

Provisions.—The exportation of animal food-products from the United States in the latest period has more than kept pace with the extension of the grain-trade. The war of secession gave the first impulse to this branch of the export trade, which has now developed into gigantic proportions, and occasions no less anxiety to the European farmers than the competition of American grain. Great Britain is by far the largest consumer of this class of American products also. The importations of lard and bacon into England from the United States during the five years from 1856 to 1860 inclusive averaged 197,398 cwt. (1 cwt.=112 lbs.). Within the last ten years they have increased over fivefold, as is shown by the following comparative statement: Imports of American hams and bacon—1868, 428,377 cwt.; 1869, 474,808 cwt.; 1870, 348,819 cwt.; 1871, 823,010 cwt.; 1872, 1,758,068 cwt.; 1873, 2,626,876 cwt.; 1874, 2,096,099 cwt.; 1875, 2,196,203 cwt.; 1876, 2,753,556 cwt.; 1877, 2,506,513 cwt. In the last few years Canada has exported the same articles in variable quantities, ranging from 30,000 to 90,000 cwt. a year. In 1878 the British imports of these commodities were 50 per cent. greater than in the preceding year, amounting to 4,263,901 cwt., nearly the whole of which was furnished by America. The exports of bacon and hams from the United States have increased in the last ten years in the following progression: In 1869 the quantity shipped away was 49 million lbs.; in 1870 it receded to 38 million;

in 1871 it was 71 million; in 1872, 246; in 1873, 395; in 1874, 347; in 1875, 250; in 1876, 327; in 1877, 460; and in 1878, 592. The imports of lard into Great Britain from the United States have also been very considerable for several years past. From 1866 to 1870 they averaged 157,858 cwt.; in 1871 they were 442,545; in 1872, 561,099; in 1873, 557,897; in 1874, 339,932; in 1875, 502,474; in 1876, 505,359; in 1877, 570,429. In 1878, as in the case of hams and bacon, they took a sudden leap forward, exceeding by at least 50 per cent. the imports of 1877: the total imports of lard into Great Britain were 562,174 cwt. in 1876, and 592,264 in 1877; in 1878 they suddenly grew to 908,187 cwt. Germany consumes yearly equally great quantities of American lard; in 1878 her imports from the United States amounted to 820,000 cwt. Many other countries depend largely on America for their supplies of this cheap and important article of food. The exports of lard from the United States have increased with unexampled rapidity in the last ten years. The total lard export in 1869 was 41 million lbs.; in 1870, 35 million; in 1871, 80; in 1872, 199; in 1873, 230; in 1874, 205; in 1875, 166; in 1876, 168; in 1877, 234; and in 1878, 342.

The trade in salt beef and pickled pork between the United States and Great Britain has sunk into a very subsidiary position compared with the other classes of provisions; still, it has undergone a development which, if it has been slow, has also been regular. Of salt beef the imports into England from America averaged 157,000 cwt. from 1856 to 1860, 191,000 from 1861 to 1865, 169,000 from the latter year to 1870, and 198,000 from then till 1875; in 1876 they were 236,277, and in 1877, 204,507. The average importation of salt pork from the United States was 54,000 cwt. from 1856 to 1860, 69,000 from 1861 to 1865, 60,000 from 1866 to 1870, 179,000 from 1871 to 1875, 291,604 in 1876, and 243,004 in 1877.

The imports of butter and cheese from America into Great Britain have also assumed enormous dimensions of late years. This branch of trade dates its origin from the impetus given to exports by the necessities of the civil war. The exports of butter to the English market were almost nothing before the war; but during the war they suddenly assumed a magnitude which they have not again attained since, being 180,274 and 142,000 cwt. in 1861, '62, and '63. Between 1866 and 1871 they had receded to only 19,000 cwt. per annum; but during the late depression the cheapness of the American article has enabled it to assert itself again in the English market, the imports having risen to 118,000 cwt. in 1876 and 188,000 in 1877. The exports to England from Canada also are very considerable, amounting to 98,000 cwt. in 1876 and 56,000 in 1877. England is the largest consumer of butter among all the nations of the world, and draws supplies from all the pastoral lands of Europe as well as from

America. The annual consumption per head of population in Great Britain is estimated at not less than 105 lbs. In 1876 France sent 622,000 cwt. into England, Holland 403,000, Germany 234,000, and Denmark 205,000. That these great quantities do not consist exclusively of the natural product of the dairy is evident from the fact that not only in the United States, but in Holland, France, Germany, and Austria, large factories are employed in the manufacture of artificial butter from tallow and fat; in two of the largest of these establishments in Holland 400 cwt. of fat is worked up into this substance every day.

In contrast with the fitful exportations of butter, the trade in American cheese has undergone a more even and natural development, showing a steady increase in almost every successive year during and since the civil war, and advancing at a rate of progression that is unparalleled by any other commodity. Between 1856 and 1859 the annual imports of American cheese into England averaged 56,000 cwt.; in 1860 they rose to 187,000, and the following year to 323,000 cwt. Between 1866 and 1870 they averaged 494,000 cwt.; in 1871 they were 731,000 cwt.; in 1872, 598,000; in 1873, 790,000; in 1874, 849,000; in 1875, 958,000; in 1876, 936,000; and in 1877, 1,082,000. The Canadian exports of cheese to Great Britain, which were only 10,000 cwt. in 1865, increased rapidly until they reached 279,000 in 1875, but receded to 250,000 in 1876, and 214,000 in 1877. Although America has grown thus suddenly to be the largest exporter of this product among all the nations of the world, the cheese-producing countries of Europe have not diminished their exports, the greater quantity of which go likewise to Great Britain. The exports of France in 1876 were 182,000 cwt.; those of Holland, 456,000; and those of Switzerland, 402,000. The imports of cheese into Great Britain in that year amounted to 1,531,000 cwt. About the same quantity is produced annually in the British Islands. The yearly consumption of cheese in the United Kingdom is estimated at 10 lbs. per capita.

The exportation of fresh meat and live animals from America to England is a trade of quite recent origin, which has grown to important dimensions after various fluctuations. After a number of disastrous experiments, the first successful attempt to regularly supply the English market with living cattle transported across the ocean in good condition, on steamers specially constructed to allow the beasts the necessary fresh air and daily exercise, was made by Canadians in 1875. In that year 1,212 head of cattle were exported to England from the Dominion; in the following year, 2,655 live oxen and steers and 2,607 sheep; in 1877, 7,639 live cattle, 6,825 sheep, and 373 hogs; in 1878, 32,115 head of cattle, 62,461 sheep, and 1,798 hogs. The exports of living animals from the United States began to assume considerable proportions in the year 1877,

and in 1878 they far exceeded the Canadian shipments, and began to make a powerful impression on the price of meat in the British market. The imports of living animals from the United States into England are reported as only 299 cattle in 1875 and 392 in 1876; in 1877 they are given as 11,538 cattle, 13,120 sheep, and 226 swine; in 1878, 68,450 cattle, 43,940 sheep, and 16,321 swine. In the report for the latter year a large portion of the Canadian exports are included in the invoices from the United States; the total shipments from the United States and Canada together in that year amounted to 86,439 cattle, 84,072 sheep, and 16,321 hogs. In February, 1879, an unfair blow was dealt to the export trade from the United States by the issue of an order of the Privy Council, on the pretended or supposed discovery of a case of pleuro-pneumonia on one of the vessels, to the effect that all American cattle should be slaughtered on the foreign animals wharves, which are very few in number, and the largest of which is at Deptford, near London. This enabled a small ring of London cattle-dealers to buy up nearly all the United States shipments at their own prices, and occasioned severe losses to shippers. The same discrimination was not made against the Canadian cattle. The influence of the English landholders and of the farmers' interest was at the time brought to bear on the Government to induce it to compel all foreign cattle to be entered and slaughtered at the foreign animals wharves. If this arbitrary application of the Contagious Diseases (Animals) Act is maintained for the protection of British landlords and stock-raisers, this large and promising trade will be nearly destroyed. It will not suffice, however, to keep American meat out of the English markets, since a still more recent improvement in the means of transportation enables American shippers to supply the British consumers with fresh meat in good condition. After many unsuccessful attempts, a method of refrigeration has been perfected, by which butchers' meat is transported across the ocean in large, cold, air-tight chambers, from which all germs of putrefaction have been expelled, and through which is passed a constant current of dried and purified air. Mr. Eastman, a New York cattle-dealer, made the first thoroughly successful attempt to transport fresh meat, with a cooling apparatus constructed by J. J. Bate, in 1876. The same year J. H. Wickes devised another refrigerator, with which a line of steamers sailing between Canada and England were provided. The extension of the fresh-meat trade in consequence of the adoption of the new system of refrigeration commenced in April, 1876. The imports of slaughtered American beef into Great Britain in 1875 amounted to but 3,098 cwt.; in 1876 they had risen to 144,336; in 1877 they were 439,440, and in 1878, 479,118. For the latter year a large part of the Canadian shipments are probably included. In 1876 the direct shipments

from Canada were 638 cwt., and in 1877 they had swollen to 19,939.

SUGAR.—The exports of cane-sugar from all the principal sugar-growing countries, according to the latest reports, were as follows, in millions of centals and decimals of millions: Cuba, 10; Java, 4.56; British, Dutch, and Danish West Indies, 5; Brazil, 3.6; Manila, 2.63; Mauritius, 1.8; Martinique and Guadeloupe, 2; Porto Rico, 1.6; China, 1.68; Peru, 1; Egypt, 0.8; Central America and Mexico, 0.8; Réunion, 0.6; British India, 0.56; Australia, 0.43; British Guiana, 0.15; Cape Colonies, 0.15; Sandwich Islands, 0.26; Spain, 0.3. The immense production of India and China has generally only sufficed for their domestic consumption. The exports from India were already large in 1857; but for a long time they were seldom seen in the world's market, and only within a few years have they again begun to compete with the products of other countries. The exportation of sugar from China, which is capable of indefinite extension, is a quite recent phenomenon. The total exports from all countries of cane-sugar amount to perhaps 41 million cwt., of which 22 million is consumed in Europe and 13½ million in the United States. England is the chief consumer of cane-sugar, taking in the year 1877 as much as 15 million cwt.

The Continental peoples depend chiefly upon beet-root sugar. The total sugar-crop of Europe for the season 1874-'75 was 23 million cwt.; 1875-'76, 27 million; 1876-'77, 22 million; 1877-'78, 25 million. Of the crop of 1876-'77, 6.5 million cwt. was produced in France, 5.8 in Germany, 4.1 in Austria, 5 in Russia, 0.9 in Belgium, and 0.5 in Holland.

The total consumption of sugar in the four chief consuming nations in 1877 was approximately as follows: England, 17.6 million cwt.; United States, 13.3; Germany, 5; France, 4.7. The annual consumption per capita in the different European countries is estimated to be at present as follows: England, 26 kilogrammes; Germany, 20; Holland, 11; Belgium, 10; France, 7; Sweden, 7; Austria, 4.75; Switzerland, 4; Italy, 3.75; Spain, 3; Portugal, 2.75; Russia, 2.75; Turkey, 1.5.

The production of beet-root sugar in France, which averaged in the five years from 1838 to 1843 about 30 million kilogrammes, during the period of five years between 1872 and 1877 averaged 392 million kilogrammes per annum. About 500 factories are engaged in this industry. Their annual products during the last five years were reported as follows: for the season 1872-'73, 408 million kilos; 1873-'74, 397; 1874-'75, 451; 1875-'76, 462; 1876-'77, 243. In the year ending August 31, 1879, the exports of beet-root sugar from Germany were 2,796,913 cwt., of which 585,629 cwt. was refined. In the preceding year the exports were 1,978,496 cwt., of which the proportion of refined sugar was 437,315 cwt.

WINES.—The commerce in wine is up to the present confined principally to European varieties; yet in these it exceeds in volume the tea and coffee trades taken together. The total wine-production of Europe is estimated at 146,123,000 hectolitres. The average production of the different countries is at present as follows: France, 56,160,000 hectolitres; Italy, 31,500,000; Austro-Hungary, 22,640,000; Spain, 20,000,000; Germany, 6,500,000; Portugal, 5,000,000; Russia and Turkey, 2,134,000; Greece and Cyprus, 1,150,000; Roumania, 662,000; Switzerland, 377,000. The consumption of French champagne wines in different countries has been estimated as follows, reckoned in millions of bottles and fractions of millions: United States, 10; England, 5; Russia, 2; France, 2; Germany, 1.5; Holland, 0.6; Italy, 0.5; Belgium, 0.5; Spain, 0.3; Africa, 0.1. The wine-production of France has been subject of late years to enormous variations, as may be seen from a statement of the yearly production: 1873, 35,715,000 hectolitres; 1874, 63,146,000; 1875, 83,837,000; 1876, 41,846,000; 1877, 56,405,000. The loss entailed upon France by the damages of the phylloxera has been estimated up to 1878 at over two milliards of francs, or \$400,000,000.

In 1874 the territory devoted to the culture of the vine in France amounted to 2,446,862 hectares, the largest acreage which had ever been attained. Owing to the ravages of the phylloxera, it has steadily contracted since that year; by 1877 the reduction amounted to more than 150,000 hectares, and in 1878 the extent of soil planted was further decreased by 50,000 hectares. The departments of the south have been the principal sufferers, those most affected being Aude, Bouches-du-Rhône, Charente, Lower Charente, Dordogne, Gard, Hérault, Lot, Var, and Vaucluse. In other portions of France there has been an extension in grape-culture, the most signal development being in the departments of the Eastern Pyrenees and Yonne. In 1878 the oidium made its appearance again, and added its devastations to those of the phylloxera. The wine-crop for the year was 48,700,000 hectolitres, 7,705,000 less than the crop of 1877, and 8,093,000 less than the mean crop of the last ten years. While Languedoc, Provence, and Dauphny were severely scourged, the departments of the east and center showed an increased yield.

Nearly all of Italy's large production of excellent wines is consumed in the country itself, the export not exceeding 1 per cent. of the production, although they increased from 291,000 hectolitres in 1873 to 498,000 in 1876. In the Austrian empire about 615,000 hectares of land are devoted to the culture of the vine, two thirds of which is in Hungary. Of the admirable Hungarian wines also the exports are small compared with the domestic consumption. Spain, out of a total of \$100,000,000 yearly exports, sends abroad heavy and artificially alcoholized wines of the value of \$30,000,-

000, nearly all of which go to England. Although the consumption of the lighter wines of France has been steadily gaining in Great Britain since the conclusion of the reciprocity treaty, it has not yet approached the amount of the heavy Spanish wines consumed, the imports of port and sherry being 10,657,000 gallons in 1877, and those of French wines 6,643,000 gallons. The British imports of German wines amount to less than half a million gallons, those of Italian wines slightly more. The total consumption of wine in Great Britain in 1877 was about 16 million gallons, of the total value of about 37½ million dollars. The production of wine in the United States is slowly but decidedly extending. The culture of the vine at the Cape of Good Hope is declining, the exports of Cape wines having steadily diminished from 319,000 gallons in 1863 to 93,000 in 1866, 88,000 in 1870, 75,000 in 1873, and 55,000 in 1875. These wines are only used to adulterate other sorts.

TOBACCO.—The total world's production of tobacco can not be estimated with any satisfactory degree of accuracy. The tobacco-growing States of the American Union furnish the largest and most productive area devoted to this staple. The total production of the United States is probably at present as much as 400 million lbs. The exports of leaf-tobacco from American ports amounted in 1878 to 283 million lbs., against 282 million in 1877, 218 million in 1876, 223 million in 1875, 318 million in 1874, 213 million in 1873, 234 million in 1872, 215 million in 1871, and 185 million in 1870. From the surplus of the American crop all the European states derive the greater part of their supplies. The Cuban exportation, in consequence of the civil disturbances in the island, fell to 5 million lbs. of tobacco and 139 million cigars in 1876, and 8 million lbs. of tobacco and 88 million cigars in 1877. Large quantities of Central American tobacco are worked up in the Havana factories, and a great number of European-made cigars are shipped there to be re-exported with the Havana brand. Not one half of the cigars dealt in as Havana cigars are supposed to be made from tobacco grown in Cuba. Another Spanish colony, the Philippine Islands, plays an important part in the international tobacco trade: out of 93 million cigars exported from Manila in 1874, 93 million in 1875, and 84 million in 1876, 49 million were taken in China, 142 million went to India and Singapore, and 33 million were sent to Europe; besides which 11 or 12 million lbs. of raw Manila tobacco are annually received in Europe. China, Japan, and the Straits Settlements have a considerable export trade in tobacco, which in the two former countries however has receded since 1873, in which year the Chinese exports were 2 and the Japanese nearly 5 million lbs., those of the Straits Settlements being 212,000 lbs.; in 1876 the Chinese exports were 1,431,000, the Japanese 785,000, and those of the Straits Settlements

435,000 lbs. Holland receives from her colonies enough to supply her own large requirements and leave a considerable surplus for exportation; Java alone produces for export in a propitious year over 30 million lbs., and did export over 40 million in 1874, and 37 million in 1875. All the states of South and Central America produce more or less tobacco to export. Nearly all the European states supply their requirements in part with their own products. The total European crop is supposed to average 260 million lbs. Austria, although the largest tobacco-producer of the European countries, her crop in 1876 being 971,000 centners (1 centner = 50 kilos), is receiving larger and larger quantities each year of foreign-grown tobacco; the imports increased from 106,000 centners in 1869 to 492,000 in 1875. The 400 or 500 centners produced in Germany do not satisfy a third of her requirements. France produces about 30 million kilos per annum, and imports an equal quantity. Russia's production in 1876 amounted to 40 million kilos; Italy's was 4½ million, Holland's 4 million, and Belgium's not quite 2½ million kilos. The very considerable production of Asiatic Turkey, Syria, Persia, and Algiers is not to any extent exported except to the bordering lands.

The annual consumption of tobacco per capita in some of the principal tobacco-consuming countries has been estimated as follows: Holland, 4½ lbs. per head of population; Germany, 3½ lbs.; United States, 3 lbs.; Austro-Hungary, 2½ lbs.; Cuba, 2⅓ lbs.; Italy, 1½ lb.; Russia, 1 lb.

The importations of manufactured tobacco into Germany in 1871-'72 were 48 million kilos; in 1872-'73, 76 million; in 1873-'74, 34 million; in 1874-'75, 42 million; in 1875-'76, 46 million; in 1876-'77, 49 million. Almost the whole of the importations are American tobacco through the ports of Bremen and Hamburg. Bremen, in 1876, imported 53 million kilos of tobacco, 48 million of which was from the United States, and exported 45 million, 38 million of which was American tobacco. The consumption of tobacco per capita in Germany is estimated at 1.50 kilo in the seven years preceding 1870, and 1.83 in the succeeding seven years. The culture of tobacco in Germany has shown a tendency to decline within a few years. There was an increase up to the year 1874, when 30,500 hectares were under cultivation, and 54 million kilos were harvested. In 1875 the crop was 42 million kilos; in 1876, 37 million; in 1877, 31 million, the acreage in the mean time having fallen to 21,735 hectares. The cultivation of tobacco is confined almost entirely to the Rhine valley; 31 per cent. of the area devoted to this crop is situated in Baden, 24 per cent. in Prussia, 21 per cent. in Bavaria, and 16 per cent. in Alsace-Lorraine. The production in 1874 and the years immediately preceding was stimulated by the prospect of the restoration of the im-

port duties on tobacco, which question was being agitated at that time.

The monopoly of tobacco in Italy was carried into effect in the year 1869. The manufacture was made the exclusive privilege of the society called the *Régie*, in consideration of a rent paid annually to the state, with a certain share in the profits as an additional royalty. During the first six years of the monopoly the domestic crop of tobacco increased from 3,673,569 kilos in 1870 to 4,421,418 in 1875; and its value from 1,968,779 to 2,439,948 francs. The consumption of tobacco per capita is 0.708 kilo, of the value of 5.47 francs. The sales increased from 14,252,619 kilos in 1868, the year before the establishment of the monopoly, to 17,658,347 in 1874; the next year they fell off to 17,001,000 kilos, and have been gradually increasing again since then. The total receipts from the sales of 1876 were 134,053,132 francs, of which 41,816,795 francs represented the total cost of the materials, manufacture, and sales, and 92,236,337 was net profit. The share of the *Régie* in this profit was 5,093,827 francs; the rent paid in to the Government amounted to 79,484,891 francs; the share of the state in the profits was 5,093,827 francs, besides 2,563,792 francs which proceeded from supplementary taxes. The home production has not kept pace with the increase in the importations from abroad: in 1871 the domestic growers furnished about 28 per cent. of the total quantity required by the *Régie*, and in 1875 not more than 19 per cent. Italy has therefore become a large consumer of foreign tobacco. The *Régie's* purchases abroad were 9,341,511 kilos in 1871, 14,299,250 in 1872, 12,837,021 in 1873, 15,148,423 in 1874, 19,393,609 in 1875, and 18,375,031 in 1876. The largest part of the foreign supply is purchased in the United States, whence about 75 per cent. of the imports were derived in 1871, and over 80 per cent. in 1874, 1875, and 1876. The imports of tobacco from the United States for the several years were as follows: 1871, 6,948,145 kilos, value 7,669,511 francs; 1872, 10,549,405 kilos, value 13,902,493 francs; 1873, 10,470,078 kilos, value 11,974,690 francs; 1874, 12,865,131 kilos, value 15,544,532 francs; 1875, 15,472,440 kilos, value 25,039,686 francs; 1876, 15,060,020 kilos, value 20,634,288 francs.

COTTON.—In the cotton trade and industry the year 1878 was one of unprecedented depression. The extension of manufacturing facilities in all commercial countries during the period of inflated values and over-stimulated consumption before 1873 necessitated a fierce struggle for trade in the subsequent period of diminished consumption. The short grain-crops in Europe and the famines in India and China lessened the power of consumption, and occasioned a great fall in the prices of the manufactured stock; while no corresponding decline took place in the price of raw material, owing to the short supply of cotton. The deficiency, compared with 1877, amounted at one time to

700,000 bales; while raw cotton declined in average price in Liverpool $\frac{3}{8}d.$ to $\frac{1}{4}d.$ per lb. below the level of 1877; the prices for yarns in Manchester declined for the twelve months $1\frac{1}{4}d.$ to $1\frac{1}{8}d.$, and manufactured goods $\frac{3}{4}d.$ to $1\frac{1}{8}d.$ per lb. The British imports for 1878 amounted to 3,015,840 bales, an increase of 225,920 bales American, with a decrease of 189,580 bales Brazilian, 109,300 Egyptian, and 90,110 East Indian; the net decrease for the year was 182,250 bales. The average import price in 1878 was $6\frac{1}{8}d.$ per lb., against $6\frac{1}{4}d.$ in 1877, $6\frac{3}{4}d.$ in 1876, $7\frac{1}{8}d.$ in 1875, $9\frac{1}{8}d.$ in 1873, $8d.$ in 1871, and $11\frac{1}{8}d.$ in 1869. The annual consumption of Great Britain for the last ten years, in millions of pounds, was as follows: 1878, 1,176; 1877, 1,237; 1876, 1,274; 1875, 1,230; 1874, 1,266; 1873, 1,246; 1872, 1,175; 1871, 1,205; 1870, 1,071; 1869, 939. The quantities and values of the British exports of cotton manufactures for ten years were as follows, in millions and tenths of millions:

YEARS.	Yarns.		Piece-goods.		Hosiery.	Total value of exports.
	Lbs.	£	Yards.	£	£	£
1878...	250.5	18.0	3,606.0	47.7	5.1	65.9
1877...	227.6	12.2	3,828.0	51.9	4.9	69.7
1876...	232.1	12.7	3,656.6	49.9	4.9	67.6
1875...	215.4	18.1	3,547.8	58.1	5.4	71.7
1874...	220.5	14.5	3,557.1	54.8	5.8	74.2
1873...	214.6	15.8	3,466.5	55.8	5.5	77.8
1872...	212.8	16.6	3,517.5	55.2	5.2	80.1
1871...	198.6	15.0	3,395.1	52.8	4.8	72.8
1870...	156.0	14.6	3,257.4	53.0	8.7	71.4
1869...	169.5	14.1	2,566.1	49.9	8.0	67.1

The following table presents an estimate of the total value of the cotton goods produced in Great Britain and the cost of the raw cotton consumed each year from 1867 to 1878 inclusive, the difference giving the balance left for wages, interest, profits, and all the other expenses of manufacture, the figures representing millions and fractions of millions of pounds sterling:

YEARS.	Total value of goods produced.	Cost of raw cotton.	Balance for wages, profits, etc.
1867.....	90.4	41.2	49.1
1868.....	91.7	40.9	50.7
1869.....	86.1	43.7	42.4
1870.....	93.1	42.1	51.0
1871.....	101.9	40.8	61.1
1872.....	102.2	45.0	57.2
1873.....	104.6	45.4	59.1
1874.....	100.5	40.2	60.3
1875.....	95.4	36.5	58.9
1876.....	88.7	32.8	55.9
1877.....	87.3	32.5	54.7
1878.....	80.7	30.3	50.8

From the above it appears that the labor and capital engaged in the production of the raw material have borne the burden of reduced values in a somewhat greater measure than the capital and labor engaged in its manufacture, and that the cost of the material in the first four years of the twelve was 46.4 per cent. of

the manufactured product, in the second four years 42·6 per cent., and in the last four years only 37·5 per cent. During the period of twelve years, while the value of the aggregate manufacture has declined about 10, and the cost of materials about 11 million pounds, the actual production has been increased about 10 per cent. The price of raw cotton has fallen in ten years from 11 $\frac{1}{10}$ *d.* to 5 $\frac{3}{8}$ *d.* per pound. The price of middling uplands was quoted in the month of October in each of the five years from 1874 to 1878 as follows: 1874, 8*d.*; 1875, 7 $\frac{3}{8}$ *d.*; 1876, 6 $\frac{3}{8}$ *d.*; 1877, 6 $\frac{1}{10}$ *d.*; 1878, 6 $\frac{5}{16}$ *d.* The price of 40-mule yarn at the same dates was 12 $\frac{1}{4}$ *d.* per pound in 1874, 10 $\frac{3}{4}$ *d.* in 1875, 10 $\frac{1}{8}$ *d.* in

1876, 10 $\frac{1}{2}$ *d.* in 1877, and 9 $\frac{3}{8}$ *d.* in 1878; the price of 39-inch red-end cloth was 11 $\frac{1}{4}$ *d.* per pound in 1874, 10 $\frac{3}{4}$ *d.* in 1875, 9 $\frac{1}{4}$ *d.* in 1876, 9 $\frac{1}{2}$ *d.* in 1877, and 8*d.* in 1878. The margin for the cost and profit of manufacture has been reduced in the five years from 4 $\frac{1}{2}$ *d.* to 3 $\frac{1}{4}$ *d.*, or nearly 24 per cent., on yarn, and from 8 $\frac{1}{4}$ *d.* to 1 $\frac{3}{8}$ *d.*, or over 42 per cent., on long cloth.

The present consumption of cotton in the different countries of the world, both in the form of raw material for manufacture and in imports of cotton fabrics, the latter being the products of British factories, with the consumption per capita in the several countries, is as follows, in millions of pounds:

COUNTRIES.	Population.	Consumption of raw cotton.		Consumption of British goods.		Total consumption.	
		Lbs.	Lbs. per cap.	Lbs.	Lbs. per cap.	Lbs.	Lbs. per cap.

Total.....	5,699	100	6,246	100	7,343	100

WOOL. — The trade in fine colonial wool was moderately satisfactory for the first eight months of 1878. At the close of the September sales a declining demand reduced the level of prices. The subsequent occurrence of several heavy failures caused a panic which drove

prices far below their normal level. In low grades of wool the market was stagnant and depressed during the whole year, and accumulated stocks were piled up without buyers, while prices remained exceptionally low.

The value of the exports of wool to Europe

from the British colonies suddenly increased in the two years 1871 and 1872 from 11 to 17 millions sterling, the average before the year 1871 having been 11 millions, and since that year 18½ millions per annum. The average value per bale declined from £23¼ in 1865 and £24¼ in 1866 to £15¼ in 1869, and then rapidly rose to £26¼ in 1872; it has since declined to £18¾, where it has stood for the last three years. The prices in the latter part of 1878 were about 18 per cent. below that figure. The imports into Europe from the chief sheep-grazing countries which export have been for the last eight years as follows, in thousands of bales:

YEARS.	Australasia.	Cape.	River Plate.	Total.
1873.....	791	164	266	1,222
1877.....	823	169	277	1,271
1876.....	771	170	272	1,214
1875.....	699	175	247	1,123
1874.....	651	164	245	1,061
1873.....	651	160	264	976
1872.....	522	154	237	915
1871.....	567	143	221	937

The diminution of 49,000 bales in 1878 was occasioned by droughts, but it did not have the effect to raise prices; for, although the quantities absorbed in the European trade were larger than in 1877, the large surplus stocks remaining from the preceding year prevented any deficiency being felt. The decrease in the exports of woollen fabrics from Great Britain has been from 32 millions sterling in 1872 to 17 millions in 1877, two thirds of the diminution being in the quantities exported, and the remaining third in the diminished value of cloth, which was not compensated by any proportionate reduction in the cost of raw wool.

SILK.—Since the silk-crop of Europe has fallen away from 7 down to 3 million kilogrammes per annum, in consequence of the silk-worm disease, the factories of Europe have been obliged to make up the deficiency by increased imports of raw silk from the East. The great factories of Lyons depend almost entirely on Oriental silk. The silk-crop of Europe and Western Asia amounted in 1875 to 4, in 1876 to 1·7, and in 1877 to 2·6 million kilos. Of the product of the last-named year, France furnished half a million, and Italy (mainly raised from cocoons imported from Japan) 1½ million kilos; Spain furnished a small quantity; the rest came from Persia, Syria, and Asia Minor. The total is not as great as it should be, owing to the failure to include the crops of Austria, Greece, Algiers, and other producing lands. The importations of raw silk from Eastern Asia in 1875 were 5·6 million kilos; in 1876, 5·2 million; and in 1877, 5·7 million. In the latter year the proportion furnished by China was 4·1 million, by Japan 0·9 million, and by British India 0·7 million.

The exports from France have diminished at a rapid rate within the past few years. The decline has been from 477 million francs in 1873 to 415, 377, and 270 million, respectively,

in the three following years, and illustrates the great decrease in the consumptive capacity of all countries. A part of this shrinkage, however, is to be explained by the loss of the trade of the United States for all except the most expensive silk manufactures, owing to the development of a protected native silk industry. The exports of silks from France to the United States, who used to be one of her best customers, have decreased from 59 million francs in 1871 to 34 million in 1877.

COAL AND IRON.—The coal trade of Great Britain exhibits some abnormal and unexpected features, and has passed through an eventful period. In 1872 there was a great activity in the mining industry, owing to the high prices of iron and coal; the output increased 6½ million tons over that of 1871. In 1873 the wave of prosperity rose still higher, although, owing to labor conflicts, the production surpassed by only 3½ million tons that of 1872. In 1874 the contraction had set in, and there was a decrease of nearly 2 million tons in the production of the mines. Yet in 1875, with an increasing depression in all other branches of industry, the production of coal began again to increase, with a vast stride of 6½ million tons, and in 1876 a further increase of nearly 1½ million tons occurred. In 1877 the output was still further increased by 1½ million tons. This augmented volume of trade was only achieved by the gradual reduction of wages to the lowest endurable living rate, and was the result of the great influx of laborers who had been attracted into this branch of industry by the high wages of 1871-'73. But in the last couple of years the aggregate production was increased, while large numbers of men have abandoned the trade; that is, the quantity mined per man has been increasing.

The total production, export, and home consumption of coal in Great Britain for the twelve years 1866-'77 were as follows, in millions of tons:

YEARS.	Exports.	Home consumption.	Total production.
1866.....	10	91	101
1867.....	10	93	104
1868.....	11	91	103
1869.....	11	96	107
1870.....	12	98	110
1871.....	13	104	117
1872.....	13	110	123
1873.....	12	114	127
1874.....	14	110	125
1875.....	14	117	131
1876.....	16	116	133
1877.....	15	115	134

In France, Belgium, and Germany, the coal-mining interest, owing to the contracted consumption of iron, is languishing from the effects of diminishing demand and sinking prices.

The world's production of crude iron approaches the figure of 16 million tons per annum, of which 12 millions are produced in Europe and 6·6 millions in Great Britain alone. The production of the different iron-producing

countries advanced between 1868 and 1874 as follows: Great Britain, from 5,050,000 to 6,087,000 tons; German Empire (without counting Alsace-Lorraine), from 1,159,000 to 1,409,000 tons; France (without Alsace), from 1,235,000 to 1,388,000 tons; Belgium, from 436,000 to 533,000; Austrian Empire, from 375,000 to 484,000; Russia, from 325,000 to 326,000; Sweden, from 263,000 to 228,000; United States, from 1,454,000 to 2,439,000. The total manufactures of iron and steel in the different countries are estimated as follows, in thousands

of tons: Great Britain, iron 3,500, steel 500; United States, iron 1,602, steel 143; Germany, iron 1,150, steel 200; France, iron 883, steel 138; Belgium, iron 503, steel 15; Austria, iron 300, steel 49; Russia, iron 245, steel 7; Sweden and Norway, iron 191, steel 12; Spain, iron 36; Italy, iron 24; extra-European lands, iron 70. The production of pig iron in the several countries of the world, with the growth in this industry since 1850, is exhibited in the following table, showing the produce of each nation for the years designated in thousands of tons:

YEARS.	Great Britain.	United States.	Germany.	France.	Belgium.	Austro-Hungary.	Russia.	Sweden.	Luxemburg.	Other countries.	Total.
1850....	2,249	564	400	400	141	285	222	139	...	135	4,488
1855....	2,975	697	500	600	283	250	260	154	...	144	5,919
1860....	3,700	818	600	850	313	325	291	151	...	140	7,248
1865....	4,519	829	941	1,179	461	370	310	222	26	140	9,292
1870....	5,963	1,659	1,236	905	553	394	352	294	126	140	11,616
1871....	6,627	1,701	1,392	842	597	416	362	292	139	208	12,565
1872....	6,741	2,540	1,771	1,193	642	450	391	332	176	204	14,445
1878....	6,566	2,552	1,943	1,389	595	523	376	388	252	204	14,698
1874....	5,991	2,393	1,627	1,359	522	474	372	321	241	204	13,407
1875....	6,365	2,017	1,743	1,363	529	446	420	343	250	204	13,708
1876....	6,555	1,362	1,552	1,420	559	470	420	345	250	204	13,671
1877....	6,603	2,059	1,535	1,328	416	470	420	343	250	204	13,627

During the period from 1860 to 1876 the number of puddling-furnaces in the United Kingdom was increased from 3,462 to 7,159, augmenting the productive capacity of the country from 2 to 4½ million tons. This increase would have more than sufficed to meet the increased demand for iron, though steel had never supplanted malleable iron in the market as it has done. The extension of blast-furnace facilities was equally enormous and uncalled for; and at the end of 1878 there were 500 blast-furnaces lying idle in Great Britain. A capital of as much as five millions sterling invested in blast-furnaces has remained unproductive for the last two years, while other iron-masters kept their furnaces in blast at a loss until they were completely bankrupted. Now for the first time there are signs of a revival in the market for pig iron, and an upward tendency in prices.

The capital expended in puddling-furnaces is probably lost together. More than half the puddling-furnaces in the north of England, Staffordshire, and Wales have ceased operations probably for ever, and gradually the remaining ones must let their fires go out one by one in the natural course of events. But if England has lost this so lately important industry, she is foremost in pursuing the one which has pushed it to the wall. The production of Bessemer steel has increased within five years from 540,000 to 813,000 tons, while the price has fallen from £14 to £4 10s. per ton. Steel-works have been started on the Mersey and the Tees, at Barrow, Sheffield, and Manchester, and in Wales and Staffordshire. Yet England is not without rivals in the manufacture of the new material. France and the United States early started in the race, and have elaborated their own methods and improvements; and Belgium and Germany com-

pete so well with the British manufacturers that they can frequently cite lower prices.

The competition of English iron manufacturers with foreign manufacturers and with each other has been desperate, and prices have steadily declined. The total exports of iron and steel from the United Kingdom in 1878 were 47,000 tons less than in 1877, but 75,000 tons more than in 1876. The exports in 1878 were only 658,000 tons less than those of 1873; yet the shrinkage in prices made the difference in the value of the exports between the two years fully 20 millions sterling. The lowest price was touched in July, 1879, when Scotch pig was quoted at 40s. 3d. per ton. When considerable orders came from the United States a turn in prices resulted, and the trade began to revive. By the middle of September Scotch iron was selling at 49s. 7d., and on the 1st of October at 59s. 6d. Cleveland No. 3 rose between the middle of July and the beginning of October from 32s. 6d. to 44s. 6d., and Cleveland bars from 96s. to 114s.

As the expansion in the iron industry was greater than in any other, and spread over all countries before the crisis of 1873, so now this trade is suffering the most severely from a collapse of prices and a lack of business. In Germany, Belgium, and France the depression is greater than in England, and a long and bitter contest is impending between the new works on the Continent and the capital engaged in the iron and steel industries in England.

PETROLEUM.—The production of petroleum in the oil-fields of western Pennsylvania, in quantities of any commercial importance, began in the year 1859. Only within the last few years has the export trade assumed such dimensions as largely to exceed the home consumption. The production of the wells for the five years from 1859 to 1863, inclusive, was 8,362,-

000 barrels; 1864-'68, 15,140,176; 1869-'73, 30,010,119; and 1874-'78, 57,563,775; total production for the twenty years, 111,082,070 barrels. The exports of petroleum from the United States in the year 1876, in barrels of crude oil or their equivalent, the barrel containing 42 gallons, were 7,497,856 bbls.; the home consumption for the same year, 2,677,158 bbls.; in 1877, exports 10,175,014 bbls., home consumption 2,761,574 bbls.; in 1878, exports 10,353,774 bbls., home consumption 3,769,226 bbls. Of the production of 1878, 66·4 per cent. was shipped abroad, 24·2 per cent. went into consumption in the United States, and 9·4 per cent. went to increase the surplus stock. The total production in 1878 was 15,165,462 bbls., against 13,135,671 in 1877, and 8,968,906 in 1876. The daily average consumption in 1878 was 38,494 bbls., against 34,351 in 1877, an increase of over 12 per cent. The shipments to New York from the oil regions in 1876 were 24½ per cent. of the total shipments, in 1877 35 per cent., and in 1878 43 per cent. The Cleveland refineries consume 20 to 24 per cent. of the total shipments, and 14 to 19 per cent. goes to Pittsburgh; the Oil Creek refiners, who in 1876 and 1877 took 13 or 14 per cent. of the oil shipped, in 1878 consumed but 2 per cent.

In *England* the evils of declining prices and a contracted trade have made themselves felt with greater severity in each succeeding year. In 1877, as in 1876, the English money market was in a languishing condition. The Bank's mean rate of discount for the year was 2½ per cent., against 2¼ per cent. in 1876; the rate in the open market was about the same as in the preceding year, averaging 2½ per cent. The financial situation of the country was seriously impaired by a rise in the price of wheat of about 20 per cent.; the advance from 46s. 2d. to 56s. 9d. in this period of stagnation aggravated greatly the general distress. The increase in the cost of living, happening at a time of feeble business and low markets for manufactured goods, excited numerous conflicts between labor and capital: there occurred not less than 161 separate strikes within the year 1877. Pauperism increased 11 per cent. this year, comparing it with the last. Owing to the unusual requirements for food, the importations were largely in excess of those of the preceding year, increasing the total commerce from £698,449,631 to £723,716,620, or 3·6 per cent.; yet the export trade continued in the same downward course which commenced in 1873.

The year 1878 was marked by deepening financial gloom in England, and the appearance of serious distress among the working population. The situation was aggravated by disastrous financial failures. A crisis in the cotton trade occurred, in which the manufacturers, who had been keeping their mills working at a loss for several years, until many of them stood on the brink of bankruptcy, and had kept up

the stock of manufactured goods beyond any present demand, and underbid each other till prices were at the lowest ebb, were threatened with a double danger by a dearth in the supply of raw cotton, which kept up the price of the material, while the failure of several manufacturers and the critical situation of others threw their stocks of cotton goods on the market and depressed the prices of manufactures. In the coal and iron industries the situation was equally gloomy, and there can be no doubt that the substitution of steel for iron will cause a gradual decay of those trades, extended as they had been by the sudden and enormous demand for iron before 1873. In the stock market there has been a large unloading of American State securities, which have returned to America, and of Russian securities, which went to Germany and France. The great Glasgow failure caused less distress in the money and loan market than in the industrial districts of the north.

The failure of the City of Glasgow Bank, which closed its payments on the 2d of October, 1878, amounted almost to a national disaster, reducing hundreds and thousands of families in the south of Scotland to beggary. The investigation of the affairs of this gigantic institution after its collapse revealed a degree of willful deceit and criminal recklessness on the part of its managers which set the public to reflecting anew on the justice of the reputation for integrity formerly deserved and long enjoyed by the British merchant. The bank was established in 1839. Its paid-up capital was £1,000,000. It had one hundred and thirty-one branches, distributed all over Scotland. Although its bills had never stood A 1 in Lombard Street, the public had no suspicion of its condition until the day it was closed; on the very preceding day its shares stood at 2·35½ in the market. For years before the published statements of the condition of the bank were made up of a tissue of falsehoods and forgeries. All the books were falsified. The statement published four months before the failure, when a dividend of 12 per cent. was voted, gave the amount of bills receivable over a million pounds too high; the good securities were overstated by nearly the same amount; and a couple of hundred thousand pounds were fictitiously added to the account of cash in the vaults. In the June statement the liabilities to the public were given as ten millions; in October the liquidators found them twelve millions. In June the assets balanced the liabilities and capital account; after the failure they were found to be £7,213,314, leaving a deficit of £6,783,079. The City of Glasgow Bank, like all the Scottish banks of issue except the three oldest, was incorporated under the provision of the unlimited liability of the shareholders. The deluded shareholders, beyond the loss of their investment in the stock, which they had bought mostly at prices far above par, were therefore holden each and all of them, to the extent of

every shilling which they possessed, for the outside liabilities of the bank, amounting to £5,190,988. The reckless manner in which credit was extended by the directors, often on purely personal or family grounds, was revealed by the fact that they had loaned over 5½ millions, the greater part of it to only three persons, on securities which were not worth more than a million and a half. Besides the failure of the City of Glasgow Bank, several other failures in the banking business occurred in Great Britain during the years 1878 and 1879, which affected trade very injuriously. The most formidable of these was the stoppage of the West of England and South Wales Banking Company on the 9th of December, 1878. This large concern had forty or fifty branches; the liabilities were five million pounds and the deficit between one and two millions. In the coal-mining trade numerous bankruptcies occurred; nearly all of the companies started during the period of high prices from 1871 to 1873 have gone into liquidation.

In consequence of the numerous speculative, impracticable, or fraudulent schemes for which joint-stock companies were formed, whose shares were floated without difficulty on the London market prior to the crisis of 1873, a Parliamentary Commission was appointed to inquire into the constitution and usages of the London Stock Exchange, and report on the necessity of legislative interference or supervision. The London Stock Exchange has been in existence over seventy-five years, and counts more than 2,000 members. The Commission exonerated the board of management, which is called the Committee for General Purposes, from all knowledge of or participation in the reckless and fraudulent transactions which gave occasion for the investigation. The premises, business management, and emoluments of the Exchange belong to a body of shareholders, who may or may not be members, and who elect a board of trustees to look after the financial management of the corporation. The yearly dividends amount to 20 or 21 per cent. on the original investment. Among the glaring swindles and disastrous bubble companies which have been launched on the London Stock Exchange of late years, are the Oriental and Australian Navigation Company, the directors of which bought the shares short before the day of issue until they had the sellers at their mercy; the Eupion Gas Company swindle of 1874; Charles Laffitte & Co.; the Marseilles Land Company; the Moscow Gas Company; and the Peruvian Railway Company. The Stock Exchange, before quoting the stock of a new company, subjects it to a certain sort of examination and scrutiny in the interests of the general public, enough to inspire confidence in the public, but not enough to insure it against fraud. The investors can not usually judge of the merits and prospects of a new company, but are guided in their purchases by the quotations of the Stock Ex-

change. When they read in the papers that the stock of a company is quoted at a premium on the Exchange, they conclude that it is in request among the business men best versed in such enterprises. But the premium on the stock before the issue of the shares is of a fictitious character, and is produced purposely to mislead the public. Swindling promoters are thus enabled to dispose of worthless shares at or above par, by first bidding up the price on 'Change before the issue, and after the issue unloading as soon as possible, while the demand thus fraudulently created continues among the gulled and ignorant public. Another common method of fraud is practiced by the founders and directors of new companies on the dealers within the Exchange. The dishonest promoters, through their agents, will buy stock for future delivery at a premium of the speculators, who rely on procuring it in the open market at or about par on the day of issue. But the promoters, who control the issue of the stock, will have put so many shares in the names of themselves, their friends, and abettors, that the dealers can not obtain the stocks to fulfill their contracts except at exorbitant rates. The quotation of shares before the day of issue is a practice which the Commission condemns unqualifiedly, regarding the jobbing in stocks and bonds before the delivery of the shares to subscribers as the means oftenest employed to place fraudulent loans and to float the stock of swindling corporations. They recommend a penal enactment of Parliament against this variety of stock-jobbing. The operations on the Exchange are under the control of the members through their administrative council, the Committee for General Purposes, which is elected annually. A movement is on foot, which is approved of by the Parliamentary Commission, to fuse the two separate societies of shareholders and members into one corporation. Both brokers and dealers are admitted as members on the same footing; but a regulation has recently been adopted forbidding members to act as speculators on their own account and as agents for outsiders at the same time. As the Committee for General Purposes, which consists of seven members, is frequently called upon to decide on questions which affect the interests both of the members of the Stock Exchange and of outside parties, it would be well to insist that each member of the Committee before voting should have listened to the whole of the deliberations, and that he should be compelled to declare that he has no financial interest in the question under consideration.

A comparison of the wholesale prices in London of the leading articles on the 1st of January, 1879, with those of the same date in the years named below, showed the following variations (the sign + signifying the excess over the prices of 1879; —, the increase in 1879 over the prices of the former year; and =, that the prices were the same as those of 1879):

ARTICLES	1878.	1876.	1870.	1867.

Between the 1st of January, 1873, and the 1st of January, 1879, the "Gazette" average price for wheat had fallen from 55s. 11d. per quarter to 39s. 7d., or 29 per cent., in London, while the New York price for red spring wheat had fallen from \$1.70 to \$1.10 per bushel; and flour had fallen from \$7.50 to \$3.70 per barrel, 51 per cent., in New York, and in London had declined 22 per cent. The London price for Scotch pig iron declined between the two dates from 127s. to 43s. per ton, or 66 per cent.; coals from 30s. to 19s., or 37 per cent.; copper from £91 to £57 per ton, or 37 per cent.; and tin from £142 to £61, or 57 per cent. The fall in inferior beef was 26 per cent., in prime small 10 per cent. Middling upland cotton fell from 10d. to 5½d. per lb., or 46 per cent.; wool from £23 to £13 per pack, or 43 per cent. The decline in sugar was 26 per cent., in coffee 19 per cent., in black Malabar pepper 39 per cent., and in saltpeter 34 per cent.

The total value of British imports showed a decline in 1878 for the first time since 1872. The fall in the total values imported was from 394 to 366 millions sterling, the total imports for the year amounting to the latter sum. The imports of raw materials, 122 millions, show a decline of 1½ per cent. or 14 millions. In the quantities of food and articles of consumption imported there was an increase of 2 per cent., and in materials for manufactures a decrease of 5 per cent.; in average prices there was a decrease in the first class of about 9 and in the second of nearly 7 per cent. The increase in food imports was confined to animal foods, and chiefly occurred in the articles bacon and hams, much larger quantities of which were imported at reduced prices. Among vegetable foods, there was a decline in quantity and a still greater decline in price in the articles wheat and sugar, and an increase in the article Indian corn. Among the materials for manufactures, the largest falling off was in the textile materials, the decline in prices being considerably greater than that in quantities. In the imports of wood there was a remarkable diminution in quantities and a considerable decline in prices. In the total

imports of all classes there was perhaps a slight increase in quantities, with a decrease in the aggregate value of 8½ per cent. The chief articles of animal food were imported to the amount of 40 millions in value, nearly 4 millions more than in the previous year. In the imports of alcoholic beverages, which amounted to nearly 8½ millions in value, there was a falling off of about 1½ million. In petroleum there was a slight falling off in quantity, which was remarkable considering that the value was proportionately much less. In oils and in tallow there was a decline in both quantities and value. In niter there was an advance in quantity at a higher price. In guano and bone fertilizers there was a slightly increased importation. The chief materials for the textile manufactures were imported to the value of 70.43 millions, or 5.84 millions less than in the preceding year—a decrease due in nearly equal measure to lessened quantities and lower cost. On imports of the chief manufactured articles of the value of 6.70 millions, there was a decrease of 0.17 million, principally due to lower prices. Among miscellaneous materials, there was a slight increase in the import of raw hides and tanned leather at a lower cost, and also in rope and linseed. The following table shows the course of trade in the principal articles above mentioned and several others (+, increase; —, decrease):

The trade returns for the first nine months of 1879 show a decrease of £23,269,840, or 8.2 per cent., compared with the returns of the same three quarters of 1878, which gave £282,616,072, against £259,346,232 in 1879. The decrease in the exports was less marked, being £4,761,512, or 3.3 per cent.; the exports in the first nine months of 1878 being £144,926,177, against £140,164,665 in 1879. The imports of raw cotton were about 3 per cent. lighter and about two millions sterling less in value than in the first three quarters of 1878. In the

exports of cotton manufactures there was an inappreciable increase in the number of yards of piece-goods, but a decline in the total values of over 4½ per cent. This was partly balanced by an increase in the values of lace, so that the total decline in cotton manufactures was from about 39¼ to 38¼ millions sterling. In cotton yarn there was a reduced exportation to nearly all countries except Russia, and a decline of a million in the values. In raw silk there was a large falling off, which answers to a decline in the exports of silk manufactures. In wool there was an increase in the imports from Australia from 258 to 273 million lbs. The total imports for the nine months were 350,610,036 lbs., against 345,421,768 lbs. in 1878. The exports of raw wool increased from 4,935,278 lbs. to 7,755,100 lbs., the principal increase being made up of shipments to the United States, who had not before bought much at the English sales, and whose purchases for the nine months this year increased from 292,678 to 3,274,400 lbs. The exports of woolen and worsted yarn remained about the same, being 23,408,000 lbs., those to Germany showing a decline, and those to Russia an increase. In the total values of woolen manufactures exported there was a decline from £12,768,363 to £11,878,871. In woolen cloths there was an increase from 33,637,200 to 33,983,800 yards, the increase being in mixed goods, but a decline in values. In worsted goods, there was an increased exportation of all-wool goods, but a considerable decline in the mixed grades, the total falling off being from 149,228,600 to 142,517,200 yards. To France, the United States, Italy, China, and Japan there was an increased exportation; to all other countries diminished shipments. The imports of flax show a slight falling off in quantity and a considerable decline in value; those of hemp declined over 10 per cent. in quantity and as much as 20 per cent. in value. In jute there was an increased importation, and also an increased exportation of jute and jute manufactures, except bags, which showed a decline. The exports of linen piece-goods declined from 124,733,100 to 120,092,400 yards, and the total value of linen manufactures from £4,337,527 to £4,147,597. The imports of undressed hides fell from 507,000 to 277,000 cwt.; those of tanned and curried hides from 40 to 26 million lbs. The exports of leather showed an increase of nearly 25 per cent. In haberdashery and millinery there was a decline of nearly 10 per cent., in hardware and cutlery of about the same, in pottery an increase, in articles of female apparel and men's ready-made clothing a slight increase in value, and in alkalies an increase in quantity but a slight decline in value. The imports of copper increased, while those of the ore show a decline. The exports of copper declined in value about 4 per cent., while the quantity exported was about 8 per cent. greater than in the preceding year. The importation of nearly all articles of prime neces-

sity was in excess of that of last year. The total imports of wheat for the nine months were 41 million cwt., against 37 million in the corresponding months of 1878; but the total value was only 20 in the place of 21 millions sterling. Of these Russia furnished 5¼ million cwt., instead of 6¼ as in 1878; Germany, 2¼, instead of 3¼ million cwt.; India, only ¼ instead of 1¼ million cwt. The importations from Australia increased from 1,144,449 cwt. to 1,860,005 cwt., those from British America from 1,570,638 to 2,662,165 cwt., and those from the United States from 22,562,818 to 25,144,090 cwt.; from the Pacific States the increase was from 4,124,852 to 6,010,863 cwt., and from the Atlantic ports from 18,437,966 to 19,133,227 cwt. There was a large increase in the importation of wheat-flour from the United States. The total importation increased from 5,760,102 to 7,553,383 cwt., that from the United States being 4,890,999 cwt., or nearly double that of the previous year in the same nine months. In the imports of maize there was a decline from 34 to 30 million cwt., or between 8 and 9 per cent. In oil-seed cakes there was also a decline, about 4 per cent. in quantity and 8 per cent. in value. The importation of oats was about the same; that of barley declined nearly one half both in quantity and value.

The foreign commerce of France has increased in the last half-century nearly 400 per cent. The average annual trade, import and export together, for the different periods of ten years within the space of fifty years from 1823 to 1876, has been computed as follows, the numbers denoting millions of francs: 1827-'36, general commerce 1,366, special commerce 1,001; 1837-'46, general commerce 2,112, special commerce 1,489; 1847-'56, general commerce 3,175, special commerce 2,301; 1857-'66, general commerce 6,280, special commerce 4,631; 1867-'76, general commerce 8,464, special commerce 6,714. Averaging the returns for the whole fifty years, we find the mean annual volume of the general commerce to be 4,279, of the special 3,227 million francs. The returns for each year of the last decade, 1867-'76, of the total volume of each class of foreign trade, the exports and imports being taken together, were as follows in millions of francs: General commerce—1867, 7,965; 1868, 7,979; 1869, 8,002; 1870, 6,954; 1871, 7,231; 1872, 9,258; 1873, 9,399; 1874, 9,125; 1875, 9,269; 1876, 9,456. Special commerce—1867, 5,852; 1868, 6,094; 1869, 6,228; 1870, 5,670; 1871, 6,439; 1872, 7,332; 1873, 7,342; 1874, 7,209; 1875, 7,409; 1876, 7,564.

The importations into the United States from France in the year 1860, on the eve of the civil war, amounted to about 50 million dollars. In 1864 they were not more than a third as much in amount. During the ten years from 1867 to 1876 the exportations from America to France increased in a steady progression from about 28 million dollars to nearly 53 millions. The exportation of Ameri-

can products to France amounted to nearly 48 millions; but, interrupted by the war, they sank in 1864 to less than 10 millions. In 1876 they were 5 millions more than in 1860. The commodities exported to France from the United States, with the exception of a small amount in machinery, consist of raw materials and articles of food. Of the exportations of American products to France in 1876, 31 millions, or nearly 60 per cent., were in raw cotton; 21 millions, or 8 per cent., lard and tallow; 19 millions, petroleum; and 15 millions, tobacco.

The French customs returns for 1878 give as the values of the imports and exports of that year the following sums (reduced to dollars): Total imports, \$892,194,800, viz.: raw materials, \$450,355,200; articles of food, \$308,661,600; manufactures, \$89,426,600; other articles, \$43,751,400. Total exports, \$673,961,400, viz.: manufactures, \$373,428,400; articles of food and raw materials, \$264,173,000; other articles, \$36,360,000. Among the imports of food articles, breadstuffs are represented by 116 million dollars, oil-bearing fruits and seeds by 31 millions, sugar by 22 millions, coffee by 22 millions, cattle by 48 millions. Among the chief imports of raw materials are peltries, 82 million dollars; wool, 69 millions; silk, 75 millions; cotton, 39 millions; timber, 33 millions; coal, 33 millions. Among the chief imports of manufactures are cotton yarn, 9 millions; woolen yarn, 4 millions; silk goods, 8 millions; woolen goods, 14 millions; cotton goods, 14 millions; machinery, 8 millions. Of the exports of manufactures, silk goods are the chief item, 66 millions; woolen goods next, 53 millions; then leather manufactures, 30 millions; mercery, buttons, and turned wares, 29 millions; leather, 18 millions; clothing, 17 millions; tools and hardware, 14 millions; jewelry, 12 millions; cotton goods, 12 millions; woolen yarn, 8 millions. The imports of food and crude products exceed the exports by 495 million dollars, while the exports of manufactures are 284 millions in excess of the imports. Compared with 1877, there is an increase in the total imports of 158 million dollars, and a diminution in the exports of 13 millions; the excess of imports, which was 47 millions in 1877, having increased in 1878 to 218 millions.

The French customs returns for the first eight months of 1879, compared with the same period in 1878, show an increase in the imports of alimentary substances from 1,149,527,000 to 842,442,000 francs, or 36 per cent. In the imports of natural products and materials for manufacture the slight decrease from 1,430,732,000 to 1,424,457,000 francs is of no statistical significance. The imports of manufactured objects were 289,709,000 francs, compared with 287,501,000 in 1878; those of other merchandise, 142,583,000 francs, compared with 126,699,000. The increase in the imports from 2,687,374,000 to 3,006,276,000

francs, amounting to 318,902,000 francs, or nearly 12 per cent., is therefore attributable to the augmented food importations. In the exports there was an inappreciable diminution in manufactures from 1,116,767,000 to 1,114,605,000 francs; a decline of 1 per cent., or from 799,699,000 to 791,121,000 francs, in foods and raw materials, and of 4 per cent., or from 115,495,000 to 110,498,000 francs, in other merchandise. The decline in the total exports was not $\frac{1}{10}$ per cent., being from 2,031,961,000 to 2,016,224,000 francs.

The variations in the ninety principal securities dealt in on the Paris Bourse show a net rise in the aggregate values of securities between the 1st of January, 1878, and the 1st of January, 1879, of 2,996 million francs. The rise in French rentes aggregates 1,000 million francs; in French railway bonds, 548 million francs. Among the few securities which declined in price were Austrian Government bonds, shares of the Bank of France, Suez Canal shares, and certain gas shares, depressed probably, like gas shares in London, by the prospect of the introduction of the electric light. Money was more abundant in Paris during the year 1878 than in any other money market, large amounts flowing out to England during the latter half of the year. The rise in first-class securities is in this case the result of the general depression of industry and commerce, the lowering of the rates of interest, and the diminished demand for capital for productive purposes. Industrial stocks generally declined; the coal stocks of the nineteen principal companies of the north of France depreciated during the year 103 million francs in the aggregate, the fall in shares averaging 47 per cent.

The total volume of the external commerce of Belgium in 1877 was 4,360,800,000 francs, about 4 per cent. less than in 1876. The total importations, embracing all the goods received both for consumption and for re-exportation, amounted to 2,356,600,000 francs, a decline of about 4 per cent.; the total exports, including the foreign exports, were 2,004,200,000 francs, showing a falling off of 4 per cent. likewise. Eliminating the transit and re-export trade, the net amount of the foreign trade of Belgium (the amount of foreign products which entered into consumption and the amount of Belgian produce and manufactures shipped abroad being taken together) was about the same as in the preceding year, the total value being 2,500,500,000 francs. The analysis of the total returns shows favorably for Belgium, the value of the imports which went into consumption being 1,426,200,000 francs, a decline of 2 per cent., and the value of the exports of Belgian products being 1,074,300,000 francs, a gain of 1 per cent. over the previous year. There was a diminished importation of grain, of wool and hides, of pig iron, and of coffee and nearly all luxuries and manufactures, and an increase in the importations of iron ore and other mineral

products, vegetable fibers, resins and oils, and provisions. Among the exports the articles showing the largest increase were vegetable fibers, machinery, iron products, iron and steel, zinc, the different textiles, and various other manufactures.

The fatal marasmus of contracting commerce and industrial stagnation has afflicted *Germany*, perhaps, more severely and calamitously than any other country. The depression set in very early in the country of the milliards, and was by many attributed to the reaction from the over-speculation excited by the influx of the French gold; now many attribute it to the effect on values of the change to a gold standard which the receipt of the vast sum of indemnity enabled the German Government to accomplish. The Government has recently appointed commissions to inquire into the causes of the continued commercial depression, from whose deliberations projects for its relief and remedy are hopefully awaited.

The German Government has lately abandoned the practice of reporting the value of

the imports and exports, and published simply the quantities. The estimated value of the imports and exports of 1878, compared with the values reported in the two preceding years; indicate an intensified prostration of commerce and industry. The total value of the imports of 1876 was 3,913,300,000 marks, and of 1877, 3,877,000,000 marks; estimated value of the imports of 1878, 3,343,700,000 marks. The total exports in 1876 amounted 2,484,700,000 marks; in 1877, to 2,716,100,000 marks; in 1878 their computed value is 2,360,700,000 marks. The subjoined table exhibits the movement for the three separate years in the chief classes of commodities. The increase made in the importations of the year 1878 under the heads of tobacco and machinery is ascribable to the prospect of tariff reforms. The table gives the complete returns for the first two years, but only the estimates, based on the quantities which passed the borders, for the year 1878. Four marks are approximately equal to one dollar, and a centner is equal to a cwt. of 112 lbs.

ARTICLES.	IMPORTS.		EXPORTS.	
	Quantities.	Value.	Quantities.	Value.
	Centners.	Marks.	Centners.	Marks.

	1877	43,800,000
	1878	51,700,000

The German Government, impelled on the one hand by the prostration of industry and commerce and the widespread distress among the working people to adopt some extraordinary measure of relief, and actuated on the other hand by its own pressing need of an increased revenue which shall not depend on the doubtful vote of the Parliament, in order to carry out the policy to which it has committed itself, saw fit to abandon its free-trade principles, and drew up a reformed tariff of a highly protective nature, which has lately been accepted by the Parliament. This tariff proposes

to raise from 88 to 120 million marks of additional revenue from supplementary duties, which are to be imposed to the amount of 29 to 37 millions on objects already dutiable, and new duties amounting to from 59 to 84 million marks to be levied on imports which have been before exempt. Of the new revenue, 35 to 43 millions is purely fiscal in its character, being imposed on petroleum to the amount of from 20 to 25 millions, and on articles of luxury, with the exception of beer and tobacco, to the amount of from 15 to 17 millions. The remainder of the new revenue is

to be levied on imports which compete with native products, with a view to protect home industries from foreign competition. Of this, from 34 to 49 million marks is to be imposed on agricultural and forest products, to wit: 30 to 41 millions on cereals, cattle, cheese, butter, etc., and 4 to 8 millions on products of the forest; and 18 to 28 millions on mechanical products, to wit: 6 to 12 millions on iron and machinery, 9 to 12 millions on textile fabrics, and 3 to 4 millions on other industrial products.

In *Italy* the imports declined from 1,327,137,301 francs in 1876 to 1,148,049,418 francs in 1877; and the exports in a still greater measure, from 1,216,929,416 francs to 967,367,551 francs, thus increasing an adverse balance from 110 to 180 millions and reducing the total volume of trade by 16 per cent. In 1878 the total trade remained about the same as in 1877, but an increase in the exports to 1,040,789,181 francs and a diminution in the imports to 1,070,802,434 francs reduced the adverse balance to only 30 millions. The principal reduction in the imports took place under the following heads, the values being stated in millions of francs: Spirits, beverages, and oils, 17; colonial products, 24; cottons, 23; metals and minerals, 26. Under the following heads there was an increased importation to the following amounts: Chemical products, 2; hemp and flax and their products, 7; grain and flour, 32. Among the exports there was a diminution of 15 millions in oils and beverages, 2 millions in paper, 3 millions in cereals, flour, and pastes, and 11 millions in animals, etc. The augmentations chiefly arose under the following heads: Colors and tanners' materials, 8; hemp and flax, 14; cottons, 6; wool, 3; silk, 49; wood and straw, 7; stone, earthenware, and glass, 5.

The trade statistics of *Italy* for the first half of 1879 show a continued favorable state of commerce. The imports for the six months were of the value of 607,251,075 francs, against 587,956,841 francs in the corresponding part of 1878. The exports were 586,435,744 francs, against 516,082,083 francs in 1878. The increase of 19 millions or 3.28 per cent. in the imports is found under the general head of sugar, tobacco, and other colonial products, which is put down for 106,090,275 francs, against 57,125,043 francs in the first half of 1878. The proposal of the Government to raise the duties on sugar, coffee, and petroleum excited an unusual importation of those articles, particularly of sugar, of which 500,000 quintals more were imported than in the corresponding previous half year. Other articles which show an increased importation are tanning materials, hides, coal, and horses. The stimulated trade in colonial wares produced an increase of over 25 million francs, or about 50 per cent., in the customs receipts. The unusual and anticipated demand for sugar and coffee was nearly set off by a decline in the importation of foreign manufactures. Among the textiles, there was a decrease of 7,000 quintals

in the imports of flax, hemp, and jute materials, 11,000 quintals in cotton yarn, 9,000 quintals in cotton goods, 7,000 quintals in linen and jute manufactures, and 7,000 quintals in woollens. There was a slight decrease among the exports in dried fruit, straw hats, lead, and live stock. There were considerable increases, on the other hand, in the export of wines, olive oil, lime-juice, tanning materials, hemp, raw and thrown silk, paper, dressed skins, sulphur, rice, oranges and lemons, almonds, and dried figs.

The import trade of *Egypt* in 1876 amounted to 162,903,786 francs; the exports were 325,614,015 francs, an increase of 8,346,099 francs over those of the preceding year. England takes nearly two thirds of the Egyptian exports, France about one quarter, and Italy, the next best customer, not over 6 per cent. In the articles of export, cotton preponderates over all the others, figuring for 213 million francs, and cotton-seed for nearly 38 millions; the export of cereals amounted to 26 millions, that of sugar to 17½ millions. A considerable trade is done in the products of Central Africa, which are exchanged by the natives for English calicoes, copper, and fire-arms, and brought by caravans to Khartoum or the ports of the Red Sea: gums are exported to the value of 8 million francs, ostrich-plumes 3 millions, skins 2½ millions, and ivory 1½ million. The principal trade in these articles is with France, who takes the coffee, the drugs, the skins, the gums, the wax, and the ostrich-feathers, which are brought from the White Nile, Dongola, and Kordofan. The elephant and hippopotamus ivory goes to Austria. The oil of roses and other essences are sent to Turkey and the Levant. The chief imports into *Egypt* are woods for building purposes from Austria and Turkey; coal and iron from England; fruits and provisions from France, Austria, Greece, and Syria; marbles from Italy and Austria; manufactures and machinery principally from Great Britain; oils, furniture, paper, silks, wines, and liquors from the port of Marseilles; and tobacco from Greece, Turkey, and Syria. England and France are the largest sellers to *Egypt*. The imports of petroleum from the United States show a diminution of 300,000 francs in 1876. The total imports into *Egypt* in 1876 were 5,033,142 francs less in value than in the preceding year. This diminution, however, did not affect the leading commercial nations of Europe, as the importations from Great Britain showed an increase of 5 millions for iron, coal, and manufactures; those from Austria showed an increase of 1½ million francs for timber. The importations of breadstuffs from Russia also increased slightly; and those from France were somewhat greater.

The foreign trade returns of *British India* for 1877-'78 show a larger total than in any previous year. This increase, however, is not attributable to the improved prosperity of the

people; but, as far as it is affected by the greater importation of grain and pulse, which amounted to 1,250,000 cwt. as compared with 41,000 and 282,000 cwt. in the two preceding years, it is the result of the recent famine. The imports of cotton twist and yarn and of gray piece-goods show a large increase, the former amounting to 36 million lbs., as compared with 33 million lbs. in 1876-'77, and the latter to 992 million yards, as compared with 840 million yards. But this line of trade was unnaturally stimulated by the efforts of English manufacturers to work off their surplus stocks at greatly reduced prices. The imports of salt, which afford a better criterion of the consumptive capacity of the people, have declined from 298,000 tons in 1877, and 365,000 in 1876, to 254,000 tons in 1878. The trade of France and Italy with India through the Suez Canal has greatly increased during the last four years; in 1878 the trade with those countries made 5·3 and 1·8 per cent. respectively of the total commerce. The export trade of India still continues to feel the stimulating effect of the depreciation of silver; the proportion of the exports to the total volume of the merchandise trade, which was 59 per cent. in the years 1867 and 1868, and increased to 67 per cent. in 1871-'72, was 62 per cent. in 1877-'78, against 63 per cent. the previous year, and 61 and 62 per cent. in the second and third years before. The values of the imports and exports of merchandise for the last twelve years were, in lacs of rupees (1 lac=\$50,000 approximately), as follows:

YEARS.	Imports.	Exports.	Total trade.
1866-'67.....	2,901	4,185	7,087
1867-'68.....	8,566	5,087	8,653
1868-'69.....	3,599	5,306	8,599
1869-'70.....	3,287	5,247	8,535
1870-'71.....	3,334	5,533	8,568
1871-'72.....	3,981	6,318	9,399
1872-'73.....	8,047	5,523	8,570
1873-'74.....	3,162	5,496	8,653
1874-'75.....	3,464	5,681	9,095
1875-'76.....	3,711	5,804	9,515
1876-'77.....	3,536	6,096	9,632
1877-'78.....	3,932	6,518	10,451

The shipments of silver from England to the East, in millions of pounds sterling and fractions of millions, the silver imports into Great Britain, and the average price of standard silver per ounce in pence, are shown in the following table:

YEARS.	Shipments to the East.	Imports into the United Kingdom.	Average price in London.
1878.....	5·84	11·45	52 ³ / ₄
1877.....	17·00	21·62	54 ¹ / ₂
1876.....	10·91	18·56	52 ¹ / ₂
1875.....	8·71	9·50	56 ³ / ₄
1874.....	7·09	11·80	58 ³ / ₄
1873.....	2·50	12·30	53 ¹ / ₂

1870.....	1·53	10·65	80 ¹ / ₂
1869.....	2·36	6·73	60 ¹ / ₂
1868.....	1·63	7·71	60
1867.....	·64	8·02	60
1866.....	2·36	10·78	61 ¹ / ₂

The foreign commerce of the *Dominion of Canada* for each of the ten years from 1868 to 1877 was, according to the official returns, as follows:

YEARS ENDING JUN 30.	Exports.	Gross Imports.	Net Imports.
1868.....	\$57,567,388	\$78,459,644	\$71,965,806
1869.....	60,474,751	70,415,165	67,402,170
1870.....	73,573,490	74,814,839	71,237,608
1871.....	74,178,618	96,092,971	56,947,432
1872.....	82,639,668	111,430,527	107,709,116
1873.....	89,789,922	128,011,281	127,514,594
1874.....	89,351,925	128,213,582	127,404,189
1875.....	77,886,979	123,070,288	119,618,657
1876.....	80,966,435	93,210,346	94,788,218
1877.....	75,875,893	99,327,962	96,800,458

In 1878 the total imports were \$91,199,577, and the total exports \$79,323,667. The foreign trade of Canada is mainly with Great Britain and the United States. The proportions in which these two countries participate in the aggregate trade has greatly altered in the last few years. In 1873 the imports from Great Britain, \$68,522,776, exceeded by nearly 50 per cent. the imports from the United States, \$47,735,678, and were more than 75 per cent. in excess of the exports to Great Britain. In 1878 the imports from Great Britain had fallen to \$37,431,180, while the imports from the United States, \$48,631,739, had not diminished; and the exports to Great Britain had increased to \$45,941,539, while the exports to the United States had shrunk to \$25,244,898. For the first time in her history Canada has been able to show a favorable balance in her trade with England for the last three years, while her aggregate trade still shows an adverse balance, which is owing now to the United States instead of to Great Britain: in 1873 England supplied Canada with 53 per cent. of her imports, and the United States supplied 37 per cent.; in 1878 the United States supplied 53 per cent. and Great Britain 41 per cent.

COMMERCE OF THE UNITED STATES. Comparing the latest official statements of the foreign trade of all countries, the commerce of the United States is found to have been less in total volume than that of only three, Great Britain, Germany, and France, and the export trade inferior in magnitude to that of Great Britain and Germany alone. A comparison of the imports and exports of the several countries shows that while the United States in 1877-'78 exported 257 million dollars' worth of merchandise more than they imported, Great Britain imported 690 million dollars' worth in excess of exports, Germany 272, France 45, Netherlands 83, and Belgium 67 millions. The only other countries which show a favorable balance besides the United States are India, whose excess of exports is 115 million dollars; Austria, 37 millions; Japan 2 millions; Siam, 3 millions; and the South American countries—Brazil with 6, the Argentine Republic with 4, and Chili with 2 millions balance on the credit side.

Until 1876 the balance of trade was almost

invariably against the United States. In the period from 1835 to 1850 there was an excess in the imports of merchandise over the exports aggregating 88 million dollars, and an excess in the imports of specie over the exports of 44 millions. From 1851 to 1860 inclusive the importation of merchandise exceeded the exportation by 356 millions; but this was more than balanced by exportation of coin and bullion amounting to 417 millions. During the period of the war there was a small excess of imports. After the war followed a period of unexampled commercial expansion and extension of the facilities of production and transportation, during which the external trade has been nearly doubled. The augmentation in productive facilities was accomplished in part by foreign capital, and to a considerable extent with imported material; so that during the thirteen years from 1861 to 1873, while the exports in the latter part of the period increased in a rapid and steady ratio, a large debt was accumulating abroad against the United States, which is represented in the trade returns by an aggregate excess in the imports of merchandise over exports of 1,155 millions, against which must be offset the net exportation of bullion, amounting to 657 million dollars. In 1874 the merchandise balance turned out in favor of the United States for the first time since the war. It was the first time, indeed, since the discovery of gold in California, save in 1858, when a similar cause worked a sudden reduction of imports, and one year in the beginning of the war, when the exports and imports nearly balanced each other. The excess of exports in 1874 was 18 millions; in 1875 there was again a slight excess in the imports, amounting to 19 millions. In 1876 the balance changed definitively in favor of the United States, the excess of exports in that year amounting to 79 millions, increasing in 1876 to 151 millions, and in 1877 to 257 millions. The aggregate excess of exports for these last three years only more than extinguishes the accumulated debt shown by the aggregate unfavorable balances of the previous period, embracing a destructive war and the multiplication of productive and commercial facilities by means of material imported largely from Europe, and at prices which were fully double those which obtain to-day. The aggregate favorable balance for the five years in the merchandise account is 488 million dollars, which swells by the addition of the net exports of coin and bullion, which were 169 millions, to a total of 657 millions. The imports of merchandise grew from 357 millions in 1868 to 642 millions in 1873, and then declined without a break to 437 millions in 1878. The decline is due in part to the cessation of railroad-building and other improvements with imported material, in part to the diminished power of consumption in the community and the practice of enforced or voluntary economy, and in part to the reduction of values. The exports of domestic products increased steadily

from 281 millions in 1868 to 586 millions in 1874, then fell off to 513 millions in 1875, and increased again with rapid strides to 540 millions in 1876, 602 millions in 1877, and 694 millions in 1878. The decline in 1875 was not due to diminished exportations, but to a large fall in average prices.

The increase in the export trade in merchandise of over one third in value since 1873, in spite of an equal decline in prices, is partly due to the adventitious cause of short crops in Europe; but there is no reason to expect that the recent improvements in the means of production and transportation will not enable the raw products of America to hold their own in the markets of Europe. The export trade in food articles occupies a position of natural rivalry and antagonism to the export trade in manufactures, since the more Europe becomes dependent on America for food, the more sharp will be its competition in its own and neutral markets and in the American market for an outlet for manufactures. If the present extension of agriculture and increase in the exported surplus continues, then the test will be the more severe to which the American manufacturers will be subjected to show in what branches of industry superior skill, knowledge, taste, honesty, cheaper power and cheaper raw material, priority of development, the advantage of accumulated capital, or better commercial communications with the markets, will enable them to sustain the competition of the older industrial nations.

The magnitude of the foreign trade of a country indicates better than any other sign the material progress and social well-being of the people. The average annual value of imports of merchandise into America during the five years from 1835 to 1839 inclusive was 139 million dollars; the average annual exports amounted to 113 millions. The succeeding lustrum, 1840-'44, was a period of retardation, in which the average imports declined to 104 millions and the exports to 92 millions. From 1845 to 1849 the imports averaged 128 and the exports 130 millions. In the succeeding five years, 1850-'54, the imports had increased to 230 and the exports to 187 millions. In the five years from 1855 to 1859 the imports had advanced further to 302 and the exports to 271 millions. After 1850 a new element enters into the account, which is not included in the merchandise returns, viz., the exports of the precious metals. Between 1850 and 1878 the total net exports of gold and silver amounted to about 1,280 million dollars, or some 90 millions more than the total adverse balance in merchandise for the whole period. The war had an unfavorable effect on the external commerce of the United States. In the period from 1860 to 1864, the average imports were 278 million and the exports 221 million dollars. Both the export and import trades were probably greater than in the preceding period, as the commerce of the belligerent Southern

States is not included in the reports. In the next five years, 1865-'69, the annual imports had increased to 368 millions, but the exports, 275 millions, stood about where they did ten years before. Toward the end of this period commenced the rapid development which, judged by the growth of the export trade, is equaled in the commercial history of the country only by the period of similar duration between the discovery of the California gold-fields and the outbreak of the civil war. Then the development was more varied. The American forests afforded the materials for the construction of a vast merchant marine. The possession of the carrying trade was exceedingly favorable to the exportation of manufactures, and numerous industries sprang up for the supply of distant neutral markets with industrial products. The increase in the exports of manufactures of iron and other metals, of cotton manufactures, leather goods, chemical products, and other finished industrial products, was twice as great between 1850 and 1860 as it was between 1860 and 1878. The merchant fleet passed into other hands, and the markets for these manifold industrial productions were rendered less accessible through the civil war. A revolution in naval architecture, whereby iron replaces wood and steam performs more perfectly the service of the wind, confirms the great manufacturing and maritime nation where coal and iron are the cheapest in the possession of the ship-building and carrying trades, where, fortified by an enormous invested capital, they must remain until the new materials can be produced more cheaply elsewhere, since no protective measures not forbidden by the law of nations can suffice to wrest them away. Yet during the late new advance in production the growth of manufacturing interests in the United States has been enormous, as may be seen by comparing the lists of imports for a series of years. Industries of the most vital importance, producing the staple manufactures of prime necessity and universal use, for which America formerly depended largely upon Europe, fostered under the wing of the Government by protective tariffs, are now able to nearly supply the entire needs of the people. Yet the progress seems to have been still more rapid in agriculture, and the population of the country to be more preponderantly engaged in agricultural production and in auxiliary industries, and in the production of crude commodities, than it was twenty years ago. Petroleum, silver, and other new mineral products occupy a similar position with reference to manufactures as agricultural produce. The increase in the exportation of grain and provisions, cotton and tobacco, has been shown in the preceding article. These products of the field form in a greater measure than ever before the main bulk of the exports, and swell the total more and more each year. These four articles, with mineral oil, formed in 1878 about 76½ per cent. of the total exports of domestic

commodities. Whether this extension will still continue is somewhat problematical, as it has been accelerated by an abnormal demand resulting from recent failures of European crops. It is possible that the present increase of food production may be temporarily or permanently arrested by the return of good harvests abroad. It is more likely that with the increased facilities of transportation the light and fertile soil of the prairies will enable the American farmer to compete with the European, and that on the return of general prosperity the consumptive capacity of Europe will expand sufficiently to absorb all of these and other agricultural products now exported, and still more.

The capacity of the country for agricultural production is indefinitely greater than the crops yet obtained. The total yield of cereal crops in the United States in 1879, according to the reports of the Agricultural Bureau at Washington, was 2,492,169,590 bushels, compared with 2,298,371,150 bushels in 1878. In wheat there was an increase of from 420,122,400 to 448,750,000 bushels; in corn from 1,388,268,750 to 1,601,151,570 bushels; the other, non-exportable crops showed a slight falling off. The crop of cotton was 4,926,285 bales, against 5,200,000 bales in 1878. The tobacco yield amounted to 384,059,659 lbs. The potato crop was 181,369,340 bushels, or 57,000,000 bushels more than in 1878. The yield per acre was for wheat 13·7, for corn 30·2, and for potatoes 98·9 bushels; for cotton 176, and for tobacco 779 lbs.

If agricultural production should prove incapable of further development, if it should be fated to relapse and decline, the fortunes of the manufacturing industries will assume greater importance, and then the inquiry will press itself on the public mind whether the protected industries are in position, or will soon be in position, to hold their own in the open market, to produce an exchangeable equivalent for the foreign luxuries demanded by the people, and maintain the position of America among commercial nations. If, on the other hand, the foreign demand for the products of the soil should continue to increase, the same question may be pushed to a speedier solution, as the waxing agricultural interest may demand that the markets should be cleared for the cheapest goods and thrown open to all comers. That there are American manufactures which are able to compete in the neutral markets and in Europe with the products of the older manufacturing nations is seen in the subjoined table of the exports of the articles which are classed as manufactures in the official reports of the Treasury Department, for the years 1850, 1860, 1870, 1872, 1874, 1876, and 1878. This group of articles formed in 1850 11½ per cent. of the total exports of domestic merchandise, in 1860 not quite 13½ per cent., in 1870 something less than 20½ per cent., in 1872 19½ per cent., in 1874 less than 18½ per cent., in 1876 nearly 21 per cent., and in 1878 a little under 20 per cent.:

In the year 1878 the principal classes of merchandise entered in the following proportions into the total value of the exports, which was about 695½ million dollars: Breadstuffs, 26·12 per cent. of total exports; raw cotton, 25·88; provisions, 17·76; mineral oil, 6·69; tobacco, 4·09; wood and manufactures of wood, 2·41; iron and steel and their manufactures, 2·28; cotton manufactures, 1·64; leather and leather manufactures, 1·16; tallow, 0·96; live animals, 0·84; oil-cake, 0·73; sugar and molasses, 0·70; ordnance stores, 0·69; drugs, chemicals, medicines, and dye-stuffs, 0·41; vegetable oils, 0·41; peltry, 0·38; agricultural implements, 0·37; copper and manufactures of copper, 0·36; na-

val stores, i. e., rosin, pitch, etc., 0·36; coal, 0·34; spirits of turpentine, 0·34; seeds, 0·33; animal oil, 0·32; hops, 0·31; hemp and its manufactures, 0·23; other metals and their manufactures, 0·22; carriages and cars, 0·22; fruits, 0·20; other unmanufactured articles, 1·04; other manufactured articles, 2·22.

The progress and fluctuations of American trade with the countries with which it has the most extended commercial intercourse are shown in the annexed table, which gives the value of the total imports from and exports to America of each country for the alternate years from 1865 to 1873, and the following successive years to 1877, in millions of dollars:

COUNTRIES.	1865.		1867.		1869.		1871.		1873.		1874.		1875.		1876.		1877.

Of the imports of foreign merchandise in 1878, sugar and molasses was the heaviest item, making 18·27 per cent. of the total of \$437,051,532; coffee, 11·88; woollens and raw wool, 7·69; silk goods and raw silk, 5·91; chemicals, drugs, dyes, and medicines, 5·66; cottons, 4·47; hides and skins, 3·94; tea, 3·58; linens, 3·57; tin, 2·79; fruits, 2·36; iron and steel and manufactures, 2·07; breadstuffs, 2·02; leather and leather goods, 1·71; tobacco and manufactures, 1·47; wood and manufactures, 1·32; provisions,

1·31; wines and spirits, 1·26; India-rubber, 1·13; and the remaining 14·86 per cent. was about half composed of manufactures.

The countries which take the largest share in the commerce of the United States, according to the returns for 1877-'78, with the total imports from and the total exports of domestic products to each, in millions of dollars, and the percentage of each in the total commerce of the United States, in the total export trade, and the total import trade, are as follows:

The proportion in which Mexico, Central America, and the West Indies entered into the total commerce was 10·49 per cent. Inter-course with South America formed 8·03 per cent. of the total trade. The share of British America was 5·55 per cent., making the trade with American countries 24·07 of the total volume. Asia's share, with that of Japan and the East Indian islands, 4·83 per cent.; that of Australasia, 0·70; that of the other islands of the Pacific, 1·08; that of Africa and adjacent islands, 0·57; and that of all other islands and ports, 0·05 per cent. of the total export and import trade.

Of the foreign commerce of 1878, 68·70 per cent. of the total of 1,146 million dollars, or 787 millions, was with the countries of Europe, with all of which there was a heavy balance in favor of the United States. Europe received 583 million dollars' worth, or 82·18 per cent., of the total exports of the United States, and furnished 157 millions worth, or 46·67 per cent., of the total imports into the United States.

Great Britain received 54·57 per cent. of the total exports from the United States, and furnished 24·55 per cent. of the imports. The favorable balance amounted to 280 million dol-

lars, or 2½ times the total imports from Great Britain. The value of raw cotton exported to Great Britain was 117 million dollars, or 65·23 per cent. of the total export; the value of breadstuffs, 125 millions, or 69·21 per cent. of the exports, to which may be added a considerable portion of the exports to Canada, making perhaps 75 per cent. in all. The value of the exports of provisions to the United Kingdom was 80 million dollars, or 64·91 per cent. of the total export, and with the Canadian imports added 67·12 per cent. The other principal exports to Great Britain were: tobacco, 9·1 millions; petroleum, 6·8, or 13·97 per cent. of the total export; oil-cake, 4·9; leather and manufactures, 4·7; wood and manufactures, 4·2; live animals and tallow, 3·1 each. Among the other manufactures England took 1 million worth of iron and steel products and 1·4 million worth of cotton fabrics. The values of the principal imports from the United Kingdom were: woollens, 14 millions; linens, 13·1; cottons, 10·3, or 54·17 per cent. of the total imports; tin and manufactures, 9·5; iron and steel and manufactures, 6; soda, 4·4; pottery, 3; hides and skins, 2·9; silk manufactures, 2·7; drugs, etc., 2·7.

The commerce with France formed 8·61 per

cent. of the total foreign trade for the year, amounting to 98 million dollars. France took from the United States 55 million dollars' worth of merchandise, or 7.79 per cent. of the total exports, and furnished 43 million dollars' worth, or 9.92 per cent. of the total imports. The principal exports to France were: raw cotton, 25.9 million dollars, or 14.42 per cent. of the total value exported; provisions, 8.6 millions; bread-stuffs, 7.6 millions, 4.21 per cent. of the total export; petroleum, 2.3; leaf-tobacco, 2.2; tallow, 1.5. The principal imports from France were: silk and manufactures, 11.6 million dollars; woollens, 7 millions; leather and manufactures, 3.7; wines and spirits, 3.2; drugs, etc., 2.2; cotton goods, 1.8; fancy articles, 1.5; precious stones, 1.3; and buttons, 1.1.

The trade with Germany amounted to 89 millions, or 7.81 per cent. of the total volume of commerce. The exports to Germany, 54 millions in value, were 7.73 per cent. of the total exports, and the imports from Germany, 34 millions, made 7.96 per cent. of the total imports. Germany received 11.9 million dollars' worth of petroleum, or 25.58 per cent. of the total export, nearly double the export to Great Britain, who was the next largest taker of this commodity. Germany is also the largest consumer of American lard, receiving after England the largest shipments of provisions, amounting to 10.6 million dollars, or 8.62 per cent. of the total exports under this head. Her imports of raw cotton are, next to those of England and France, the most considerable, amounting to 13.3 millions, or 7.41 per cent. of the entire export.

There is an exceedingly heavy balance against the United States in the commerce with the countries which are the sources of the sugar, coffee, and tea supplies, and of certain raw materials, as hides and skins, raw silk, etc. With Cuba and the other Spanish colonies, Brazil, China, and British India, there is an aggregate adverse balance of 112 million dollars, the imports from those countries being of nearly five times the value of the total exports of American commodities to them. These same countries are large consumers of manufactures of the classes in which American manufacturers expect to compete with the industries of England and the other industrial and commercial nations. Some of them are left as much in debt every year to Great Britain for textiles and metal wares as the United States are to them for their agricultural products. There has long been a market in several of these countries for American cured meats and provisions, and for a number of coarse manufactures in which there is no competition with Europe. The use of mineral oil has lately extended to these nations, and the demand is increasing every year. The condition of the trade with other countries occupying a similar position with reference to the United States is not quite so unfavorable as with those mentioned above. The exports to

Venezuela, which furnished 12.46 per cent. of the coffee imported (68.30 per cent. coming from Brazil), amounted to nearly 3 million dollars, against imports of about two and a half times that value. The imports from Japan were 7.4 millions, against exports of the value of 2.2 millions. The Dutch East Indies exported to the United States something over three times as much as they received in exchange, or 4.5 millions against 1.4 million. The exports to the Argentine Republic were 2.1 millions, and the imports 4.9 millions. The balance against the United States in the trade with Central America, with Uruguay, and with the French West Indies was about equal to the exports to those countries; with Peru it was of about half the amount of the exports; with British Guiana there was a very slight adverse balance. In the extensive trade with the United States of Colombia the excess of imports was little over 25 per cent. of the exports, which amounted to 4.4 millions. With the Hawaiian Islands, with whom a special treaty of reciprocity has lately been concluded, the imports into the United States amounted to 2.6 millions, against 1.7 million exports. To Mexico there were exports of the value of 7.4 million dollars, or 2.2 millions in excess of the imports. With Hayti and San Domingo there was a balance of 1.6 million, or one third of the exports, in favor of the United States; with the British West Indies and Honduras the export trade, 7.6 millions, exceeded the imports by 1.9 million; the exports to Chili were of nearly three times the value of the imports. With the other West Indian Islands, with Turkey, Egypt, and the other countries of Africa, and the islands of the ocean, the American exports largely exceeded the imports.

The exports of highly finished manufactures, the industrial products in which the materials are in a large measure modified by human labor and skill, and in which American industry, ingenuity, and commercial enterprise come into direct competition with European work, form thus far but a small portion of the exports of the country. Yet the quality of certain of these products, and the ease and rapidity with which they are making their way in contested markets, have already produced serious misgivings in the minds of the English, who have the most to fear and to lose from American industrial competition. The value of the American exports of this class compared with the exports of Great Britain is very insignificant, and out of all proportion to the feeling which this competition has excited in England. Still it has already had an effect upon sales and prices. The character of the American products, their superior qualities either of ingenuity of design, of honest workmanship, or of cheapness, or frequently of all three combined, and the fact that their sales have increased during the late period of depression, while the exports of British products have greatly shrunk in value, in spite of the higher wages paid in

the United States, England's possession of the carrying trade and prestige in the markets, and the power of her accumulated capital, give sufficient cause for fears on one side of the ocean and hopes on the other that the United States will some day share the world's markets with England and become a great industrial nation, receiving substantial rewards from all parts of the earth for the well-directed and energetic application of the acute and laborious practical genius which Americans long ago won the name of possessing. The increase in the exports of the most finished manufactured products has been within the last year or two even greater than in the exports of agricultural produce. This must be looked upon not so much as a vantage actually gained, for a severer struggle with the enormous capital of European manufacturers and labor, compelled to accept lowered wages there while in America it can find other employment, may check for a time the export of staple manufactures; yet it is a certain sign that America will at some not distant date rival the foremost industrial nations in the main branches of mechanical production. The exports of all classes of iron and steel products and of cotton manufactures increased nearly 5 million dollars in 1878. The markets for American manufactures are of two kinds: the old countries whose mechanical arts are of a primitive order, and the new countries whose only products are crude materials, on the one hand (the so-called neutral markets), and the manufacturing countries of Europe on the other. In the neutral markets, owing to the want of direct commercial communications, American manufactures have not gained the footing which they deserve.

The similarity in its natural condition of America to the sparsely populated and undeveloped new countries has led to the invention and manufacture of such implements and other articles as best suit their requirements. In many articles of utility which are adapted to European needs also—especially those in which cheapness, durability, and strength are combined, those in which manual labor has been superseded by mechanical production, and those which embody ingenious mechanical devices—the active spirit of improvement has developed an American product which is superior in form, in the distribution of weight or the selection of material, or in ingenious contrivance. Another important quality for which American wares have thus far been distinguished in foreign markets is their honest genuineness. Even in the style of packing, the wakefulness of the American mind leads to a saving of labor and trouble. When the Sheffield hardware merchants ask the reason of orders which they receive from English and Australian retailers for American small castings, they are informed that it is partly due to the paper boxes in which the goods are packed, from which they can be readily taken out and replaced. All American improvements when once

introduced in foreign markets are soon adopted or imitated by European makers. Even the American trade-mark is copied. When inferior imitations are foisted on any public, the fraud is sure to be detected and the genuine article to come out victorious. It is said that there are more American calicoes made in Manchester than there are imported; yet the export of American piece-goods to England is still increasing. The ordinary qualities of cotton goods of American make, though of lighter weight, wear better than the British, and are always free from the clay and size with which the English goods are often adulterated. If it should prove possible to export cottons from the United States more cheaply or as cheaply as the Manchester product can be exported, the vast markets of the Orient and of all the outlying nations are already opened to American manufactures and alienated from the English by their dishonorable practice of adulteration. The inhabitants of Madagascar, it is said, will take American cottons at any price in preference to others. They are already shipped, mostly in small quantities, to all nations. Of the 11·4 millions of exported cotton goods in 1878, 2·5 went to China and Hong Kong, 1·5 to the United Kingdom, 1·3 to Mexico, 1·2 to British America, 0·8 to Africa and Madagascar, 0·5 each to Chili, Colombia, and Brazil.

The American locomotives and railroad cars are the only kinds adapted to new countries, where railroads must be laid cheaply, with uneven beds and winding curves. The American agricultural machinery goes to all countries where farming on a large scale is practiced, and it has not yet been successfully copied in Europe. The superiority of the simpler tools made in the United States, in material and workmanship, and above all in form and the nice adjustment of weight and parts, is recognized in the British colonies to the consternation of English makers. The form of the American axe is admired as a marvel of ingenious adaptation to the work to be performed; the plow has been subjected to equally important modifications; and in saws, spades, hoes, and mattocks, and all the implements of agriculture and forestry, improvements have been wrought in this country while Europe has contentedly clung to ancient models. In locks and other building hardware, a strong demand has sprung up in England as well as in the colonies, on account of their superiority to the ordinary Birmingham products in strength and finish, and in handy and practical utility of design. All new inventions of remarkable utility are certain to be adopted in Europe, more rapidly usually than European improvements are introduced into America. Thus, the hotel and goods elevators are being introduced in Germany and Holland; and celluloid is already affecting the ivory industry in England and France.

Whether the protective policy has helped or retarded the sound and healthful development

of American industry, the truth can not be ignored that a genuine development is taking place in many branches. Not alone in cotton goods and hardware are the American manufacturers proving themselves able to sustain the decisive test of an increasing export of the protected articles. The importations of paper in 1878 were only one tenth in value of the imports of 1873, and were principally confined to fine wall-papers, while the exports have doubled since 1870 and 1871. The fineness and finish of American writing-papers have already gained them a market in China and Japan, and in Holland and other countries. In chemicals the same process of a concurrent decline of imports and increase of exports is taking place. Tartaric acid, of which a short time ago half a million pounds was imported, is now supplied entirely at home. The opening of the borax mines in Nevada has stopped the importation of that article, which England formerly supplied; the price has fallen from 35 to 8 or 9 cents a pound, and England has become a large buyer both of the crude and the refined product. France formerly sent 6 million pounds of cream of tartar to the United States, but now the domestic factories furnish the entire supply. Fruit sirups, which have a large sale in the West Indies and South America, were once supplied by France; but this entire trade is now passing into the hands of American manufacturers, who produce a richer-flavored as well as a cheaper article. Formerly England sent large quantities of doors to Australia and the other colonies poor in forests; now American machine-made joinery—doors, sashes, and Venetian blinds—is being shipped to Australia from California, while in England a demand is arising for the American doors.

There are American industries, it has been seen, which are already able to hold their own in outside markets against European competition. An increasing export at profitable rates for a series of years is a sufficient proof that America is able, with the present development of its natural resources and its existing conditions regarding capital and labor, to enter the field with the industrial and commercial countries in competition for the world's market. That this has taken place in the staple branches of manufacture is an indication that the conditions of production are favorable to that end. Many manufacturers express themselves willing already to see the protective duties removed in their own branches. When the export trade is fairly established, the whole purpose of protection has been gained. Every year new products of American manufacture find a foreign outlet, and there is every indication that the United States have fairly entered upon a career of industrial greatness.

The imports into the United States for the nine months ending September 30, 1879, were: merchandise, \$355,736,388; specie, \$46,515,595; total imports, \$402,251,983. The exports for the same period were: domestic

produce, \$508,900,787; re-exports, \$7,729,847; total merchandise, \$516,630,634; specie, \$21,033,863; total exports, \$537,664,497. The imports for the corresponding nine months of 1878 were: merchandise, \$324,611,718; specie, \$22,278,788; total imports, \$346,890,506. The exports for the same period were: domestic produce, \$523,458,842; foreign goods, \$10,480,435; total merchandise, \$533,939,277; specie, \$21,959,334; total exports, \$555,898,611. The exports of merchandise for the nine months of 1879 thus show a decrease of 17.3 millions compared with the exports of the same part of 1878, and the imports of merchandise show an increase of 31.1 millions. The favorable balance is decreased from 209.3 to 160.9 million dollars for the three quarters; and including the specie movement, the reduction of the commercial balance is increased by the increased excess in the imports of coin and bullion over the exports, which amounted to 25.5 millions in 1879, against 0.3 million in the nine months of 1878: the total surplus of exports is therefore 135.4 millions, against 209 millions for the three quarters in 1878.

CONGREGATIONALISTS. The following is a summary of the statistics of the Congregational churches of the United States, as they are given in the "Congregational Year-Book" for 1879:

STATES, ETC.	Number of churches.	Number of ministers.	Number of members.	Number in Sunday-schools.
Alabama.....	15	11	657	1,552
California.....	79	70	4,447	7,935
Colorado.....	9	13	410	463
Connecticut.....	293	374	54,077	52,183
Dakota.....	20	9	418	560
District of Columbia.....	1	13	595	1,100
Florida.....	1	1	74	100
Georgia.....	11	9	722	1,045
Illinois.....	241	231	22,737	29,541

Wyoming.....	1	2	45	160
Total.....	3,620	3,406	375,654	435,741

The whole number of families connected with the churches was 165,842. The baptisms for the year included 10,686 of adults and 5,556 of infants. Of the churches, 2,716 were returned as with pastors and 904 were "vacant," or without regularly installed pastors; of the ministers, 2,360 were in pastoral work, and 1,136 were not in pastoral work. Besides, there were 209 licentiates. Of the members, 48,615 were marked "absent," or thus designated as "persons who live at a place other than that of their church relations, and do not worship with their church." Contributions were reported by 2,760 churches to the amount of \$951,890 for benevolent purposes, and of \$2,313,796 for home expenditures. Of the ministers marked as "not in pastoral service," 134 were connected with educational work in colleges, seminaries, and academies, or as superintendents of schools; 60 were connected with the national or other benevolent societies as secretaries, superintendents, etc.; 34 were in missionary or similar work; 22 were editors; 67 were in secular work; and 152 were retired by age or infirmities. The receipts of the *American Home Missionary Society* for the year ending May 1, 1879, were \$273,691, and the expenditures were \$260,330. The indebtedness of the Society was \$50,399, against which it had a balance in the treasury of \$13,401. Nine hundred and forty-six ministers were employed during the year in 34 States and Territories, 29 of whom had preached in foreign languages.

The thirty-third annual meeting of the *American Missionary Association* was held at Chicago, Illinois, beginning October 28th. The Hon. E. S. Tobey of Boston, Massachusetts, presided. The Treasurer reported that his receipts for the year had been \$314,450, of which \$99,019 had been contributed for special institutions. His expenditures had been \$213,955, of which \$122,665 had been applied to the Southern work (among the freedmen), \$6,595 to the work among the Chinese, \$347 to that among the Indians, \$10,226 to the foreign missions, and \$37,390 to the payment of the debt of the Society. The largest work of the Society was among the freedmen in the Southern States, where it had under its care 67 churches, with 4,600 members, and 44 schools, with 190 teachers and 7,207 pupils, classified as follows: primary, 2,739; intermediate, 1,465; grammar, 633; normal, 2,022; collegiate preparatory, 169; collegiate, 63; law, 28; theological, 86. A gift of \$150,000 which had been received would be used for the erection of new buildings for the schools at Nashville, Tennessee, Atlanta, Georgia, New Orleans, Louisiana, and Talladega, Alabama. It was estimated that 150,000 pupils had been taught during the year by present and former students of the higher schools of the Association. The Association had now under its care the Indians of four agencies, numbering 13,000 souls. Nine missionaries, teachers, and assistants were employed

among the Indians. The station at Skokomish included a church of 23 members, with three other preaching stations, 123 families, 200 attendants on worship, and 110 children in the Sunday-schools. Seventy-seven Indian boys and nine Indian girls had spent the year at the Hampton Institute, Virginia, where, it was represented, they had been contented and studious, and had made "marked and steady progress." Resolutions were adopted, declaring that the aim of the Association with reference to the Indians should be, "as far as possible, and as rapidly as possible, to secure for them: a, a legalized standing in the courts of the United States; b, ownership of land in severalty; c, the full rights of American citizenship. These three things, we believe, are essential if the Indian is to be, not Christianized or civilized, but saved from extermination." The Association most heartily approved "the plan of the Indian Bureau to secure to as many Indians as possible the advantages of education offered at such distant schools as that at Hampton and Carlisle, at the same time believing that the system of boarding-schools on the reservations, which for many years have been maintained by the Government and the missionaries, is the chief educational agency that must be relied upon for bettering the condition of the Indian." A resolution was also adopted declaring that the Association, "believing that the treaties existing between the United States and China, so far as they relate to the rights of emigration from one country to the other, and the treatment such immigrants should receive from the people and nation among whom and in which they live, are right, just, wise, and Christian, does heartily record its appreciation of the high services which President Hayes, under God, has by his timely veto of the anti-Chinese bill been enabled to render the republic in preserving inviolate its treaty obligations, and also the cause of Christianity, in removing a threatened formidable barrier to the evangelization of the Chinese, not only in America, but also in their native land; and the Association hereby tenders him its profound thanks for the same." The Secretaries were authorized to notify President Hayes of this resolution. Twelve schools were taught among the Chinese of the Pacific coast, which employed 21 teachers, including five Chinese helpers, and returned a total enrollment of 1,489 pupils, with an average attendance of 252 pupils. Eighty-four Chinese had given evidence of conversion, and 137 had renounced idolatry. The Congregational Association of Christian Chinese had 198 members, of whom 44 had been received during the year. The African mission, in the Mendi country, included six missionaries, with the wives of two, and five other assistants, two churches, with 85 members and 190 Sunday-school scholars, and three day-schools, the largest of which, at Good-Hope station, had an enrollment of 245 and an average attendance of 156 scholars. Mr. Robert Arthington

of Leeds, England, had a year before offered the Association £3,000 for the establishment of a mission in Eastern Africa, and the officers of the Freedmen's Missions Aid Society of Great Britain had offered to collect other funds for the same object. The Association voted that on receiving the sum offered by Mr. Arthington and a similar sum from the British public, it would appropriate \$20,000 to the foundation of the proposed mission, and would undertake to sustain it permanently.

The seventieth annual meeting of the *American Board of Commissioners for Foreign Missions* was held at Syracuse, New York, October 7th. The Rev. Mark Hopkins, D. D., presided. The Treasurer reported that his receipts for the year had been \$518,386, and his expenditures \$513,817. The year had been marked by retrenchment of all expenses, yet the number of additions on profession of faith in all the fields, given at more than two thousand souls, was larger than in any previous year since the time when an extraordinary number of accessions had taken place in the Sandwich Islands, more than thirty years before. The Turkish missions were recovering from the injurious effects of the late war. The additions to the churches in India—nearly seven hundred—were greater than in any former year. In Austria, the missionaries had been embarrassed by official restrictions concerning which representations were to be made to the Government. Nearly fifty additions had been made to the churches in Spain, and the opening of a school for girls was reported. The mission in Mexico had lost ground for the want of men to carry it on. In the Dakota mission, the Indian converts had organized a home missionary society, which had raised more than \$800 during the past three years to meet the expenses of native teachers and preachers among the wild tribes. Special reports were also made from the missions in Zoolooland, China, and Japan.

A paper was read on "The Proposed Mission in Central Africa," which, after discussing the various features of the condition of the African Continent, and the missions already established or contemplated in it, recommended the region of Bihé and the Coanza River, in about 12° south latitude and two hundred and fifty miles from the Atlantic Ocean, as the most suitable district in which to found the mission. The paper was approved, and the Prudential Committee was advised to continue the inquiries already set on foot, with the understanding that it was purposed to establish the mission proposed at the earliest practicable day.

CONGREGATIONALISTS IN GREAT BRITAIN.—The following is a summary of the statistics of the Congregational churches in Great Britain and the colonies, as given in the "Congregational Year-Book" for 1879:

England—Churches, 2,071; branch churches, 310; preaching stations, 331; evangelistic stations, 172.
Wales—Welsh churches, 546; branch churches, 232;

preaching stations, 83; English churches, 69; preaching stations, 4. Scotland—Churches, 116. Ireland—Churches, 38. Islands of the British seas—Churches 17. Canada and Newfoundland—Churches, 120. Australia—Churches, 116; preaching stations, 112. New Zealand—Churches, 20. Natal—Churches, 2; preaching stations, 10. Cape Colony—Churches independent of the London Missionary Society, 21. Jamaica—Churches independent of the London Missionary Society, 14. British Guiana—Churches independent of the London Missionary Society, 12. India—Churches independent of the London Missionary Society, 6. China—Churches independent of the London Missionary Society, 2. Chapels and schools—New chapels opened, 51; new schools opened, 18.

The annual meeting of the *Congregational Union of England and Wales* was held in London May 12th. The Rev. Professor Newth of New College was elected Chairman of the Union for 1880. The report of the Secretary gave a statement of the recommendations of the committee which had been appointed to inquire into the working of Congregational colleges. It was recommended that the theological course should be separated from that of arts, and that whenever it was practicable advantage should be taken of the teaching afforded by such institutions as Owens College, the Yorkshire College, and the universities of England and Scotland. The committee proposed also a celebration of the jubilee of the Union, to be held in 1880, and to consist in part in the delivery of lectures in London and elsewhere by Congregational clergymen upon certain periods and aspects of church history. The Rev. J. Guinness Rogers had been appointed to deliver the Congregational lecture for the year; his subject would be "Church Systems in England in the Nineteenth Century." The Church-Aid and Home Mission Society, recently organized, reported that £30,000 had been secured for its work during its first year. A resolution was unanimously adopted condemning the foreign policy of the Government, censuring especially the Afghan and Zooloo wars.

The autumnal meeting of the Congregational Union was held at Cardiff, beginning October 14th. The Rev. W. Cuthbertson presided, and delivered an inaugural address on "Independence as a Witness-Bearer," in which, referring to the want of cooperation between the State Church and Nonconformists, he said that no step could much conduce to the social meeting which was desirable until disestablishment came. A paper was read on the position and prospects of Congregationalism in Wales, in which it was stated that there were now in the principality 1,022 chapels, 903 organized churches, 546 ordained ministers, 318 lay preachers, 108,000 communicants, and 108,000 other adherents excluding children under ten years of age, so that in round numbers the Congregationalists included a quarter of a million of people. The assembly resolved to recommend to the county associations to consider the propriety of appointing a confidential committee with which vacant churches and

unsettled ministers might confer. The question of special missions was commended to the careful consideration of these associations, with a view of determining whether they should take steps, within their several limits, for the conducting of such missions by competent and certified persons. A long resolution was adopted, condemning the Afghan war, expressing the belief that the policy of which it formed a part ought to be reversed, and urging the members of the churches to employ their votes and influence at the next general election to secure the authoritative condemnation of this policy by the various constituencies. "The Assembly," the resolution continued, "does not in view of the election counsel silence on the part of the Nonconformists in relation to questions touching upon religious equality; but in the presence of the great political difficulties of the time it feels that this is a crisis in which even these ought not to be allowed to prevent the union of the Liberal party for the purpose of putting an end to the costly and mischievous régime which has proved to be so full of menace to our constitutional liberty at home, and to derogate from our good name and our legitimate influence among other nations." Subjects were discussed in papers and addresses relating to collegiate education, business methods and church administration, spiritual life and the consecration of money, and Congregationalism and free thought.

The anniversary of the *London Missionary Society* was held May 16th. Sir William Muir presided. The financial report showed that the total annual receipts of the Society for general and special purposes had been £101,100, which the balance left from the last year increased to £117,813. The expenditures had been £123,058. There were 153 missionaries employed, of whom 11 were women, with 300 native pastors, evangelists, and assistants, besides 83 native pastors, 500 assistant pastors and evangelists, and 3,400 volunteer preachers in Madagascar. The missions in Madagascar have been enlarged and strengthened by the addition since 1870 of nine country stations, "each provided with its mission-house, its model church, and school." The Central Girls' School, the Normal School, and the Theological College have been erected at Antananarivo, and a normal school at Fianarantsoa; and the system of primary education has been revised and extended. The churches had been declared to be at liberty to manage their own affairs without any interference from secular or outside authority. A new station had been opened in China, and a new mission in the province of Sze-chuen partly provided for. In South Africa, the beginning of a mission at Lake Ngami and the opening of the Moffat Institution were mentioned. The mission to New Guinea had at the time of making up the report four ordained English missionaries with forty Polynesian missionaries, and had extended its usefulness along the southern coast of eastern

New Guinea and to the islands in the neighborhood. The mission to Central Africa had been commenced near Lake Tanganyika, but had met with vicissitudes, and Dr. Mullens, the Secretary of the Society, was to be sent to look after its interests. A woman's mission had been established four years before, which now numbered eleven missionaries. Dr. Mullens was afterward sent to this mission, but he died on the way.

The *Irish Congregational Union* met in Dublin, September 30th. The occasion was marked by the celebration of the jubilee of the Union, it having been founded in 1829, and, though the smallest in numbers, being the second oldest Union in the United Kingdom. The principal business of the session related to efforts to raise the Provident Fund to £5,000.

The *Congregational Union of Scotland* met at Dundee, April 22d. The reports showed that a decrease had taken place in the general contributions. The widows' and ministers' provident funds were in good condition, but the income of the Chapel-Building Society had been only £41 for the year. A chapel-building fund of £10,000 was asked for, toward which £3,000 had been subscribed, and propositions were made for obtaining the rest of the sum by means of subscriptions of £100 each. Thirteen students had attended the Theological Hall.

Congregationalism is represented in France by the *Union of Free Evangelical Churches*, whose basis of union is established on the principle of the freedom of the churches from the support and control of the state, their independence of each other in their own action, and the individual profession of faith. The sixteenth biennial meeting of the Synod was held at Nîmes, beginning October 16th. The opening sermon, by Pastor Hallard of Paris, was devoted to a vindication of the principle of independency, and to showing that freedom from the patronage and interference of the state was essential to the promotion of a real accord of spirit between the churches, as well as to their own internal unity. Pastor George Fisch was chosen President of the Synod. One new church was admitted to the Union; the application of another was postponed on account of insecurity in its financial condition. The question of giving up certain mission stations in the department of Saône-et-Loire, in which success had not been encouraging, was considered, and was finally referred to the Commission of Evangelization for decision. A proposition to form a common fund for all the churches of the Union, similar to the sustentation funds of the Presbyterian churches, excited much discussion. The Synod declined to express any opinion as to whether the institution of such a fund would be agreeable to the principles of the Union, but appointed a committee to examine into the subject and collect facts for the guidance of the next Synod.

THE SPEAKER OF THE HOUSE OF REPRESENTATIVES.

New York: J. Appleton & Co.

CONGRESS, UNITED STATES. The third session of the Forty-fifth Congress * commenced on December 2, 1878. (For the President's message, see "Public Documents," ANNUAL CYCLOPEDIA, 1878.) In the Senate the Vice-President, William A. Wheeler, pre-

sided; and in the House, the Speaker, Samuel J. Randall of Pennsylvania.

In the Senate, on December 3d, the following resolution was offered by Senator Blaine of Maine:

Resolved, That the Committee on the Judiciary be

* The following is a list of members:

SENATE.

Alabama—George F. Spencer, John T. Morgan.
Arkansas—Stephen W. Dorsey, A. H. Gairaud.
California—Aaron B. Sargent, Newton Booth.
Colorado—Jerome B. Chaffee, Henry M. Teller.
Connecticut—William H. Barnum, William W. Eaton.
Delaware—Thomas F. Bayard, Eli Saulsbury.
Florida—Simon B. Conover, Charles W. Jones.
Georgia—John B. Gordon, Benjamin H. Hill.
Illinois—Richard J. Oglesby, David Davis.
Indiana—D. W. Voorhees, Joseph E. McDonald.
Iowa—William B. Allison, Samuel J. Kirkwood.
Kansas—John J. Ingalls, P. B. Plumb.
Kentucky—Thomas C. McCreery, James B. Beck.
Louisiana—J. B. Eastus, W. P. Kellogg.
Maine—Urbainhal Hamlin, James G. Blaine.
Maryland—George R. Dennis, William Pinckney Whyte.
Massachusetts—Henry L. Dawes, George F. Hoar.
Michigan—Isaac P. Christianity, Thomas W. Ferry.
Minnesota—S. J. R. McMillan, William Windom.
Mississippi—Blanche K. Bruce, L. Q. C. Lamar.
Missouri—D. H. Armstrong, Francis M. Cockrell.
Nebraska—Algernon S. Paddock, Alvin Saunders.
Nevada—John P. Jones, William Sharon.
New Hampshire—Bainbridge Wadleigh, E. H. Rollins.
New Jersey—Theodore F. Randolph, John R. McPher-
 son.
New York—Roscoe Conkling, Francis Kernan.
North Carolina—Augustus S. Merrimon, Matthew W. Ransom.
Ohio—Stanley Matthews, Allen G. Thurman.
Oregon—John H. Mitchell, Lafayette Grover.
Pennsylvania—J. Donald Cameron, William A. Wallace.
Rhode Island—Ambrose E. Burnside, Henry B. Anthony.
South Carolina—John J. Patterson, M. C. Butler.
Tennessee—James E. Bailey, Isham G. Harris.
Texas—Samuel B. Maxey, Richard Coke.
Vermont—Justin S. Morrill, George F. Edmunds.
Virginia—Robert E. Withers, John W. Johnson.
West Virginia—Frank Hereford, Henry G. Davis.
Wisconsin—Timothy O. Howe, Angus Cameron.

HOUSE OF REPRESENTATIVES.

Alabama—James T. Jones, Hilary A. Herbert, Jeremiah N. Williams, Charles M. Shelley, Robert F. Ligon, G. W. Hewitt, William H. Forney, W. W. Garth.
Arkansas—Lucien C. Gause, William F. Slemmons, J. E. Cravens, Thomas M. Gunter.
California—Horace Davis, Horace F. Page, John K. Luttrell, R. Pacheco.
Colorado—T. M. Patterson.
Connecticut—George M. Landers, James Phelps, John T. Wels, Levi Warner.
Delaware—James Williams.
Florida—R. H. M. Davidson, Horatio Elsiebe, Jr.
Georgia—Julian Hartridge, William E. Smith, Philip Cook, Henry R. Harris, Milton A. Candler, James H. Blount, William H. Felton, Alexander H. Stephens, H. P. Bell.
Illinois—William Aldrich, C. H. Harrison, Lorenzo Brentano, William Lathrop, H. C. Burchard, T. J. Henderson, Philip C. Hayes, G. L. Fort, Thomas A. Boyd, B. F. Marsh, R. M. Knapp, William M. Springer, Thomas F. Tipton, Joseph G. Cannon, John R. Elden, W. A. J. Sparks, William R. Morrison, William Hartzell, R. W. Townsend.
Indiana—B. S. Fuller, Thomas E. Cobb, George A. Bleknell, Leonidas Sexton, Thomas M. Browne, M. S. Robinson, John Hanna, M. C. Hunter, M. D. White, W. H. Calkins, James L. Evans, A. H. Hamilton, John H. Baker.
Iowa—J. C. Stone, Hiram Price, Theodore W. Burdick, N. C. Deering, Rush Clark, E. S. Sampson, H. J. B. Cummings, William F. Sapp, Addison Oliver.
Kansas—William A. Phillips, Dudley C. Haskell, Thomas Ryan.
Kentucky—A. R. Boone, James A. McKenzie, John W. Caldwell, J. Proctor Knott, A. S. Willis, John G. Carlisle, J. C. S. Blackburn, M. J. Durham, Thomas Turner, John B. Clarke.
Louisiana—R. L. Gibson, E. John Ellis, Chester B. Darrail, J. B. Elam, J. E. Leonard, E. W. Robertson.

Maine—Thomas B. Reed, William P. Frye, S. D. Lindsey, Llewellyn Powers, Eugene Hale.
Maryland—Daniel M. Henry, Charles B. Roberts, William Kinnell, Thomas Swann, E. J. Henkle, William Walsh.
Massachusetts—William W. Crapo, Benjamin W. Harris, Walbridge A. Field, Leopold Morse, N. P. Banks, George B. Loring, Benjamin F. Butler, William Claflin, W. W. Rice, Amasa Norcross, George D. Robinson.
Michigan—A. S. Williams, Edwin Willets, J. H. McGowan, E. W. Keightley, John W. Stone, Mark S. Brewer, Omar D. Conger, Charles G. Ellsworth, Jay A. Hubbell.
Minnesota—M. H. Dunnell, H. B. Strait, J. H. Stewart.
Mississippi—H. L. Muldrow, Van H. Manning, H. D. Money, O. R. Singleton, Charles E. Hooker, J. R. Chalmers.
Missouri—Anthony Ittner, Nathan Cole, L. S. Metcalf, Robert A. Hatcher, R. P. Bland, Charles H. Morgan, T. T. Crittenden, B. J. Franklin, David Rea, Henry M. Pollard, J. B. Clark, Jr., John M. Glover, A. H. Buckner.
Nebraska—Thomas J. Majors.
Nevada—Thomas Wren.
New Hampshire—Frank Jones, James F. Briggs, Henry W. Blair.
New Jersey—C. H. Sinnenkaon, J. H. Pugh, Miles Ross, Alvah A. Clark, A. W. Cutler, Thomas B. Peddie, A. A. Hardenburgh.
New York—James W. Covert, William D. Veeder, S. B. Chittenden, Archibald M. Biss, Nicholas Muller, S. S. Cox, Anthony Eckhoff, A. G. McCook, Fernando Wood, A. S. Hewitt, Benjamin A. Willis, Clarkson N. Potter, John H. Ketcham, George M. Beebe, S. L. Mayham, John W. Bailey, Martin I. Townsend, Andrew Williams, A. B. James, John H. Starin, Solomon Bundy, George A. Bagley, William J. Bacon, William H. Baker, Frank Hisecock, John H. Camp, E. G. Lapham, J. W. Dwight, J. Hungerford, E. Kirke Hart, Charles B. Benedict, D. N. Lockwood, G. W. Patterson.
North Carolina—Jesse J. Yates, C. H. Brogden, A. M. Waddell, J. J. Davis, A. M. Seales, W. L. Steele, William M. Robbins, Robert B. Vance.
Ohio—Milton Saylor, H. B. Banning, Mills Gardner, J. A. McMahon, A. V. Rice, Jacob D. Cox, Henry L. Dickey, J. W. Kelfer, John S. Jones, Charles Foster, Henry S. Neal, Thomas Ewing, M. I. Southard, E. B. Finley, N. H. Van Vorhes, Lorenzo Sanford, William McKinley, Jr., James Monroe, James A. Garfield, Amos Townsend.
Oregon—Richard Williams.
Pennsylvania—Chapman Freeman, Charles O'Neill, Samuel J. Randall, William D. Kelley, A. C. Harmer, William Ward, Isaac N. Evans, Heister Clymer, A. H. Smith, S. A. Bridges, F. D. Collins, H. B. Wright, James B. Reilly, J. W. Killinger, E. Overton, Jr., John I. Mitchell, J. M. Campbell, W. S. Stenger, Levi Malah, L. A. Mackey, Jacob Turney, Russell Errett, Thomas M. Bayne, W. S. Shallenberger, Harry White, J. M. Thompson, Lewis F. Watson.
Rhode Island—Benjamin T. Eames, L. W. Ballou.
South Carolina—J. H. Rainey, Richard H. Cain, D. Wyatt Aiken, John H. Evans, Robert Smalls.
Tennessee—J. H. Randolph, J. M. Thornburgh, George G. Dibrell, H. Y. Riddle, John M. Bright, John F. House, W. C. Whitthorne, J. D. C. Atkins, W. P. Caldwell, Casey Young.
Texas—John H. Reagan, D. B. Culbertson, J. W. Throckmorton, Roger Q. Mills, D. W. C. Giddings, G. Schliebe.
Vermont—Charles H. Joyce, D. C. Denison, George W. Hendee.
Virginia—John Goode, Jr., G. C. Walker, Joseph Jorgenson, George C. Cabell, J. E. Tucker, J. T. Harris, Eppa Hunton, A. L. Pridemore.
West Virginia—Benjamin Wilson, Benjamin F. Martin, John E. Kenna.
Wisconsin—Charles G. Williams, L. B. Caswell, George C. Hazleton, William P. Lynde, Edward S. Bragg, Gabriel Bouck, H. L. Humphrey, Thaddeus C. Pound.

TERRITORIAL DELEGATES.

Arizona—H. S. Stevens.
Dakota—J. P. Kidder.
Idaho—S. S. Fenn.
Montana—M. Maginnis.
New Mexico—T. Romero.
Utah—G. Q. Cannon.
Washington—O. Jacobs.
Wyoming—W. W. Corlett.

instructed to inquire and report to the Senate whether at the recent elections the constitutional rights of American citizens were violated in any of the States of the Union; whether the right of suffrage of citizens of the United States, or of any class of such citizens, was denied or abridged by the action of the election officers of any State, in refusing to receive their votes, in failing to count them, or in receiving and counting fraudulent ballots in pursuance of a conspiracy to make the lawful votes of such citizens of none effect; and whether such citizens were prevented from exercising the elective franchise, or forced to use it against their wishes by violence or threats, or hostile demonstrations of armed men or other organizations, or by any other unlawful means or practices.

Resolved, That the Committee on the Judiciary be further instructed to inquire and report whether it is within the competency of Congress to provide by additional legislation for the more perfect security of the right of suffrage to citizens of the United States in all the States of the Union.

Resolved, That in prosecuting these inquiries the Committee on the Judiciary shall have the right to send for persons and papers.

Mr. Blaine said: "Mr. President, the pending resolution was offered by me with a twofold purpose in view:

"1. To place on record, in a definite and authentic form, the frauds and outrages by which some recent elections were carried by the Democratic party in the Southern States;

"2. To find if there be any method by which a repetition of these crimes against a free ballot may be prevented.

"The newspaper is the channel through which the people of the United States are informed of current events, and the accounts given in the press represent the elections in some of the Southern States to have been accompanied by violence, in not a few cases reaching the destruction of life; to have been controlled by threats that awed and intimidated a large class of voters; to have been manipulated by fraud of the most shameless and shameful description. Indeed, in South Carolina there seems to have been no election at all in any proper sense of the term. There was instead a series of skirmishes over the State, in which the polling-places were regarded as forts to be captured by one party and held against the other; and, where this could not be done with convenience, frauds in the count and tissue-ballot devices were resorted to in order to effectually destroy the voice of the majority. These in brief are the accounts given in the non-partisan press of the disgraceful outrages that attended the recent elections; and, so far as I have seen, these statements are without serious contradiction. It is but just and fair to all parties, however, that an impartial investigation of the facts shall be made by a committee of the Senate, proceeding under the authority of law and representing the power of the nation. Hence my resolution.

"But we do not need investigation to establish certain facts already of official record. We know that one hundred and six Representatives in Congress were recently chosen in the States formerly slave-holding, and that the

Democrats elected one hundred and one or possibly one hundred and two, and the Republicans four or possibly five. We know that thirty-five of these Representatives were assigned to the Southern States by reason of the colored population, and that the entire political power thus founded on the numbers of the colored people has been seized and appropriated to the aggrandizement of its own strength by the Democratic party of the South.

"The issue thus raised before the country, Mr. President, is not one of mere sentiment for the rights of the negro—though far distant be the day when the rights of any American citizen, however black or however poor, shall form the mere dust of the balance in any controversy; nor is the issue one that involves the waving of the 'bloody shirt,' to quote the elegant vernacular of Democratic vituperation; nor still further is the issue as now presented only a question of the equality of the black voter of the South with the white voter of the South. The issue, Mr. President, has taken a far wider range, one of portentous magnitude; and that is, whether the white voter of the North shall be equal to the white voter of the South in shaping the policy and fixing the destiny of this country; or whether, to put it still more baldly, the white man who fought in the ranks of the Union army shall have as weighty and influential a vote in the government of the Republic as the white man who fought in the ranks of the rebel army. The one fought to uphold, the other to destroy, the Union of the States; and to-day he who fought to destroy is a far more important factor in the government of the nation than he who fought to uphold it.

"Let me illustrate my meaning by comparing groups of States of the same representative strength North and South. Take the States of South Carolina, Mississippi, and Louisiana. They send seventeen Representatives to Congress. Their aggregate population is composed of ten hundred and thirty-five thousand whites and twelve hundred and twenty-four thousand colored; the colored being nearly two hundred thousand in excess of the whites. Of the seventeen Representatives, then, it is evident that nine were apportioned to these States by reason of their colored population, and only eight by reason of their white population; and yet in the choice of the entire seventeen Representatives the colored voters had no more voice or power than their remote kindred on the shores of Senegambia or on the Gold Coast. The ten hundred and thirty-five thousand white people had the sole and absolute choice of the entire seventeen Representatives. In contrast, take two States in the North, Iowa and Wisconsin, with seventeen Representatives. They have a white population of two million two hundred and forty-seven thousand—considerably more than double the entire white population of the three Southern States I have named. In Iowa

and Wisconsin, therefore, it takes one hundred and thirty-two thousand white population to send a Representative to Congress, but in South Carolina, Mississippi, and Louisiana every sixty thousand white people send a Representative. In other words, sixty thousand white people in those Southern States have precisely the same political power in the government of the country that one hundred and thirty-two thousand white people have in Iowa and Wisconsin.

"Take another group of seventeen Representatives from the South and from the North. Georgia and Alabama have a white population of eleven hundred and fifty-eight thousand and a colored population of ten hundred and twenty thousand. They send seventeen Representatives to Congress, of whom nine were apportioned on account of the white population and eight on account of the colored population. But the colored voters are not able to choose a single Representative, the white Democrats choosing the whole seventeen. The four Northern States, Michigan, Minnesota, Nebraska, and California, have seventeen Representatives, based on a white population of two and a quarter millions, or almost double the white population of Georgia and Alabama, so that in these relative groups of States we find the white man South exercises by his vote double the political power of the white man North.

"Let us carry the comparison to a more comprehensive generalization. The eleven States that formed the Confederate Government had by the last census a population of nine and a half millions, of which in round numbers five and a half millions were white and four millions colored. On this aggregate population seventy-three Representatives in Congress were apportioned to those States—forty-two or -three of which were by reason of the white population, and thirty or thirty-one by reason of the colored population. At the recent election the white Democracy of the South seized seventy of the seventy-three districts, and thus secured a Democratic majority in the next House of Representatives. Thus it appears that throughout the States that formed the late Confederate Government sixty-five thousand whites—the very people that rebelled against the Union—are enabled to elect a Representative in Congress, while in the loyal States it requires one hundred and thirty-two thousand of the white people that fought for the Union to elect a Representative. In levying every tax, therefore, in making every appropriation of money, in fixing every line of public policy, in decreeing what shall be the fate and fortune of the Republic, the Confederate soldier South is enabled to cast a vote that is twice as powerful and twice as influential as the vote of the Union soldier North.

"But the white men of the South did not acquire and do not hold this superior power by reason of law or justice, but in disregard

and defiance of both. The fourteenth amendment to the Constitution was expected to be and was designed to be a preventive and corrective of all such possible abuses. The reading of the clause applicable to the case is instructive and suggestive. Hear it:

Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

"The patent, undeniable intent of this provision was that if any class of voters were denied or in any way abridged in their right of suffrage, then the class so denied or abridged should not be counted in the basis of representation; or, in other words, that no State or States should gain a large increase of representation in Congress by reason of counting any class of population not permitted to take part in electing such Representatives. But the construction given to this provision is that before any forfeiture of representation can be enforced the denial or abridgment of suffrage must be the result of a law specifically enacted by the State. Under this construction every negro voter may have his suffrage absolutely denied or fatally abridged by the violence, actual or threatened, of irresponsible mobs, or by frauds and deceptions of State officers from the Governor down to the last election clerk, and then, unless some State law can be shown that authorizes the denial or abridgment, the State escapes all penalty or peril of reduced representation. This construction may be upheld by the courts, ruling on the letter of the law, 'which killeth,' but the spirit of justice cries aloud against the evasive and atrocious conclusion that deals out oppression to the innocent and shields the guilty from the legitimate consequences of willful transgression.

"The colored citizen is thus most unhappily situated; his right of suffrage is but a hollow mockery; it holds to his ear the word of promise, but breaks it always to his hope, and he ends only in being made the unwilling instrument of increasing the political strength of that party from which he received ever-tightening fetters when he was a slave and contemptuous refusal of civil rights since he was made free. He resembles indeed those unhappy captives in the East who, deprived of their birthright, are compelled to yield their strength to the upbuilding of the monarch from whose tyrannies they have most to fear, and to fight against the power from which alone deliverance might be expected. The franchise intended for the shield

and defense of the negro has been turned against him and against his friends, and has vastly increased the power of those from whom he has nothing to hope and everything to dread.

"The political power thus appropriated by Southern Democrats by reason of the negro population amounts to thirty-five Representatives in Congress. It is massed almost solidly, and offsets the great State of New York, or Pennsylvania and New Jersey together, or the whole of New England, or Ohio and Indiana united, or the combined strength of Illinois, Minnesota, Kansas, California, Nevada, Nebraska, Colorado, and Oregon. The seizure of this power is wanton usurpation; it is flagrant outrage; it is violent perversion of the whole theory of republican government. It inures solely to the present advantage and yet, I believe, to the permanent dishonor, of the Democratic party. It is by reason of this trampling down of human rights, this ruthless seizure of unlawful power, that the Democratic party holds the popular branch of Congress to-day, and will in less than ninety days have control of this body also, thus grasping the entire legislative department of the Government through the unlawful capture of the Southern States. If the proscribed vote of the South were cast as its lawful owners desire, the Democratic party could not gain power. Nay, if it were not counted on the other side against the instincts and the interests, against the principles and the prejudices of its lawful owners, Democratic success would be hopeless. It is not enough, then, for modern Democratic tactics that the negro vote shall be silenced; the demand goes further, and insists that it shall be counted on their side, that all the Representatives in Congress and all the Presidential electors apportioned by reason of the negro vote shall be so cast and so governed as to insure Democratic success—regardless of justice, in defiance of law.

"And this injustice is wholly unprovoked. I doubt if it be in the power of the most searching investigation to show that in any Southern State during the period of Republican control any legal voter was ever debarred from the freest exercise of his suffrage. Even the revenges which would have leaped into life with many who despised the negro were buried out of sight with a magnanimity which the 'superior race' fail to follow and seem reluctant to recognize. I know it is said, in retort of such charges against the Southern elections as I am now reviewing, that unfairness of equal gravity prevails in Northern elections. I hear it in many quarters, and read it in the papers, that in the late exciting election in Massachusetts intimidation and bulldozing, if not so rough and rancorous as in the South, were yet as widespread and effective.

"I have read, and yet I refuse to believe, that the distinguished gentleman who made an energetic but unsuccessful canvass for the governorship of that State has endorsed and

approved these charges; and I have accordingly made my resolution broad enough to include their thorough investigation. I am not demanding fair elections in the South without demanding fair elections in the North also. But venturing to speak for the New England States, of whose laws and customs I know something, I dare assert that in the late election in Massachusetts, or any of her neighboring commonwealths, it will be impossible to find even one case where a voter was driven from the polls, where a voter did not have the fullest, fairest, freest opportunity to cast the ballot of his choice, and have it honestly and faithfully counted in the returns. Suffrage on this continent was first made universal in New England, and in the administration of their affairs her people have found no other appeal necessary than that which is addressed to their honesty of conviction and to their intelligent self-interest. If there be anything different to disclose, I pray you show it to us, that we may amend our ways."

Mr. Thurman of Ohio: "Mr. President, I offer an amendment, which I send to the Chair."

The Secretary: "It is proposed to add to the resolution the following":

"The committee shall also inquire whether any citizen of any State has been dismissed or threatened with dismissal from employment or the deprivation of any right or privilege by reason of his vote or intention to vote at the recent election, or has been otherwise interfered with; and to inquire whether in the year 1878 money was raised by assessment or otherwise upon Federal officeholders or employees for election purposes, and under what circumstances and by what means; and, if so, what amount was so raised and how the same was expended; and, further, whether such assessments were or not in violation of law; and shall further inquire into the action and conduct of United States supervisors of elections in the several States, and as to the number of marshals, deputy marshals, and others employed to take part in the conduct of the said elections, in what State or city appointed, the amount of money paid or promised to be paid to them, and how or by whom, and under what law or authority."

Mr. Thurman: "Mr. President, I attempted to offer that amendment before the Senator from Maine proceeded with his remarks, but failed to have an opportunity to do so. I intended then to say that, whatever opinion might be entertained on this side of the Chamber as to the propriety of the original resolutions as to the competency of Congress to make all the investigations that those resolutions contemplate, yet we were disposed to waive all scruples of that character and suffer the resolutions to pass without opposition if the amendment now proposed should be added to them. The Senator from Maine, however, having a speech carefully studied and prepared, exercised his right to deliver that speech before my amendment could be offered. I do not complain of that at all, nor do I now rise to make any extended reply to the speech that I have heard just now. Should this debate be protracted, I may exercise my privilege of saying something in reply to the Senator from Maine, but to-day

I shall confine myself to a very few general observations.

"The Senator is frank in one thing. His resolution is broad. It includes all the States; it provides for an investigation whether the rights of American citizens in connection with the elective franchise have been violated or interfered with in any of the States; but he frankly admits in the very outset of his remarks that that was not his purpose, that his purpose was to assail the Democracy of the South. He had two purposes in preparing this carefully elaborated speech; not to vindicate the right of suffrage throughout this whole Union, but to inquire whether the Democracy of the Southern States had violated the rights of American citizens, and then to find out what could be done with them. Now, Mr. President, that is a very frank, and I have no doubt a very true, statement of the *animus* of this resolution.

"Mr. President, I said that there might be some doubts as to the propriety of this investigation. I repeat it. There may be such doubts, especially to-day. Here is a short session of Congress. We have, excluding the recess that we always take, less perhaps than two months within which to dispose of the appropriation bills and the other measures of legislation that necessarily require the attention of Congress if the business of the session is to be disposed of and no extra session is to be called. And now, sir, the Senator proposes an investigation that I defy any committee that can be formed to make with anything like thoroughness, nay, in any satisfactory manner, with anything like justice either to those who are implicated or to those who may be implicated, within the time that remains of this session of the Senate. It is a simple impossibility. I have therefore wondered why this resolution was introduced, unless it was to be made a string upon which to hang speeches to arouse sectional hatred in one portion of this Union against an almost defenseless people in another portion of the Union.

"Now, Mr. President, this assault of the Senator from Maine is not an assault simply, however, upon the people of the South. I said five months ago in a speech—what I beg pardon for repeating here—that it did seem to me as clear as anything in American politics could be, that there was a deliberately formed purpose, under pretext that there was a solid South, to create a solid North to rule not only the solid South, but to rule one half nearly, if not more, of the people of the North. I thought so then; I think so yet. I thought then, and I think now, that a purpose more unpatriotic, more unjust, more fraught with ruin to this country never entered the brain of man. That is my belief.

"Why, Mr. President, of what is it that the Senator from Maine complains? That there were not enough Republican votes at the South. That is the amount of it; and how does he make that out? He assumes, without one shadow of proof produced here, that the negroes

of the South were prevented from voting, or forced to vote the Democratic ticket. He assumes, therefore, that owing to those causes the negroes of the South are not represented by the members of the House of Representatives who come from that section of the Union, or by the Senators on this floor who represent Southern States. What right has the Senator from Maine to say that the negroes of the South are not represented by the chosen Representatives of the South and the chosen Senators of the South? What right has he to vote those negroes himself on one side, and say that the men who have the credentials of election here do not represent their constituents? Why, Mr. President, it is a bare assumption on his part that he has no right whatever to make.

"But, again, the Senator ought to have thought of this when he was framing his fourteenth and fifteenth amendments, or when he was assisting in framing them. There were men then, men of his own party too, who told him with long foresight that in the end property and intelligence and education will rule the land, and ignorance can not. Mr. President, there were men of his own party who foresaw that those people who have the intelligence, the education, and the property will not be ruled by those who have neither; and in that it is not necessary to separate the community into white people and into colored people. Not at all is it necessary to do that. No, Mr. President, the result of these constitutional amendments was easy enough to be foreseen. I am not here to-day to justify the violation of the rights of any man, however humble he may be, whatever may be the color of his skin, whatever may be the poverty of his situation. I am here for no such purpose as that. If I know my own heart, I am as much in favor of respecting the rights of every man under the Constitution as the Senator from Maine or any other Senator on this floor; but I do know that property, intelligence, education, will assert their influence everywhere on the face of this globe.

"Now, Mr. President, let me say one word more on this subject. Who was it that drew the color line between the whites and the negroes in the South? Let me tell you, sir, that millions of money, of the money of the people of the United States, were expended by your agents, the Freedman's Bureau agents, in getting every colored man in the South into loyal leagues and swearing him never to vote for a Democrat. That is where the color line began to be drawn. That institution, which took charge of the negro at the ballot-box, took charge of him in the cotton-field, took charge of him everywhere, supervised every contract that he made, allowed no contract to be made unless it had the approval of the agents of the Freedman's Bureau, and spent the money and property called 'captured and abandoned property' that was surrendered to it, and many millions of money directly appropriated out of

the Treasury of the United States—it was that Bureau and its agents who first drew the color line. And yet when the white people of the South, when the men owning the property and having the intelligence and the education at the South, saw their very social system menaced with destruction, saw their very households threatened with ruin under an inundation of barbarism directed by the most unscrupulous of men, and when they naturally came together, when they naturally united as people menaced with danger ever will unite, then a cry is raised against ‘the solid South!’ Ah, Mr. President, it will not do. This system of legislation toward the South that began ten years ago is reaping its fruit; and it is not by additional penal laws that you can better the condition of this country. What does the Senator want more penal laws for? Let him look into the statute-book on this very subject; let him read the statutes in regard to the enforcement of the rights of citizens to vote, and I defy him to find in the statute-books of any civilized country on this globe a body of laws so minute, so searching, and bristling all over with fines and forfeitures as are these laws.

“But that is not all. In addition to that you have a vast machinery of superintendents of election, Federal supervisors, marshals, deputy marshals, paid electioneers out of the Treasury of the United States, under the guise of being men to preserve the freedom of suffrage and peace at elections. You have a whole army of them provided for by your statutes. What more does the Senator want? I think I see, Mr. President, what is wanted. I think this is a note which is sounded to the people of the North that they must retrace their steps; and this very party which required two amendments to the Constitution to be made in the interest, it was said, of the colored population of the South, is now preparing to face about, retrace its steps, and undo what it did only a few years ago. Either directly or by indirection that is to be done. Indeed, I thought, while the Senator from Maine was making his speech, how much reason this country, and especially the southern part of the country, had to congratulate itself that the next House of Representatives will not have a majority of gentlemen thinking like the Senator from Maine; for if he is right in what he said, if his threats are not mere idle wind—and I certainly do not attribute any such thing to him—if they are deep-seated and permanent thoughts of those with whom he acts, then I should be prepared to see a House of Representatives in which there was a Republican majority exclude Southern members by the score; then I should be prepared to see them decide themselves that the right of suffrage was prohibited down there to the negro, and then to see them in their supreme authority, as they would construe it, vote out the chosen Representatives of the South, not by ones, not by twos, but by the score. It is a fortunate thing for this country,

it is a fortunate thing for our free institutions, that there is not in the present House of Representatives, and will not be in the next, a majority thinking as the Senator from Maine thinks, and willing to act as I fear he is willing to act.

“Mr. President, one word on the amendment I have offered. My own belief is that there is a far greater danger that menaces our institutions and menaces the right of suffrage in this country than that to which the Senator from Maine has alluded. Sir, the most disheartening thing to an American who loves free institutions is to see that year by year the corrupt use of money in the elections is making its way until the time may come, and that within the observation of even the oldest man here, when elections in the United States will be as debauched as ever they were in the worst days of the old borough parliamentary elections in the mother land. Mr. President, there is the great danger. The question is whether this country shall be governed with a view to the rights of every man, the poor man as well as the rich man, or whether the longest purse shall carry the elections and this be a mere plutocracy instead of a democratic republic. That is the danger; and that danger, let me tell my friend, exists far more in the North than it does in the South. Sir, if he wants to preserve the purity of elections, if he wants to have this Government perpetuated as a system that can be honestly administered from the primary election to the signature of a bill by the President of the United States, let him set his face and exercise his great ability in stopping the flood-gates of corruption that threaten to deluge the whole land and bring republican institutions into utter ruin and disgrace.

“Mr. President, there is one thing that made me doubt a little as to the propriety of this resolution, although, as I said, I am going to vote for it; and what the Senator from Maine has said has added to the great doubt which I entertained on that subject; and that is, that I am not quite sure that there are not persons who favor this kind of a resolution, and as much debate upon it as you can have, and as much investigation as you can have, in order to divert public attention from the real questions which ought to engage the Congress of the United States. Questions of economy, questions of finance, questions of currency, all are shoved aside that popular speeches may be made, tending to excite one section of the people against another, and to set their minds mad with passion, instead of appealing to their cool and deliberate reason. I certainly do not charge the Senator from Maine with having got this up for the purpose of putting aside and throwing out of view that which should form the subject of our thoughts and of our legislation; but I fear that such may be in some men’s minds one of the things to be effected by such a resolution.”

Mr. Lamar of Mississippi: “Mr. President,

when these resolutions are printed and ready for action, I may have something to say upon the question of their adoption. Before the question passes off now, I wish to make one or two remarks, not upon the resolution, but upon one or two points submitted by the Senator from Maine.

"Sir, it is not a surprising thing, nor is it an unnatural one, that that distinguished Senator should feel and manifest a deep interest in the affairs of the Southern States. The people of that section have but recently undergone a vast change, social and political; and it is reasonable, it is eminently fit and proper, that one who bore so conspicuous a part in the adoption of the measures which brought about that vast transformation, who occupies so conspicuous a position at the present time, and who perhaps will occupy a still more distinguished position in the future, should scrutinize with anxious solicitude the progress of that people to reconstruction and to their readjustment to the healthy and normal conditions of our national life. Sir, had the Senator come forward with some well-devised scheme of public education by which this newly enfranchised race, who have had such exalted duties imposed upon them without culture and without even the trained intelligence of practical experience, may be fitted to exercise their great duties as freemen and citizens and the participants in the sovereignty of commonwealths, every one would have recognized the propriety and the patriotism of such a movement; for he would have proposed to give to that people what they most need, and what would protect them from every evil and wrong which he now alleges that they labor under.

"There are other evils in that country which might call forth the lofty and enlarged measures of a patriot and of an American statesman; but I must confess to some regret that a Senator so distinguished, in looking upon this recently dislocated member of this great American empire, instead of regarding it with reference to those great interests that affect the whole country through the long track of coming years, should have concentrated his whole attention upon its relation to parties and party contests; that nothing should have struck the Senator's notice or engaged his thoughts except the connection of that people with the ascendancy and defeat of parties and their influence in Federal elections. Party organizations are no part of the Constitution, and they are agencies which work outside of the laws. But, sir, the gentleman's remarks were directed exclusively to the mere party and partisan aspects of this great subject; and with no intent whatever to utter a bitter retort, I can not but feel the regret that one of such resolute energies, of such tenacious purposes, such daring ambition, and such great abilities, should have so narrowed his mind as 'to give to party what was meant for mankind.'

"But, sir, what is the point at last of the

gentleman's argument this morning? It was remarkable for its significant omissions. It was directed exclusively to the suppression of the votes of a particular class of suffragans in the South. Mr. President, if I understood the debates at the time of the adoption of the amendment to which he refers, clothing the negroes of the South with the right of suffrage, it was to give them protection for their freedom and for the civil rights which the fourteenth amendment accorded to them. Through the protracted remarks of the Senator he could not utter one word—he could not, because it would not have been the truth if he had—to show that there was a single right of freedom or of citizenship belonging to the black race of the South that was not as secure and as well enjoyed as that of the proudest and freest white man in the land.

"It is also a remarkable fact that in his indictment of the South there is no pretense that there is a single menace in her present attitude to any of the great interests of this country—not an imputation of that character—for 'solid' (according to the usual phrase) as the South may be, she stands in line with a majority of the American people upon nearly every question which is now discussed in this nation or argued here in her council chambers.

"But, sir, to come to the direct point, the Senator asserts that, in consequence of the suppression of the negro vote at the South by means which, he alleges, are illegitimate and irregular, the South has a disproportionate party power in this Government. Sir, before this discussion is over I will show that the negro vote has not been suppressed in the South; I will demonstrate that this political phenomenon, which is the subject of so much discussion and misrepresentation, is a phenomenon that would occur in any free society, and that it has been brought about by the influences which intelligence, and virtue, and sagacity, and the other elements of civilization, always bring to bear upon the classes that are ignorant and debased.

"But, sir, assuming all that the gentleman says to be true, that there are in the House of Representatives one hundred and six Representatives elected of one party complexion, and elected by means that are not what he considers legitimate, let us see where we stand in this position. Now, sir, what interest of the North, what interest of this country, is endangered by it? Sir, with a united vote of the South she stands a powerless section in this Government; she is an impotent minority section in any event, unable to protect a single Southern right or to defend a single Southern interest.

"But, says the gentleman, under the operations of these amendments the South have a representation not in proportion to the constituency which elect them, and the States of South Carolina, and Mississippi, and Alabama, have much more power than twice the num-

bers in some of the Northwestern States which he mentioned. Mr. President, every member of that population in those States entitled to vote ought to be counted. You have no right to draw the line between the black and the white, and assume that the black man, because he did not vote the Republican ticket, is therefore a suppressed voter. Is it to be assumed that in every Southern State the property and population of the State are in such necessary antagonism that no amount of local misrule can teach them the advantage of their natural alliance? What right has he to assume that whites and blacks are never to vote and act together as citizens of a common country? Now, sir, let me call attention to one point in the Senator's argument. If we are to enter upon a system of legislation and political movements in order to adjust representation and political power in this Government according to the number of actually voting constituencies, the principle may operate further than the gentleman thinks. What is the population of the State of Maine? I believe 625,000. It has been diminishing within the last twenty years. I can not now recollect, but perhaps it is 623,000. Vermont, which is also solid, has not more than 350,000. And yet the State of Maine has as much power in this Government with her 600,000 people as the State of New York with her 5,000,000."

A Senator: "You mean in this Chamber."

Mr. Lamar: "No, sir; I mean in this Government. Gentlemen correct me by saying 'in this Chamber'; but I adhere to the phrase. I say, and repeat, that they have the affirmative power of legislation this day; 625,000 in Maine are equal to 5,000,000 in the State of New York. A positive equality of States, whatever be their population, in either Chamber where concurrent legislation is needed, is positive affirmative power in the passage of any law. Why, sir, the whole of New England has not three and a half millions of population; and yet under the operation of the Constitution and laws of the land, of which I make no complaint and which is a legitimate thing, those three and a half millions of population have six times as much power as sovereign commonwealths that have five millions. They have got as much power as twenty millions in the large Northwestern States that the gentleman called attention to. Sir, why is one man in these Eastern States equal to twenty in the Northwest, except by virtue of the Constitution—the Constitution which we are intending to abide by and to maintain?"

"But, as the gentleman has vouchsafed advice to Southern men on this floor and outside, in all spirit of fairness and equity I will speak to the people of the New England States and tell them that in my opinion the direst foe they have got on earth is the Representative or Senator, whether from their own section or any other, that will kindle this fire whose subterranean flames will liquefy the very founda-

tions on which these proud and free commonwealths now rear their aspiring heads. Sir, the Senator is fishing in troubled waters upon this subject; and, when you come to agitate questions of this kind, you will find that changes of a more radical and fundamental nature will be necessary in order to adjust representation to numbers in this Government."

Mr. Edmunds of Vermont: "Mr. President, the point of the Senator from Mississippi appears to be, that if a Senator from New England proposes to inquire whether the Constitution has been violated in depriving any part of the people of the States of their right to vote for members of Congress, etc., he thereby incurs the danger of upsetting the Constitution itself, which says that the States in this body shall be equal; and therefore I understand him to put it out as a warning that the people of New England through their Senators and Representatives have no right to stand up for the Constitution as it is in favor of an equal representation by the people of the States in the other House, unless they run the risk of being exposed to the danger of having their senatorial representation overturned. That, then, is the question we are invited to consider, and the peril that we expose ourselves to if we undertake to inquire whether the Constitution of the United States has been violated. In other words, the representatives of the Democratic party of the South say to an inquiry into a violation of the Constitution, 'If you dare to make such an inquiry, you run the risk of overturning the representation of the States and reducing yourselves to a state of servitude.' That is the proposition!"

Mr. Lamar: "I hope the Senator will allow me to explain—"

Mr. Edmunds: "Certainly."

Mr. Lamar: "Or rather to protest against the interpretation which he has put upon my remarks. I made no such suggestion. It was simply in reply to the theory the Senator from Maine had broached, that this investigation was justified in order that the evil which he had disclosed of one hundred thousand white men in the South having a political power and vote in this Government equal to three hundred thousand somewhere else, that I said that the tendency of such a theory would lead to further investigation, and would undermine the principle and the system of government upon which our American fabric rests."

Mr. Edmunds: "I am very glad to know, Mr. President, that the Senator did not mean what his remarks appeared to indicate; and he has misunderstood—"

Mr. Lamar: "I did not mean what the gentleman has attempted to force my remarks into, but which he will never succeed in doing."

Mr. Edmunds: "The Senator is mistaken in that. I have not attempted to force the Senator's remarks into anything. The 'Record' will show exactly what he has said, and I think it will appear that I have not misstated.

the substance of what he has said; but the Senator has greatly mistaken, with his present explanation, the point of the Senator from Maine. The Senator from Maine did not complain of the inequality of personages in one part of the Union or another. What he complained of was, supposing what he believes to be true turns out to be so when you have an investigation, that a small number of persons in the South, by a gross and outrageous violation of the Constitution, have taken to themselves by that species of usurpation the power of a large number under the Constitution exercised in a rightful way in the Northwest. Is the Senator dissatisfied if that turns out to be true, or would he like to rectify it? The Senator, of course, would like to rectify it. I must assume that he would. What, then, is the use of saying that you are going to overturn the Government if we undertake to find out whether the Constitution has been grossly and flagrantly violated by a denial of equal rights in respect of the elections to the popular branch of the Congress of the United States? And where is the necessity, in such a case, of holding out the terror and kindling the conflagration that the Senator referred to in respect of senatorial representation upon an inquiry of that kind? The people of New England, as far as I may speak for them, believe in justice and in equal rights under the Constitution and according to it, just as the fathers and their successors have made it; and that is, that in the States (and I am surprised to hear a Southern Senator assail the very foundation of State rights) there is and there must be political equality; that in respect of the people represented in the other branch of Congress there shall be the fair equality of fair numbers fairly and freely exercising their rights, and not the subjects of tyranny, and corruption, and fraud anywhere. That makes your Government; nothing more, nothing less."

Mr. Lamar: "Still, Mr. President, I can not accept the position to which the Senator from Vermont assigns me. He says that he is surprised to find a Southern Senator assailing the principle of State rights. He will never find me in that position, sir. I have ever been the defender of that doctrine. But surprises are constantly sprung upon us, and the country will be not a little astonished to find the doctrine of State rights advocated by the distinguished Senator from Vermont."

Mr. Edmunds: "I think not. I have always done it."

Mr. Blaine: "Mr. President, I desire merely to say, in reply to the Senator from Mississippi, that in the little colloquy between him and the Senator from Vermont, I understand this to be about the residuum, that if I move an inquiry into the unconstitutional representation of Mississippi in the other House, he will move one into the constitutional representation of Maine in this branch!"

Mr. Lamar: "That will do pretty well for

wit and pretty well for the Senator's peculiar species of perversion; but it will not do for the truth, for, sir, I protested that I not only would move no such inquiry, but that I would oppose and fight against any such purpose. No, sir; the doctrine that I stated was, that if the right of suffrage be invaded anywhere, or any constitutional rights infringed upon, in any quarter or by anybody, it shall be maintained and enforced, if necessary, by all the constitutional power of the Government."

Mr. Edmunds: "Then we are all at one."

Mr. Lamar: "Exactly so, but not upon the ground that States shall be deprived of any of their representatives, because under the operation of the Constitution, either in its original provisions or in its amendments, their political power may be not in exact proportion to their numerical power in this Government. And I repeat the warning against this agitation about sectional power based on numbers; I warn Senators that in throwing their net into this troubled sea they may drag to the shore a vase like that of the fisherman in the 'Arabian Nights,' from which, when the seal was once broken, a demon emerged more potent than his deliverer, and threatening his destruction."

The Vice-President: "The question recurs on the amendment proposed by the Senator from Ohio. Will the Senate agree to the resolutions as amended?"

Mr. Bayard of Delaware: "I propose to amend the first resolution, in line 6, by inserting after 'any State' the words 'or of the United States'; so as to read:

"Whether the right of suffrage of citizens of the United States, or of any class of such citizens, was denied or abridged by the action of the election officers of any State, or of the United States, in refusing to receive their votes.

"This will make the inquiry include both officers of the State and of the United States, who were election officers."

Mr. Blaine: "I have no objection to that. I hope there will be no objection to that amendment."

The Vice-President: "The Chair hears no objection to the amendment suggested by the Senator from Delaware. The resolutions are so modified."

Mr. Conkling of New York: "I suggest that if either branch of this inquiry is to proceed, a special committee should be charged with it. The chairman of the Committee on the Judiciary [Mr. Edmunds] is not here. There are several members of that committee here, and they all know, as I know, that committee is already, I might say, smothered under labor and duties which are put in its charge; and the idea that during this session of Congress either alternative of this inquiry is to be conducted by that committee possibly—my friend before me [Mr. Davis of Illinois] says 'properly' but I say possibly—seems to me so improbable that I venture to call the attention of the Senate to it. Believing as I do

that this inquiry ought to be made, and believing further that there is great force in the suggestion that any one single committee will be greatly embarrassed, to say the least, by an attempt to hold all the inquisition here directed, it seems to me that the inquiry ought not to be committed to a standing committee, which committee we know in advance is obstructed already by labors making demands upon its time beyond its possibility to comply. And I will venture to add that there are no seven men, whether they be the members of the Judiciary Committee, or a court, or a commission, who, in the time available between now and the 4th of March to the Judiciary Committee, could by any diligence dispose intelligently, conscientiously, and thoroughly of the matters in charge of that committee without reference to this; and my honorable friend before me [Mr. Davis of Illinois] concurs in and confirms me in that statement. So that, unless I stand in the way of the purpose of those who more especially have charge of the resolution, I will venture to submit an amendment striking out 'the Committee on the Judiciary' and inserting 'a select committee consisting of nine members of the Senate,' to be appointed by the Chair."

Mr. Blaine: "I am entirely willing to have the change made. I would have moved it myself, but for the fact that I do not desire to be chairman or even a member of the committee; and the person who moves a select committee is under some sort of honorable obligation under certain circumstances to accept the chairmanship. I have no objection to the change."

The Vice-President: "The amendment of the Senator from New York is that the subject matters of the pending resolutions be committed to a select committee to consist of nine Senators, instead of the Judiciary Committee. The question is on the amendment of the Senator from New York."

The Secretary proceeded to call the roll, and the result was announced as follows:

YEAS—Allison, Anthony, Barnum, Blaine, Booth, Burnside, Cameron of Pa., Cameron of Wis., Christianity, Conkling, Davis of Illinois, Dawes, Ferry, Garland, Hamlin, Hoar, Howe, Ingalls, Kellogg, Kirkwood, McDonald, McMillan, Matthews, Maxey, Mitchell, Morrill, Oglesby, Paddock, Patterson, Plumb, Rollins, Saunders, Teller, Voorhees, Wadleigh, Windom—36.

NAYS—Armstrong, Bailey, Bayard, Beck, Butler, Cockrell, Coke, Davis of W. Va., Eustis, Gordon, Grover, Harris, Hereford, Johnston, Jones of Florida, Kernan, Lamar, McCreery, McPherson, Merrimon, Morgan, Randolph, Ransom, Saulsbury, Wallace, Wythe, Withers—27.

ABSENT—Bruce, Chaffee, Conover, Dennis, Dorsey, Eaton, Edmunds, Hill, Jones of Nevada, Sargent, Sharon, Spencer, Thurman—13.

So the amendment was agreed to.

The Vice-President: "As thus amended will the Senate agree to the resolutions?"

Mr. Blaine: "Let the first part of the resolutions be read as amended."

The Vice-President: "The resolutions will be read as amended."

The Secretary read as follows:

Resolved, That a select committee, to consist of nine Senators, be appointed to inquire and report to the Senate—

Mr. Blaine: "Let 'by the Chair' be put in after 'appointed.' Let the portion added by the Senator from Ohio come in after the first resolution. Then the two subsequent clauses follow, and then I move an amendment at the end of the last clause to add these words:

"To take testimony and administer oaths by subcommittees, and to visit any portion of the country when such visit may in their judgment facilitate the object of the inquiry."

Mr. Butler of South Carolina: "May I ask the Senator from Maine to consent to one additional amendment after his, 'that said committee be instructed to sit with open doors?'"

Mr. Blaine: "I think there is a good deal under that suggestion of the Senator from South Carolina. He will pardon me for not inserting it."

Mr. Butler: "I am perfectly earnest in making the suggestion."

Mr. Blaine: "Will the Senator explain the motive of it?"

Mr. Butler: "My motive is to have a perfectly fair, impartial, and open investigation. That is my object."

Mr. Blaine: "The Senator from South Carolina will observe that this committee will undoubtedly have a fair and full representation of the minority of the Senate, or of the other side—I do not know whether it is a minority or not. Both political parties and all shades of political opinion that sit on this floor will be represented on the committee. Now, I can conceive a case, I think I can go a little further and say that I have heard of a good many cases, in which the committee would be embarrassed by having witnesses come before them who did not want to testify openly. There certainly could be no partisan advantage gained if so active and vigilant an eye as that of the Senator from South Carolina was on the minority, and so of many other Senators whom I might name; then no harm could come to the inquiry in that respect. But the Senator is not unaware surely that one of the alleged, if not actual, troubles in the whole investigation of the Southern question has been that the very men who were intimidated at the polls were still more intimidated on the witness-stand; and therefore I would leave that matter altogether to the discretion of the committee. I would neither bind them the one way nor the other. Let them be the judges as to what the propriety of the case demands in this respect."

Mr. Butler: "I understand, then, the Senator to state that he objects to that addition to his amendment upon the ground that there may be in certain parts of this country some witnesses who would not desire to testify

openly, but who would be willing to testify secretly. That I understand to be the position of the Senator. I do not know, Mr. President, for one, any part of this country where that state of things exists. The Senator says that it is alleged. Like a great many other allegations, it is entirely without any proof to sustain it. I respectfully submit to the Senator that he has not one particle of proof, and if he desires (and I have no right to question but that he does desire) a free, full, complete, thorough, public investigation of this question, I can not see why he should object to my amendment.

"So far as I am concerned, as a representative in part of South Carolina, I wish to say to the Senator, to the Senate, and to the country, since he has chosen to select and single out my State as the special object for this investigation, that we desire the most complete and the fullest investigation we can get; and I can say to the Senator that any witness who goes before the committee in South Carolina may do so just as safely and may testify as fully as he can in the State of Maine."

Mr. Eustis of Louisiana: "Mr. President, I desire to state to the Senator from Maine, so far as any investigation in Louisiana is concerned, that past investigations prove that Republican witnesses are not intimidated, because Republican witnesses not only testify, but a great many testify on both sides. Therefore I can see no objection to having this investigation a public investigation.

"It was not my intention to reply to the remarks made by the Senator from Maine, because whether or not there has been intimidation is a question of fact and not a question of conjecture or guesswork or partisan statement; and therefore it occurred to me as a very extraordinary position for the honorable Senator from Maine to occupy, that in advance of the examination of a single witness, in the absence of a single inquiry, as the introducer of the resolution asking for an investigation, which implies that there has been so far no sustained fact upon which to base an accusation, the honorable Senator should take the liberty of stating to the Senate and to the people that the colored citizens of the State of Louisiana had no more rights as suffragans and as voters than the inhabitants of Senegambia. I could very easily demonstrate, if this were a proper time, that the election in Louisiana, so far as results are concerned, either as to the general State ticket or as to the Congressional elections, was a fair and a peaceable election, and that there were a great many reasons why the Democratic nominees were elected; and I could also demonstrate that the colored people selected their choice as to Congressional candidates and exercised their choice as to legislative candidates, showing that they exercised a discrimination in the matter."

The Vice-President: "Will the Senate agree to the amendment proposed by the Senator from South Carolina?"

Mr. Blaine: "I have no desire to prolong the debate; but the Senator from South Carolina either possesses or affects great ignorance of past events. He certainly ought to know that one of the primal troubles in every investigation South has been the very one on which I have commented. I used the word 'alleged' because I wanted to put it in as mild a form as possible. I might have used the word 'proved' or 'recorded' in Congressional reports accessible to him as to every other Senator; but in advance of the investigation which the Senate is to order I do not care to go into particulars. I have had as many as two hundred letters from the South giving details of great outrages upon the right of suffrage; many from the State of the Senator who last spoke. I do not adduce them or parade them here. They at least form the basis, in connection with that which has become matter of public notoriety, of a serious and sober investigation; and, if the Senator from Louisiana does not know that a great massacre occurred in one of the parishes of his own State on the last election day, he is probably the only gentleman in the United States who is ignorant of it."

Mr. Butler: "The Senator from Maine says he has two hundred letters from people in the South giving evidence of intimidation and fraud and wrong and riot and murder. Why, Mr. President, I understood the Senator to say the other day, and if I am mistaken I hope he will correct me, that he based his statements upon the newspapers of the country. Well, now, Mr. President, I submit in all frankness and in all kindness to the Senator that, if he based his statements upon the newspaper press alone, he and I should have been hung and quartered long ago. It is not safe for the Senator to base his opinions and his statements and his allegations upon any such authority; not that I mean to say that the newspapers do not communicate the truth, but I do mean to say that when correspondents are sent into a country, as they have been into my country, to make a case, to write down all that is bad about our people and to suppress all that is meritorious, the accounts they send are unreliable. I say to the honorable Senator that with the same feeling and with the same spirit I could go into his State with a corps of detectives and I could make his State a stench in the nostrils of the civilized world."

Mr. Blaine: "You have the authority under these resolutions to do it."

Mr. Butler: "I say I could do that; yet when I propose to open the doors of the committee to permit everybody to go in who has the right to go, whom the committee will permit to go, to allow the witnesses to be cross-examined, the Senator attempts to answer that by saying that witnesses white and colored will be notified that they do that at their peril. I say, Mr. President, that that is not true so far as South Carolina is concerned. I say that it is absolutely untrue. I do not mean this in an

offensive sense to the honorable Senator, but I submit and assert upon my responsibility here that a witness may testify before a committee with open doors as freely in my State, and I believe in every other Southern State, as he can in the State of Maine or Massachusetts."

The Secretary proceeded to call the roll on Mr. Butler's amendment, and the result was announced, as follows:

YEAS—Armstrong, Bailey, Bayard, Beck, Cockrell, Coke, Davis of Illinois, Davis of West Va., Eaton, Eustis, Garland, Gordon, Grover, Harris, Hereford, Johnston, Jones of Florida, Kernan, Lamar, McCreery, McPherson, Merrimon, Morgan, Randolph, Ransom, Saulsbury, Voorhees, Wallace, Whyte, Withers—30.

NAYS—Allison, Anthony, Blaine, Booth, Burnside, Cameron of Pa., Cameron of Wis., Christiancy, Conkling, Dawes, Ferry, Hamlin, Hoar, Howe, Ingalls, Kellogg, Kirkwood, McMillan, Matthews, Mitchell, Morrill, Oglesby, Paddock, Patterson, Plumb, Rollins, Saunders, Teller, Wadleigh, Windom—30.

ABSENT—Barnum, Bruce, Butler, Chaffee, Conover, Dennis, Dorsey, Edmunds, Hill, Jones of Nevada, McDonald, Maxey, Sargent, Sharon, Spencer, Thurman—16.

The Vice-President: "On the amendment proposed by the Senator from South Carolina [Mr. Butler] the yeas are 30 and the nays are 30. The amendment is rejected; and the question recurs on the amendment proposed by the Senator from Maine [Mr. Blaine]. The amendment will be reported."

The Secretary read as follows:

That in prosecuting these inquiries the said committee shall have the right, by itself or by any subcommittee, to send for persons and papers, to take testimony, to administer oaths, and to visit any portion of the country when such visit may in their judgment facilitate the object of the inquiry.

Mr. Davis of West Virginia: "I presume it will be in order to amend the amendment of the Senator from Maine with the words 'shall sit with open doors if any member of the committee desires.'"

The Vice-President: "The question is upon the amendment just stated, upon which the yeas and nays have been ordered."

Mr. Bayard: "The action of the Senate upon the resolutions and all the amendments has had the mark almost of unanimity. Why shall it not be continued in respect of this proposition? The system of taking testimony in courts of justice is invariably open; and, if there ever was an inquisition as to fact which ought to be public, it surely is that which touches the affairs of a whole community. Ordinarily, in contests as to rights between individuals, issues of fact are created by pleadings, so that some degree of certainty is brought to every mind, and we know the subjects matter and general character of the testimony to be expected. But here is little else than an indictment of communities as a whole, vague, uncertain, and surely there is the spirit of fair play which dictates that, if you strike, you at least shall hear. There is something un-American in secret inquisition, something in the

proposition that is repugnant to a sense of justice. If the charges are true, I hope that exposure will follow, and that punishment may follow exposure. If they be untrue, I hope they may recoil on those who unjustly set them on foot. But the truth is something that no honest man should fear; and, believing that this proposition to try whole communities upon vague and general charges calls especially for open and public investigation of the facts, I do hope that the Senate will unanimously agree that no such thing as a secret inquisition shall be held upon such a state of facts as is alleged by those who have moved this proceeding.

"I have been by the direction of the Senate assigned to duty upon every committee of this public character of inquisition since 1870. The first was in the State of North Carolina; next there followed a joint committee of the two Houses, twenty-one in number, upon all the Southern States; again followed a special committee in respect to the State of Mississippi. All of that testimony was taken in secret; all of that testimony was taken in short-hand and fully published. There was then the same proposition made that we should sit with open doors, that the communities who were to be assailed should hear at least what was said against them that they might reply; but the majority of those who controlled those investigations forbade it, and men came and swore to anything they pleased, assailing men who were absent, uninformed of the time, unprepared to meet it, and unable to meet it simply from want of knowledge of what had been said. All this testimony was published, published in full, and I have never heard in the succeeding cases, where committees have visited again those States, that the publication of the testimony in full ever produced any breach of the peace whatever."

Mr. Blaine: "May I ask the honorable Senator a question?"

Mr. Bayard: "Certainly."

Mr. Blaine: "Before any of these committees of which he has been a member did he ever know testimony affecting the character of an individual submitted which that individual, through himself or counsel, did not have some opportunity to review and rebut?"

Mr. Bayard: "Yes, sir. I can tell him there was no case except it came through the action of a member of the committee who might choose to summon the man assailed."

Mr. Blaine: "Was he not summoned?"

Mr. Bayard: "Sometimes he was and sometimes he was not."

Mr. Blaine: "What I want to get at is this: Whenever it was regarded as essential to the protection of the reputation of any man, was it not invariably the rule that any one assailed was summoned?"

Mr. Bayard: "I can not say that any such rule prevailed. I mean to say that where a subpoena was asked for I never knew it refused."

Mr. Blaine: "That is what I mean. Now, as the Senator will observe, just as in those committees, so in this, both political parties will be represented, and they will use their discretion; but if you by a rule beforehand say that under no circumstances shall they hold a closed-door meeting, you have taken all proper responsibility from them. You have taken from them any exercise of discretion whatever."

Mr. Bayard: "I do hold that any man, however humble, however poor, has a right to be confronted with the witnesses against him. He has a right to know the charge against him. This proceeding is, as I say, an indictment against a whole people; it is a railing accusation; therefore the more difficult to meet, and therefore the proof in regard to it ought to be open especially. The Senator must see, I submit to his candor, to his sense of fairness, that a man may come in burning with partisan dislike and make false charges against one hundred and fifty men; the Senator or I on that committee have no knowledge of the facts save that which the witness chooses to give us; power of cross-examination we have none, because we have not the knowledge to conduct a cross-examination. There is something in this which strikes my sense of justice and offends it. I would not wish to do by another what I would not have done by me; and I can understand that, if my character were to be assailed in secret without the opportunity of cross-examination, I should feel it exceedingly unjust were I not to be fully informed of it all, and be there at the time that I might defend myself.

"I believe I have already referred to the fact that the most voluminous testimony has been in print for several years, taken at different dates—depositions of witnesses examined and cross-examined in private. They all have been in private; none that I know of, in which there has not been a refusal to allow these matters to be public, although they were subsequently fully published without injury to any one; and yet I believe great injustice was done by that method of taking testimony."

Mr. Hoar of Massachusetts: "Mr. President, I wish simply to call the attention of the Senate to the fact that the proposition made by the Senator from South Carolina [Mr. Butler], and now renewed by the Senator from West Virginia [Mr. Davis], is in opposition to the uniform precedents both of the Senate and the House in all like cases since the foundation of the Government. It is in opposition to the uniform precedents in regard to original investigations wherever criminal or unlawful conduct is charged."

Mr. Bayard: "Will the Senator pardon me?"

Mr. Hoar: "Certainly."

Mr. Bayard: "I was a member of a committee which sat six weeks in the city of New York investigating the custom-house affairs

there. That examination was public, and made so by the committee."

Mr. Hoar: "I understood the Senator from Delaware himself to say that, in all the investigations of this character in which he had borne a part, the investigation had been, as proposed by the original resolution, left to the discretion of the committee. I ask the Senator from Delaware whether, in regard to the custom-house investigation, of which he speaks, the question whether the public interest required the session to be secret or open was not left to the discretion of the committee?"

Mr. Bayard: "It was decided by the committee to sit with open doors."

Mr. Hoar: "Certainly."

Mr. Bayard: "There was nothing said about it in the original resolution."

Mr. Hoar: "That is the precise point which I was making."

Mr. Blaine: "That is it exactly."

Mr. Hoar: "In every instance the matter has been left to the discretion of the committee, with the single exception of the famous Cr dit Mobilier investigation; and the experience of the House of Representatives in that particular case induced the House, the Democratic House, to return to the old custom, which has never been observed more strictly than during the past two Congresses in the other branch. The reason is obvious. In seeking to discover criminal or unlawful conduct, the tribunal making the investigation must avail itself frequently and very largely of hostile sources of information; and the examination of one witness having put them on the trace of a fact, every other witness who knows that fact, but who desires to keep it secret, is put on his guard if the investigation is open, and flies from the summons of the committee."

Mr. Kernan of New York: "I am in favor of having a full, fair, thorough investigation. I am one of those who, if it be proved that wrongs are perpetrated against the humblest citizen, will endeavor to protect them by corrective legislation, if we can do it. But I wish the investigation to be open and fair, so that the people who are accused may have an opportunity to defend themselves against false charges. The power of this committee reaches all the States. It may be that there are transactions in Northern States to be investigated as to which I may have prejudices against those accused; but I do not know my own heart if I would not resist the proposition that a committee of my political friends should examine witnesses against these parties with closed doors, excluding them from hearing the testimony and cross-examining the witnesses against them. Inasmuch as there have been committees who thought it their right to sit with closed doors taking testimony against individuals and communities charged with offenses, I trust we will now disapprove that practice by at least declaring that, if one of the Senators on this committee believes the doors should be

open while witnesses are being examined, this shall be done."

The Vice-President: "The question is on the amendment proposed by the Senator from West Virginia [Mr. Davis]."

The Secretary proceeded to call the roll, and the result was announced, as follows:

YEAS—Armstrong, Bailey, Bayard, Beek, Cockrell, Coke, Davis of Illinois, Davis of West Virginia, Eaton, Eustis, Garland, Gordon, Harris, Hereford, Jones of Florida, Kernan, Lamar, McCreery, McDonald, McPherson, Merrimon, Morgan, Randolph, Ransom, Voorhees, Wallace, Whyte, Withers—28.

NAYS—Allison, Anthony, Blaine, Booth, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Christiancy, Conkling, Dawes, Dorsey, Ferry, Hamlin, Hoar, Howe, Ingalls, Kellogg, Kirkwood, McMillan, Mitchell, Morrill, Oglesby, Paddock, Patterson, Rollins, Saunders, Teller, Wadleigh, Windom—29.

ABSENT—Barnum, Bruce, Butler, Chaffee, Conover, Dennis, Edmunds, Grover, Hill, Johnston, Jones of Nevada, Matthews, Maxey, Plumb, Sargent, Saulsbury, Sharon, Spencer, Thurman—19.

So the amendment was rejected.

The Presiding Officer (Mr. Rollins in the chair): "The question is on the amendment proposed by the Senator from Maine [Mr. Blaine], which will be read for the information of the Senate."

The Secretary: "If amended as proposed the last resolution will read:

"That in prosecuting these inquiries the committee shall have the right, by itself or by any sub-committee, to send for persons and papers, to take testimony, to administer oaths, and to visit any portion of the country when such visit may in their judgment facilitate the object of the inquiry."

The amendment was agreed to.

The Presiding Officer: "The question now is on the passage of the resolutions as amended. The resolutions will be read as they now stand."

The Secretary read as follows:

Resolved, That a select committee, to consist of nine Senators, be appointed by the Chair to inquire and report to the Senate whether at the recent elections the constitutional rights of American citizens were violated in any of the States of the Union; whether the right of suffrage of citizens of the United States, or of any class of such citizens, was denied or abridged by the action of the election officers of any State or of the United States, in refusing to receive their votes, in failing to count them, or in receiving and counting fraudulent ballots in pursuance of a conspiracy to make the lawful votes of such citizens of none effect; and whether such citizens were prevented from exercising the elective franchise, or forced to use it against their wishes, by violence or threats, or hostile demonstrations of armed men or other organizations, or by any other unlawful means or practices. The committee shall also inquire whether any citizen of any State has been dismissed or threatened with dismissal from employment or deprivation of any right or privilege by reason of his vote or intention to vote at the recent elections, or has been otherwise interfered with.

And to inquire whether, in the year 1878, money was raised, by assessment or otherwise, upon Federal office-holders or employees for election purposes, and under what circumstances and by what means; and, if so, what amount was so raised and how the same was expended; and, further, whether such assessments were or not in violation of law.

And shall inquire into the action and conduct of United States supervisors of elections in the several

States; and as to the number of marshals, deputy marshals, and others employed to take part in the conduct of the said elections; in what State or city appointed; the amount of money paid or promised to be paid to them, and how or by whom, and under what law authorized.

Resolved, That the committee be further instructed to inquire and report whether it is within the competency of Congress to provide by additional legislation for the more perfect security of the right of suffrage to citizens of the United States in all the States of the Union.

Resolved, That in prosecuting these inquiries the committee shall have the right, by itself or by any sub-committee, to send for persons and papers, to take testimony, to administer oaths, and to visit any portion of the country when such visit may in their judgment facilitate the object of the inquiry.

Mr. Whyte of Maryland: "Mr. President, I do not rise for the purpose of making any speech, but, inasmuch as I intend to vote against the passage of these resolutions, I desire in a very few words to give my reasons for that course.

"In the first place, I am unalterably opposed to these roving commissions. I am opposed to the system which has grown up since the war of appointing committees upon almost every conceivable subject and sending them at the expense of the country upon roving excursions to see what they can find out. I am opposed to the expense which has been entailed upon the country by the useless commissions that have been ordered by either the one or the other House of Congress within the last few years. We had committees to South Carolina, we had committees to Louisiana, we had committees to Florida anterior to the last presidential count; and, when the evidence gathered by the gentlemen who had gone on these foraging excursions was printed at the public expense and was ready for examination by the parties who were supposed to have charge of the electoral count, we were informed that all of that testimony was *aliunde*. We had a committee sent to Mississippi, and after taking testimony for many days and weeks, and gathering together two volumes as large as this (holding up a book) of Munchausen statements, they made their report to Congress, and I venture to affirm that not ten men in or out of Congress have ever read fifty pages of those volumes. We have had our Potter committee and our Matthews committees, and various other committees. They have all been at work, and the result is absolutely nothing but a large amount of expenditures to be paid out of the public Treasury. I am opposed to it, and I think the time has come when we should set our face against these wandering committees, some of whom I believe, either singly or in twos, have wandered with half a dozen stenographers over the Rocky Mountains during the last summer."

The Vice-President: "Is the Senate ready for the question on the resolution, upon which the yeas and nays have been ordered?"

The Secretary proceeded to call the roll, and the result was announced, as follows:

YEAS—Allison, Anthony, Armstrong, Bailey, Barnum, Bayard, Beck, Blaine, Booth, Burnside, Butler, Cameron of Pennsylvania, Cameron of Wisconsin, Christianey, Cockrell, Coke, Conkling, Davis of Illinois, Davis of West Virginia, Dawes, Dennis, Eustis, Ferry, Garland, Gordon, Hamlin, Harris, Hereford, Hoar, Howe, Ingalls, Jones of Florida, Kellogg, Kernan, Kirkwood, McDonald, McMillan, McPherson, Matthews, Maxey, Merrimon, Mitchell, Morrill, Oglesby, Paddock, Patterson, Randolph, Ransom, Rollins, Saunders, Spencer, Teller, Voorhees, Wadleigh, Windom, Withers—56.

NAYS—Eaton, Hill, McCreery, Morgan, Wallace, Whyte—6.

ABSENT—Bruce, Chaffee, Conover, Dorsey, Edmunds, Grover, Johnston, Jones of Nevada, Lamar, Plumb, Sargent, Saulsbury, Sharon, Thurman—14.

So the resolutions were agreed to.

The Presiding Officer: "The Vice-President has appointed as the select committee in relation to the violation of the rights of American citizens at the recent elections, under the resolution of the Senator from Maine [Mr. Blaine], Mr. Teller, Mr. Cameron of Wisconsin, Mr. Kirkwood, Mr. Mitchell, Mr. Plumb, Mr. Bayard, Mr. Wallace, Mr. Bailey, and Mr. Garland."

For the report of the committee, see **PUBLIC DOCUMENTS**.

In the Senate, on December 10th, Mr. Edmunds of Vermont proceeded to explain the bill from the Committee on the Judiciary to regulate the counting of the votes for President and Vice-President. The bill was read as follows:

A bill to amend sundry provisions of chapter 1, title 3, of the Revised Statutes of the United States, relating to presidential elections, and to provide for and regulate the counting of the votes for President and Vice-President and the decision of questions arising thereon.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the electors of President and Vice-President shall be appointed in each State on the first Tuesday in October in every fourth year succeeding the election of a President and Vice-President, and on the same day in October whenever there shall be a vacancy in both the offices of President and Vice-President declared and certified as hereinafter provided; but no Senator or Representative or person holding an office of trust or profit under the United States shall be appointed an elector.

SECTION 2. Whenever there shall be a vacancy in both the offices of President and Vice-President occurring more than two months next preceding the first Tuesday in any month of October other than that next preceding the expiration of the term of office for which the President and Vice-President last in office were elected, the Secretary of State shall forthwith cause a notification thereof to be made to the executive of every State, and shall also cause the same to be published in at least one of the newspapers printed in each State. The notification shall specify that electors of President and Vice-President of the United States shall be appointed in the several States on the first Tuesday in October then next ensuing.

SEC. 3. The electors of each State shall meet and give their votes on the second Monday in January next following their appointment, at such place in each State as the Legislature of such State shall direct.

SEC. 4. Each State may provide, by law enacted prior to the day in this act named for the appointment of the electors, for the trial and determination of any controversy concerning the appointment of electors,

before the time fixed for the meeting of the electors, in any manner it shall deem expedient. Every such determination made pursuant to such law so enacted before said day, and made prior to the said time of meeting of the electors, shall be conclusive evidence of the lawful title of the electors who shall have been so determined to have been appointed, and shall govern in the counting of the electoral votes, as provided in the Constitution and as hereinafter regulated.

SEC. 5. It shall be the duty of the executive of each State to cause three lists of the names of the electors of such State, duly ascertained to have been chosen, to be made and certified and to be delivered to the electors on or before the day on which they are required by this act to meet.

SEC. 6. Congress shall be in session on the second Monday in February succeeding every meeting of the electors. The Senate and House of Representatives shall meet in the Hall of the House of Representatives at the hour of one o'clock in the afternoon on that day; and the President of the Senate shall be their presiding officer. Two tellers shall be previously appointed on the part of the Senate, and two on the part of the House of Representatives, to whom shall be handed, as they are opened by the President of the Senate, all the certificates, and papers purporting to be certificates, of the electoral votes, which certificates and papers shall be opened, presented, and acted upon in the alphabetical order of the States, beginning with the letter A; and said tellers, having then read the same in the presence and hearing of the two Houses, shall make a list of the votes as they shall appear from the said certificates; and the votes having been ascertained and counted as in this act provided, the result of the same shall be delivered to the President of the Senate, who shall thereupon announce the state of the vote, and the names of the persons, if any, elected, which announcement shall be deemed a sufficient declaration of the persons elected President and Vice-President of the United States, and, together with a list of the votes, be entered on the Journals of the two Houses. Upon such reading of any such certificate or paper the President of the Senate shall call for objections, if any. Every objection shall be made in writing, and shall state clearly and concisely, and without argument, the ground thereof, and shall be signed by at least one Senator and one member of the House of Representatives before the same shall be received. When all objections so made to any vote or paper from a State shall have been received and read the Senate shall thereupon withdraw, and such objections shall be submitted to the Senate for its decision; and the Speaker of the House of Representatives shall in like manner submit such objections to the House of Representatives for its decision; and no electoral vote or votes from any State from which but one return has been received shall be rejected except by the affirmative votes of both Houses. If more than one return or paper purporting to be a return from a State shall have been received by the President of the Senate, those votes, and those only, shall be counted which shall have been regularly given by the electors who are shown by the evidence mentioned in section 4 of this act to have been appointed; but in case there shall arise the question which of two or more of such State tribunals, determining what electors have been appointed, as mentioned in section 4 of this act, is the lawful tribunal of such State, the votes regularly given of those electors, and those only, from such State shall be counted whose title as electors the two Houses, acting separately, shall concurrently decide is supported by the decision of the tribunal of such State so provided for by its Legislature. And in such case of more than one return, or paper purporting to be a return, from a State, if there shall have been no such determination of the question in the State as aforesaid, then those votes and those only shall be counted which the two Houses, acting separately, shall concurrently decide to be the lawful votes of the legally appointed electors of such State. When the two Houses have voted they shall immediately again meet, and the pre-

siding officer shall then announce the decision of the questions submitted. No votes or papers from any other State shall be acted upon until the objections previously made to the votes or papers from any State shall have been finally disposed of.

Sec. 7. That while the two Houses shall be in meeting, as provided in this act, no debate shall be allowed, and no question shall be put by the presiding officer except to either House on a motion to withdraw; and he shall have power to preserve order.

Sec. 8. That when the two Houses separate to decide upon an objection that may have been made to the counting of any electoral vote or votes from any State, or other question arising in the matter, each Senator and Representative may speak to such objection or question five minutes, and not oftener than once; but after such debate shall have lasted two hours it shall be the duty of the presiding officer of each House to put the main question without further debate.

Sec. 9. That at such joint meeting of the two Houses seats shall be provided as follows: For the President of the Senate, the Speaker's chair; for the Speaker, immediately upon his left; the Senators, in the body of the Hall upon the right of the presiding officer; for the Representatives, in the body of the Hall not provided for the Senators; for the tellers, Secretary of the Senate, and Clerk of the House of Representatives, at the Clerk's desk; for the other officers of the two Houses, in front of the Clerk's desk and upon each side of the Speaker's platform. Such joint meeting shall not be dissolved until the count of electoral votes shall be completed and the result declared; and no recess shall be taken unless a question shall have arisen in regard to counting any such votes, or otherwise under this act, in which case it shall be competent for either House, acting separately in the manner hereinbefore provided, to direct a recess of such House not beyond the next day, Sunday excepted, at the hour of ten o'clock in the forenoon. But if the counting of the electoral votes and the declaration of the result shall not have been completed before the fifth calendar day next after such first meeting of the two Houses, no further or other recess shall be taken by either House.

Sec. 10. That section 140 of the Revised Statutes of the United States be, and the same is hereby, so amended that the words "first Wednesday in January then next ensuing" be stricken out and the words "second Monday next after their meeting" be inserted therein.

Sec. 11. That section 141 of the Revised Statutes of the United States be, and the same is hereby, so amended that the words "first Wednesday" be stricken out and the words "on or before the day" inserted therein.

Sec. 12. That sections 131, 135, 136, 142, 147, 148, and 149 be, and the same are hereby, repealed.

Mr. Edmunds: "The first thing, Mr. President, that ought to be considered, undoubtedly, is the state of the Constitution upon this subject, and that is to be found in only two or three places, and in very few and simple words. Article II., section 1, provides, first, that—

"The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of four years, and, together with the Vice-President, chosen for the same term, be elected as follows:

"Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress: but no Senator or Representative, or person holding an office of trust or profit under the United States, shall be appointed an elector.

"The electors shall meet in their respective States, etc.

"That is in section 1 of Article II.; but the existing provision of the Constitution as to the mode of election is in the twelfth amendment, which I will read in lieu of that:

"The electors shall meet in their respective States, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the Government of the United States, directed to the President of the Senate; the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted; the person having the greatest number of votes for President shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by States, the representation from each State having one vote.

"It is unnecessary to read the rest of that provision, as this bill does not bear upon it. Article I., section 8, of the Constitution, clause 18, provides this in defining and declaring the powers of Congress:

"To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

"These provisions of the Constitution I believe are all that bear directly upon the question we now have under consideration, the first being in the natural and logical order of the consideration of this question the one that I first read, the first section of the second article to which I now invite the careful scrutiny and consideration of the honorable members of the Senate who do me the honor to listen to me. The very first statement is after the declaration that the executive power shall be vested in the President, 'that each State shall appoint' its electors. This, then, it will be seen, is a duty that is imposed upon the State in language that it appears to me does not admit of doubt or misconstruction. It is the duty of the State in its political and coequal character, with every one of its sisters, to appoint the number of electors to which it is entitled under the Constitution. It is the act of the State, and as Mr. Madison, one of the fathers and constructors of the Constitution, stated in the 'Federalist,' in the time of it and before the Constitution was adopted and as an exposition of the true character of the Constitution in respect of the election of the President, 'it is the political act of each one of the States in its definite and independent character,' which it was to exercise freely for itself in selecting the persons who were to express its voice in the election of President. The particular declara-

tion to which I wish to call the attention of the Senate, although it is hardly necessary, the language of the Constitution is so plain, is that 'the immediate election of the President is to be made by the States in their political characters.' That is to say, it is the political right of the State as a State to select for itself, and without the intervention or decision of any other power, the persons to the number to which it is entitled who are to express its choice in the electoral college for the Chief Magistrate of the Union.

"Then it goes on to provide in this same clause, 'in such manner as the Legislature thereof may direct.' So that taking the whole clause together it reads :

"Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled.

"That not only fortifies, but to my mind clinches conclusively the doctrine that the ultimate selection, the actual, the effectual, selection, which is to count in the final expression in this Chamber or in that of the other House where the votes are counted as the voice of the State, is to be made by the State, and it is to be made in the manner that the Legislature of that State may direct. In other words, it is wholly, exclusively, absolutely a matter which the Constitution has remitted to the State and to its authority.

"Now, what does 'manner' include, Mr. President, in respect of what the Legislature is to do? The language is that the State is to appoint its electors who are to give their votes and whose votes are to be counted here as the voice of the State for President. The Constitution says that the manner of doing that, of this selection, shall be such as the legislative power of the State shall direct. Is it not within the manner of this selection for the Legislature of the State to provide that he and he only shall be an elector of that State who in case of a dispute shall have submitted to a certain test of ascertaining whether he is the genuine man the State has appointed or not? If it is not, then there is no value in the delegation to the Legislature of the State of the power to prescribe the manner in which this choice shall be made.

"Can you say that above the State or behind it, or somewhere, there is still a Federal power to enter that State and say, in spite of the declaration of its constituted authorities that those persons and those only who have conformed to certain requisites of the law shall be the electors, that somebody else shall? The Legislature may say that they themselves will appoint the electors. Would it do for the counting power, wherever it may be, in such a case to say: 'Well, this is a provision that is within the Constitution, as everybody knows it is, but we are satisfied that this particular Legislature acted under a mistake; they thought that these

electors were going to vote for the other candidate for President, and we therefore will exercise the full power that belongs to a court of appeal on review to open the whole record and decide for ourselves what that Legislature intended to have done and ought to have done under the circumstances.' That will not do, Mr. President. The two Houses have no power to say that. The form of the action of the State, its most solemn and authentic procedure, which the Constitution says shall be the act of the State, and then in the other clause that the act of the State shall be respected and its votes counted, you will have to change for a decision of Congress, or a Vice-President, or a President of the Senate, or whatever committee or tribunal the law may select or determine upon as the true one to count the votes.

"This fourth section, then, which provides for the conclusiveness of this State determination, is merely saying that the counting authority will recognize as the true act of the State, and give effect to it as such, that body of people that the State itself has finally through its own action determined to be the persons it has chosen. That is all. Can anything be more just if you are to respect the rights of the States under this clause of the Constitution? The very thing, without any law, without any provision, without any rule, that the two Houses meet to do, if it belongs to them to do it, or the very thing that the President of the Senate is to do if it belongs to him to do it, is to count and declare the result of the vote of the State; that is, to ascertain the will of the State, not according to his notion of what he thinks that will ought to have been, but according to his intellectual and judicial or administrative perception of the fact of what that State has done. Therefore this section simply provides that what this bill assumes to be, or confers as, the counting and declaring power shall respect and follow the choice of the State of her electors, and that the evidence of that choice shall be the action of the very machinery that the State itself has provided to determine whom she has chosen.

"This action of the State, Mr. President, you will observe, is not an action of a sovereign and independent body in its original and natural right as a separate and independent body, as between foreign nations such acts of intercourse might take place, because without the Constitution of the United States there would be no such officer as President to be elected; without the Constitution of the United States there would be no such means of the selection of such an officer, if we had one, to be found. The duty of the State, and therefore its power, is one that did not preexist in itself, to elect a President for itself and for all the others of its sisters; but it is a right and a duty that is imposed upon it by the Federal Constitution, and the Federal Constitution has therefore measured and defined precisely the power that that State shall exert, and precisely the man-

ner in which it shall be exerted. Then this law comes in under the Constitution to declare that when we have this authentic declaration of this exertion by the State of the power that the Constitution has reposed in it and the duty of exercising that power that it has imposed upon it, the national authority will respect the exercise of that power, just as it is bound to respect the exercise of every other power the State may possess.

"So it appeared to the committee that this provision that that body of men shall be taken to be the electors whom the State has appointed in the manner that the Legislature shall have determined that their appointment shall be ascertained, is an inherent part of the right which the State acquires under the Constitution to select its electors for itself and an inherent part of the duty that the Constitution has imposed upon the counting power, let it rest wherever it may, of recognizing and respecting this determination of the State as to the choice and identity of its electors. When you take the next step and have ascertained the body of persons who are to give their votes, then this clause of the Constitution has exhausted itself, the State has no further legal and legitimate concern in the way of control over the action of the electors. The duty and the power that is confided to the State is the duty of choosing a body of men and of choosing them finally, so that that choice shall have its effect in the final aggregate of the votes which are to be counted. That duty being done, then the electors so chosen and determined are officers, under the Constitution, of the United States, whose duties are pointed out by the Constitution, and of course it follows that they in the course of their conduct are subject to the Constitution and the constitutional laws of the United States, and to nothing else.

"This bill, then, in this respect of which I am speaking, simply provides—you may measure and discuss it in what way you will—that the solemn and determinate voice of the State in the selection of the persons whom the Constitution says it shall select and whose votes shall be counted, shall be left where the Constitution leaves it, with the State, and that the counting authority shall respect this act of the State and not undertake upon any notions of its own to overturn it.

"There is something still left; and I say this to those Senators who have sometimes appeared to suppose that if the two Houses of Congress, as this scheme is, have the counting power, the two Houses exercise revisory and judicial powers over whatever questions may legitimately arise. Suppose they do, what then is the true interpretation and the true effect of this bill? It only acts upon that revising and quasi-judicial power, if you call it such—and I assume it for the purpose of this aspect of the argument—in exactly the same way that from the foundation of the Government it has in all sorts of aspects acted upon

the judicial power that the Constitution creates. That is to say, it regulates the mode of procedure, it defines the rules of evidence, and calls upon the court, if you call it a court, to respect the act and deed of the State which is authenticated in a certain way. That is all.

"The Constitution says that the Supreme Court of the United States shall have jurisdiction of all cases that affect public ambassadors. Now, suppose the Congress of the United States immediately after the formation of the Government had decided that the only and conclusive evidence as to who is an ambassador over whom that jurisdiction is to be exercised shall be an appointment of a sovereign under the great seal of state of the foreign country from which he purports to come, and that it should not be competent as a consequence for the Supreme Court to take up, either upon public opinion or upon its own private notions, separate affidavits or what not, to prove the character of the person entitled to appeal to its jurisdiction or upon whom its jurisdiction might rightfully be exercised. Does anybody question that the court would have bowed in obedience to that law and said, 'It is within the legitimate province of the legislative power to provide laws by which this court is to be governed in ascertaining who are and what class are the persons who are entitled to its protection'? Nobody would question it. Other instances as to citizenship, as to the public character of officers, as to the authentication of records from the Departments fill your statutes with regulations that it shall be the duty of the judicial power to receive as authentic, and give effect to them accordingly, copies certified and formalized in a certain way; and when in some instances the courts have been appealed to to disregard these regulations of law, and to say that it is a part of the judicial power to make its own regulations for the government of itself, and that it is by Congress an invasion of the judicial power and a limitation of it to prescribe rules, the court with unanimous voice and for almost a century, whenever the question has arisen, has said, 'No, we can not take that view of it; we can not make regulations for the administration of the very powers that the Constitution has conferred upon us,' not conferred by law, 'against an act of Congress; but it falls within the legislative power to give effect to the jurisdiction that is imposed upon us and to regulate its administration,' just as in all civilized nations it has always been regulated by the national statutes. So that if it were to be established (which I do not at all agree to, but I do not wish to go into that matter now) that the power of the two Houses recognized in this bill, or conferred by it, as the case may be, of exercising a certain canvassing scrutiny over these votes is a plenary and judicial power, there would still be the rightful jurisdiction of the legislative authority of the United States to declare that that jurisdiction and that plenary revising and canvassing power should be exer-

closed in conformity with certain rules in order to give effect to what the Constitution declares to be the root and substance of the whole matter—the independent and untrammelled voice of the State, selecting for itself and by its own instrumentalities the persons whom it has chosen; and there is still left in that view of the case, as with the courts in the other cases I have referred to, the revising power of determining in the case that I have named, first, whether the Legislature of the given State has provided by law for a determination of the dispute; second, whether that dispute has been determined in conformity with the regulations and by the steps that that law prescribes; that is, whether the jurisdiction thus invoked has been followed. Then there only follows the consequence as in the other cases I have named, to illustrate—and I might spend a day in instances, enough certainly to convince the mind of any man, I think—there only follows the consequence that this court (if you call it such) of the two Houses, when it finds that the Legislature of the State has made this provision, when it finds that the provision has been followed, is bound upon the principles and declarations of this act, as it would be without it indeed, on the principles of law, to respect and to follow the determination of the State. I say then that we have not taken away the jurisdiction of the two Houses if it exists; we have not cramped it; we have only provided that in the exercise of that jurisdiction the test of what is the voice of the State shall be found in the declaration of the State itself. That is all.

“I now come, sir, because I wish to be very brief and will take an opportunity hereafter, if it be necessary, to refer to authorities and decisions and precedents for what I have undertaken to uphold—I come to what this function is of counting the votes; and on that I do not wish to provoke a discussion, because it is apparently immaterial, with any gentleman who may differ with me. I know, as I believe I have said, that some have been, and no doubt now are, of the opinion that the function of counting, and as involved in that of determining the identity and validity of a vote to a certain degree, is with the presiding officer of the Senate, whether he happens to be the Vice-President of the United States or the President *pro tempore* of the body. That has been so thoroughly discussed hitherto, and so emphatically decided in an instance where it was largely according to the political wishes of a majority of this body at any rate—and that is the only body I am speaking of—to hold to the authority of the President of the Senate, that I do not think it necessary (certainly it is not on this occasion) to go into any discussion. The Senate held by a very large majority that no such power existed.

“The next question would be whether this power resides in the two Houses, because the scope of this act in the other part of it is either

to recognize the existence in the two Houses, as two judges of election, so to speak, of the power to count and decide the necessary questions that are involved in that, and so regulates the exercise of that jurisdiction, or else it is a jurisdiction and an authority that the Constitution has not specifically lodged in any department of the Government, but has only declared that it shall be exercised; and if that be the true construction of the Constitution, of course it follows that it is open to legislative provision, and that Congress may confer upon the two Houses the administrative faculty, with all that it involves, of proceeding with this ceremony of the counting of the votes of the States, and with the decision of all the questions that necessarily arise in every act, whether you call it an executive act, an administrative act, or a judicial act; because it is impossible, as everybody knows, to carry on a government for a day, even in the simplest and the humblest of its executive functions, without recognizing by law in the simplest and humblest executive officer a certain amount of deciding power and a certain amount of responsibility. The judge of a court issues his warrant in conformity to law for the arrest of A B, and it is placed in the hands of the marshal. You say at first sight there is nothing for the marshal to decide, he is to arrest A B; but that very fact implies that the marshal must decide in executing that warrant between A B and the eight hundred million, or whatever it may be, in the world if his jurisdiction extended so far, or between A B and the forty million if his jurisdiction extended over the United States, or the five million as it is in the State of New York, whether A B is one of that five million or whether some other man is the one that he is after. In other words, the marshal must decide for the time being the identity of the man whom he takes into his custody. He decides undoubtedly at his peril. So the President of the United States is authorized by the Constitution to do a great variety of executive acts in certain contingencies, and through his subordinate officers acting under his authority he proceeds to do those acts. In doing them the discretion of the executive power in the application of the law to the subject upon which it speaks must be exercised—judgment, discretion, will, choice. He exercises it at his peril; so do his subordinates where it is administrative. Where it is purely executive, if he makes a mistake the remedy of the citizen is clear and his redress perfect. If it is a matter where the Constitution or the law confides it to him as a judicial discretion, and he exercises it in an ill way rather than a good one, of course it is a perfectly legal act, and it must stand; he is the sole judge, and your only course then is, if he does it corruptly, to impeach him.

“Mr. President, I say this only to call your attention and that of the honorable Senators to the circumstance that whether you say this

power is with the two Houses under the Constitution, or whether you say this bill providing for the exertion of it confers it as well, is of no consequence. If it is there, it is the subject of regulation; if it is not there, then it is within the competency of Congress, as everybody will agree, to provide for its being exercised by somebody; and in either case it is, as is the judicial power, to be exercised in conformity to the Constitution and in conformity to the regulations exerted in the spirit of the Constitution to carry the Constitution into effect.

"The Constitution, then, saying that the State shall appoint its electors, and saying that that appointment, which means the creation of some body whose vote is to be counted and nothing else, shall be in the manner that the Legislature shall direct, it is within the competence of Congress, as it appears to us, whether the power of counting be judicial, or wherever it may be lodged, or wherever it may be reposed, either by the Constitution or by the law, to declare that the counting tribunal, whatever it may be, shall obey the Constitution in respecting the act of the State done in conformity with it. It does not take away a deciding power, if one exists; it only regulates the means and the evidence which the court, if you call it a court, shall give effect to.

"Of course, Mr. President, any person who believes that the two Houses of Congress do not under the Constitution possess any power at all to participate, except as witnesses, in the count of these votes, but that that power resides in the President of the Senate alone, would be obliged necessarily to vote against this bill, irrespective of the effect that we give to the voice of the State, because it does provide for the action of the two Houses. He would not be obliged to vote against the fourth section of the bill, if it stood alone, framed to guide the exercise of the jurisdiction of the President of the Senate; because if it were with him, Congress could with equal propriety and with equal validity under the Constitution declare what should be the true authentication of the voice of the State which he should be bound to respect, that authentication being in the direction that the Constitution provides of expressing its voice in the manner that its Legislature directed. But apart from that, of course those who believe that the President of the Senate has this power of counting, be it much or little, as this bill is framed in all its aspects, could not vote for it; but to any gentleman who believes that the power resides in the two Houses, I respectfully submit that this bill does not in its fourth section—nobody claims that it does in any of the others—trench in the least upon the exercise of that power, but it provides regulations in the same manner and of the same nature that the recognized course of the history of this Government shows have always been provided for its judiciary, and which the very letter of the Constitution

as to the appointment of electors and the manner of their appointment declares shall have effect, even if you had not any law, that the authentic voice of the State itself declaring who are her electors shall be recognized and respected."

Mr. Morgan of Alabama: "This bill, as I understand its provisions, is framed upon the proposition that the power to adjudge and to decide upon the validity of the appointment of electors resides in the States, and may be completely and finally exercised through tribunals created by State laws, and regulated in their procedure by State laws. It does not, however, adopt the idea that, if the States decline to adjudge and decide conclusively who are appointed electors, there is no other constitutional authority that can make such a decision. On the contrary, it provides rules to govern in such case the action of the two Houses of Congress as the tribunal which may decide, if the State has failed to decide, the validity of the appointment of the electors. Without stopping at this point to consider more particularly the provisions of this part of the bill with reference to their fitness to accomplish this purpose, I proceed to say that the bill does not by express provision attempt to dispose of the question of the eligibility of the electors that may be appointed by the States. I think that this is the true constitutional course to be observed in this matter. The Constitution expressly declares certain grounds of ineligibility of electors, which operate *ex proprio vigore* so as to annul any appointment of such persons. Other grounds of disqualification of electors may exist, such as age or sex, a want of citizenship, insanity, or corruption through bribery, which the bill does not attempt to provide for. It is a presumption that we must indulge that the States will make provision for such cases in their laws respecting the qualifications of electors; but, if they shall fail to do so, the Houses of Congress are at liberty to act upon such objections. The bill includes the power of the Houses to take such action, by requiring their concurrence in a separate and affirmative vote in counting or refusing to count all votes that have been transmitted to them by the colleges of electors, excepting only the instance in which the States whose returns are questioned have through their own tribunals determined who are lawfully appointed electors of such States upon a controversy instituted for that purpose.

"The leading provisions of this measure may be thus stated with reference to the principles on which they are founded:

"*First.* The bill secures firmly and broadly that 'each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress.'

"*Second.* It secures to the State the right

to determine under its own laws what persons have been appointed as electors.

"*Third.* This right the State can enforce fully and conclusively, in reference to all matters that are constitutionally within its jurisdiction, if a contest or controversy arises and is carried before the State tribunals for decision.

"*Fourth.* It asserts the right in Congress to give to the action of a State, so deciding a controversy as to who are appointed electors, a conclusive effect as evidence of the lawful title of electors who shall have been so determined to have been appointed; and that such evidence shall govern in counting the vote, without the necessity of the concurrence of the two Houses in a vote affirming its validity.

"*Fifth.* It secures to the States the right to demand the separate and affirmative concurrent vote of the two Houses in counting the electoral vote, in the following cases:

"1. In rejecting a vote from a State from which but one return has been received;

"2. In deciding which of two tribunals in a State, claiming the right to determine which of the electors have been appointed, is the lawful tribunal; and,

"3. In deciding which of two or more returns from a State shall be counted, where the State tribunals have not determined who are the electors.

"*Sixth.* It secures to a Senator and a member of the House of Representatives the right to join in a demand that the two Houses, met to count the vote, shall consider, separately, any objection in writing that they may submit to the counting of any vote that is offered to be counted.

"The bill does not attempt to define what shall be the character of the objection thus to be submitted; it only provides that in certain named cases or circumstances it shall require the concurrent affirmative vote of the Houses, voting separately, to reject the vote to which objection is made, and in the other cases it requires a vote in like manner concurring and affirmative to admit the vote to be counted. The concurrence of the Houses that is thus required does not depend upon the nature of the objection to the vote, but upon the circumstances attending it when it is offered to be counted. If the State authorities have certified the electors in due form, according to State laws, then the vote is to be counted, unless the Houses concur in an affirmative vote to reject it. If it has been passed upon by the State tribunal duly authorized by State laws to determine its validity upon a contest, then it is to be counted. In these instances the vote is supported by either a presumptive or conclusive intendment in favor of its validity, which is imparted to it by the action of the State authorities. In the absence of such presumption, or where it operates alike in reference to two or more persons claiming a right to cast the same vote, this bill requires the Houses by an affirmative vote to

determine which is the lawful vote. If the States neglect or refuse to make final and conclusive decisions of all matters within their jurisdiction (all matters indeed that relate to the validity of the appointment of electors), it seems but reasonable that when the tribunal that is required to count the vote and declare the election acts upon the subject, it should be provided by law that only one branch of that tribunal should not be permitted finally to determine the matter. It is the better and safer rule that the Houses should concur, even if in such case their non-concurrence should disfranchise the State. Every State can save its vote, if it will do so, against the power of any tribunal lawfully to exclude it for any cause except for the constitutional disability of its electors or for fraud in the action of the State tribunal that determines the validity of the appointment.

"If this bill becomes a law, the States will see the importance of using their rightful authority to provide for the settlement of contested elections or the appointment of electors before the electoral vote is cast. It is within the scope of their authority to compel persons to contest the question whether they are the lawful electors before the State tribunals, and to enact laws which shall annul every pretext of lawful authority to represent the State in the electoral colleges that is claimed by persons who refuse to enter such contests. The distinct enunciation of these rights and powers of the State governments will induce them, as I believe, to settle all questions of contested claims by different persons to the lawful authority to cast electoral votes of the States, and they will thus be excluded as elements of strife from consideration by the Senate and the House when they are met to count the votes.

"I do not like the words 'or paper purporting to be a return' found in several connections in the sixth section of the bill, and especially do I mistrust the effect of these words when they occur in line 53 of the sixth section:

"And in such case of more than one return, or paper purporting to be a return, from a State, if there shall have been no such determination of the question in the State as aforesaid, then those votes and those shall only be counted which the two Houses, acting separately, shall concurrently decide to be the lawful votes of the legally appointed electors of such State.

"I am afraid that their presence in the text of the law would suggest an inducement to some enterprising persons to send to the Vice-President papers purporting to be returns from States, and by means of such fraud gain the possible advantage of disfranchising a State to get rid of its vote against their favorite. The words signify nothing in the structure of the sentence where they occur beyond a cautious effort to embrace every possible case that could arise upon more than one return from a State, each return having some real ground of good faith to support its claim to recognition. I think this over-caution to prevent the exclusion

of a return made in good faith from consideration by the two Houses, on the ground that, in contemplation of law, it is not in fact a return, opens a still wider door to the danger of the introduction of returns that are not made in good faith; that are merely simulated returns, but are drawn up in such form as that they purport to be honest returns. These reflections also suggest the point, upon which the bill is silent, that where a paper purporting to be a return from a State of a vote by electors for President and Vice-President is sent to the President of the Senate, and a question is made whether it is a forged, or false, or simulated paper, that either House should have the right to declare its judgment that such paper is false, or forged, or simulated, and that thereupon it should be rejected; and also that such an objection, when made, should be acted upon separately by each House, and its decision should be announced by the presiding officer in joint meeting, before any other objection should be considered to such vote. These points escaped my attention in the committee, and I now suggest them to the committee, as I should have done at that time, for their consideration. It may be that the bill will be improved by their introduction into it by amendment; at all events it is proper that I should bring these matters to the attention of the committee and of the Senate.

"This bill is an earnest and bold movement to assert the rights of the States in the enjoyment of this important privilege of free constitutional government. It recognizes the right of each State to appoint electors to vote for President and Vice-President, and the right of the Legislature of each State to direct the manner of appointing electors. This is an express grant of constitutional power to the States, and by necessity the power thus granted is supreme in the same sense that the Constitution of the United States is supreme. The power to appoint electors and to direct the manner of their appointment can not be taken away from the States by any law or by the action of any department of the United States Government. This power must be removed from the Constitution before it can be denied to the States, or before any department of the Government can usurp it or participate in its exercise. It is a power that must be fully and completely exercised by the States in conformity to State laws, without their being constrained, directed, or obstructed by any other power whatever."

Mr. Jones of Florida: "Mr. President, I shall consume but very little of the time of the Senate in stating my objections to this bill. The subject it professes to regulate is so full of difficulties that I have no complaint to make of the efforts of the committee, and I freely admit that it is much easier to point out objections to the measure than to supply them by better and wiser provisions.

"The first section of the bill, following the

Constitution, requires that all the electors shall be appointed on the second Tuesday in October. The fixing of the time is left to Congress, but the day, whatever it may be, must be the same throughout the United States. This requirement, as we know, was regarded as a most important one; for it is plain that if the appointment of electors could take place in the States on different days, the election of the Chief Magistrate would be controlled by intrigues and influences which would stifle the honest voice of the people. Suppose it was competent for the States to vote on different days, that all but one State voted on the same day, and that the vote of this last State was sufficient to determine the election of President, does any one suppose that after it was ascertained that the election depended upon the vote of a single State it would be possible to have an election there which would be free and tranquil? Is it not clear that every influence of party and power, all that wealth and authority could do, would be done on both sides of the contest to secure that vote? And is it not more than probable that such an immense power concentrated within such narrow bounds would prove too strong for the arm of local authority, and that, with the mind of the whole country excited as we know it would be, an outbreak of violence on such an occasion and in such a State would convulse the entire Union? Every evil which would be likely to result from the appointment of electors on different days might be expected to follow from the operation of this bill.

"The framers of the Constitution guarded the interest not of one State but of every State. The question here is not in regard to the right of a single Commonwealth to select its delegates in the electoral college, but it involves a greater power; it involves the right to select a number of men who, it may be, will hold in their hands the title to the first office in the world.

"What does the Constitution mean when it requires the appointment of the electors to be made on the same day throughout the Union? Does it not mean that on that day, and on that day alone, the rights and powers of every elector shall be fixed and determined, so that the whole country on the night of the day of the election can understand who has been elected President? What, sir, would be our condition it, after the election on the second Tuesday in October and until the 1st of January following, nearly three months, this great country, with its immense interests, should be kept in a state of suspense and excitement? I need not tell grave Senators of the influence which an event like this has upon all the business interests of the country, how much is gained to all classes when it is satisfactorily ended, or how much is lost when uncertainty intervenes to produce alarms and dangers. Under the fourth section of this bill, should it become a law, no one would be able to tell who was elected President until

after the contests which it provides for were all settled. The time intervening between the election and the meeting of the electors may be taken up by legal proceedings to determine the title of a sufficient number of electors to control the presidential office. And ought an issue of that kind—one so full of danger to the whole country, involving its peace and happiness, and it may be the liberty of every man within it—be confided to some local magistrate who never had an idea above what was necessary to settle matters of petty jurisdiction? While the Constitution very wisely has left the mode of selecting electors to the States, and is not particular as to how this power is exercised, still it has taken the precaution to guard the interests of the whole Union in two most important particulars connected with such elections. These are, that all the electors must be appointed on the same day, and that they must cast their votes for President and Vice-President on the same day.

“Whatever you may do here, you must not and can not leave open any important question entering into the appointment of electors after the second Tuesday in October. The people of the whole Union have an interest in this matter even greater than any which can belong to any State; for a contest over a single vote in Florida or Oregon, as we well know, might lead to the agitation of the whole country, and endanger the very foundations of the Government. Have we not had some experience of what is likely to result in every case of a close election, when under any system of laws the power of electing a President is placed in the hands of a few men, or an insignificant tribunal? When during the last election it was ascertained that the fate of the Presidency depended upon the decision of two persons unknown beyond the neighborhood in which they lived, and that they carried in their pockets the fortunes of the two great parties of the country, did not these men and the State to which they belonged rise to a height of interest and importance never before dreamt of by any one? Can we ever forget the patriotic pilgrimages of those ‘visiting statesmen,’ who, laying aside for a time the ease and comforts which surrounded them, rushed into Florida and Louisiana to fawn and cringe before the new-born majesty of McLin and Wells? Is any one weak enough to imagine that, if it should again happen that the fate of the Presidency depended upon the decision of a local court of any kind, a controversy like that could be carried on like other contests? Do we not know that in proportion to the magnitude of the interests involved, the hopes and fears excited by the event, such a tribunal would rise to the highest pitch of importance and power? Would you expect to see the two great parties of the Union, forty millions of people, stand quietly by and await with calmness and composure the result of such a proceeding? Figure to your mind the picture of two local par-

ties, with Smith’s Form Book on one corner of their table and a defaced copy of the Holy Bible on the other, sitting in a spare room of a country grocery and hearing with studied patience the great question whom they should make President of the United States.

“Sir, I once witnessed something like this, and I pray to God I shall never behold anything like it again. I saw two men carried by accident to the highest pitch of this great power. I saw the fortunes and destinies of this whole people for a time in the keeping of a returning board in a single State. I saw them surrounded by parasites and flatterers from every quarter of the land. I saw how ‘the stormy wave of the multitude retired at their approach.’ I witnessed, with sorrow and humiliation and apprehension for the country, the congregation of a large part of the army of the United States to do the bidding of these men, and to put down the strong indignation of the people. After seeing all this, I am well satisfied that nothing could be more unwise or unsafe than to give the sanction of Congressional legislation to a mode of settling electoral contests which has been tried and found wanting. There is nothing in this bill which leads us to conclude that any different processes will be resorted to, in some of the States at least, to determine the Presidency than were resorted to in 1876. The character of the tribunal is not designated; there is nothing definite; it is left absolutely to the decision of the States, and it was boldly claimed in 1876 that, when a State decided through a returning board that one set of electors was elected, the tribunal here must acquiesce. That is the principle of this bill. I must confess that the fourth section of this bill is not at all satisfactory to me. Under this bill any returning board could perpetrate as much fraud as it pleased and certify it here, and there would be no power to look into it.

“I am aware that the late Electoral Commission based its conclusions upon the conclusive character of the State returns. But did this concession to State power and sovereignty, did this following the shadow and disregarding the substance, satisfy the people of the States concerned, or a majority of the voters of the United States?

“But suppose the States do not adopt the suggestion of Congress as contained in this bill, where is your power to enforce it? You say in the fourth section that the States may enact laws looking to the adjustment of all controversies growing out of the election of presidential electors in the State; but you can not enforce that. You admit upon the face of your bill that you have no power to enforce it, that it is a mere suggestion from this Government to the States, that they ought to pass a law providing for the adjustment of all electoral controversies. Suppose the laws of the States remain as they now are after the passage of this bill (and it is very likely that they

would in a great measure so remain), what would be the effect of a State return? Would it be *prima facie* or conclusive evidence of its correctness? Or suppose some States decide to provide machinery for the adjustment of electoral contests and others do not. You have no power to enforce your wishes in this matter. You would be compelled to adopt two distinct rules in regard to the same kind of returns. If one State shall follow the suggestion of the law and constitute a tribunal prior to the time fixed for the counting of the electoral votes, and if there should be a trial and a determination to settle that question, I presume when the latter return came here it would be accepted under the provisions of this law as conclusive. But suppose that the State did not, relying upon the law as it now stands—and the laws throughout the Union are generally satisfactory on that subject, and simply comply with the act of 1792—and certified only the title of the electors, what then? In the one case I presume the record would be conclusive evidence that they were the electors, and in the other it would be only *prima facie* evidence. Unless you have the power to enforce this uniform rule and make it applicable to all States, I think you will find great difficulty in carrying out this part of it.

“Notwithstanding all that has been said in favor of this bill as a State-rights measure, it gives to Congress a power over the election of President which in my judgment is most dangerous. It was the observation of a very wise man on this floor that there is very little difference between leaving the presidential election to Congress and leaving Congress to decide that election. The sixth section of this bill gives Congress the power to set aside the vote of any State in this Union if one Senator and one Representative can be found to object to it. This is stating it pretty broadly, but the power is there. I know it is not a legitimate argument to argue against the existence of power from the abuse of it; but on questions of this kind all experience teaches us that whenever Congress is called to act it will act in a party spirit. Unfortunately for the country, unfortunately for all, it will be impossible to obtain any decision by Congress, in my judgment, on a question of this kind, into which party spirit will not enter. That is the great danger in the whole business. Am I to be told that the party majority in Congress will always be wise, moderate, and just, and that there is no danger from usurpation and passion? Give to one Senator and one Representative the power to set in motion this Congressional machinery against the electoral votes of the States, and I believe, sir, that the time is not far distant when it will prove to be the most dangerous delegation of authority ever conferred upon two men.

“There are many other objections that I could make to this bill; but I conceive that it is most important in the view that I take of

the meaning of the Constitution, and the practice under it, that there should be no outstanding contest over the electors after election-day if it can be possibly avoided; that the Constitution in requiring the electors to be selected on a given day, and placing that time under the control of the General Government, clearly indicates what the purpose was in regard to it. It was that everything appertaining to or connected with the election of the electors should be settled upon that day. After the first Tuesday in October the election is over, but you have a contest in Florida, in North Carolina, in Kentucky, it may be in New York; and no living man would be able to say what will be the decision of those local tribunals to whose judgments, under this bill, the main question is submitted. The election has settled nothing; it has brought a controversy into existence, which in its progress, as I said a while ago, may involve the very foundations of the Government, for the reason I have assigned.”

Mr. Eaton of Connecticut: “Mr. President, I agree with other Senators who say that this is a grave question. I hope I am second to no man in this body in my desire for peace and good order and love for the Constitution. I am opposed to the passage of this bill. I am opposed to the passage of any such bill. I say, sir, here, that in my judgment there can be constitutionally no legislation upon this subject. There ought not to be any legislation upon this subject. There ought to be no interposition by Congress between the States and the Constitution. If the Constitution of the United States is defective, amend it, not tinker with it by legislation. I am not prepared to say that any amendment is required; but, if it is required, let the people of the country determine what the organic law shall be, and not this Congress of the United States.

“I said, sir, that there could not be, there ought not to be, any interposition between the Constitution and the States. The principle of legislation is vicious, and why? This instrument undertakes to and I believe does determine exactly what the power of the States is in this matter. Is any legislation required? What is necessary to constitute legislation? To legislate successfully requires the assent of the President of the United States, or a two-thirds vote of each House of Congress over his veto. Can this principle be adopted in this case? Is this principle wise? What has the Executive of the United States under the Constitution to do with this matter? Does the Constitution give him over this subject any power? You seek now to pass a bill, and ask the Executive of the United States to sign that bill, and that bill to govern, gentlemen say not the States, but the action of the States under the organic law of the land. Sir, let us read this clause of the Constitution:

“The electors shall meet in their respective States and vote by ballot for President and Vice-President,

one of whom at least shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the persons voted for as Vice-President, and they shall make distinct lists of all persons voted for as President and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of Government of the United States, directed to the President of the Senate.

"That is plain, clear. The right of the States is well defined. It is absolute. It can not be changed, tinkered with in any way, without destroying the virtue and vitality of the instrument.

"The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted.

"The Senator from Delaware [Mr. Bayard] urges as one reason why this bill should pass that it admits a great principle for which he has long contended; that is, that the President of the Senate has no right to count the votes, but that that power rests in the two Houses of Congress. Well, sir, a declaration of that sort incorporated in a bill of this character may be true, and yet it furnishes no reason why legislation should be adopted in this case. Further:

"The person having the greatest number of votes for President shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest number, not exceeding three, on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President.

"It strikes me that this is perfect. It does not require this bill at all in any way or manner.

"Again, the Constitution confers upon a Congress the right to count the electoral votes cast by the several States for President and Vice-President. Is there any doubt about it? 'The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted.' Here, I beg to say, is a delegated power to some body. To whom? To what body is this power delegated? There can be no question about it whatever that here is a delegated power by the organic law of the land to Congress. What Congress? Not the Congress of 1800, or 1804, or 1824, or 1878; and we have no control over this delegated power. It is a power delegated to that Congress which has the right under the Constitution to count the votes; and I undertake to say that this Congress can make no law with regard to the counting of the votes that will bind that Congress upon whom that duty devolves. The duty of counting the electoral votes of the States for the next President and Vice-President of the United States will devolve upon the Congress that meets in this building in 1880—not this, but the next; and here we undertake to determine a rule of action for a Congress hereafter in part to be elected, and

upon whom will devolve that duty. The idea, to my mind, is monstrous that a President of the United States has the power in his hands, unless there is a two-thirds vote in each branch of the Federal Assembly to override him, to defeat a bill with regard to the important matter of counting the votes for the next President of the United States! The very statement of it in itself is enough to determine the whole question.

"Now, what is necessary? Is any change in the organic law necessary? If so, are we not competent to advise our fellow countrymen, to advise the different States of the Union, that such an amendment to the organic law would be wise, and prudent, and is necessary? This whole subject with the next Congress will be the simple passage, if anything is necessary, of a joint rule in regard to who shall preside, on which side of the Chamber the Senate shall sit, on which side of the Chamber the House of Representatives shall sit, where the Speaker's chair shall be, and who shall write down the figures. All that is mere matter of a rule to be made by the two Houses and acted upon whenever the count is had.

"Gentlemen speak as though there was great danger. Sir, I am not an alarmist. I do not believe there is any danger in standing by the Constitution of the United States. I did not believe there was any danger two years ago when a bill was passed under which the choice of the people of the United States was defrauded out of an office by the illegal act of an unconstitutional machine. The Constitution is the great charter of the rights of the States and the liberties of the people. I do not propose myself to vote for any law, to be a party to any legislation that interferes in the slightest degree with the rights of each of the sovereign States—I know that term is not liked about these days, but yet I use it—of each of the sovereign States of this confederacy of sovereignties. I have no idea, Mr. President, that this bill is introduced or advocated as a condonation of anything in the past. If I did believe that, I should characterize it with different language than what I now do."

Mr. Hoar of Massachusetts: "Mr. President, I do not propose at this late hour of the afternoon to discuss the pending measure. I propose to vote for it because, after several years' attempt to reconcile conflicting theories, the best minds which the Senate has been able to charge with the duty have reported that this is the best measure which they can devise to remove the present evil. The evil, however, is essential and inevitable after any legislation may have been adopted, which arises from the construction of the Constitution, which I think the correct construction of the Constitution, which was put upon it by the consent of a large majority of both parties at the time of the last presidential election. I could not believe that the framers of our Constitution, jealous as they were of power, jealous as they were

of executive power, could have intended to intrust the grave questions which might arise during the count of a presidential vote to the determination of a single officer, who, as the Constitution was originally framed, must have been one of the two last candidates for the Presidency, and in all probability, under their habit of continuing the same men in public service, would be one of the candidates whose election was to be determined by the count. The only other alternative was the construction adopted, which imposed the power and duty of determining these questions upon two equal bodies, who could not therefore act by a majority, who would frequently be of different political parties, and whose difference must of course be expected to occur frequently in practice.

"Now, it does not seem to me that this bill or that any bill has removed the essential difficulty which grows out of that oversight made by the framers of the Constitution. This bill provides that when, in regard to the votes returned from any State by two bodies claiming to have the right to make the return from the State, there is a difference of opinion, neither vote shall be counted. I can not understand, I never could understand, how that could be called a count of the vote for the Presidency, when the counting power simply said they were unable to determine what individuals made up the aggregate which was to be counted. How can you count the number of votes when all you have said is that there are ninety partly for one man and partly for another, and that there are ten which you can not determine whether they belong to the aggregate to be counted or not? That difficulty is untouched by the pending bill, and it can not in the nature of the case be removed except by a constitutional amendment which gives to one authority, and not to the concurrence of two authorities, the power of determining these questions."

Mr. Edmunds: "The objections that have been made to the bill recognize, I think in every instance, the principle upon which it is founded, and that is, the right of each State to determine for itself the choice of its electors. All that follows is the regulative method of going through with the administrative act of counting the votes which the States have sent to the national capital to express their choice for President of the United States."

The Presiding Officer (Mr. Mitchell in the chair): "The question is on the passage of the bill." The Secretary proceeded to call the roll, and the result was then announced—as follows:

YEAS—Messrs. Allison, Anthony, Bayard, Blaine, Booth, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Christianity, Conkling, Davis of Illinois, Dawes, Edmunds, Ferry, Hamlin, Hoar, Howe, Ingalls, Kellogg, Kirkwood, McMillan, Matthews, Merrimon, Mitchell, Morgan, Morrill, Oglesby, Paddock, Patterson, Plumb, Rollins, Saunders, Teller, Wadleigh, Windom—35.

NAYS—Messrs. Armstrong, Bailey, Beek, Butler, Coke, Davis of West Virginia, Dennis, Eaton, Eustis, Gordon, Grover, Harris, Herford, Hill, Jones of Florida, Kernan, Lamar, McCreery, McDonald, Maxey, Randolph, Ransom, Thurman, Voorhees, Wallace, Withers—26.

ABSENT—Messrs. Barnum, Bruce, Chaffee, Cockrell, Conover, Dorsey, Garland, Johnston, Jones of Nevada, McPherson, Sargent, Saulsbury, Sharon, Spencer, Whyte—15.

So the bill was passed. No decisive action on the bill was taken in the House of Representatives.

In the House, on January 29th, the following bill to restrict the emigration of Chinese to the United States, with the amendments of the Committee on Education and Labor, was considered:

Strike out the parts in brackets, and insert the parts in italics.

Be it enacted, etc., That no master of any vessel owned in whole or in part by a citizen of the United States, or by a citizen of any foreign country, *nor other person*, shall take on board such vessel, at any port [of] or place within the Chinese Empire, or at any other foreign port or place whatever, any number exceeding [ten] *fifteen* Chinese passengers, whether male or female, with the intent to bring such passengers to the United States, or shall bring such passengers to any number exceeding [ten] *fifteen* on one voyage within the jurisdiction of the United States.

SECTION 2. That whenever the master or *other person in charge* of any such vessel takes on board the same, at any foreign port or place, any greater number of Chinese passengers than is prescribed in the first section of this act, with intent to bring such passengers to the United States, or bring such passengers to any number exceeding [ten] *fifteen* on one voyage within the jurisdiction of the United States, he shall be deemed guilty of a misdemeanor, and shall for each passenger so taken on board or brought within the jurisdiction of the United States exceeding the number of [ten] *fifteen*, be fined \$100, and may also be imprisoned for not exceeding six months.

SEC. 3. That the master of any vessel arriving in the United States, or any of the Territories thereof, from any foreign place whatever, at the same time that he delivers a manifest of the cargo, and if there be no cargo, then at the time of making report or entry of the vessel pursuant to law, shall, in addition to the other matters required to be reported by law, deliver and report to the collector of the district in which such vessel shall arrive, a separate list of all Chinese passengers taken on board the vessel at any foreign port or place, and of all such passengers on board the vessel at that time; such list shall be sworn to by the master in the same manner as directed by law in relation to the manifest of the cargo; and the refusal or neglect of the master to comply with the provisions of this section shall receive the same penalties, disabilities, and forfeitures as are provided for a refusal or neglect to report and deliver a manifest of the cargo.

SEC. 4. That the amount of the several penalties imposed by the foregoing provisions shall be liens on the vessel violating those provisions; and such vessel shall be libeled therefor in any circuit or district court of the United States where such vessel shall arrive.

[SEC. 5. That informers shall be entitled to one half of any penalty or fine collected under the provisions of this act upon their information.]

SEC. [6] 5. That nothing herein contained shall be held to repeal or modify any law forbidding the importation of coolies, or of females for immoral purposes, into the United States: *Provided*, That no consul or consular agent of the United States, residing at any port from which any vessel taking Chinese pas-

engers may take her departure, shall grant the certificate provided for in section 2162 of the Revised Statutes for more than [ten] fifteen Chinese passengers on any one vessel.

SEC. [7] 6. That this act shall take effect from and after the first day of [September] July, eighteen hundred and seventy-[eight] nine.

Mr. Willis of Kentucky, from the Committee on Education and Labor, submitted the following report :

The Committee on Education and Labor, having had under consideration sundry bills in regard to Chinese immigration, beg leave to submit the following report :

Briefly stated, this bill provides that no master of a vessel shall take on board at any point in China, or elsewhere, more than fifteen Chinese passengers with intent to bring them, or shall bring them, within the United States. The violation of this provision is made a misdemeanor, punishable by a fine of \$100 for each passenger and imprisonment for six months. The master is required, under like penalties, to report on his arrival a sworn list of all Chinese passengers. The penalty is made a lien upon the vessel. The bill becomes operative on the 1st day of July, 1879.

Waiving for the present any consideration of the merits of the bill, the first question is whether such legislation is within the power of Congress? Can Congress repeal a treaty?

The existing treaty with China gives its subjects an unlimited right of immigration to the United States. The second clause of Article VI. of the Constitution provides that "this Constitution, and the laws of the United States which shall be made in pursuance thereof, and all treaties made under the authority of the United States, shall be the supreme law of the land." It is contended that any law restricting Chinese immigration would contravene this provision of the Constitution, and would therefore be null and void. Such a construction can not be sustained either upon principle or authority. The objects for which the Constitution was formed are higher than any power granted under it. The general welfare, justice, domestic tranquillity, and the blessings of liberty are of supreme importance, and can not be taken from the people by any treaty however solemnly ratified. The treaty-making power is limited by these objects. Moreover, both in nature and by international law, the first duty is self-preservation. If, therefore, it be true that the presence of the Chinese endangers the peace or prosperity of our people, no mere technical consideration should intervene to prevent an increase of the evil.

The clause of the Constitution above quoted does not, however, admit of the construction contended for. It elevates treaties from the status of mere compacts to the dignity of laws, but does not clothe them with any additional superiority. Laws made in pursuance of the Constitution are equally as binding and authoritative as treaties, and, if last enacted, control any contravening treaty. This conclusion is enforced by numerous decisions, both of the executive and judicial departments of the Government. In 1851, in the case of the Florida claims, an apparent conflict between a treaty and a subsequent act of Congress was decided by Attorney-General Crittenden in these words: "An act of Congress is as much a supreme law of the land as a treaty. They are placed on the same footing, and no preference or superiority is given to the one or the other. The last expression of the law-giving power must prevail, and just for the same reason and on the same principle that a subsequent act must prevail and have effect, though inconsistent with a prior act; so must an act of Congress have effect, though inconsistent with a prior treaty." ("Opinions Attorney-General," volume v., page 345.) To the same effect is the decision of Attorney-General Akerman in the case of the Choctaw Indians: "There is nothing in the Constitution which assigns different ranks to treaties and to statutes; both the one and the other, when not in-

consistent with the Constitution, seem to stand upon the same level and to be of equal validity; and as in the case of all laws emanating from an equal authority, the earlier in date yields to the later." ("Opinions Attorney-General," volume xiii., page 357.)

These decisions of the Executive Department, confirmed as they are by the teachings of Madison, of Hamilton, and of Jefferson, have been followed by the judiciary. In the case of *Taylor vs. Martin*, 2 Curtis, C. C. Rep., 454, the court said: "It is impossible to maintain that under our Constitution the President and Senate exclusively possess the power to modify or repeal a law found in a treaty. If this were true, no change in a treaty could be made without the consent of some foreign government. That the Constitution was designed to place our country in this helpless condition is a supposition wholly inadmissible. It is not only inconsistent with the necessities of a nation, but negated by the express words of the Constitution. That gives to Congress, in so many words, power to declare war, an act which, *ipso facto*, repeals all treaties inconsistent with a state of war. It can not, therefore, be admitted that the only method of escape from a treaty is by the consent of the other party to it or a declaration of war. To refuse to execute a treaty for reasons which approve themselves to the conscientious judgment of a nation is a matter of the utmost gravity; but the power to do so is a prerogative of which no nation can be deprived without deeply affecting its independence. That the people of the United States have deprived their Government of this power I do not believe. That it must reside somewhere, and be applicable to all cases, I am convinced, and I feel no doubt that it belongs to Congress."

Similar opinions have been delivered in the circuit courts of the country. These decisions were finally reaffirmed by the Supreme Court of the United States in the *Cherokee Tobacco Case*, reported in 11 Wallace, page 616. The court says: "The effect of treaties and acts of Congress, when in conflict, is not settled by the Constitution. But the question is not involved in any doubt as to its proper solution. A treaty may supersede a prior act of Congress (2 Peters, 314), and an act of Congress may supersede a prior treaty (2 Curtis, 454; 1 Woolworth, 155). In the cases referred to, these principles were applied to treaties with foreign nations. Treaties with Indian nations can not be more obligatory. They have no higher sanctity, and no greater inviolability or immunity from legislative invasion can be claimed for them. The act of Congress must prevail, as if the treaty were not an element to be considered. If a wrong has been done, the power of redress is with Congress, not with the judiciary."

Upon principle, therefore, as well as upon the authority of precedents, judicial and administrative, it would seem clear that Congress has the right, by appropriate legislation, to change or to abrogate any existing treaty. Indeed, Congress has in one instance expressly exercised this power. The act of July 7, 1798, declares that the existing treaties with France are no longer obligatory upon the United States. (1 Statutes at Large, page 578.)

The evils of Chinese immigration have been fully recognized upon the Pacific slope for many years. Welcomed at first as a unique addition to the society and a valuable ally in the development of the material resources of their new home, the Chinese, by their sordid, selfish, immoral, and non-amalgamating habits, within a very short time reversed the judgment in their favor, and came to be regarded as a standing menace to the social and political institutions of the country.

The State laws which had been enacted having been declared unconstitutional by the Supreme Court, and every other means of relief proving ineffectual, it was finally determined to appeal to Congress. Accordingly, as early as the 22d of December, 1869, at the second session of the Forty-first Congress, an effort was made, but without success, to secure restrictive legislation. In the Forty-second Congress, and also in the Forty-third Congress, numerous memorials,

resolutions of public meetings, and petitions, one of which numbered over 16,000 signatures, were presented to the same effect and with the same result. At the first session of the Forty-fourth Congress these renewed appeals for relief met for the first time with a favorable response. A joint resolution was introduced and passed calling upon the President of the United States to "open negotiations with the Chinese Government for the purpose of modifying the provisions of the treaty between the two countries, and restricting the same to commercial purposes."

Subsequently, at the same session, another joint resolution was passed, requesting the President to present to the Chinese Government an additional article to the treaty of July 28, 1868, reserving mutually to the two governments the right to regulate, restrict, or prevent immigration to their respective countries. These authoritative requests on the part of Congress failed to secure the desired relief. In the mean while the question had assumed dangerous proportions. The conviction that Chinese immigration was a great evil was so deep-seated and unanimous that mob violence was openly threatened, and in many instances the arm of the law seemed powerless to protect. Recognizing the exigency, the Legislature of California appointed a special committee, whose report, based upon the testimony of witnesses familiar with the subject, ably and graphically sets forth the objections to the Chinese. Subsequently to this a joint committee appointed by the Forty-fourth Congress collected voluminous testimony upon the same subject, and by a majority report urged upon the Executive Department the necessity for an immediate change of the Burlingame treaty, to the end that such immigration might be restricted or prevented. These reports, together with other official documents upon the subject, were laid before the present Congress.

Your committee, in view of the importance and urgency of the question, after a patient hearing of the evidence and argument on both sides, at an early date after its organization presented a resolution which with a slight modification passed both Houses of Congress. This resolution again called attention to the obnoxious features in the Burlingame treaty, and requested prompt action on the part of the Executive Department in securing its change or abrogation. In view of the almost unanimous sentiment of the people of the Pacific slope as to the necessity of such action, it was hoped that these successive resolutions of Congress, together with the various petitions, memorials, and official data in the possession of the Government, would cause negotiations to be opened for that purpose. Such action would have been preferable to the direct interference by Congress, inasmuch as it would have been free from all doubt as to its legality, and would not have jeopardized the friendly feelings and commercial intercourse between the two countries. Moreover, when a change of the treaty was first suggested by Congress, and indeed up to a very recent date, it is believed that the Chinese Government would have made no serious objection, as its policy was opposed to the emigration of its citizens. However desirable such a result, it has thus far not been accomplished. The petitions to secure remedial legislation were presented within a year after the ratification of the Burlingame treaty. These were vigorously renewed at every subsequent session, until finally in the Forty-fourth Congress the resolution already referred to was passed, calling the attention of the Executive Department to the necessity of a change in the treaty. This resolution was again presented and passed in the second session of the present Congress, but has not, as far as your committee is informed, called forth any practical effort at action. So long a period of non-action proves either the unwillingness or the inability of the treaty-making power to cope with the question. In either event your committee consider that further delay would work great injustice to a large portion of our country, provided the evils whereof they complain are well founded.

That these complaints are not without cause can not,

upon the evidence, be doubted. Your committee, in a report accompanying joint resolution H. R. No. 123, at the second session of this Congress, endeavored to present what seemed to them some insuperable objections to Chinese immigration. Further examination of facts only confirms the conclusions therein stated. This whole question is not one of right, but of policy. There is no principle upon which we are compelled to receive into our midst the natives of Asia, Africa, or any other part of the world. The character, source, and extent of immigration should be regulated and controlled with reference to our own wants and welfare. The difficult problems, economic and political, resulting from the presence of the red and black races, would be renewed in a more aggravated and dangerous form by the yellow race. The Mongolian, unlike the Indian, is brought in daily contact with our social and political life; and, unlike the African, does not surrender any of his marked peculiarities by reason of that contact. It is neither possible nor desirable for two races as distinct as the Caucasian and Mongolian to live under the same government without assimilation. The degradation or slavery of one or the other would be the inevitable result. Homogeneity of ideas and of physical and social habits are essential to national harmony and progress. Equally grave objections may be urged against the Chinese from an industrial standpoint. Our laboring people can not and ought not to be subjected to a competition which involves the surrender of the sacred and elevating influences of home and the sacrifice of the ordinary appliances of personal civilization. The question, therefore, is not one of competition, but of a substitution of one kind of labor for another.

No self-governing country can afford to diminish or destroy the dignity, the welfare, and independence of its citizens. Justice to the people of the Pacific slope, the dictates of common humanity and benevolence, as well as the plainest suggestions of practical statesmanship, all demand that the problem of Chinese immigration shall be solved while it is yet within the legislative control.

Governed by these views, your committee present and recommend the passage of the bill accompanying this report.

Mr. Page of California presented the following petition, and said: "As an expression of the views entertained on this subject by the working classes of our State, I submit a memorial presented to Congress, and signed by seventeen thousand of the workmen of California. I introduce this memorial further to show that this movement is endorsed not by the ignorant and vicious, but by the intelligent and law-abiding citizens of California."

The petition of the undersigned citizens, resident in the State of California, respectfully shows:

That your petitioners view with great alarm the systematic importation and immigration of Chinese laborers into the United States, to be employed at rates of wages ruinous to the free labor of our citizens.

That the vast sums granted by Congress in bonds and public lands to aid in the construction of transcontinental railways are perverted to the employment of this debased Asiatic labor, while thousands of our own citizens in all parts of the Republic are destitute of work.

That your petitioners can not regard such a misdirection of the revenues collected from the industry of the people but as a flagrant abuse of the objects contemplated in these munificent grants of the national resources.

That in all future measures of Congressional aid provision should be embodied against such abuse, and that supplementary legislation to this end should be provided in the exercise of existing grants.

That our recent history shows with what devotion to the great principles of freedom our citizens placed

their lives at the command of the Government and poured out their blood and treasure to terminate the blighting influence of slavery in our midst. Yet an equally and, if possible, a more insidious danger must eventuate by the great increase of this servile population.

That this immigration is in no manner homogeneous with us as a people; that their social wants, habits, and character differ so materially that the standard of labor must be debased to such a degree by their vitiating influence as to repel vast bodies of our most valuable operatives, and not only degrade the social status and moral welfare of our producing classes, but arrest the advancement of our civilization.

That the Asiatic has displaced to a great extent the citizen operatives formerly engaged in the various manufactures of the city of San Francisco, and is rapidly displacing others.

That all occupations giving profitable employment to both male and female have suffered through this cause.

That the aggregate diminution of wages to American citizens can not be less than \$9,000,000 annually.

That the expenditure of such vast industrial resources thus withdrawn from circulation has entailed privation among the working classes, taxed the most generous benevolence, and operated most detrimentally against the prosperity of the city.

That the spread and augmentation of the number throughout the State of California have seriously discouraged the increase of the most desirable class of European immigrants, such additions to our industrial population seeking homes where labor is less degraded or in greater demand.

That your petitioners would urge upon your honorable consideration the necessity of an immediate revision of our treaty relations with China to restrain this overwhelming evil.

That all treaty stipulations should be based on the principle of reciprocal advantages, not mutual privileges. The right or privilege for a citizen of the United States to migrate to China and for a subject of China to migrate to the United States are not mutual in advantages, for it is an advantage to the subject while it is disadvantageous to the citizen to migrate. Hence such provision in the treaty is impolitic and unwise.

That the inundation of incompatible races into the various avenues of labor, which are still so inadequate to supply employment to our own producing classes, must evidently lead to the most disastrous consequences.

That your petitioners are actuated by no illiberal feeling inimical to the less advanced races. On the contrary, it is their earnest desire that all the offices of friendly intercourse should be generously fulfilled; that religious instruction and the advantages of scientific education should be placed at their command; that instead of permitting the unchristian sordidness of our own race using them to degrade the social condition of our people and to desecrate the noblest hopes of our national destiny, we should render them every service to elevate their civilization.

That a cause which projects and accelerates the concentration of wealth, and thus creeps in the very bosom of the nation a power destructive of republican institutions, as evidenced by every record of history, and which draws into conflict the millions whose sole dependence and property consist in labor, and therefore sacred to the interests of their families, impeaches equally the justice and wisdom of such a policy.

That we are but in the first stages of this fatal policy.

That its destructive influence on the industrial condition of California is the inevitable result which must follow its extension into every other State of the Union.

That it now be arrested by the foresight and sagacity essential to the guardianship of a great nation, while the delay or neglect of necessary measures will leave the growing antagonism of interests to gather

force and ultimately consolidate its power in resistance to the most salutary legislation.

That your petitioners earnestly hope that your honorable body, preëminent under the Constitution in its deliberative functions, will not disregard their prayer nor underrate the solemn importance of a subject so grave.

That large numbers of our most valuable operatives have withdrawn from this degrading competition, while others are preparing to abandon a State where a beneficent Providence has spread such immeasurable blessings over its fair villages.

This assuredly demonstrates how limited is governmental knowledge in the administration of Divine bounty, and how much the prosperity of a nation depends on the wisdom of its statesmen.

Mr. Page: "I do not suppose it will be generally claimed by the opponents of this measure that Congress has not full power to legislate on this subject. The right of Congress is unquestionable. The only question that may arise in this connection is that of good faith, and of that I shall speak hereafter. I shall quote only one opinion on this point, which I believe to be conclusive of the question. I send to the Clerk's desk to be read an opinion of Justice Curtis, of the Supreme Court of the United States, *Sanford vs. Scott*, 19 Howard's Reports, 629:

"By a treaty with a foreign nation the United States may rightfully stipulate that the Congress will or will not exercise its legislative power in some particular manner on some particular subject. Such promises when made should be voluntarily kept with the most scrupulous good faith. But that a treaty with a foreign nation can deprive the Congress of any part of the legislative power conferred by the people, so that it no longer can legislate as it was empowered by the Constitution to do, I more than doubt.

"The powers of the Government do and must remain unimpaired. The responsibility of the Government to a foreign nation for the exercise of those powers is quite another matter. That responsibility is to be met and justified to the foreign nation according to the requirements of the rules of public law, but never upon the assumption that the United States had parted with or restricted any power of acting according to its own free will governed by its own appreciation of duty.

"The second section of the sixth article is, 'This Constitution and the laws of the United States which shall be made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land.' This has made treaties part of our municipal law, but it has not assigned to them any particular degree of authority, nor declared laws so enacted shall be irrevocable. No supremacy is assigned to treaties over acts of Congress. That they are not perpetual, and must be in some way repealable, all will agree. If the President and the Senate alone possess the power to repeal or modify a law found in a treaty, inasmuch as they can change or abrogate one treaty only by making another inconsistent with the first, the Government of the United States could not act at all to that effect without the consent of some foreign government. I do not consider, I am not aware it has ever been considered, that the Constitution has placed our country in this helpless condition. The action of Congress, in repealing the treaties with France by the act of July 7, 1798 (7 Statutes at Large, 878), was in conformity with these views.

"In the case of *Taylor vs. Morton* (2 Curtis's Circuit Court Reports, 454) I had occasion to consider this subject, and I adhere to the views there expressed.

"This is a dissenting opinion in what was

popularly known as the Dred Scott case. This opinion, however, was endorsed at that time by the people of one section of this country, and is now recognized as being in accordance not only with the principles of liberty, but the dominant sentiments of the country. I regard it as a fortunate circumstance that I am able to refer to a case that involves the question of freedom and free labor in this country, and I invoke the principles announced in that opinion to justify this House in passing a law that involves the present and future happiness of the citizens of this country, as well as the immediate settlement of a question that involves the peace and good order of the Pacific coast.

"The only restriction to the exercise of the power herein claimed under the Constitution and public law, as inherent in the Government of the United States, is in the contingency suggested by Justice Curtis, in which the United States may have for reasons satisfactory to it bound itself not to use its powers in a given direction. There is nothing in the treaty with China that indicates a relinquishment of power on our part, and there can not therefore be a reasonable ground upon which this Congress should decline to take jurisdiction and action upon the subject of discussion."

The amendments were agreed to, and the bill was put on its passage, and the result was as follows :

YEAS—Messrs. Acklen, Aiken, Aldrich, Atkins, Bailey, John H. Baker, William H. Baker, Banning, Bayne, Beebe, Bell, Benedict, Bicknell, Blackburn, Blair, Bliss, Blount, Boone, Brentano, Brewer, Bright, Buckner, Cabell, John W. Caldwell, W. P. Caldwell, Calkins, Campbell, Chalmers, Clarke of Kentucky, Clark of Missouri, Cobb, Cole, Cook, Covert, Jacob D. Cox, Samuel S. Cox, Cravens, Crittenden, Cummings, Davidson, Horace Davis, Deering, Dibrell, Dickey, Durham, Eden, Elam, Ellis, Ellsworth, Errett, James L. Evans, John H. Evans, Ewing, Felton, Finley, Fort, Foster, Freeman, Garth, Gause, Gibson, Giddings, Glover, Gunter, Hale, Hamilton, Hanna, Harmer, Harrison, Hartzell, Hatcher, Hayes, Hazelton, Henkle, Herbert, Abram S. Hewitt, G. W. Hewitt, Hiscock, Hooker, House, Hubbell, Hunton, Ittner, Frank Jones, James T. Jones, Keightley, Kenna, Ketcham, Killinger, Kimmel, Knapp, Landers, Ligon, Lockwood, Luttrell, Mackey, Maish, Majors, Manning, Martin, Mayhan, McMahon, Metcalfe, Mills, Money, Morse, Muldrow, Neal, O'Neill, Page, T. M. Patterson, Peddie, Pollard, Potter, Pound, Rea, Reagan, Reilly, Americus V. Rice, Robertson, M. S. Robinson, Ross, Ryan, Sapp, Saylor, Scales, Shallenberger, Singleton, Slemmons, William E. Smith, Southard, Sparks, Steele, Stenger, Throckmorton, Amos Townsend, R. W. Townshend, Turner, Turney, Vance, Van Vorhes, Walker, Ward, Michael D. White, Whitthorne, Wigginton, Jere N. Williams, Richard Williams, Albert S. Willis, Willits, Wilson, Wren, Wright, Yeates, and John S. Young—155.

NAYS—Messrs. Bacon, Bagley, Banks, Bisbee, Bouck, Bragg, Briggs, Brogden, Bundy, Burchard, Burdick, Cain, Candler, Cannon, Caswell, Chittenden, Rush Clark, Conger, Crapo, Cutler, Danford, Denison, Dunnell, Dwight, Eames, Hardenbergh, Benjamin W. Harris, Henry R. Harris, Hart, Hendee, Henderson, Humphrey, Hungerford, James, John S. Jones, Joyce, Lathrop, McCook, McGowan, Mitchell, Monroe, Morgan, Norcross, Overton, G. W. Patterson, Phelps, Pridemore, Pugh, Rainey, Randolph, Reed, William W. Rice, Robbins, G. D. Robinson, Sampson,

Sexton, Sinnickson, Smalls, A. Herr Smith, Starin, Stephens, Stewart, Strait, Swann, Thompson, Tipton, M. I. Townsend, Waddell, Warner, Watson, C. G. Williams, James Williams—72.

NOT VOTING—Messrs. Ballou, Bland, Boyd, Bridges, Browne, Butler, Camp, Carlyle, Clafin, Alvah A. Clark, Clymer, Collins, Culberson, Joseph J. Davis, Dean, Eickhoff, I. Newton Evans, Forney, Franklin, Frye, Fuller, Gardner, Garfield, Goode, John T. Harris, Haskell, Henry, Hunter, Jorgensen, Keifer, Kelley, Knott, Lapham, Lindsey, Loring, Lynde, Marsh, McKenzie, McKinley, Morrison, Muller, Oliver, Phillips, Powers, Price, Riddle, Roberts, Shelley, Springer, John W. Stone, Joseph C. Stone, Thornburgh, Tucker, Veeder, Wait, Walsh, Harry White, Andrew Williams, Benjamin A. Willis, Wood, Casey Young—61.

So the bill was passed.

In the Senate, on February 16th, the bill was considered.

The Vice-President: "The pending question is on the amendment of the Senator from New York [Mr. Conkling], which will be read."

The Secretary: "The amendment is to strike out all after the enacting clause, and insert—

"That the President of the United States is hereby requested immediately to give notice to the Emperor of China that so much of the existing treaty between the United States and China as permits the migration of subjects of the Chinese Empire and their domicile in this country is unsatisfactory to the Government of the United States, and, in its judgment, pernicious, and to propose such modifications of said treaty as will correct the evils complained of; said modifications to be made in a new or supplemental treaty to be submitted to the Senate of the United States on or before the 1st day of January, 1880. Should the Government of China refuse or omit to agree by a change of the existing treaty to such modifications, as aforesaid, then the President of the United States is further requested, and he is authorized, to inform the Emperor of China that the United States will proceed by laws of its own to regulate or prevent the migration or importation to its shores of the subjects of China, and after the 1st of January, 1880, to treat the obnoxious stipulations as at an end."

Mr. Hamlin of Maine: "Mr. President, this question has resolved itself into two simple propositions, one of power and the other of expediency. Upon the question of power I have heard no difference of opinion in this body. That we may abrogate our treaties with every foreign power is a doctrine which I maintain; and when it comes to that point, when we are justified before the civilized and Christianized world in abrogating a treaty, let us do it. But I do not believe in the doctrine, I do not believe in the expediency of seeking to abrogate a treaty upon a single and comparatively unimportant part, expecting that the main features of the treaty shall thereafter remain in force. We have the power; there can be no doubt upon it in my own mind; but there is a broad distinction between power and right. We may have the power to do many things that are wrong; we may have the power to do, and we may do, many things that would not meet the approval of calm and considerate judgment. What we should do, and the rule by which we should be guided, is the rule of right, not of power.

"Oh! it is excellent
To have a giant's strength; but it is tyrannous
To use it like a giant.

"Now I want to invite the attention of the Senate to the true condition in which this question is presented to us for our consideration and our action. I have no hope of affecting a single vote, but I wish to state the reasons of my own conclusion.

"We negotiated a treaty with a friendly and a foreign power. We, in connection with other governments, forced that treaty upon that power. It is as patent and as true as anything, it is as certain as mathematics, that in securing that treaty there was no section of our country so earnest, so forward, as that which lies upon the Pacific coast. We negotiated the treaty, we battered down a wall of commercial restriction that had surrounded the Chinese Government in the long ages of the past, almost as restrictive as that Chinese wall that preserved that empire from the Tartar hordes of the north. We accomplished, however, the negotiation of a treaty which secured to us the right of trial by jury of our own citizens in that empire, which opened up a given number of ports which should be accessible for the commerce of our country; and we granted in return the immigration of Chinese subjects to our own country. Why, sir, who does not remember with what welcome, with what rejoicing, that treaty was hailed upon the Pacific coast? To say that they honored it, is hardly adequate. That they did homage to the men who negotiated it is nearer the truth. Now, it is affirmed that that treaty is injurious to our friends on that coast, that from its effects they desire to be relieved. We are asked to secure a modification of the treaty thus negotiated, which allows an unlimited immigration from the Chinese Empire to this country. That is the precise question, and it is sought in direct contravention of the fifth article of the treaty to limit that immigration. Is it a desirable thing to do? I will not stop to consider that; but, conceding it to be a desirable thing to do, what is the mode in which it should be done? And that brings us directly to the division which we have here upon this question. I would proceed by the ordinary rules of negotiation; I would treat that empire as I would treat every civilized nation upon the earth, and I believe that there are few Senators on this floor who would be willing to treat a warlike power of Europe in the summary manner in which this bill proposes to treat the Empire of China. I would first make the distinct proposition to that empire to treat. Failing to treat, coming within the scope of the amendment which has been submitted by the Senator from New York, after full and ample notice, I would say then that we might take the matter into our own consideration, and apply the remedy which in our own judgment should be demanded.

"At the last session of this Congress there

were a variety of subjects submitted to the consideration of the Committee on Foreign Relations: one a bill almost in the terms of this now presented to us, differing indeed, I believe, only in that but ten citizens of that empire should embark upon any one vessel, this extending it to fifteen. There was another bill proposing to place a capitation tax upon every Chinaman immigrant to this country. There were two or three other propositions. After mature consideration, the Committee on Foreign Relations, believing it just and right and the proper solution of this problem, directed my honorable friend from Wisconsin [Mr. Howe] to report a resolution to this body. Perhaps it is not inappropriate to say that I drew that resolution. It met the approval of the committee, and in my absence the Senator from Wisconsin was kind enough to report it for the consideration of the Senate. It was adopted by the Senate. It has been read; still, you will pardon me for again presenting it, in connection with what I am saying, to the attention of the Senate:

"That the provisions of the existing treaty between the Empire of China and the United States, allowing the unrestricted emigration to this country from China, might wisely be modified so as to subserve the best interests of both governments; and the attention of the Executive is respectfully invited to the subject.

"That was a simple invitation on the part of this body, inviting the attention of the Executive to the consideration of this subject, the committee deeming it and believing it to be the precise and best mode in which the result aimed at should be accomplished. It is but a few months since the Senate adopted that resolution. I would leave this question upon that resolution to-day, if I could have my way. I would have no action in this body now. I would leave it there; I would trust it to the Administration in the firm belief—and I do not speak unadvisedly—that if there were not this hot haste to override and to supersede the duties that justly and appropriately belong to the Executive, there would a solution come of this question satisfactory even to our friends upon the Pacific slope."

The Vice-President: "The question is on the amendment of the Senator from New York [Mr. Conkling]."

The result was announced, as follows:

YEAS—Messrs. Anthony, Bruce, Burnside, Butler, Cameron of Wisconsin, Cockrell, Conkling, Conover, Davis of Illinois, Dawes, Edmunds, Ferry, Garland, Hamlin, Hill, Hoar, Howe, Jones of Florida, Kerman, McCreery, McMillan, McPherson, Matthews, Maxey, Merrimon, Morrill, Oglesby, Randolph, Rollins, Saunders, Withers—31.

NAYS—Messrs. Allison, Bailey, Barnum, Bayard, Beck, Blaine, Booth, Cameron of Pennsylvania, Coke, Dennis, Dorsey, Eaton, Eustis, Gordon, Grover, Hereford, Ingalls, Jones of Nevada, Kirkwood, Lamar, McDonald, Mitchell, Morgan, Patterson, Plumb, Ransom, Sargent, Sharon, Spencer, Teller, Thurman, Voorhees, Wallace, Windom—34.

ABSENT—Messrs. Chaffee, Davis of West Virginia, Harris, Johnson, Kellogg, Paddock, Saulsbury, Shields, Wadleigh, Whyte—10.

So the amendment was rejected.

An extended discussion ensued on the bill, and it was put to vote, and resulted as follows:

YEAS—Messrs. Allison, Bailey, Bayard, Beek, Blaine, Booth, Cameron of Pennsylvania, Coke, Dennis, Dorsey, Eaton, Eustis, Garland, Gordon, Grover, Hereford, Jones of Nevada, Kirkwood, Lamar, McDonald, McPherson, Maxey, Mitchell, Morgan, Oglesby, Paddock, Patterson, Plumb, Ransom, Sargent, Saunders, Sharon, Shields, Spencer, Teller, Thurman, Voorhees, Wallace, Windom—39.

NAYS—Messrs. Anthony, Bruce, Burnside, Butler, Cameron of Wisconsin, Conkling, Conover, Davis of Illinois, Davis of West Virginia, Dawes, Edmunds, Ferry, Hamlin, Hill, Hoar, Howe, Ingalls, Jones of Florida, Kellogg, Kernan, McCreery, McMillan, Matthews, Merrimon, Morrill, Randolph, Withers—27.

ABSENT—Messrs. Barnum, Chaffee, Cockrell, Harris, Johnston, Rollins, Saulsbury, Wadeleigh, Whyte—9.

So the bill was passed.

In the House, on March 1st, the following veto message from the President was received:

To the House of Representatives:

After a very careful consideration of House bill No. 2423, entitled "An act to restrict the immigration of Chinese to the United States," I herewith return it to the House of Representatives, in which it originated, with my objections to its passage.

The bill, as it was sent to the Senate from the House of Representatives, was confined in its provisions to the object named in its title, which is that of "An act to restrict the immigration of Chinese to the United States." The only means adopted to secure the proposed object was the limitation on the number of Chinese passengers which might be brought to this country by any one vessel to fifteen; and, as this number was not fixed in any proportion to the size or tonnage of the vessel or by any consideration of the safety or accommodation of these passengers, the simple purpose and effect of the enactment were to repress this immigration to an extent falling but little short of its absolute exclusion.

The bill, as amended in the Senate and now presented to me, includes an independent and additional provision which aims at, and in terms requires, the abrogation by this Government of Articles V. and VI. of the treaty with China, commonly called the Burlingame treaty, through the action of the Executive enjoined by this provision of the act.

The Burlingame treaty, of which the ratifications were exchanged at Peking, November 23, 1869, recites as the occasion and motive of its negotiation by the two governments that "since the conclusion of the treaty between the United States of America and the Ta Tsing Empire (China) of the 18th of June, 1858, circumstances have arisen showing the necessity of additional articles thereto," and proceeds to an agreement as to said additional articles. These negotiations, therefore, ending by the signature of the additional articles July 28, 1868, had for their object the completion of our treaty rights and obligations toward the Government of China by the incorporation of these new articles as, thenceforth, parts of the principal treaty to which they are made supplemental. Upon the settled rules of interpretation applicable to such supplemental negotiations the text of the principal treaty and of these "additional articles thereto" constitute one treaty, from the conclusion of the new negotiations, in all parts of equal and concurrent force and obligation between the two governments, and to all intents and purposes as if embraced in one instrument.

The principal treaty, of which the ratifications were exchanged August 16, 1859, recites that "the United States of America and the Ta Tsing Empire, desiring to maintain firm, lasting, and sincere friendship, have

resolved to renew, in a manner clear and positive, by means of a treaty or general convention of peace, amity, and commerce, the rules of which shall in future be mutually observed in the intercourse of their respective countries," and proceeds, in its thirty articles, to lay out a careful and comprehensive system for the commercial relations of our people with China. The main substance of all the provisions of this treaty is to define and secure the rights of our people in respect of access to, residence and protection in, and trade with China. The actual provisions in our favor, in these respects, were framed to be, and have been found to be, adequate and appropriate to the interests of our commerce, and by the concluding article we receive the important guarantee, "that should at any time the Ta Tsing Empire grant to any nation, or the merchants or citizens of any nation, any right, privilege, or favor connected either with navigation, commerce, political or other intercourse, which is not conferred by this treaty, such right, privilege, and favor shall at once freely inure to the benefit of the United States, its public officers, merchants, and citizens." Against this body of stipulations in our favor, and this permanent engagement of equality in respect of all future concessions to foreign nations, the general promise of permanent peace and good offices on our part seems to be the only equivalent. For this the first article undertakes as follows: "There shall be, as there have always been, peace and friendship between the United States of America and the Ta Tsing Empire, and between their people respectively. They shall not insult or oppress each other for any trifling cause, so as to produce an estrangement between them; and, if any other nation should act unjustly or oppressively, the United States will exert their good offices, on being informed of the case, to bring about an amicable arrangement of the question, thus showing their friendly feelings."

At the date of the negotiation of this treaty our Pacific possessions had attracted a considerable Chinese emigration, and the advantages and the inconveniences felt or feared therefrom had become more or less manifest, but they dictated no stipulations on the subject to be incorporated in the treaty. The year 1868 was marked by the striking event of a spontaneous embassy from the Chinese Empire, headed by an American citizen, Anson Burlingame, who had relinquished his diplomatic representation of his own country in China to assume that of the Chinese Empire to the United States and the European nations. By this time the facts of the Chinese immigration and its nature and influences, present and prospective, had become more noticeable and were more observed by the population immediately affected and by this Government. The principal feature of the Burlingame treaty was its attention to and its treatment of the Chinese immigration and the Chinese as forming, or as they should form, a part of our population. Up to this time our uncourteous hospitality to immigration, our fearless liberality of citizenship, our equal and comprehensive justice to all inhabitants, whether they abjured their foreign nationality or not, our civil freedom and our religious toleration, had made all comers welcome, and under these protections the Chinese in considerable numbers had made their lodgment upon our soil.

The Burlingame treaty undertakes to deal with this situation, and its fifth and sixth articles embrace its most important provisions in this regard and the main stipulations in which the Chinese Government has secured an obligatory protection of its subjects within our territory. They read as follows:

"Art. V. The United States of America and the Emperor of China cordially recognize the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and subjects respectively from the one country to the other for the purpose of curiosity, of trade, or as permanent residents. The high contracting parties, therefore, join in prohibiting any other than an entirely voluntary emigration for these purposes. They consequently agree to pass

laws making it a penal offense for a citizen of the United States or Chinese subjects to take Chinese subjects either to the United States or to any other foreign country, or for a Chinese subject or citizen of the United States to take citizens of the United States to China or to any other foreign country, without their free and voluntary consent, respectively.

"**ARR. VI.** Citizens of the United States visiting or residing in China shall enjoy the same privileges, immunities, or exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation; and, reciprocally, Chinese subjects visiting or residing in the United States shall enjoy the same privileges, immunities, and exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation. But nothing herein contained shall be held to confer naturalization upon citizens of the United States in China, nor upon the subjects of China in the United States."

An examination of these two articles in the light of the experience then influential in suggesting their "necessity" will show that the fifth article was framed in hostility to what seemed the principal mischief to be guarded against, to wit, the introduction of Chinese laborers by methods which should have the character of a forced and servile importation, and not of a voluntary emigration of freemen seeking our shores upon motives and in a manner consonant with the system of our institutions and approved by the experience of the nation. Unquestionably the adhesion of the Government of China to these liberal principles of freedom in emigration, with which we were so familiar and with which we were so well satisfied, was a great advance toward opening that empire to our civilization and religion, and gave promise in the future of greater and greater practical results in the diffusion throughout that great population of our arts and industries, our manufactures, our material improvements, and the sentiments of government and religion which seem to us so important to the welfare of mankind. The first clause of this article secures this acceptance by China of the American doctrines of free migration to and fro among the peoples and races of the earth.

The second clause, however, in its reprobation of "any other than entirely voluntary emigration" by both the high contracting parties, and in the reciprocal obligations whereby we secured the solemn and unqualified engagement on the part of the Government of China "to pass laws making it a penal offense for a citizen of the United States or Chinese subjects to take Chinese subjects either to the United States or to any other foreign country without their free and voluntary consent," constitutes the great force and value of this article. Its importance both in principle and in its practical service toward our protection against servile importation in the guise of immigration can not be over-estimated. It commits the Chinese Government to active and efficient measures to suppress this iniquitous system where those measures are most necessary and can be most effectual. It gives to this Government the footing of a treaty right to such measures, and the means and opportunity of insisting upon their adoption and of complaint and resentment at their neglect. The fifth article, therefore, if it fall short of what the pressure of the later experience of our Pacific States may urge upon the attention of this Government as essential to the public welfare, seems to be in the right direction and to contain important advantages which once relinquished can not be easily recovered.

The second topic which interested the two governments under the actual condition of things which prompted the Burlingame treaty was adequate protection, under the solemn and definite guarantees of a treaty, of the Chinese already in this country and those who should seek our shores. This was the object and forms the subject of the sixth article, by whose reciprocal engagement the citizens and subjects of the two governments, respectively, visiting or re-

siding in the country of the other, are secured the same privileges, immunities, or exemptions there enjoyed by the citizens or subjects of the most favored nations. The treaty of 1853, to which these articles are made supplemental, provides for a great amount of privilege and protection, both of person and property, to American citizens in China, but it is upon this sixth article that the main body of the treaty rights and securities of the Chinese already in this country depends. Its abrogation, were the rest of the treaty left in force, would leave them to such treatment as we should voluntarily accord them by our laws and customs. Any treaty obligation would be wanting to restrain our liberty of action toward them, or to measure or sustain the right of the Chinese Government to complaint or redress in their behalf.

The lapse of ten years since the negotiation of the Burlingame treaty has exhibited to the notice of the Chinese Government, as well as to our own people, the working of this experiment of immigration in great numbers of Chinese laborers to this country, and their maintenance here of all the traits of race, religion, manners and customs, habitations, mode of life, and segregation here, and the keeping up of the ties of their original home, which stamp them as strangers and sojourners, and not as incorporated elements of our national life and growth. This experience may naturally suggest the reconsideration of the subject, as dealt with by the Burlingame treaty, and may properly become the occasion of more direct and circumspect recognition, in renewed negotiations, of the difficulties surrounding this political and social problem. It may well be that to the apprehension of the Chinese Government no less than our own the simple provisions of the Burlingame treaty may need to be replaced by more careful methods, securing the Chinese and ourselves against a larger and more rapid infusion of this foreign race than our system of industry and society can take up and assimilate with ease and safety. This ancient Government, ruling a polite and sensitive people, distinguished by a high sense of national pride, may properly desire an adjustment of their relations with us, which would in all things confirm, and in no degree endanger, the permanent peace and amity and the growing commerce and prosperity which it has been the object and the effect of our existing treaties to cherish and perpetuate.

I regard the very grave discontents of the people of the Pacific States with the present working of the Chinese immigration, and their still graver apprehensions therefrom in the future, as deserving the most serious attention of the people of the whole country and a solicitous interest on the part of Congress and the Executive. If this were not my own judgment, the passage of this bill by both Houses of Congress would impress upon me the seriousness of the situation, when a majority of the representatives of the people of the whole country had thought it to justify so serious a measure of relief.

The authority of Congress to terminate a treaty with a foreign power, by expressing the will of the nation no longer to adhere to it, is as free from controversy under our Constitution as is the further proposition that the power of making new treaties or modifying existing treaties is not lodged by the Constitution in Congress, but in the President, by and with the advice and consent of the Senate, as shown by the concurrence of two thirds of that body. A denunciation of a treaty by any government is, confessedly, justifiable only upon some reason both of the highest justice and of the highest necessity. The action of Congress in the matter of the French treaties in 1798, if it be regarded as an abrogation by this nation of a subsisting treaty, strongly illustrates the character and degree of justification which was then thought suitable to such a proceeding. The preamble of the act recites that "the treaties concluded between the United States and France have been repeatedly violated on the part of the French Government, and the just claims of the United States for reparation of the injuries so committed have been refused, and their attempts to negotiate an amicable

adjustment of all complaints between the two nations have been repelled with indignity," and that "under authority of the French Government there is yet pursued against the United States a system of predatory violence, infracting the said treaties, and hostile to the rights of a free and independent nation."

The enactment, as a logical consequence of these recited facts, declares "that the United States are of right freed and exonerated from the stipulations of the treaties and of the consular convention heretofore concluded between the United States and France, and that the same shall not henceforth be regarded as legally obligatory on the Government or citizens of the United States."

The history of the Government shows no other instance of an abrogation of a treaty by Congress. Instances have sometimes occurred where the ordinary legislation of Congress has, by its conflict with some treaty obligation of the Government toward a foreign power, taken effect as an infraction of the treaty, and been judicially declared to be operative to that result. But neither such legislation nor such judicial sanction of the same has been regarded as an abrogation, even for the moment, of the treaty. On the contrary, the treaty in such case still subsists between the governments, and the casual infraction is repaired by appropriate satisfaction in maintenance of the treaty.

The bill before me does not enjoin upon the President the abrogation of the entire Burlingame treaty, much less of the principal treaty of which it is made the supplement. As the power of modifying an existing treaty, whether by adding or striking out provisions, is a part of the treaty-making power under the Constitution, its exercise is not competent for Congress, nor would the assent of China to this partial abrogation of the treaty make the action of Congress, in thus procuring an amendment of a treaty, a competent exercise of authority under the Constitution. The importance, however, of this special consideration seems superseded by the principle that a denunciation of a part of a treaty, not made by the terms of the treaty itself separable from the rest, is a denunciation of the whole treaty. As the other high contracting party has entered into no treaty obligations except such as include the part denounced, the denunciation by one party of the part necessarily liberates the other party from the whole treaty.

I am convinced that, whatever urgency might in any quarter or by any interest be supposed to require an instant suppression of further immigration from China, no reasons can require the immediate withdrawal of our treaty protection of the Chinese already in this country, and no circumstances can tolerate an exposure of our citizens in China, merchants or missionaries, to the consequences of so sudden an abrogation of their treaty protections. Fortunately, however, the actual recession in the flow of the emigration from China to the Pacific coast, shown by trustworthy statistics, relieves us from any apprehension that the treatment of the subject in the proper course of diplomatic negotiations will introduce any new features of discontent or disturbance among the communities directly affected. Were such delay fraught with more inconveniences than have ever been suggested by the interests most earnest in promoting this legislation, I can not but regard the summary disturbance of our existing treaties with China as greatly more inconvenient to much wider and more permanent interests of the country.

I have no occasion to insist upon the more general considerations of interest and duty which sacredly guard the faith of the nation in whatever form of obligation it may have been given. These sentiments animate the deliberations of Congress and pervade the minds of our whole people. Our history gives little occasion for any reproach in this regard, and in asking the renewed attention of Congress to this bill I am persuaded that their action will maintain the public duty and the public honor.

R. B. HAYES.

EXECUTIVE MANSION, March 1, 1879.

The Speaker: "The question is, Will the House on reconsideration pass this bill, notwithstanding the objections of the President?"

The question was taken, and resulted as follows:

YEAS—Atkins, Banning, Bayne, Beebe, Bell, Blackburn, Boone, Brentano, Bridges, Butler, Cabell, John W. Caldwell, Carlisle, Chalmers, Clarke of Kentucky, Clark of Missouri, Cobb, Cole, Collins, Cook, Covert, Samuel S. Cox, Cravens, Crittenden, Culberson, Horace Davis, Joseph J. Smith, Springer, Stephens, Swann, Thornburgh, Throckmorton, Tipton, Tucker, Vance, Van Vorhes, Veeder, Walsh, Willits, Wilson, Wood, Wren, Casey Young, John S. Young—84.

So the House refused to pass the bill, notwithstanding the objections of the President.

In the House, on February 2d, the bill making appropriations for the support of the army for the fiscal year ending June 30, 1880, was considered.

Mr. Hewitt of New York said: "When I reported the army appropriation bill last year, I undertook to show the House (and I think I succeeded in showing) that the army could be reorganized so as not to impair its efficiency

and still save annually about \$4,000,000. According to the plan which I then submitted, about half that sum was saved by a reduction in the number of officers, for it is notorious that the army is overloaded with officers; it is top-heavy. The other half was saved by reducing the number of men from 25,000 to 20,500, and by a reorganization of the regiments in such a manner as I believed would make this reduced number of men quite as effective as the number now in the army—25,000. That proposition was adopted in the House, but was rejected in the Senate. The conference committee that had to pass upon this question was placed in one of the most embarrassing positions which could possibly occur in the legislation of the country. The rule of the House is that any general legislation may be incorporated in an appropriation bill, provided it effects a retrenchment of expenditures. The rule of the Senate is that no general legislation can be attached to appropriation bills. As a matter of course, the rule of the Senate could not by any possibility restrict or infringe upon the constitutional right of this House to send to that body a bill in any shape or form it may choose; but, on the other hand, it is quite as impossible for this House to constrain the action of the Senate. If that body thought the general legislation upon an appropriation bill to be inadmissible, we have then presented this alternative—the failure of the bill or the surrender on the part of this House of its claim to legislate upon appropriation bills.

“My own judgment and conviction, the fruit of very considerable study before I had the honor to be a member of this House, and of very much observation since I have been here, lead me to the conclusion that as a rule general legislation upon appropriation bills ought to be avoided. But, Mr. Chairman, the question presents itself whether at any time and under any circumstances this House can be justified in insisting upon legislation in an appropriation bill even to the extent of allowing the bill to fail. That question is answered by a reference to the history of the birth and growth of British liberty. Redress of grievances prior to the passage of appropriation bills, prior to grants of supplies, has been the only instrument by which the British Commons have constructed and maintained the edifice of individual liberty. When the question of personal liberty—the right of the subject as it is called in England, the right of the citizen as we call it—comes in question, then by every lesson of tradition, by every conclusion of statesmanship, this House is not only justified in insisting upon a redress of grievances before agreeing to a supply bill, but to do anything else would be to abdicate its powers and to be treacherous to the memory of that long line of heroes who went before us in building up the fabric of human freedom which we inherited from our British fore-

fathers, and which it is our duty to conserve and protect with the same fidelity as the English people to this hour display through their representatives in the halls of Parliament.

“Now, Mr. Chairman, such an occasion arose in the Forty-fourth Congress. There were two conflicts in that Congress, one of which determined the result of the Presidential election. This House agreed to a method of settlement of the gravest of all political questions which had ever arisen in this country, and it was loyal to its engagements. The second question arose on the army appropriation bill, and it arose in this wise: It was the conviction of a large majority of the members of this House that the result of the Presidential election was not in accordance with the choice of the people, but was governed, influenced, and controlled by the use of the army in the States of Louisiana and South Carolina. There was then presented to the majority of this House one of those crucial tests which try the patriotism and statesmanship of Representatives. True to the lessons of the past, they attached to the army appropriation bill a provision in the exercise of the unquestionable right of Congress directing where, when, and how the army should be used in the States of South Carolina and Louisiana; that the army should not be used to maintain certain State governments which had been created and only kept in existence by the exercise of the military power under the orders of the President. I mean by his ‘military power’ his control over the military forces of the country, which he exercised under certain statutes passed at the close of the war. The Senate refused to assent to that provision.

“Three several conference committees, composed of different members, met and conferred upon the matter in difference. They failed to come to an agreement, and the result was, the Forty-fourth Congress adjourned without passing any bill for the support of the army. For one, I approved the steps taken by this House. I felt that to have done less would have been a base surrender of the right of a free people to control the army and determine to what use it should be put. I repelled then, and I repel now, the idea that the President of the United States has any other control as Commander-in-Chief of the Army except in accordance with the statutes which Congress may adopt. He is the organ through which the order of the people, expressed by Congress, is to be given to the army; and to surrender the power of regulating and controlling the use of the army would be to convert this Government into a centralized despotism.

“Moreover, I was glad the bill failed. It would have been a misfortune to this country if common ground had been found on that occasion by which this question should have been passed by for the moment and put out of sight. The loss of the bill aroused the atten-

tion of the people of this country to the old story of British liberty, forgotten amid the din of arms and the conflict of war. It revived to a youthful generation who knew not the history of those men who from the time of James I. to that of William III. consecrated their lives and their fortunes to the cause of human freedom, and with stern unbending energy never yielded to the frowns, or the caprices, or the approaches of power until they had surrounded the right of the subject with a bulwark which has never been successfully attacked in England, and which could never have been attacked successfully in this country but for the fact of the civil war. The failure of that bill brought us back to the old landmark, raised the old question, and brought the public judgment to a conclusion on that subject which can never again be shattered.

"An extra session was made necessary by the failure of the army bill. For one, I came to this House, to the Forty-fifth Congress, with a determination not to allow any question, public or private, to interfere with the restoration and the recognition of the right of Congress to control the army. To me it was the question of questions. I was placed, to my own surprise, in charge of the army bill. The question at once presented itself, Shall we renew the issue upon this bill which failed, or shall we reserve it to the bill to come for the next fiscal year? It seemed to me that to raise the question upon the bill to take the place of the one which failed would be a mistake. I did not want to see the Democratic party arrayed, either by implication or direct action, against the Administration which had come into power over their heads and against their wishes. I felt, and was the first to say, that the Administration had a title which could not be successfully attacked; and it seemed to me it would be a mistake to reopen the issue as it must necessarily have been reopened on that bill. I thought it was a mistake even to attempt any reorganization or reduction, and the bill was brought into this House without any reduction. It was brought into this House without the reduction of a man, without an attempt to cut off an officer, without any provision looking to the assertion of the right of the people to control the army. This omission was done purposely, and the bill passed; and then disappeared, I trust for ever, the wreck which surrounded the late Presidential campaign.

"When the new bill came along, the bill under which the army is being maintained for the present year, then it seemed to me the question thus passed over ought to be raised anew. And here I want to make my acknowledgments to the distinguished gentleman from Kentucky [Mr. Knott], the Chairman of the Committee on the Judiciary, to whom I applied for help on that occasion, and who, with the skill of a Somers, drew the clause which is now known as the *posse comitatus* clause. I

did not think it wise to insert that clause in the bill as reported by the committee. I preferred that the committee should come in under the rules of the House with provisions which should reorganize and reduce the expense of maintaining the army. I preferred that the fight should be made upon the question of economy, and you, Mr. Chairman [Mr. Springer in the chair], and other gentlemen here, will bear witness that whatever power I had I exerted to the utmost to secure the economy which that bill would have produced; and it passed the House.

"But I say now that I regarded the question of money involved in that bill, and the question of reorganization which it presented, as of utter insignificance compared with the provision which I had arranged with my friend from Kentucky [Mr. Knott] to offer in this House. It was offered; it was ruled in order; it was passed; and it went to the Senate, where it and the entire reorganization scheme were rejected. Then came the conference committee, and an anxious conference it was. I had a perfect understanding with my colleague on that committee—I mean my Democratic colleague—that while we would secure as much economy and reduction of expenditures as might be possible, yet we would surrender it all, every jot and tittle of the saving, if we could preserve the *posse comitatus* clause; and we also had a perfect understanding that, no matter what might be offered in the way of reduction and economy, it would be no temptation for us to give up that provision upon which, as he and I believed, the future liberties of this country depended. I trust my colleague will pardon me if I say that this country and this House know not the debt of gratitude which they owe to him. During the hours, long and anxious, during which that provision was under discussion, he exhibited a patience, an acuteness, a breadth of comprehension, I was almost going to say an adroitness, which can not be too highly commended; and, if to any man we owe more than to another the securing of that great triumph, it is to my friend and colleague from Illinois [Mr. Sparks].

"But, Mr. Chairman, we secured more than the *posse comitatus* clause: we secured a clause providing for the reorganization of the army; that is to say, creating a commission whose business it was made to examine into the whole question and make report by bill or otherwise to this House; and pending such report and action thereon by the House, all appointments and promotions were suspended.

"That provision will secure a reorganization of the army, whether in this Congress or in the next I know not, and I frankly say I care but little.

"But, Mr. Chairman, our work is not done. The *posse comitatus* clause is objected to by the Secretary of War in his report. But in his report he has failed to grasp the magnitude of

this question when he even suggests the idea of a repeal of the *posse comitatus* clause. Repeal, never! Now, sir, I say repeal, never! Definition, yes. The provision may be too broad. It may impede the action, the proper action of the Government. There may be cases wherein the military power might be employed properly and usefully in the execution of civil process. It is not for me who am no lawyer to say what those cases are, but I can understand that on the frontier and in the Territories of the United States there may be occasions when in the absence of police it may be necessary to invoke the aid of the army, and I do not know that even that is prohibited by the clause; but if there be any prohibition which interferes with the security of life, liberty, and property, then let us define and correct it, and I trust it will be the work of the next Congress to define when and where and in what places the military power of the country may be invoked. Now, this work which we have undertaken is not yet completed. I ask the Clerk to read section 2002 of the Revised Statutes."

The Clerk read as follows:

No military or naval officer, or other person engaged in the civil, military, or naval service of the United States, shall order, bring, keep, or have under his authority or control, any troops or armed men at the place where any general or special election is held in any State, unless it be necessary to repel the armed enemies of the United States or to keep the peace at the polls.

Mr. Hewitt: "'Or to keep the peace at the polls.' This statute was enacted in 1865, after the close of the war. It was enacted, as a protection of the citizen in his right of voting against military interference, that 'no military or naval officer or other person engaged in the civil, military, or naval service of the United States, shall order, bring, keep, or have under his authority or control, any troops or armed men at the place where any general or special election is held.' The object was to prohibit the presence of troops at the polls; and then, as if in irony which is almost sublime, the words follow, 'except it may be necessary to repel the armed enemies of the United States or to keep the peace at the polls.' I do not know who wrote that statute, but under favorable conditions he would have developed into a satirist of the highest order. 'To keep peace at the polls!' How easy is it to have a little disturbance at the polls. It can be got up to order, and generally without order, and then the military officer may march up his troops to preserve the peace; but where meanwhile is the voice of the people? *Inter arma silent leges*. On the day of election the people are sovereign. That is the day when the soldier should not be seen. Moreover, it forms no part of the duty of the General Government to 'keep the peace at the polls.' That is the duty of the States; that is a part of the sovereign power which they kept to themselves. Prior to 1865 no one ever suggested that the

Federal Government could enter within the confines of a State and 'keep peace at the polls.' In saying this I do not mean to reflect upon my Republican friends. The close of the war, when this statute was passed, was a martial era. Men still breathed a military atmosphere; passion still reigned supreme—passion upon both sides. The judgment of men was paralyzed. They were in no condition to frame just and wise legislation. But how it happens that this clause has thus far been allowed to remain upon the statute-book passes my comprehension, and I appeal to gentlemen upon the other side of the House with the same confidence that I do to those upon this side, to help us to expunge it from the statute-book as a blot on the charter of American freedom.

"If the gentlemen want to know how monarchical governments protect the liberties of their subjects, let them listen to the wise and solemn words of the British statute. This statute which I will have read was enacted in the reign of Queen Victoria. It was the re-enactment of a statute passed during the reign of George II."

The Clerk read as follows:

SEC. 2. *And be it enacted*, That on every day appointed for the nomination or for the election or for taking the poll for the election of a member or members to serve in the Commons House of Parliament no soldier within two miles of any city, borough, town, or place where such nomination or election shall be declared or poll taken shall be allowed to go out of the barrack or quarters in which he is stationed, unless for the purpose of mounting or relieving guard, or for giving his vote at such election; and that every soldier allowed to go out for any such purpose within the limits aforesaid shall return to his barrack or quarters with all convenient speed as soon as his guard shall have been relieved or vote tendered.

SEC. 3. *And be it enacted*, That when and so often as any election of any member or members to serve in the Commons House of Parliament shall be appointed to be made, the clerk of the Crown in chancery or other officer making out any new writ for such elections shall, with all convenient speed, after making out the same writ, give notice thereof to the Secretary at War, or, in case there shall be no Secretary at War, to the person officiating in his stead, who shall, at some convenient time before the day appointed for such election, give notice thereof in writing to the general officer commanding in each district of Great Britain, who shall thereupon give the necessary orders for enforcing the execution of this act in all places under his command.

Mr. Hewitt: "It will there be seen that whenever an election for members of Parliament takes place the soldier must disappear from the scene. The people are sovereign on that day; and if a riot should break out upon that day the military force could not be used for its suppression. During the hours of election the soldier must be within his barracks. That there may be no mistake about this, the Secretary of State is charged with the duty of making known through the War Office that an election is to take place, in order that the symbol of force may retire and the majesty of the people may reign supreme, at least for one

day, when the right of suffrage is exercised in the island of Great Britain.

"Let me here recall the noble preamble of the mutiny act under which the standing army is maintained in Great Britain :

"Whereas the raising or keeping a standing army within the United Kingdom of Great Britain and Ireland in time of peace, unless it be with the consent of Parliament, is against law ;

"And whereas no man can be forejudged of life or limb, or subjected in time of peace to any kind of punishment within this realm by martial law, or in any other manner than by judgment of his peers, and according to the known and established laws of this realm.

"Oh, what a proclamation of the rights of the subject is that! No king, no potentate, no power but the law of the land can coerce the subject in time of peace.

"In the forty-first section of that bill is another provision, which until it came under my eye the other day had escaped notice :

"No person who shall be commissioned and in full pay as an officer shall be capable of being nominated or elected to be sheriff of any county, borough, or other place, or to be mayor, portreeve, alderman, or to hold any office in any municipal corporation in any city, borough, or place in Great Britain or Ireland.

"So jealous are they of the military power that they will not allow a military officer to hold a civil commission. They are not in England willing to have the power of the army compounded even for a day with the machinery by which civil process is enforced. Yet we, in this country, have solemnly enacted that on an election day, 'if it is necessary to keep the peace,' the army of the United States may be marched to the polls. Such a provision is at war with every principle for which our ancestors contended, and which is embodied in the framework of our Government. Every hour that we allow it to remain on the statute-book is treason to the great men who achieved liberty for us, who founded this Government of ours after fighting for the right of representation, who imbedded this right into the Constitution, who jealously guarded it from the foundation of the Government until 1860, and whose spirits, if they could speak to us in this Hall, would entreat us to remember the sacrifices by which this liberty was secured, and not allow it to be imperiled by the insidious use of the military power.

"Now, I count upon the cordial support of both sides of this House in the attempt to amend the statute which I have just read, by striking out the words 'or to keep the peace at the polls.' At the proper time I shall offer an amendment for that purpose. This provision is not now in the bill as reported to the House, because I think it better that there should be a direct vote of the House taken as to whether it shall come in or not."

Mr. Hale: "The gentleman proposes to move that as an amendment to the army appropriation bill?"

Mr. Hewitt: "Yes, of course, subject to a

point of order, which I trust no gentleman will make. I count, indeed, upon the unanimous support of both sides of the House of such an amendment."

Subsequently the bill was amended so as to strike out the words mentioned by Mr. Hewitt in the statute, and it was then passed and sent to the Senate.

In the Senate it was reported back by the appropriate committee with amendments. The bill and report were considered in Committee of the Whole, and the amendment of the House was struck out, as follows:

Sec. 51. That section 2002 of the Revised Statutes be amended so as to read as follows :

"No military or naval officer, or other person engaged in the civil, military, or naval service of the United States, shall order, bring, keep, or have under his authority or control any troops or armed men at the place where any general or special election is held in any State, unless it be necessary to repel the armed enemies of the United States."

And that section 5523 of the Revised Statutes be amended so as to read as follows :

"Every officer of the army or navy, or other person in the civil, military, or naval service of the United States, who orders, brings, keeps, or has under his authority or control any troops or armed men at any place where a general or special election is held in any State, unless such force be necessary to repel armed enemies of the United States, shall be fined not more than \$5,000 and suffer imprisonment at hard labor not less than three months nor more than five years."

After the action of the Committee of the Whole was concluded, the bill was reported to the Senate. In the progress of its consideration in the Senate, Mr. Beck of Kentucky asked for a separate vote on striking out section 51 as above. The roll-call having been concluded, the result was announced as follows :

YEAS—Allison, Anthony, Blaine, Booth, Bruce, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Chandler, Conkling, Conover, Dawes, Dorsey, Edmunds, Ferry, Hamlin, Hoar, Ingalls, Jones of Nevada, Kellogg, Kirkwood, McMillan, Matthews, Mitchell, Morrill, Ogelsby, Paddock, Patterson, Plumb, Rollins, Saunders, Teller, Wadleigh, Windom—34.

NAYS—Bailey, Barnum, Bayard, Beck, Butler, Cockrell, Coke, Davis of West Virginia, Dennis, Eaton, Garland, Gordon, Grover, Harris, Hereford, Hill, Jones of Florida, Kernan, Lamar, McCreery, McDonald, McPherson, Maxey, Merrimon, Morgan, Ransom, Saulsbury, Shields, Thurman, Voorhees, Wallace, Whyte, Withers—33.

ABSENT—Chaffee, Davis of Illinois, Eustis, Howe, Johnston, Randolph, Sargent, Sharon, Spencer—9.

The bill was passed by the Senate with other immaterial amendments, and sent to the House for its concurrence in them. The House refused to concur, and asked for a conference. At the conference the House insisted on its position, and the following were the subsequent proceedings on its part :

In the House, on March 3d, Mr. Hewitt of New York said : "Mr. Speaker, the conferees on the part of the Senate and on the part of the House are in no disagreement as to any questions of money involved in this bill. The bill was so carefully matured in the House that

but few amendments were offered in the Senate, and the conferees on the part of the Senate were promptly willing to recede from those amendments on hearing the proper explanation: so that I am able to say if other matters could have been arranged this bill could have been reported to the House without the addition of a single dollar, except for a military post which had been recommended subsequently to the passage of the bill by the House.

"There were, however, two points of disagreement in the bill.

"The bill provided for the reorganization of the army in many clauses which were added after full consideration here, as the House will remember. Those clauses were only informally discussed by the conferees. Practically they were passed over in order to see if an agreement could be arrived at on the final provision of the bill in regard to the presence of the troops at the polls. It was very soon apparent that upon this point no agreement was likely to be reached.

"I think I can state without impropriety that there would have been no difficulty in arranging for such a reorganization of the army as would have been satisfactory to this House and to the Senate. Both sides professed their willingness to accommodate themselves to the pressing and admitted necessity which exists for a reorganization of the army. But upon the other point, as to whether it shall continue to be lawful for troops to be present at the polls under any circumstances, the difference seemed to be irreconcilable. The conferees on the part of the Senate declined to assent to the repeal of so much of the two sections of the Revised Statutes as authorize troops to be present at the polls. The issue, therefore, was fairly and clearly defined. On the one side we insisted that the time had come when it should no longer be lawful for a soldier to be at the polling-place on the day of election. Upon the other side it was insisted with equal force that this provision of the statute should be maintained, and the power should remain in the executive to order the troops to the polls on the day of election if in his judgment it was necessary to preserve the peace.

"Mr. Speaker, this presents an issue which involves the very essence of free government. The difference between a despotic government and a free government is this: that in a despotism the military power is superior to the civil; in a free government the civil dominates the military power. And this principle is one which we never fought for; it came to us as an inheritance from our fathers. It was so well recognized that when the Constitution was formed it was not even deemed necessary to insert an article to that effect. But as a protection against military interference provision was made that citizens might bear arms, and that no soldiers should be quartered upon them without their consent. No English-speaking man for two hundred years has ques-

tioned the principle that soldiers should never be present at the polls; and the question could never have been raised in this country, the demand could never have been made in our land, but for the unhappy calamity of a civil war. In time of civil war all political rights must be surrendered to the necessities of the conflict. And so it was here. We surrendered the right we had inherited, and which up to that hour we had exercised, that no soldier should show himself at the polls. We surrendered that safeguard as we surrendered many other things that were dear to us. A convertible currency, specie payments, almost every traditional right, disappeared in the presence of the great danger with which we were confronted. Now, for fifteen long years we have been striving to recover that lost ground. We have made gigantic efforts, sacrifices such as the world never saw, to get back to the resumption of specie payments; and yet we have done nothing for the resumption of our political rights, the rights which lie at the very foundation of this government. The time has come to recover this lost ground, and I think it is a reproach to our patriotism that the resumption of specie payments should have preceded the resumption of the rights necessary for the preservation of free government. It is an imputation upon this liberty-loving people and its representatives that they have allowed the time to pass by until now, when the question is finally about to be settled in this bill, and in another bill, the result of the conference on which will soon be reported to this House.

"Now, Mr. Speaker, can we surrender this question? Would we be justified by the people of this country, now that the issue has been raised in conceding the principle in time of profound peace, fifteen years after the close of a civil war, that soldiers may be ordered by the executive power to the polls on the day of election?

"The issue thus made is one that we are ready to accept before the country. Let the people decide whether they are prepared to surrender the sacred right of untrammelled suffrage which this bill seeks to guard, and the provisions which in the legislative bill are designed to maintain unimpaired the trial by jury, which is the great achievement of our race. Unless the blood which courses in our veins has degenerated from the vital fluid which has made the Anglo-Saxon people great and free, I can not doubt the result of the appeal which I now make to the country."

Mr. Foster of Ohio: "The gentleman from New York has been on the conference committee on the army bill alone. Fortunately or unfortunately for me, I have been on the conference committees of both of the bills where these political questions arise, and I can say to the House that so far as my own action is concerned I think I have fully realized the importance of trying to come to an agreement on these bills and save the country

the annoyance of an extra session. With this feeling I offered what I thought was a fair basis of compromise, or settlement if you please, which included the question which is now before the House. That basis was something like this: that the Republican side of the House would agree to the proposition that is embraced in this army bill, and would agree further to what is known as the jury clause in the legislative bill; and that the Democrats should recede from what is known as the supervisors and marshals clause in the legislative bill."

Mr. Atkins: "If my friend will allow me, I do not like to interrupt him. He is speaking of the conference on the legislative, executive, and judicial appropriation bill. Does my friend confine his remarks to himself, or does he speak of other members of the conference?"

Mr. Foster: "I am speaking of the proposition that I made."

Mr. Atkins: "For yourself?"

Mr. Foster: "For myself. We were informed in conference by our Democratic friends that they could not yield anything. Now, while I have no right to speak here of what the Senators might have done on this question, yet upon my own responsibility I am willing to say that I believe if this basis of settlement had been agreed to by our Democratic friends an agreement would have been reached."

"For myself, I care but little about this proposition in the army bill. I do not know but that the time has about come when we perhaps ought to agree to it, though I am not quite ready for it yet. The gentleman from New York [Mr. Hewitt] has said a great deal about English-speaking people and the liberty-loving traits of their character. Sir, I think we Republicans are as much in love with liberty as are the English people or as my friend from New York. I have yet to learn from any responsible source that the troops ever prevented any single voter from voting as he pleased. On the contrary, they have assisted hundreds and thousands of poor people to vote, who otherwise could not have voted."

"We Republicans are not quite ready to yield to all these demands. And what is the nature of these demands? Are you going to force us to repeal these laws by provisions on an appropriation bill? I know we have a great deal of discussion about legislation upon appropriation bills. It has been said that Republicans in times past have been in the habit of legislating upon appropriation bills. I agree to that, and for myself I can not see any great harm in legislating upon appropriation bills when both Houses agree to it. But this proposition never was brought into this House as an independent measure. You never sought to have it passed through this House and sent to the Senate as an independent measure. But you come in here with this proposition on an appropriation bill, and you undertake through

the means of an appropriation bill to force the proposition upon the Senate. There, in my judgment, is where the wrong of legislating upon appropriation bills comes in.

"I have been as anxious as my friend from New York or any other gentleman could be to reach a conclusion. I have worked for it steadily. The only propositions that have come from anybody, so far as relate to a basis of settlement, have come from Republicans. But our Democratic friends stood like adamant in refusing to concede one single thing, refusing to dot an *i* or cross a *t*; and that left nothing for us to do but to agree to disagree."

"You gentlemen on the other side will have the next Congress. You can repeal these laws by means of bills passed in the regular form. If the President should see fit to veto them, you can then put them upon appropriation bills and probably force him to take them. There will be no election between now and 1880, except in California, to be affected by these laws; and I want to say to gentlemen on the other side, and I think I speak for my friends on this side, that we are willing to make an exception of California for the purpose of reaching a settlement."

Mr. Garfield: "Mr. Speaker, it is only just that the precise situation of this legislation and the fair relation of all parties to it should be perfectly understood. It has been quite fully stated on both sides, but I desire to enlarge a little upon one or two features of what has been said."

"The gentleman from New York [Mr. Hewitt] has certainly drawn very largely upon what, if I should follow his example, would be my imagination, in his statement that the liberties of this country are now in danger or ever have been in danger from the legislation embraced in the two clauses of the sections of the statutes proposed to be repealed by this legislation. I admit that in a monarchical country like England, especially as England was in the days when their first army law passed, there was danger, great danger, in giving any considerable power to the army. But in a country like ours, where the Legislature controls the purse of the nation, it can freeze the army to death when it chooses. In a country like ours, where the Chief Magistrate is liable to be impeached for any serious violation of law, for any malfeasance or misfeasance on the part of any military officer, where the whole spirit of the government is civil, and the military is completely subordinated, it seems to me that the alarms which my friend from New York raises are wholly imaginary."

"Now, gentlemen ought to bear in mind what these two sections are. They ought to remember in the first place the time when they were passed and the object for which they were passed. It ought to be borne in mind that both the sections sought to be modified in this appropriation bill are restraining sections—sections indeed leveled against the army

—one of them laying heavy penalties upon any soldier, whether enlisted man or officer, who may in any way interfere with the freedom of elections.

“Gentlemen talk as though these sections had been adopted to empower the army to interfere with the freedom of elections. On the contrary, they were in precisely the opposite direction. It should be remembered that these sections were enacted in 1865, when the roar of battle was still in our ears; when our guns were still smoking; when none of the States in rebellion had been reconstructed; when none of them had been restored to their place in the circle of the Union; when all was chaos; when from governor down to the humblest officer in every one of those States there was no one that bore in the new order of things any recognized authority; when even the machinery for the service of ordinary civil process had all to be set up anew; when by the necessity of the case the military occupation of all that part of the country was indispensable even in the view of the most extreme opposers of the Union. It was at the time, when our Government was seeking to restore civil authority in the place of the chaos that the war had left, when it was necessary to have armies all through that portion of the country—it was at such a time that the victorious Government in the interest of liberty put up these muniments and armaments against any aggression of the military upon the right of electors by saying to them, ‘You shall obstruct no man in his free right to the suffrage. If you do, imprisonment and fine shall be visited upon the officer or man who may do it.’ That is what those laws were for, and that is what they are to-day—laws restrictive of the military power with exception of the single clause which does not prohibit them from keeping the peace at the polls. Is that a wrong, an act of tyranny? Perhaps the law is now as necessary as it was in 1865. I am free to admit for one that these enactments were passed at a period so different from the present that probably we can without serious harm in any direction muster them out, as we mustered out of service the victorious armies when the war was done. For myself, I see no serious practical objection to letting these sections go, though I do not quite see how anybody can say that, while a State may call out its own militia to keep the peace at its own polls (and nobody calls that tyranny, nobody calls that wickedness, injustice, and a menace to civil liberty), so it seems to me that a nation when it has its own elections, which its own Constitution says it may regulate as to the time, place, and manner of holding them, may with great propriety use its own military force to keep the peace at its own national polls. That is all there is in these two sections that any gentleman has complained of. Now, I believe, as a matter of fact, no one will say that any citizen during the thirteen years and more that this law has stood on our statute-

book has been denied the full and free exercise of the elective franchise in consequence of the presence of armed soldiers of the United States near the polls. If there has been such a case, I will join with any man of any party in deprecating it, in deploring it, in doing what I can to prevent its recurrence.”

Mr. Townshend of Illinois: “The gentleman from New York has uttered a truthful sentiment here, which is creditable to him. He has mentioned the fact that during the late civil war the people of this country did surrender many things, one of which was specie payments. Another surrender of the people of this country was to a large extent their constitutional liberty. He has also announced that we have resumed specie payments, but we have not yet resumed our liberties. I have no more to say upon that point, except to say the time has arrived for a resumption of our liberties. I want now further to call the attention of this House to the spectacle which has been presented to the American people during the past few days.

“Why is it that there is an extra session imminent? It is because gentlemen upon the other side of the House, since last Saturday, have been filibustering and obstructing legislation in order to screen a man holding an exalted position as a representative of the Government abroad from punishment who is charged with high crimes and misdemeanors. There are some other issues before us to which I will refer. Let me call your attention to the fact that an appropriation bill making provision for postal expenses has been in a conference committee and there is a disagreement upon it. Why? Because the Senate, a Republican body, has said to the House, ‘Unless you yield to us a scheme for subsidizing the Brazilian steamship line there shall be an extra session.’ Another issue is presented before the country upon the army bill, when it is insisted we have reached that period of peace in the country when soldiers should be taken from the polls in order that we may have free elections, a Republican Senate says to us in plain language it will force an extra session before the authority to use troops at the polls shall be repealed. The point, then, that the Senate makes upon us here, as uttered by the gentlemen from Ohio [Mr. Foster and Mr. Garfield] here to-night, is that in reference to the bill providing for the legislative, executive, and judicial expenses of the Government, there shall be no repeal of laws which provide for the appointment of Republican recruiting sergeants at the polls in the shape of deputy marshals and supervisors. I want to state the fact before the House and the country that the Democratic side of this House has not been guilty of resorting to filibustering or any means of obstructing legislation in order to provoke an extra session. If an extra session shall be found necessary, it is because the Republican party is obstructing legislation, and because the Democratic party is

standing up here for free elections and against the Brazilian subsidy."

The Speaker: "The question is on the motion of the gentleman from New York that the House further insist upon its disagreement to the Senate amendment to the army appropriation bill."

The motion of Mr. Hewitt of New York was then agreed to.

Mr. Hewitt moved to reconsider the vote just taken; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

So the bill failed to become a law.

In the House on February 26th the bill making appropriations for the Legislative, Executive, and Judicial departments of the government was considered in Committee of the Whole.

The Chairman: "The question is upon the amendments offered by the gentleman from Ohio [Mr. Southard], which the Clerk will now read."

The Clerk read Mr. Southard's amendments, as follows:

That the several sections of the Revised Statutes of the United States, from and including section 2011 to and including 2031, and all other provisions of law authorizing the appointment of, or the performance of any duty by, any chief or other supervisor of elections, or any special deputy marshal, or other deputy marshal of elections, or the payment of any money to any such supervisor or deputy marshal of elections for any services performed as such, be, and the same are hereby, repealed.

Mr. Hayes of Illinois said: "It is scarcely necessary to remark that I am most decidedly opposed to the amendment offered by the gentleman from Ohio [Mr. Southard], and hope to see it voted down by an overwhelming majority. The reasons upon which I base my opposition are two: first, because I believe it to be bad policy to legislate in regard to general matters in an appropriation bill; and second, because I heartily approve those portions of our law which this amendment proposes to repeal, and am in favor of letting them remain as they now are upon our statute-book. What is this law, let me ask, or rather what are its provisions? The law simply provides that in certain cases the United States court shall appoint persons to act as supervisors of elections, and makes it the duty of United States marshals under certain circumstances to assist these supervisors in the discharge of their duties. The sole object of the law is to prevent fraud at the ballot-box and secure free, fair, and honest elections. This being so, why is it that the gentlemen on the other side are so hostile to it? Are they not in favor of fair and honest elections—of preserving the purity of the ballot-box? It would certainly seem not, if we are to judge from the bitter war they are making against this law. I am free to confess, sir, that I can not see what objec-

tion any honest man can urge against the law as it now stands. I can not see why any one who is anxious to have fair and honest elections in this country should ask for its repeal. The fact is, the war against this law is waged not so much by men who want fair and honest elections, as by mere politicians who hope, by wiping out this law, to advance the interests of the Democratic party, and thus help forward their own ambitious schemes. There is method in what these men are doing, and it will be well for us before we give our votes in favor of this amendment to pause and consider the meaning of the demand for its passage, to pause and consider what peculiar significance attaches to this cry that comes up from a Democratic caucus, asking that this law be repealed. Why, sir, this cry is nothing but a note of alarm, a signal of distress. The Democratic party is in trouble, and this House is called upon to help it out. The future looks dark for that party unless some relief is furnished at once.

"The enforcement of this law by President Hayes has sent terror to Democratic leaders everywhere. As the law goes forth and does its work, they see the immense Democratic majorities in such cities as New York almost entirely wiped out. They see their friends and supporters in South Carolina, Louisiana, Florida, Maryland, and New York arrested, tried, convicted, and sent to the penitentiary. These facts lead them to fear for the future of their party. They know that if this law is suffered to remain upon the statute-book and is enforced, our penitentiaries will soon be filled with Democratic voters. They know, too, that this law, honestly and fearlessly executed, would wipe out the heavy Democratic majorities in many localities, both North and South. They understand fully that while this law is in the interest of honest elections and good government, it is not in the interest of the Democratic party, and hence they have resolved to blot it out.

"Now, sir, I do not blame the Democratic leaders much for being alarmed at the situation. The signs of the times are ominous. This law is cutting down Democratic majorities fearfully. Already hosts of Democratic voters have fallen beneath its unsparing hand. No less than two stalwart Democrats who claim to be elected to the Forty-sixth Congress are already indicted for election frauds, and may be landed in the penitentiary any day. Why, sir, if this thing is allowed to go on much longer, the Democrats may find themselves in a hopeless minority in the next House. But this is only a part of the danger that threatens our Democratic friends. If this law continues in force until 1880, and under its operation we can get a fair and honest election, not only will the Democrats not be able to elect their candidate for President, but many of our Democratic friends on this floor will be retired to the ranks of private life.

"This is the secret of the Democratic hatred of this law. The fact is, the Democratic leaders have determined upon success at the next Presidential election, and as this law stands in their way they have resolved to get rid of it. They propose to repeat in 1880 the frauds and dishonest trickery of their party in 1876, only upon a more extensive scale. They say that in order to carry the State of New York for the democracy the bunners, dead-beats, and plug-uglies of New York City must be allowed to vote half a dozen times apiece instead of only once, as they can do under this law. They say that the white-liners and rifle-club men must be permitted to intimidate Republican voters, drive them from the polls, and vote tissue ballots to their hearts' content, or the Southern States will all go Republican. The repeal of this law will be an act solely in the interest of the Democratic party, and not in the interest of the country. It will simply mean the opening of the flood-gates of iniquity, ballot-box stuffing, intimidation, and fraud in order to make Democratic success certain in 1880. It will only give the Democracy more complete control in those localities where they are in the majority, and thus enable them with impunity to perpetrate such frauds upon the ballot-box as will give them a victory."

Mr. Davis of North Carolina: "The gentleman from Maine [Mr. Powers] said the other day: 'I for one believe that every citizen should have the right to vote, and have that vote honestly counted.' Now, sir, it seems curious to me that gentlemen in the section from which the gentleman from Maine comes, can not discover the fact that in the little State of Rhode Island there are more white men over the age of twenty-one years who are not only not allowed to have their votes honestly counted, but are not allowed to vote at all, than there are negroes disfranchised by intimidation in the States of Louisiana, Florida, and South Carolina combined, even counting all that are alleged to have been intimidated. In the State of Rhode Island free white citizens are excluded unless possessed "of real estate of the value of \$134 over and above all incumbrances, . . . or which shall rent for \$7 per annum, over and above all rent reserved, or interest of any incumbrance thereon." Yet beam-eyed political saints up there can look over the State of Rhode Island down into the South and find a vast deal to complain of. No man is allowed to vote in the State of Massachusetts unless he can read and write. Apply these tests to the impoverished South, and nine tenths of your Republican brethren would be excluded from the right to vote.

"Now, sir, in regard to Rhode Island, I have only to say that there are free white men who are not allowed to vote. With two Representatives on this floor, she only cast 26,627 votes at the last Presidential election out of a voting population of more than twice that

number, and in 1876 there were nearly 6,000 more votes cast in my single district than were cast in the whole State of Rhode Island; that is, less than one half her citizens are allowed to vote, and they may possibly have to resort to another Dorr rebellion to secure their rights as freemen.

"Now, in reply to the gentleman from Ohio. He said the other day: 'Not one man on that side of the House has sought in any way to do anything to purify the ballot-box, but all have favored free fraud in our elections.' Is it possible the gentleman from Ohio meant that? I trust he did not. It is language that can not be reasonably applied to a single gentleman on this side of the House. It is not true, and if applied to any one on this side would be pronounced false and slanderous. Why, sir, this is the old cry of 'Wolf!' 'Stop thief!' this cry of fraud in elections. Why, sir, in 1876 the Democratic majority of all the votes cast was fully a quarter of a million over that cast for the Republican candidate, and counting only the white vote it was nearly or quite one million; and yet the voice of the people was stifled by fraud, by perjuries, by forgeries, by the improper use of the power of Federal officials all over the land, and by the improper use of the army. Having the control of an army of office-holders, with the aid of supervisors and marshals appointed for partisan purposes and paid out of the public funds, by assessments on office-holders, and the improper use of official power, the will of the people was defeated. Sir, this amendment is a protest against fraud and outrages in elections; a protest against the improper use of Federal patronage and Federal power; and it is strange that a charge such as that made by the gentleman from Ohio should come from that side of the House.

"Sir, I may be pardoned for a little feeling when I hear not only my whole party abused, but when I hear statements made in regard to my section and my State which I know to be untrue, and which go all over the land to prejudice and poison the public mind against us. I repeat, the gentleman can not find a man on this side of the House who in any way 'approves of fraud in elections' or in anything else. That, perhaps, belongs rather to the gentleman's own party friends in Louisiana and Florida, all of whom, so far as I know, have been rewarded by his party; known and recognized perjurers have been rewarded by the bestowal of office, I will not say (because I hope it is not true) with the approval of the gentleman from Ohio.

"All this complaint against the Democratic party of the South has its origin in the fact that by the enfranchisement of the colored man, designed to be in the interest of the Republican party, the Democrats have gained power, and our Republican friends have been grievously disappointed. Instead of securing increased power for that party, it has proved,

as the late Senator Morton had the good sense to foresee, an element of weakness. Our Republican friends commit a radical mistake when they assume that the colored vote belongs to their party as a matter of right. Their argument, syllogistically put, is this:

"First. The party that gave the colored man the right to vote is entitled to his vote.

"Second. The Republican party gave him the right.

"Therefore, the Republican party is entitled to his vote.

"Colored men are beginning to comprehend this, and to understand that if it is good logic, it may be bad policy; and when they remember how often the men for whom they have voted have cheated and swindled them, it is not strange that they should conclude to change their votes, and regard good policy as better than doubtful logic. They have found by experience—that best of teachers—that the average white radical who came down from the North and professed so much love for them was often a hypocrite, still oftener a swindler, and sometimes a thief. They are beginning to comprehend the situation and to think for themselves and to ask, 'How is it that our good friends who love us so, and who are always whining about our rights and wrongs, especially as election time approaches, how is it that these good friends have never invited us to Maine or Michigan, to Massachusetts or to Minnesota, to Iowa or to Indiana, or to some other northern State where sweet liberty was born and grew for us?' Sir, our Republican friends underrate the colored man if they suppose that he can always be deceived by the cunning arts of the men who first bewildered and then swindled him. It is a mistake to suppose that he will not follow the great law of self-interest which governs other men—especially our Republican friends—and vote in accordance with their interests."

Mr. Hewitt of New York: "Mr. Chairman, the opposition which is expressed against this amendment by the gentlemen on the other side, shows how absolutely impossible it is for them to comprehend the motives which govern the Democracy in their desire and their fixed determination to erase from the statute-books every provision which infringes upon the personal liberty of the citizen. These provisions have all been placed upon the statute-book during and since the close of the late war. For nearly three-quarters of a century the old principles upon which free government had been based were found sufficient for the preservation of the right of suffrage, the most sacred right of the citizen." Once only in our history was an attempt made to violate the principles upon which George Mason, and Thomas Jefferson, and James Madison, and Alexander Hamilton had firmly planted the structure of free government, and that was when the alien and sedition laws were forced on this country. They were swept from the statute-books in a

burst of popular indignation, which consigned John Adams to private life, and placed Thomas Jefferson, the great expounder of the Democracy, in the Presidential chair. So now the Democracy to-day plant themselves on the old stronghold that there is no safety for civil liberty when power is centralized; that the only security for free institutions lies in the distribution of power among the people, so as to strengthen local self-government. We believe if abuses occur they will be remedied more quickly, more readily, and more effectually than by any central power.

"And when the gentleman from Maine [Mr. Frye] alluded to those corrupt judges who had granted false naturalization papers in 1868, he overlooked the fact that Judges Barnard and McCunn were driven from the bench, not by the Government at Washington, but by the indignant voice of the people of the State of New York. And we say now that these statutes, thus centralizing power in Washington, although they may alleviate temporary difficulty, are sure to produce evils on a scale of infinitely greater magnitude, and to become the parent of abuses which, if tolerated, will imperil, and if permanently tolerated will destroy, the right of suffrage and the inestimable blessings to which it gives birth.

"The gentleman from Maine said it was necessary to repeal these laws in order to carry the State of New York for the Democracy. Does the gentleman not know, did he not himself bear witness to the fact, that the election of 1876 was an honest election in the State of New York; and did not Governor Tilden receive a majority in that State of over thirty thousand? What motive, then, have we to repeal those laws in order that the Democratic party may carry the State of New York? We have carried that State by constantly increasing majorities at every election since their enactment. And we shall do it to the end of time, unless by the abuse of those election laws which we seek to repeal free citizens shall be deterred from exercising the right of suffrage.

"Now, Mr. Davenport has administered this law from the time of its enactment up to the present hour, and found no way honestly to keep Democratic voters from the polls. But in 1876 they taught him a lesson in New Orleans. They issued ten thousand warrants in one day, and upon the strength of that Mr. Davenport, on the night before the election, upon the affidavit of his own clerk, issued warrants which resulted in the arrest of four thousand citizens of the city of New York, and their imprisonment on the day of election in the iron den of the court-house. What occurred on that memorable day has been described with graphic power by General Wingate in his argument before Judge Blatchford against the validity of these arrests, which will be confirmed by my colleague from New York [Mr. Eickhoff], who was present and saw what occurred:

"Such a scene as the room of this court presented on that election day has never before been witnessed in this city or in this country, and it is to be hoped never will again. From early morning until after the polls were closed these rooms were packed and jammed with a mass of prisoners and marshals. Not only were they crowded beyond their capacity, but the halls and corridors were thronged with those who were unable to obtain admission; so that the counsel representing the prisoners and the bondsmen who were to be offered to secure their release had the greatest difficulty and were frequently unsuccessful in obtaining entrance. In addition to all this was this delectable iron 'pen' on the upper floor, in which men were crowded until it resembled the 'black hole of Calcutta,' and where they were kept for hours, hungry, thirsty, and suffering in every way, until their cases could be reached. With scarcely an exception these men had gone to the polls expecting to be absent but a short time. Many of them were thinly clad. Numbers had sick wives or relatives; some were sick themselves. There were carmen who had left their horses standing in the public streets; men whose situations depended upon their speedy return; men who wished to leave the city on certain trains. Every imaginable vexation, inconvenience, injury, and wrong which the mind can conceive existed in their cases, so that it was painful for the counsel who were endeavoring to secure their release to approach sufficiently near the railing to hear their piteous appeals and witness the distress which they had no power to alleviate. And over all this pushing, struggling, complaining crowd, Mr. Commissioner John I. Davenport sat supreme with a sort of oriental magnificence, calmly indifferent to everything but the single fact that no man who was arrested was allowed to vote. And after all this tremendous exhibition of the power of this great Government, after this exhibition of what a United States commissioner and chief supervisor of elections can do if he has a mind to, what was the result? Surely if the offenses which these persons had committed were of so grave a nature as to require these wholesale proceedings, if the morals, the peace, and outraged laws of the community required to be vindicated by the summary arrest of four thousand persons on a single day, it was certainly necessary that the law should be enforced to the end, and that the offenses which were so dangerous as to require this arbitrary action should be punished. But nothing of the kind was done. As these men were brought up before the three commissioners who sat in judgment, they were asked if they had voted. If they had not, they were required to promise that they would not do so. If, to escape the terrors of Ludlow street jail, they surrendered their rights as American citizens and made the promise thus exacted, as the great majority of necessity did, they were released upon their own recognizance. If they did not, they were held to bail. If they had voted, although if not properly naturalized such vote was an additional offense instead of a palliation for the crime charged against them, they were immediately released. After sundown, when the polls were closed and it was too late for any one to vote, the doors appear to have been thrown open and all set at liberty.

"This scene occurred, not in the imperial city of Berlin, where despotism is striving to roll back the tide of time, but in the metropolis of this land of freedom, in the free city of the sovereign State of New York. Fortunately for the cause of liberty, out of these four thousand citizens thus summarily deprived of their freedom and of the sacred right of suffrage, one man alone, so poor that he had no friends to become his bail, and so friendless that he seems not to have known that he might have walked away, was committed to jail, and allowed to lie there until by accident

his case was made known in the proper quarter, and proceedings of *habeas corpus* were taken to test the question of the legality of these arrests. The name of that unfortunate citizen was Peter Coleman—a name destined to live in history with that of John Peter Zenger, who, in the colonial days of New York, was so fortunate as to have suffered a similar arrest and to have achieved immortality by vindicating the freedom of the press. Coleman's case was brought before Judge Blatchford, an able and upright Judge of the Federal Court, who never has and never will allow his Republican sympathies to interfere with the stern performance of his duty. The case was elaborately argued, and in a careful opinion he decided that not only was the affidavit whereon the arrest was made insufficient, but that the warrant itself was unlawfully issued. He further decided that the naturalization papers which had been called in question upon the other side had been duly made and issued; and, to quote his own language—

"It therefore appears that Coleman was duly and legally admitted to citizenship, and that the legality of his admission was not invalidated by any act or omission which occurred either prior or subsequently to his admission. As he was legally admitted, it was proper for the Court to give to him the certificate of citizenship which was given to him, and that certificate was not unlawfully issued or made. On this ground he is entitled to his discharge from arrest.

"But there is another ground on which Coleman is entitled to be discharged. Even if there were such a defect in the record of the Superior Court as to make the certificate given to him one that was unlawfully issued or made, he was not guilty of an offense under section 5426, unless when he used the certificate he knew that it was unlawfully issued or made. As it appears that he complied fully with all the conditions imposed on him as prerequisites to his admission, and that the unlawfulness, if any, was in the want of form in the records of the Court, and as he received at the time from the Court a certificate stating that all the statutory requisites had been complied with, and that the Court had ordered that he be admitted to be a citizen, and that he was accordingly admitted by the Court to be a citizen, no court would permit a jury to convict him of using such certificate knowing that it was unlawfully issued. So manifest was this that the moment the facts were brought to the attention of this Court on the hearing on the *habeas corpus*, it announced that Coleman would be discharged immediately on this ground alone. Thereupon the attorney for the United States stated that he did not think the evidence disclosed sufficiently guilty knowledge on the part of Coleman of the defects in the certificate of citizenship, and that he consented that he should go at large. He was immediately released from custody, but no formal decision was made, in order that other questions presented might be argued, considered, and decided.

"An order will be entered discharging Coleman from custody.

"STEWART L. WOODFORD, Dist. Att'y,

"SAMUEL B. CLARKE,

Ass't Dist. Att'y for the United States.

"E. ELLERY ANDERSON,

"GEORGE W. WINGATE,

For Coleman.

"A copy. JOHN I. DAVENPORT, Clerk.

"Now let me inquire what redress these four thousand citizens thus unlawfully arrested have under the law against Mr. Davenport.

Can they bring suit for damages for false arrest? No; they are met by the conclusive answer that it was an official act done in the performance of a duty required by the statute. Is there any reason why this outrage may not be repeated at the next or any future election? If four thousand men can be arrested in one day upon the affidavit of one man, the entire legal majority of either party might be wiped out in any city of this Union by supervisors bold enough to take the responsibility of such monstrous action.

"My grievance is not that this was done by a Republican official. My objection is that it can be done by any official whatever. I should protest just as earnestly against it if it had been the action of a Democratic supervisor, under a Democratic administration. It simply goes to prove what I have already said, that there is no safety and can be no safety for personal liberty when the fountain of power is not in the people, but resides in a centralized government. The fact that despotism is the inevitable result of centralized power is as old as the story of the human race. The complaints of citizens at a distance from the central power are rarely heard; but where the power to redress grievances resides at home, where men live and move among their fellow-citizens, grievances can not long survive. There is no more striking proof of this fact than the manner in which the Tweed ring, who were the creators of whatever frauds occurred in the years 1868, 1869, and 1870, was utterly broken up and its members consigned to prison and to exile. The very judges who connived at their atrocities were the first to feel the popular indignation, and were driven in disgrace from the bench into obscurity, from which they can never emerge."

Mr. Hazelton of Wisconsin: "Mr. Chairman, there are three propositions, sir, involved in these amendments. The first in order, which provides for the elimination of the restrictions placed upon the jury-box by sections 820 and 821 of the Revised Statutes, I support with all my heart. I support it because it opens the jury-box to the intelligence of the South, brings it within that constitutional principle which permits the citizen to be tried by his peers, and places it where it ought to stand in our country, open to every citizen ordinarily eligible to pass upon a question of fact in the courts of the land.

"The next proposition, Mr. Chairman, is one which the American people will repudiate at sight. It is to make the jury-box of our country a political jury-box. It is to select one juror from one political party and the next from another political party, who are to constitute thus made up a jury to try the great questions which shall arise in the administration of justice in the future of our country. It is revolutionary and impracticable. Such a system, sir, will poison the very fountains of justice and undermine and destroy the settled law of ages.

To state the proposition is to condemn it, and I discuss it no further.

"The third proposition strikes down at a blow twenty sections of the statutes, comprising those election laws which constitute today the safeguards of the ballot-box and the muniments of liberty. They are all that can protect and keep pure the ballot-box in many States of the Union, and especially in the great city of New York. And I tell the gentleman from New York [Mr. Hewitt] in all fairness that there never has been an instance where any honest voter has been deprived of the exercise of the elective franchise by the enforcement of any one of those laws, and I challenge any man on this floor to show an instance where any man has been deprived of his rights by those great safeguards of our Government."

Mr. Hewitt of New York: "I instance Peter Coleman, by the decision of Judge Blatchford, which I hold in my hand."

Mr. Hazelton: "Now, sir, who asks for this great change; whence comes the demand for these amendments? Do the one million voters of the black race in the South ask for this legislation? Not one of them, sir. Does the demand come from that sentiment that carried the Government through the storm and shock of war and laid its foundations anew in the principles of liberty? No, sir. Where, then, does the voice come from? Louisiana wants it; and her regular political diet has been for the last ten years fraud, intimidation, and blood. Alabama wants it, and upon that declaration of her leading citizens that the exercise of the elective franchise by the black man is a crime against American liberty. South Carolina wants it also; and the gentleman from that State [Mr. Aiken] only the other day boasted on this floor that as a matter of re- crimination they were in South Carolina now visiting back upon the Republicans, upon the black men, this whole scheme of the tissue ballot."

Mr. Aiken: "You are sorry the chickens are coming home to roost, are you?"

Mr. Hazelton: "If you tell them a man's right is struck down in South Carolina, they will answer you that the North sent down awhile ago a lot of carpet-baggers. If you say that crimes are committed there against civilization, against humanity, the answer is, 'Why, you sent carpet-baggers down to rule over us.' Now, the gentleman from South Carolina—and no man has a higher respect for that gentleman than I have—says that because, away back, some Republican was elected by tissue ballots, now the thing had come home to roost."

Mr. Whitthorne of Tennessee: "Mr. Chairman, far above party and far above the love I bear the section in which I was born is my attachment to a republican form of government; and whatever else may happen in the future of this country, I trust the inheritance of a free

ballot shall be the heritage for all time of the American citizen. Under the Constitution, Article 1, section 4, it is provided that 'That the times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.' Now, it is claimed that under this provision of the Constitution the existing laws in regard to supervisors of election and their aids, deputy marshals, and which are sought to be repealed by the pending amendment, were enacted.

"It is admitted that Congress may rightfully adopt regulations as to the time, place, and manner of the elections of Representatives in Congress, but it is denied that Congress in the exercise of this right to make regulations, either as to time, place, or manner, can determine the question of the sovereignty of the elector or his qualification in this regard. This belongs alone to the States or the people thereof. The people of the States may fix the qualification of the elector as to age, residence, and character, and when so fixed and determined, these electors become and are the supreme sovereignty in and of the Government of the United States. Now, then, any attempt made to impair this sovereignty is an attack upon the fundamental theory upon which our whole popular institutions are based. It is war upon the people and their right of defense and protection. Let me say, Mr. Chairman, that if it be necessary to the preservation of the national life that the existing laws should be enforced, I am in favor of their enforcement. But what is the source of the national life? It is the sovereignty of the people; it is the freedom of the elector.

"The Democratic party of the country believe that the laws sought to be repealed go beyond the rightful authority of Congress to regulate the time, place, and manner of holding the elections for members of Congress; and in the authority given to the supervisors and marshals to arrest and imprison the elector before registering and before voting, as well as in the act of voting, assert a dangerous and unconstitutional exercise of authority upon the part of the Government, and seek to destroy the source of the life of the Government. No more arbitrary, tyrannical, or oppressive power was ever given to any body of men than is lodged in the hands of deputy marshals by section 2022 of the Revised Statutes, which I read:

"Sec. 2022. The marshal and his general deputies, and such special deputies, shall keep the peace, and support and protect the supervisors of election in the discharge of their duties, preserve order at such places of registration and at such polls, prevent fraudulent registration and fraudulent voting thereat, or fraudulent conduct on the part of any officer of election, and immediately, either at the place of registration or polling-place, or elsewhere, and either before or after registering or voting, to arrest and take into custody, with or without process, any person who commits, or attempts or offers to commit, any of the acts or of-

fenses prohibited herein, or who commits any offense against the laws of the United States; but no person shall be arrested without process for any offense not committed in the presence of the marshal or his general or special deputies, or either of them, or of the supervisors of election, or either of them; and for the purposes of arrest or the preservation of the peace, the supervisors of election shall, in the absence of the marshal's deputies, or if required to assist such deputies, have the same duties and powers as deputy marshals; nor shall any person, on the day of such election, be arrested without process for any offense committed on the day of registration.

"It will be seen from this section that an indefinite number of marshals may be appointed. It is a fact that pending the elections of 1876 over eleven thousand were appointed; a body of men in numbers equal to one half of your regular army, and, as I have said, may be multiplied beyond the strength of that army. Remembering that these marshals are paid by the National Government out of the taxes derived from the people, we come to look into the power with which these marshals are vested. They are clothed with the power to decide of their own will, whether 'order' is observed, either at places of registration or voting; whether there is 'fraudulent registration'; whether there is 'fraudulent voting'; whether there is 'fraudulent conduct' on the part of any officer of the election; whether the State authorities have rightfully administered their own election laws, and upon their own will to decide and determine whether any attempt to violate the law has been made, and thereupon to arrest and take into custody, with or without process, such parties as they may decide or determine to be guilty of these offenses or any one of them. Thus clothed with new, strange, and extraordinary powers, they are at once judges and executive officers, powers the exercise of which arbitrarily takes from the citizen his liberty and from the elector his sovereignty. Sir, it is simply an invasion of authority upon the freedom of the ballot.

"The genius of tyranny never conceived a more insidious assault upon the rights of a free people than is concealed under this pretense of guarding the purity of the ballot-box. The citizen invested with sovereignty by his State or the people thereof is subordinated to the control and will of a foreign, and it may be antagonistic, tribunal, which, in the assertion of its supremacy by its supple minions, disrobes him of his sovereignty and leaves him the slave of a superior power. The tendency of the law is to prostitute the judiciary to the domination of the executive, and to take away this asylum of the oppressed and make it the castle, if not the bastille, of the oppressor."

Mr. Davidson of Florida: "The amendment proposes to repeal the several sections of the Revised Statutes of the United States from and including section 2011 to and including section 2031. It was introduced by a gentleman whose home is north of the Ohio River, and it is earnestly supported and advocated by members from the North and West as well as from the

South. Yet there are those here who would make it appear that the proposition is a Southern measure only, and they pretend to see in it treason and rebellion. The gentleman from Maine [Mr. Hale] has told us that 'the proposition to repeal all these sections takes hold and violent hold of the whole body of criminal law applicable to the purity of elections in the South and ruthlessly repeals it.' He seems to have forgotten that the sections sought to be repealed apply not only to elections in the South, but throughout the whole country, and at the same time to have misapprehended the purport and scope of the amendment. For it does not propose to repeal the whole body of the criminal law applicable to elections, but only those sections which provide for the appointment of supervisors and deputy marshals. Again, sir, it was very strongly intimated, if not expressly stated, a few days since by the gentleman from New York [Mr. Chittenden], that the object of this amendment was to give to the South absolute control of this Government, and that the proposition to repeal the unwise and iniquitous sections, as I regard them, was an exhibition of audacity which the North would not for a moment tolerate. Sir, the South does not desire absolute control of this Government. It does desire though that the vicious and tyrannical legislation, the enactment of which was the result of bitter feelings engendered during the late great struggle, should no longer remain in force. It does desire that laws which are used as political machines by the political party now in power, and which are manipulated and run altogether in the interest of that party, regardless of the rights of those who are opposed to it, should be repealed. And I fail, Mr. Chairman, to discover in the amendment that audacity which seems to be so apparent to the gentleman from New York. And I could not see it even had the amendment been offered by a Democrat from the South; for in this House the privileges and rights of members are the same whether they come from the North or South, from the East or West.

"And again, sir, it has been argued by the gentleman from Indiana [Mr. Hanna] that the adoption of the pending amendment will sweep away all that legislation which sharply defines, as he expressed it, the difference between loyalty and treason. And it has been said by the gentleman from Indiana [Mr. Baker] that it will undo all the results of the war. Mr. Chairman, I can not appreciate such arguments; neither can I believe that they emanate from sober reflection and sound judgment, but rather do I think that they are the offspring of bitter partisan feeling and uncontrolled prejudice. The members of this House from the South claim no rights here which are not granted to them by the Constitution and laws of their country. And when they assert those rights on this floor, and in a fair and manly manner endeavor to maintain them, that it should be said they are audacious and intimated that they are trea-

sonable is not only unkind, but also most wonderfully presumptuous and arrogant.

"Sir, the proposition on the part of the Democrats to repeal the odious sections mentioned in the amendment is not prompted by a desire to obtain any undue advantage of Republicans. They seek only to take from them that advantage which, owing to partisan legislation, they possess, and which they so harshly, unfairly, and corruptly use at elections in some of the States—use not merely against the interest of the Democratic party, but also in violation of the rights and privileges of the citizens of those States. Mr. Chairman, wrongs, great wrongs, have been and will continue to be perpetrated under the operation of this law so long as it remains in force, and therefore it ought to be repealed."

Mr. Hale: "Mr. Chairman, I rise only for the purpose of stating the position of this question. We may as well understand exactly how this matter now stands before us. The gentleman from Ohio [Mr. Southard], in pressing this amendment, has thrown down the gage of battle. The gentleman from New York [Mr. Hewitt] has asserted this morning that the Democratic party stands here to-day, and will stand, in favor of sweeping from the statute-book all that body of law which he says interferes with the operations of the State governments and State laws with respect to the ballot. Now, there is a plain, distinct challenge; and, Mr. Chairman, I know that, strong as is the feeling on the other side, it is equally strong on this. These laws for the protection of the ballot must not and shall not be repealed. I repeat that this side of the House will never consent to this project of repeal being pushed forward and carried through. Gentlemen on the other side may as well understand that now as hereafter. Thus we are confronted with what the other side must take the responsibility of, an extra session of Congress. Last Tuesday, one week ago to-day, an almost solid vote of this side of the House was given in favor of going into Committee of the Whole upon this appropriation bill. We were voted down by the other side. On Wednesday the bill came up, was discussed, and went over. On Thursday the Republican side again voted solidly to take it up and pass it pure and simple; but we were antagonized with an election case upon which the other side, refusing to consider this bill, unseated a member who had been here within twenty days of his entire term of office. On Friday this bill was antagonized with private bills, and that day was wasted. On Saturday the Republican side again rallied for the purpose of pushing this appropriation bill through; but antagonized as it was by the morning hour and by the bill for the repeal of the tobacco tax, the motion to proceed to the consideration of this bill was, on a vote by tellers, defeated by one vote. I only wish to say that we on this side have done everything to push this bill, and at some stage of this pro-

ceeding between now and the final adjournment gentlemen on the other side must yield their position, for these laws can not be and shall not be repealed."

Mr. Southard: "Mr. Chairman, in response to the gentleman from Maine I desire to say for myself, and I think I speak the spontaneous and unanimous sentiment of this side of the House, that these laws, which were enacted for the purpose of controlling the ballot-box and securing the success of the Republican party by bribery, intimidation, and force, must and shall be swept from the statute-books. Let it be distinctly understood that with this side of the House and with the Democratic party rests the responsibility, and they are ready to do, dare, and die, if need be, in defense of the freedom of the ballot and the freedom of the citizen. It is a question of a fair and pure ballot and a question of personal liberty; and the man who yields now in this supreme crisis deserves the condemnation and scorn of a free and independent people.

"These marshals, Mr. Chairman, are appointed by a party, for a party purpose, but they are paid out of the public Treasury. It is idle to say that any Administration will be fair and impartial in the execution of the law against the opposing political party. In addition, these deputy marshals have the power of arresting individuals without affidavit and without warrant upon their own *ipse dixit*, upon their own malice, hatred, interest, or caprice, so that so long as these statutes stand it is utterly impossible that the American citizen can be duly protected in his personal liberty and in his right to vote.

"In St. Louis the special deputy marshals were appointed upon the pledge, and as an indispensable condition, that they would support in the canvass and by their votes the Republican candidates for Congress. One thousand and twenty-eight special deputy marshals were appointed in that city alone, at an expense of over \$20,000, and the result was the election of three Republicans in three Democratic districts.

"These supervisors and marshals have in different parts of the country arrested citizens without right and imprisoned them until the hour of voting had passed. In New York last fall, if those who were arrested pledged themselves not to vote they were immediately discharged, but if they insisted on the right to vote they were held in custody; but when the ballot-boxes were closed at six o'clock on election day they were all discharged, and no attempt was made afterward to prosecute them for any crime. The plain inference is that these supervisors and marshals used their authority not to bring to punishment those voting illegally, but simply and solely to secure a victory for the Republican party. This machine is simply one of party for the purpose of perpetuating a party dynasty that has been condemned by the popular judgment of the

country. It is a Northern outrage as well as a Southern outrage. In the North, in 1876, \$220,515.64 was paid to these marshals, while in the South but \$54,770.96. Four fifths of the money was paid in the North. In 1878 \$24,636.74 was paid in the South, while \$177,654.35 was paid in the North, or seven eighths of the entire amount; and Mr. Davenport of New York has still to come in with his bills of thousands more.

"I say again, in response to the taunt from the gentleman from Maine [Mr. Hale], that this side of the House has determined on this measure, not as a question of mere dollars and cents, but as a question of absolute incontestable right, as a question of the freedom and purity of the ballot-box, as a question of freedom from arrest without due process of law. We will no longer permit the control of the ballot-box to remain in the hands of paid and hired agents of one political party for the purpose of carrying elections. It is, as I have already said, a question of personal liberty to the citizen, and we do not mean in this free country that any man shall be arrested and imprisoned until there has been due complaint and warrant of arrest, until there has been due process of law. We mean to protect the citizen in his personal rights and to protect the ballot-box in its freedom and in its purity.

"If the Republican party can beat the Democratic party at the polls, after they have had a free and fair election, we will cheerfully submit, but until that ballot-box is freed we intend to stand as free men to make it free. Let the issue come, and come now. Not a dollar of appropriations should be voted until this most reasonable redress of grievances is conceded."

The Chairman: "The question recurs on the amendment of the gentleman from Ohio [Mr. Southard]."

The committee divided, and the tellers reported—ayes 135, noes 110.

The Chairman: "The amendment is agreed to."

The next amendment from the Committee of the Whole was read, as follows:

After line 16, page 85, add the following:

For detraying the expenses of the Supreme Court, and circuit and district courts of the United States, including the District of Columbia, and also for jurors and witnesses, and expenses of suits in which the United States are concerned, of prosecutions for offenses committed in violation of the laws of the United States, and for the safe-keeping of prisoners, \$2,500,000: *Provided*, That the per diem pay of each juror, grand or petit, in any court of the United States shall be \$2, and that the last clause of section 800 of the Revised Statutes of the United States, which refers to the State of Pennsylvania, and sections 820 and 821 of the Revised Statutes of the United States are hereby repealed, and that all such jurors, grand and petit, shall be publicly drawn from a box containing the names of not less than three hundred persons possessing the qualifications prescribed in section 800 of the Revised Statutes, which names shall have been placed therein by the clerk of such court and a commissioner to be appointed by the judge thereof, which commissioner shall be a citizen residing in the district in which such court is held, of good standing and a well-known mem-

ber of the principal political party opposing that to which the clerk may belong, the clerk and said commissioner each to place one name in said box, alternately, until the whole number required shall be placed therein. But nothing herein contained shall be construed to prevent any judge in a district in which such is now the practice from ordering the names of jurors to be drawn from the boxes used by the State authorities in selecting jurors in the highest courts in the State. All general and special laws in conflict herewith are hereby repealed.

The amendment was agreed to.

The next amendment from the Committee of the Whole was as follows:

Insert after the amendment just adopted the following:

That the several sections of the Revised Statutes of the United States from and including section 2011 to and including section 2031, and all other provisions of law authorizing the appointment of or the performance of any duty by any chief or other supervisor of elections, or any special deputy marshal, or other deputy marshal of elections, or the payment of any money to any such supervisor or deputy marshal of elections for any services performed as such, be, and the same are hereby repealed.

The question was taken; and there were—
yeas 143, nays 3, not voting 144; as follows:

YEAS—Acklen, Aiken, Atkins, Banning, Beale, Bell, Benedict, Bicknell, Blackburn, Bliss, Blount, Boone, Bouck, Bragg, Bridges, Bright, Buckner, Cabell, John W. Caldwell, W. P. Caldwell, Chandler, Carlisle, Chalmers, Alvah A. Clark, Clarke of Kentucky, Clark of Missouri, Clymer, Cobb, Collins, Cook, Covert, Samuel S. Cox, Cravens, Crittenden, Culbertson, Davidson, Joseph J. Davis, Dean, Dibrell, Dickey, Durham, Eden, Eickhoff, Elam, Ellis, John H. Evins, Ewing, Felton, E. B. Finley, Jesse J. Finley, Fleming, Forney, Franklin, Fuller, Garth, Gause, Gibson, Giddings, Glover, Goode, Gunter, Hamilton, Hardenbergh, Henry R. Harris, John T. Harris, Harrison, Hart, Hartzell, Hatcher, Henkle, Henry, Herbert, Abram S. Hewitt, G. W. Hewitt, Hooker, House, Hunton, Frank Jones, James T. Jones, Kenna, Kimmel, Knott, Landers, Ligon, Lockwood, Luttrell, Lynde, Mackey, Maish, Manning, Martin, Mayham, McKenzie, McMahon, Mills, Money, Morgan, Morrison, Morse, Muldrow, Muller, T. M. Patterson, Phelps, Potter, Pridemore, Rea, Reagan, Reilly, Americus V. Rice, Robbins, Roberts, Robertson, Ross, Saylor, Seales, Shelley, Singleton, Slemmons, William E. Smith, Southard, Sparks, Springer, Steele, Stenger, Swann, Throckmorton, R. W. Townshend, Turner, Turney, Vance, Needer, Waddell, Warner, Whitthorne, James Williams, Jere N. Williams, Albert S. Willis, Benjamin A. Willis, Wilson, Wood, Wright, Yeates, John S. Young—143.

NAYS—Chittenden, Fort, Killinger—3.

NOT VOTING—Aldrich, Bacon, Bagley, Bailey, John H. Baker, William H. Baker, Ballou, Banks, Bayne, Beebe, Blair, Bland, Boyd, Brentano, Brewer, Briggs, Brogden, Browne, Bundy, Burchard, Burdick, Butler, Cain, Calkins, Camp, Campbell, Cannon, Caswell, Clafin, Rush Clark, Cole, Conger, Jacob D. Cox, Crapo, Cummings, Cutler, Danford, Horace Davis, Deering, Denison, Dunnell, Dwight, Eames, Ellsworth, Errett, I. Newton Evans, James L. Evans, Foster, Freeman, Frye, Gardner, Garfield, Hale, Hanna, Harmer, Benj. W. Harris, Haskell, Hayes, Hazelton, Hendee, Henderson, Hiscock, Hubbell, Humphrey, Hungerford, Hunter, Ittner, James, Jorgensen, Joyce, Keifer, Keightley, Kelley, Ketcham, Killinger, Lapham, Lathrop, Lindsey, Loring, Majors, Marsh, McCook, McGowan, McKinley, Metcalfe, Mitchell, Monroe, Neal, Norcross, Oliver, O'Neill, Overton, Page, G. W. Patterson, Peddie, Phillips, Pollard, Pound, Powers, Price, Pugh, Rainey, Randolph, Reed, William W. Rice, Riddle,

G. D. Robinson, M. S. Robinson, Ryan, Sampson, Sapp, Sexton, Shallenberger, Sinnickson, Smalls, A. Herr Smith, Starin, Stephens, Stewart, John W. Stone, Joseph C. Stone, Strait, Thompson, Thornburgh, Tipton, Amos Townsend, M. I. Townsend, Tucker, Van Vorhes, Wait, Walker, Walsh, Ward, Watson, Harry White, Michael D. White, Wiggin, Andrew Williams, C. G. Williams, Richard Williams, Willits, Wren, Casey Young—144.

The Speaker (before announcing the vote):
"The Clerk will call my name."

The Clerk called the name of Mr. Randall.

The Speaker: "I vote 'ay.'"

The result of the vote was then announced as above recorded, and the amendment was accordingly agreed to.

The bill was ordered to be engrossed and read a third time. The previous question was demanded and seconded, and the main question ordered. The question was taken, and it was decided as follows:

YEAS—Acklen, Aiken, Atkins, Banning, Beale, Bell, Benedict, Bicknell, Blackburn, Bliss, Blount, Boone, Bouck, Bragg, Bridges, Bright, Buckner, Cabell, John W. Caldwell, W. P. Caldwell, Chandler, Chalmers, Alvah A. Clark, Clarke of Kentucky, Clark of Missouri, Clymer, Cobb, Collins, Cook, Covert, Samuel S. Cox, Cravens, Crittenden, Culbertson, Cutler, Davidson, Joseph J. Davis, Dibrell, Dickey, Durham, Eden, Eickhoff, Elam, Ellis, John H. Evins, Ewing, Felton, E. B. Finley, Jesse J. Finley, Fleming, Forney, Franklin, Fuller, Garth, Gause, Gibson, Giddings, Glover, Goode, Gunter, Hamilton, Hardenbergh, Henry R. Harris, John T. Harris, Harrison, Hart, Hartzell, Hatcher, Henkle, Henry, Herbert, Abram S. Hewitt, G. W. Hewitt, Hooker, House, Hunton, Frank Jones, James T. Jones, Kenna, Kimmel, Knott, Landers, Ligon, Lockwood, Luttrell, Lynde, Mackey, Maish, Manning, Martin, Mayham, McKenzie, McMahon, Mills, Money, Morgan, Morrison, Morse, Muldrow, Muller, T. M. Patterson, Phelps, Potter, Pridemore, Rea, Reagan, Reilly, Americus V. Rice, Robbins, Roberts, Robertson, Ross, Saylor, Seales, Shelley, Singleton, Slemmons, William E. Smith, Southard, Sparks, Springer, Steele, Stenger, Swann, Throckmorton, R. W. Townshend, Turner, Turney, Vance, Veeder, Waddell, Walker, Whitthorne, James Williams, Jere N. Williams, Albert S. Willis, Benj. A. Willis, Wilson, Wood, Wright, Yeates, John S. Young—142.

NAYS—Aldrich, Bacon, Bagley, John H. Baker, Ballou, Bayne, Blair, Boyd, Brentano, Brewer, Briggs, Brogden, Browne, Bundy, Burehard, Burdick, Cain, Calkins, Camp, Campbell, Caswell, Chittenden, Clafin, Rush Clark, Cole, Conger, Jacob D. Cox, Crapo, Cummings, Danford, Horace Davis, Deering, Denison, Dunnell, Eames, Ellsworth, Errett, I. Newton Evans, Fort, Foster, Frye, Gardner, Hale, Hanna, Harmer, Benj. W. Harris, Haskell, Hayes, Hazelton, Hendee, Henderson, Hiscock, Hubbell, Humphrey, Hungerford, Hunter, Ittner, James, Jorgensen, Joyce, Keifer, Keightley, Kelley, Ketcham, Killinger, Lapham, Lathrop, Lindsey, Majors, Marsh, McCook, McGowan, McKinley, Mitchell, Monroe, Neal, Norcross, Oliver, O'Neill, Overton, Page, G. W. Patterson, Peddie, Phillips, Pollard, Pound, Price, Pugh, Rainey, Randolph, William W. Rice, G. D. Robinson, M. S. Robinson, Ryan, Sampson, Sexton, Shallenberger, Sinnickson, Smalls, A. Herr Smith, Starin, Stewart, John W. Stone, Joseph C. Stone, Strait, Thompson, Amos Townsend, M. I. Townsend, Van Vorhes, Wait, Ward, Watson, Harry White, Andrew Williams, C. G. Williams, Richard Williams, Willits—117.

NOT VOTING—Bailey, William H. Baker, Banks, Beebe, Bland, Butler, Cannon, Carlisle, Dean, Dwight, James L. Evans, Freeman, Garfield, John S.

Jones, Knapp, Loring, Metcalf, Powers, Reed, Riddle, Sapp, Stephens, Thornburgh, Tipton, Tucker, Walsh, Warner, Michael D. White, Wigginton, Wren, Casey Young—31.

So the bill was passed.

In the Senate, on March 1st, the consideration of this appropriation bill and the amendments made by the Senate committee on appropriations was commenced. Among the amendments was the following:

After the word "prisoners," to insert:

And for defraying the expenses which may be incurred in the enforcement of the act approved February 28, 1871, entitled "An act to amend an act approved May 30, 1870, entitled 'An act to enforce the rights of citizens of the United States to vote in the several States of the Union, and for other purposes,' or any acts amendatory thereof or supplementary thereto."

So as to read:

For defraying the expenses of the Supreme Court and circuit and district courts of the United States, including the District of Columbia, and also for jurors and witnesses and expenses of suits in which the United States are concerned, of prosecutions for offenses committed in violation of the laws of the United States, and for the safe-keeping of prisoners, and for defraying the expenses which may be incurred in the enforcement of the act approved February 28, 1871, entitled "An act to amend an act approved May 30, 1870, entitled 'An act to enforce the rights of citizens of the United States to vote in the several States of the United States, and for other purposes,' or any acts amendatory thereof or supplementary thereto," \$2,800,000.

The Presiding Officer: "The question is on agreeing to the amendment reported by the Committee on Appropriations. Is the Senate ready for the question?"

The Secretary proceeded to call the roll, and the result was announced as follows:

YEAS—Allison, Anthony, Blaine, Booth, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Chandler, Dawes, Dorsey, Edmunds, Ferry, Hamlin, Hoar, Ingalls, Kellogg, Kirkwood, McMillan, Matthews, Mitchell, Morrill, Oglesby, Paddock, Rollins, Saunders, Spencer, Teller, Wadleigh, Windom—29.

NAYS—Bailey, Barnum, Bayard, Beck, Cockrell, Coke, Davis of West Virginia, Dennis, Eaton, Garland, Gordon, Hereford, Hill, Jones of Florida, Kernan, Lamar, McDonald, McPherson, Maxey, Merrimon, Morgan, Saulsbury, Thurman, Wallace, Whyte, Withers—26.

ABSENT—Bruce, Butler, Chaffee, Conkling, Conover, Davis of Illinois, Eustis, Grover, Harris, Howe, Johnston, Jones of Nevada, McCreery, Patterson, Plumb, Randolph, Ransom, Sargent, Sharon, Shields, Voorhees—21.

So the amendment was agreed to.

Mr. Thurman: "Mr. President, I suppose the next amendment is to strike out the proviso on line 2170 and ending in line 2203."

The Presiding Officer: "The Senator is correct. The question now is on agreeing to the amendment, which the Secretary will report."

The Secretary: "The Committee on Appropriations propose to strike out from line 2170 to 2203, in the following words:

"Provided, That the per diem pay of each juror, grand or petit, in any court of the United States, shall

be \$2, and that the last clause of section 800 of the Revised Statutes United States, which refers to the State of Pennsylvania, and sections 801, 820, and 821 of the Revised Statutes of the United States, are hereby repealed: and that all such jurors, grand and petit, shall be publicly drawn from a box containing the names of not less than three hundred persons, possessing the qualifications prescribed in section 800 of the Revised Statutes, which names shall have been placed therein by the clerk of such court, and a commissioner to be appointed by the judge thereof, which commissioner shall be a citizen residing in the district in which such court is held, of good standing and a well-known member of the principal political party opposing that to which the clerk may belong, the clerk and said commissioner each to place one name in said box alternately until the whole number required shall be placed therein. But nothing herein contained shall be construed to prevent any judge in a district in which such is now the practice from ordering the names of jurors to be drawn from the boxes used by the State authorities in selecting jurors in the highest courts of the State. All general and special laws in conflict herewith are hereby repealed. That the several sections of the Revised Statutes of the United States, from and including section 2011 to and including section 2031, and all other provisions of law authorizing the appointment of, or the performance of and duty by, any chief or other supervisor of elections, or any special deputy marshal, or other deputy marshal of elections, or the payment of any money to any such supervisor or deputy marshal of elections for any services performed as such, be, and the same are hereby repealed."

The Presiding Officer: "The Chair will state the question. The Committee on Appropriations report to strike out the clause which the Secretary has just read. The question is on agreeing to the amendment proposed by the Committee on Appropriations striking out the clause."

Mr. Thurman: "I ask for a division of the amendment, and that the question may first be taken on striking out, beginning at line 2170 and ending with the word 'repealed,' in line 2194. Up to that word the provision moved to be stricken out relates wholly to juries. The subsequent part of the proviso proposed to be stricken out relates to a wholly different subject—to supervisors of elections and marshals. They are wholly distinct subjects, and I ask that the vote may be first taken on the jury proposition, beginning with line 2170 and ending with the word 'repealed,' in line 2194."

The Presiding Officer: "The Chair is of opinion that the question is subject to a division, and will put the question on agreeing to the first branch of the divided proposition. The question, therefore, is on agreeing to strike out from line 2170 to and including the word 'repealed,' in line 2194. Is the Senate ready for the question?"

The Secretary proceeded to call the roll, and the result was announced as follows:

YEAS—Messrs. Allison, Anthony, Blaine, Booth, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Chandler, Dawes, Dorsey, Edmunds, Ferry, Hamlin, Hoar, Ingalls, Kellogg, Kirkwood, McMillan, Matthews, Mitchell, Morrill, Oglesby, Paddock, Rollins, Saunders, Spencer, Teller, Wadleigh, Windom—29.

NAYS—Messrs. Bailey, Barnum, Bayard, Beck,

Cockrell, Coke, Davis of West Virginia, Dennis, Eaton, Eustis, Garland, Gordon, Hereford, Hill, Jones of Florida, Kernan, Lamar, McDonald, McPherson, Maxey, Merrimon, Morgan, Saulsbury, Thurman, Wallace, Whyte, Withers—27.

ABSENT—Messrs. Bruce, Butler, Chaffee, Conkling, Conover, Davis of Illinois, Grover, Harris, Howe, Johnston, Jones of Nevada, McCreery, Patterson, Plumb, Randolph, Ransom, Sargent, Sharon, Shields, Voorhees—20.

So the amendment was agreed to.

The Presiding Officer: "The words stated are stricken from the bill. The question now is upon agreeing to the recommendation of the Committee on Appropriations to strike out the remaining words of the clause that was read by the Secretary, namely, beginning with the word 'that' on line 2194, and going to and including the word 'repealed' in line 2203. Is the Senate ready for the question?"

The Secretary proceeded to call the roll, and the result was announced as follows:

YEAS—Messrs. Allison, Anthony, Blaine, Booth, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Chandler, Dawes, Dorsey, Edmunds, Ferry, Hamlin, Hoar, Ingalls, Kellogg, Kirkwood, McMillan, Matthews, Mitchell, Morrill, Oglesby, Paddock, Rollins, Saunders, Spencer, Teller, Wadleigh, Windom—29.

NAYS—Messrs. Bailey, Barnum, Bayard, Beck, Cockrell, Coke, Davis of West Virginia, Dennis, Eaton, Garland, Gordon, Hereford, Hill, Jones of Florida, Kernan, Lamar, McDonald, McPherson, Maxey, Merrimon, Morgan, Saulsbury, Thurman, Wallace, Whyte, Withers—26.

ABSENT—Messrs. Bruce, Butler, Chaffee, Conkling, Conover, Davis of Illinois, Eustis, Grover, Harris, Howe, Johnston, Jones of Nevada, McCreery, Patterson, Plumb, Randolph, Ransom, Sargent, Sharon, Shields, Voorhees—21.

So the amendment was agreed to, and the bill was subsequently passed.

The House disagreed to the amendments of the Senate, and a committee of conference was appointed in each House. The following is their report to the House of Representatives:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. No. 6240) making appropriations for the legislative, executive, and judicial expenses of the Government, for the fiscal year ending June 30, 1880, and for other purposes, having met, after full and free conference, have been unable to agree.

J. D. C. ATKINS, M. J. DURHAM, CHARLES FOSTER, WILLIAM WINDOM, W. B. ALLISON, JAMES B. BECK,	}	Managers on the part of the House.
	}	Managers on the part of the Senate.

Mr. Atkins: "I move that the House adhere to its disagreement; and upon that motion I call for the previous question."

The previous question was seconded and the main question ordered.

The question being taken on the motion to adhere, it was agreed to.

Mr. Atkins of Tennessee said: "Mr. Speaker, I regret that the conference committee upon this bill, which I regard the most important of the appropriation bills, have utterly failed to

agree. We have had three sittings; we have discussed the question in every possible phase of it, and we have found it impossible to come to any agreement. What might have been effected if the whole subject had been left to the conferees themselves, and to themselves alone, it is not necessary for me here to say; nor am I warranted in saying even that they could have come to a conclusion. But they each felt that there was a power behind them which would admit of no agreement. The disagreement between them is radical. As you know, Mr. Speaker, the House has demanded in, I may say, unmistakable terms free elections, untrammelled elections. The House has demanded also intelligent juries, and that jurors should not be subjected to test oaths while members of Congress coming from the Southern States and representing the majesty of the people upon this floor are not subjected to such oaths.

"There were about one hundred amendments to the legislative, executive, and judicial appropriation bill. We were enabled to agree in regard to most of these amendments. We did not agree to the salaries of the officers and employees of the Senate and House of Representatives. I believe it is but candid to say, however, that if we could have agreed upon the other points we might have agreed upon that.

"Mr. Speaker, the deliberate action of this House in attaching the repealing clause to the legislative, executive, and judicial appropriation bill of certain sections of the Revised Statutes has been respected and firmly maintained by the majority members of the House conferees. Upon so grave a question, one not measured by a mere appropriation of money, but involving the rights and liberties of American citizens, the majority of the House conferees did not hesitate a moment to resolutely stand by the injunctions and carry out the action of the body which created our functions. Whatever individual opinions of mere policy in the beginning I or any other Representative may have entertained, and upon which it is usual to exercise the broadest latitude and the most liberal discretion in conference, here is a question involving the most sacred rights and privileges of the citizen, around which this House has thrown the ægis of its protection, and over which this committee has been intrusted a special guardianship, and one which they had no disposition to disregard.

"The committee could not agree upon that feature of the bill which proposes to repeal the test oath now applied to Federal jurors. The importance of selecting juries from among the most intelligent of the people is too plain to admit of argument. The rights of property, the well-being of society, and the safety of the best interests of the State require the abrogation of a law which drives intelligence from the jury-box and installs it with ignorance and prejudice. What public or private

harm can result from the repeal of such a law is to my mind inexplicable. Without its repeal the substantial ends of justice will continue to be defeated, and the sanctity of the verdicts and judgments of juries and of courts will sink into ridicule and contempt. Surely, any law which becomes contemptible in its execution and irritates rather than appeases and assuages popular sentiment is radically wrong and ought to be repealed.

"The conference committee were equally unfortunate in not agreeing upon the provisions of the bill which repeal the laws authorizing the appointment of supervisors and deputy marshals. So far as the supervisors are intended to supervise elections and see that a fair count is had, I have heard no complaint. These officers are selected from both political parties, and, if confined to simply supervising elections to prevent fraud, there is not any special objection. But, when these officers are used for police purposes—to make arrests and otherwise interfere with the rights of citizens—there is a vital and fundamental objection. There is no warrant in the Constitution for clothing supervisors with police powers; that power is lodged with the States. But, grant that the Constitution clothes them with police duties and powers, why should they, aided by an army of deputy marshals, turn upon that Constitution and rend it by defeating a fair election? That such has been the unvarying and oft-repeated result for years past is not seriously denied that I am aware of. These deputy marshals are invariably selected on account of their known partisanship and efficiency in manipulating and managing elections; they are appointed by the Administration on account of their facility and readiness to work for the attainment of party ends.

"Realizing that the language of the Constitution (Article I., section 4) only confers the power upon Congress to decide when, where, and how the elections of members of Congress may be held and conducted, but does not extend to the qualifications of voters except such as are made necessary under State constitutions to render a citizen eligible as an elector for members of the most numerous branch of the State Legislature, this House and the country feel that the system of laws which should protect the sanctity of the elective franchise may be and has been converted into an ingenious enginery to deny and even overthrow the purity of the ballot-box, which lies at the base of the very citadel of freedom. All agree that in America a free, unobstructed, and unintimidated ballot is fundamentally essential to free institutions, and any supervision which prevents its voluntary and unfettered exercise is at war with the spirit of the Constitution, no matter though its empty forms may be complied with.

"The practical effect of these laws has been to prevent fair elections, and arouse in the public mind the gravest apprehensions for that

purity and legality without which elective government becomes a simple mockery. If intimidation and the fear of arrest drive electors from the polls, or force them to vote against their will, in what does the plebiscit of France which elevated Napoleon to be the supreme ruler of that country differ from our boasted rights of suffrage? No more violent assault was ever made upon the freedom of the elective franchise in France during that period of simulated liberty to which I have just referred, when to have refused to support this mock hero of republicanism was equivalent to incarceration in the Bastille, than was made in the great city of New York and other places on the day of the election in November last, when thousands of American citizens were arrested and imprisoned with the sole view of preventing them from voting. That such acts of tyranny so utterly subversive of liberty may not be repeated, this House has taken its stand in the sacred name of freedom, and demands the repeal of the laws under the cover of which these wrongs were perpetrated.

"The right of the Representatives of the people to withhold supplies is as old as English liberty. History records numerous instances where the common feeling that the people were oppressed by laws that the lords would not consent to repeal by the ordinary methods of legislation obtained redress at last by refusing appropriations unless accompanied by relief measures.

"This is not an ordinary affirmative proposition which is here sought to be ingrafted upon this bill to be carried through by virtue of its momentum, but it is simply a relief measure, a repeal of a bad law. The system of laws so ingeniously blended to obstruct the free exercise of the elective franchise, and against which the majority in this House is now arrayed, grew out of the military ideas which have dominated the legislation of this country since the war. But the time has now come when these measures of injustice and inequality, so long and so patiently endured, must give way to the advancing and well-grounded sentiment of free elections in all the States of this Union, and the equal rights of all men at the ballot-box. As long as these relics of military domination remain upon the statute-book, just so long will the public mind continue to be agitated. As long as statutory contrivances continue to be used to defeat the popular will, so long will the people struggle to wipe them out. As long, too, as these measures encumber the statute-book, economic questions of administration will retire before their presence. For what matters any given line of policy if the people are denied the right of suffrage, or if the chosen Representatives of the people are ejected by arbitrary power from the places to which they have been elected? We therefore submit the general disagreement, and now relegate to the House the trust imposed by the expression of its judgment and action.

"Speaking for myself alone, it seems to me that the majority, having demanded the repeal of these iniquitous laws, have reached a point where retreat is impossible, and where it will be easier to go through than retrace their steps. Whatever responsibility attaches to either House or either party, or the individual members of each, either the one or the other, for the failure of these appropriation bills, the people will fix it where it belongs. That the majority of this House should be blamed for demanding the repeal of statutes which are unjust and unconstitutional, is hardly probable. Believing, therefore, that the repeal is justified by every consideration of fairness and right, the majority can well afford to submit this issue to the verdict of the people."

Mr. Durham of Kentucky: "I shall not detain the House more than a very few moments, and I certainly should not have said anything but for the fact that I have had to bear my share of responsibility in the difficulties of the situation that now surround not only this Congress but the whole of the people of the United States.

"Every member upon this floor, Mr. Speaker, knows what have been my ideas on the subject of putting general legislation upon appropriation bills. Anticipating a result of this kind, it is known to all that in the regular course of legislation a bill repealing all these laws was introduced by myself, referred to the proper committee of this House, and matured by that committee; and the gentleman from Wisconsin, General Bragg, and myself have prepared a report in the regular course of business of this House. That report is now in print. That report gives expression to my sincere and honest sentiments. I believe and have ever believed that the States, and the States alone, have a right to regulate their own elections, and that the Government of the United States has no right to interfere in any election or in any of the domestic affairs of any of the States unless the States prove themselves insufficient to preserve order and carry out and maintain the laws of the country.

"Whenever, Mr. Speaker, insurrection exists, whether it be at the ballot-box, at the polls, or at any other place, and the constituted authorities of that State are insufficient to quell insurrection, to secure every individual that right which is granted to him, not only by the constitution of his State, but the Constitution of the United States, then it may be proper for the Federal Government to interfere; but I do not believe such a state of case has existed anywhere, either North or South. I believe, Mr. Speaker, that these supervisors, these deputy marshals who are employed under the pretext of preserving order at the polls, have been more corrupting to the ballot-box and have thwarted the will of the American people more than would have been done had those officers never been created. I believe it is one of the cardinal principles of the De-

mocratic party—certainly it is one with myself—that the States must regulate these matters for themselves, and, believing so, I had no hesitation in saying from the beginning that all these obnoxious statutes should be wiped and blotted from the statute-book.

"I would have preferred, Mr. Speaker, that these matters should have come in the regular course of legislation, as I said a moment ago; but if that could not be accomplished, then, when it was put on this appropriation bill by the majority of the House, I felt that, as the organ, in part, of the House, I was in honor bound to stand by the instructions given to me; and I should have stood by those instructions until the hands on that dial pointed to the hour of twelve. But if the session had continued one month longer I would have obeyed them. Unless the House had directed me to surrender, I never would have surrendered, but would have stood by the action of the House.

"Only one or two words more. I believe local self-government is the cardinal principle involved in State sovereignty. I believe that it lies at the foundation of all free institutions. Believing, as I said a moment ago, that all these laws in regard to supervisors and marshals corrupt the ballot-box rather than preserve its purity, I am glad that, as I perhaps shall never stand in the American Congress again, that as I shall within a few minutes step out of the position which I have occupied here for the last six years, in the last declaration I shall probably ever utter in the American Congress, the opportunity is presented to me to raise my voice for free elections, free ballots, for State rights, and for unrestricted local self-government."

Mr. Hale of Maine: "Mr. Speaker, I do not think there is a sane man in the country who wants an extra session of Congress. The embarrassments that will follow from it are grave and many. The inflammation of political issues and discussions, the possible conflict between the executive and legislative branches of the Government, above all, the great financial and currency questions, touching nigh the business interests of all the people, which will be disturbed and kept in an uncertain condition, altogether nothing more calamitous could befall the country.

"This side of the House has sat here every day since this session began trying to urge forward the needed legislative business. We have been willing to pass appropriation bills, pure and simple, and to adjourn and let the country have the peace which it needs. The other side of the House has, without need, forced political amendments upon appropriation bills, and the responsibility is theirs. I have faith to believe that there are many moderate, prudent, and patriotic men on the other side, who dread the result of this, who are not satisfied with it. But the spectacle presented is not a rare one in history, where

the revolutionary and reactionary elements in a great party, though in a minority as to numbers, have obtained such control of it as to drive the entire force of the party toward revolution. If the people of the North do not appreciate the situation now, they never will appreciate it. If the people of the whole country do not appreciate it now, they never will appreciate it.

"The gentleman from Kentucky [Mr. Durham] has said that it was necessary to put upon the appropriation bills this political legislation. Sir, my comment upon that statement is to say that I hold in my hand a bill passed seventy-four days ago by a Republican Senate repealing the test oath so much insisted on by this Democratic House. That bill is very brief and in these words:

"Be it enacted, etc., That section 820 of the Revised Statutes of the United States be, and the same is hereby, repealed, saving the application of the same to all offenses committed prior to April 20, 1871, and all proceedings for prosecution of offenses pending on the said 20th day of April, 1871.

"Passed the Senate, December 20, 1878.

"Attest: GEO. C. GORHAM, Secretary.

"By WM. E. SPENCER, Chief Clerk.

"Seventy-four days have gone by since that bill came to us from the Senate, and no attempt has been made to take it from the Speaker's table and pass it, so as to give the gentleman from Kentucky [Mr. Durham] and his associates 'an honest and an intelligent jury.' Instead of that, a Democratic caucus has taken this matter into its own hands, has ignored a proper bill passed by a Republican Senate, and has demanded that this and other measures, which they declare to be of vital importance, shall be forced through Congress upon appropriation bills. It has attempted to array this House against a coördinate branch of the National Legislature, the Senate of the United States, as I believe with the intention on the part of some men belonging to the reactionary and revolutionary portion of that party to precipitate an extra session of Congress. That is what I have charged from the beginning, and in proof of the correctness of my assertion is this bill passed by a Republican Senate, but which this Democratic House has persistently refused even to take up and consider."

Mr. Southard of Ohio: "As the mover of a part of these amendments, I desire to say that it was with the highest, the purest, and the most patriotic motives. The positions taken are incontestably right, and will be maintained until these odious laws cease to exist. Laws prescribing test oaths for jurors and those creating marshals and supervisors of elections, clothed with the arbitrary power of arrest without warrant, should cease to exist in this free country, and the polling-places of elections should be free from the presence of the military. As it has been in England since the dawn of her civilization, so shall it be in America. The Democratic party have consid-

erately and firmly planted themselves upon these truths. They now appeal to the people of these United States, confidently trusting in their patriotism, their intelligence, and their integrity."

Mr. Atkins: "I believe the gentleman from Maine [Mr. Hale] will remember that there was a motion made to suspend the rules and pass these very measures, and the other side of the House voted against it and defeated it."

Mr. Manning: "Yes, Mr. Speaker, three weeks ago I made a motion to suspend the rules and put upon its passage a bill repealing the test oath and certain election laws. One hundred and twenty-six Democrats voted for the passage of the bill and one hundred and thirteen Republicans voted against it; the Democrats standing solidly for it, and the Republicans solidly against it."

Mr. Hale: "Bring out the record; let us see the record."

Mr. Manning: "It will be seen by reference to the 'Record' of the 11th ultimo, page 20, that I introduced the following bill in the due course of business:

"Be it enacted, etc., That sections 820 and 821 of the Revised Statutes of the United States, and also the sections from 2011 to 2031, both inclusive, and all other sections authorizing the appointment and payment of supervisors of elections and special deputy marshals to aid and assist said supervisors, be, and the same are hereby, repealed.

"All the sections referred to were read to the House. It was my purpose in introducing it to afford a full vindication to the Democratic party in the event of the present threatened emergency that it could not be truthfully said we were undertaking to coerce the repeal of these statutes until we had exhausted all ordinary means. So important a fact so recently transpiring could hardly have been forgotten by either the gentleman from Ohio or the gentleman from Maine, as they were both present and voted against the bill."

The Speaker: "Representatives, in a moment this Congress will expire. Its acts, whether for weal or woe, are indelibly inscribed upon the pages of history. In this Hall, party has been arrayed against party and interest against interest in fierce and bitter struggle; but it is due to truth to say that on every side there has been honest ambition to win popular esteem by seeking, each in his own way and according to his best judgment, the general welfare. Whether or not the desired end of the public good has been successfully attained is for time to prove; but that such has been the aim of both sides can not justly be disputed.

"Genuine concord between all the States and the citizens thereof is the corner-stone of our national prosperity. What prostrates or elevates one at the expense of the other inevitably inures to the ultimate injury of all. Although each Representative has championed the wishes of his immediate constituency with earnestness and energy, yet during the whole

period of the existence of this House there has not been a single breach of legislative decorum. That noble respect born of generous rivalry in a common good cause has softened all asperities.

"I feel that mere words are inadequate to thank fully this House for its resolution of approval of the manner in which I have discharged the duties of Speaker, always responsible and onerous, and often most delicate and difficult. I have done my best.

"Long service here has taught me that hate or vengeance has never raised any cause to enduring honor, while, on the contrary, justice and mutual regard have often given the weaker side an easy victory. With two great parties dividing the people, each holding an important share in government, with strict accountability on the part of public servants and vigilant eyes watching all, with reviving business and restored confidence, may we not look hopefully to the early dawn of a new era of increased prosperity and greater happiness for the country? Such is my fervent prayer.

"To each and every Representative here I desire to tender my heartfelt acknowledgment for the kindly forbearance extended to me as Presiding Officer of this House, and to say that I shall ever gratefully cherish the honor of which I have been the recipient.

"With the expression of the wish that you all may return safely and in health to your homes, it only remains for me to declare that, in accordance with the Constitution of the United States, this House stands adjourned without day."

In the Senate, on March 3d, the above conclusions of the conference committees were submitted by Mr. Windom of Minnesota, who said: "Mr. President, the conference would have been able to agree on all the items of appropriation in the bill; the point of disagreement was the legislative provisions, those (to state them very briefly) relating to the test oath of jurors and the election laws or the appointment of deputy marshals and supervisors. With reference to these legislative propositions contained in the bill, the conference was unable to agree, the conferees on the part of the House taking the position that the only condition upon which an agreement could be had was that the conferees on the part of the Senate should recede from all of its disagreeing votes on those points. The conferees on the part of the Senate could not accept those conditions.

"I will say, with reference to the condition of the public business so far as the appropriation bills are concerned, that all the bills have now been agreed to and passed by both Houses except the legislative bill, now pending, and the army bill."

Mr. Beck of Kentucky: "Mr. President, I was one of the conferees on the legislative, executive, and judicial appropriation bill when two earnest efforts were made to agree, but

we found it impossible. The Senator from Minnesota has stated correctly that, upon all questions pertaining to the appropriations, the great probability is that we could have agreed, though I believe we did not finally agree even as to them. He is also correct in stating that the House conferees insisted upon retaining that portion of the bill to which he has alluded, but it was also equally certain that the majority of the Senate conferees with equal pertinacity insisted upon the Senate amendments, and maintained that each and all the provisions inserted by the House should be stricken out. There was no attempt at any division of the subjects, and no proposition looking to any modification was considered. Not desiring to revive any political animosities or any discussion at this late hour, I will only state very briefly what seemed to be the condition of things: the House insisted that the armed soldiers of the United States should not be allowed to approach the polls for the mere purpose of keeping the peace, that there should be an honest jury obtained in the courts of the United States in all cases where the rights and liberties of citizens were involved, and that the States should be allowed to conduct their own elections in their own way, free from all Federal interference, and the Democratic conferees on the part of the House seemed determined that unless those rights were secured to the people in the bills sent to the Senate they would refuse, under their constitutional right to make appropriations, to carry on the Government if the dominant majority in the Senate insisted upon the maintenance of these laws and refused to consent to their repeal.

"They seemed further to agree, and I agreed with them, that if an extra session must be called, much as it is to be regretted, the very moment it is called the committees of both Houses would be organized and separate bills would be framed and passed as soon as possible asking the President of the United States to agree with the representatives of the States and people in repealing all laws that authorize the soldiers of the Republic to be sent by any authority whatever to the polls at State elections under the pretense of keeping the peace, and in repealing all laws that prevent men who are by intelligence and interest in the public welfare fit and competent to do justice between citizens and between the United States and citizens in the jury-box from exercising that right, thus depriving the courts the benefit of fair jurors, and they will promptly pass another bill declaring that the United States shall not, either through supervisors, marshals, or deputy marshals, interfere with the States in conducting the elections held within the States. We insist that those matters pertain solely to the States and are part of their absolute right, and that they are perfectly competent to attend to them fairly and honestly. When these three laws are submitted to the President for his approval, as they will be, and are approved

by him, as they ought to be, the next Congress will in my opinion be ready to pass every appropriation bill, just as it is now, adjourn, and go home without attempting before next December to perfect any further legislation."

The Presiding Officer: "The question is on the motion of the Senator from Ohio [Mr. Thurman] that the Senate recede from its amendment to the legislative, executive, and judicial appropriation bill which has been indicated."

The Secretary proceeded to call the roll, and the result was announced as follows:

YEAS—Bailey, Barnum, Bayard, Beck, Butler, Cockrell, Coke, Davis of West Virginia, Dennis, Eaton, Garland, Gordon, Grover, Harris, Hereford, Hill, Kernan, Lamar, McDonald, McPherson, Maxey, Morgan, Ransom, Saulsbury, Thurman, Whyte—26.

NAYS—Allison, Anthony, Blaine, Booth, Bruce, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Chandler, Conkling, Conover, Dorsey, Edmunds, Ferry, Hamlin, Jones of Nevada, Kellogg, Kirkwood, McMillan, Matthews, Oglesby, Paddock, Paterson, Plumb, Rollins, Saunders, Spencer, Teller, Wadleigh, Windom—30.

ABSENT—Chaffee, Davis of Illinois, Dawes, Eustis, Hoar, Howe, Ingalls, Johnston, Jones of Florida, McCreery, Merrimon, Mitchell, Morrill, Randolph, Sargent, Sharon, Shields, Voorhees, Wallace, Withers—20.

So the Senate refused to recede.

The Presiding Officer. "The question recurs on the motion of the Senator from Minnesota [Mr. Windom] that the Senate insist upon its amendments," which was decided in the affirmative, and the bill failed to become a law.

EXTRA SESSION.

On March 4th the President issued the following proclamation as a summons for an extra session of Congress:

Whereas the final adjournment of the Forty-Fifth Congress without making the usual and necessary appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1880, and without making the usual and necessary appropriations for the support of the Army for the same fiscal year, presents an extraordinary occasion, requiring the President to exercise the power vested in him by the Constitution to convene the Houses of Congress in anticipation of the day fixed by law for their next meeting:

Now, therefore, I, Rutherford B. Hayes, President of the United States, do, by virtue of the power to this end in me vested by the Constitution, convene both Houses of Congress to assemble at their respective Chambers at twelve o'clock noon on Tuesday the 15th day of March instant, then and there to consider and determine such measures as, in their wisdom, their duty and the welfare of the people may seem to demand.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this 4th day of March, in the year of our Lord 1879, and of the Independence of the United States of America the one hundred and third.

[L. S.]

R. B. HAYES.

By the President:

WM. M. EVARTS, Secretary of State.

This being the first session of the Forty-sixth Congress, the Vice-President took the chair in the Senate, and in the House Samuel J. Randall of Pennsylvania was chosen Speaker. He received 143 votes, James A. Garfield 125, Hendrick B. Wright 13, and William D. Kelley 1.

After the organization the following message from the President to Congress was communicated:

Fellow Citizens of the Senate and House of Representatives:

The failure of the last Congress to make the requisite appropriations for legislative and judicial purposes, for the expenses of the several Executive Departments of the Government, and for the support of the Army, has made it necessary to call a special session of the Forty-sixth Congress.

The estimates of the appropriations needed, which were sent to Congress by the Secretary of the Treasury at the opening of the last session, are renewed, and are herewith transmitted to both the Senate and the House of Representatives.

Regretting the existence of the emergency which requires a special session of Congress at a time when it is the general judgment of the country that the public welfare will be best promoted by permanency in our legislation and by peace and rest, I commend these few necessary measures to your considerate attention.

RUTHERFORD B. HAYES.

WASHINGTON, March 19, 1879.

Mr. Sparks of Illinois said: "I would say that this is substantially the bill as it passed the House of Representatives of the Forty-fifth Congress at its last session, with the clauses stricken out in relation to the reorganization of the army. It is also substantially the bill as passed by the Senate with the insertion of the clauses repealing the two provisions of the statute relating to the use of the troops at the polls. It is really the bill which was informally agreed upon in the conference committee of the two Houses of the last Congress, excepting the portion relating to the repeal of the provisions of the statutes allowing soldiers at the polls. I now move that the House resolve itself into Committee of the Whole on the state of the Union for the purpose of considering the army appropriation bill."

The motion was agreed to.

Mr. Sparks: "I ask that the Clerk now read section 6."

The Clerk read section 6, as follows:

SECTION 6. That section 2002 of the Revised Statutes be amended so as to read as follows:

"No military or naval officer, or other person engaged in the civil, military, or naval service of the United States, shall order, bring, keep, or have under his authority or control any troops or armed men at the place where any general or special election is held in any State, unless it be necessary to repel the armed enemies of the United States."

And that section 5528 of the Revised Statutes be amended so as to read as follows:

"Every officer of the army or navy, or other person in the civil, military, or naval service of the United States, who orders, brings, keeps, or has under his authority or control any troops or armed men at any place where a general or special election is held in any State, unless such force be necessary to repel armed enemies of the United States, shall be fined not more than \$5,000 and suffer imprisonment at hard labor not less than three months nor more than five years."

Mr. Stephens of Georgia said: "One word upon the merits of this question, and that is in regard to the history of the use of the army in civil administration. I will state it that way.

"There seems to be some disagreement and lack of information among members. The calling out of troops to suppress insurrection and violence, referred to by the gentleman from Kentucky [Mr. Carlisle], is a very different provision from the use of the troops in civil administration, totally different. The President, first, by the act of 1795, was authorized, in cases set forth by the Constitution, to call out, not the militia of the State, no; but to put down an insurrection against a State, to preserve the integrity of the State, guaranteeing a republican government under the Constitution, he was authorized to call out the militia of adjoining States. That is the law of 1795. It is not to be presumed that the governor would not call out the militia in his own State, and the militia of adjoining States was to be called out when it was necessary to put down an insurrection in a State. That is the legitimate use of the military power of the country under the act of 1795.

"Now it was not until 1807 that the organ-

In the House, on March 27th, a bill making appropriations for the support of the army for the fiscal year ending June 30, 1880, and for other purposes, was introduced.

ized army—the military force and the naval force—was authorized to be called out for a like purpose, to protect the States against domestic violence and insurrection. That law also went further, or some subsequent law—I have not, from indisposition, been able to look up these laws as I expected to do last night, but the provision of the law for the use of the troops in civil cases is entirely a different matter. It is where provision is made for the execution of a mandate or judgment of a court. The generals are not to command the troops in such cases, but the marshals. The civil officers, as the sheriffs in our States, were authorized to call for the use of the troops, and the President was authorized to furnish them to the Legislature or to the governor when the Legislature was not in session or the marshals for the execution of the mandate of a court. That is what I call the execution of process in civil administration of the law. That is a very different thing from the other—the use of troops to suppress insurrection and domestic violence in a State upon the call of a Legislature or the governor as provided by the Constitution.

“Wherever the marshal calls for troops, as was decided by Attorney-General Cushing, it was as a *posse*, not as the army. The United States troops were called upon and they were furnished as a *posse comitatus* to execute the law. They were under the command, not of the United States military officers, but under the command of the marshal who asked for them.

“Now, Mr. Chairman, upon the subject of the use of the troops to keep the peace at elections I have only to repeat what was so well and so often said yesterday. Such a provision never had existence on the statute-book of the United States until after 1860, after the war. This act of 1865 which it is proposed to modify got into existence rather strangely. The law set out by stating that no officer, etc., should order troops, or have them at any election in any State, except for certain purposes, mainly to keep the peace at the polls. It was a negative affirmative. That is, it thus legalized the use of the army. That is the way in which it appeared upon the statute-book. The danger of such a law, I suppose, in this age and in the enlightened condition of public sentiment the world over, need not be argued. The whole of this amendment is simply this: all the new legislation it proposes, or change of legislation, is to repeal that clause which negatively affirms that the troops might be called out and ordered by military commanders to attend at elections under pretense of keeping the peace. That is all of it. The whole thing might have been embodied simply in the expression that all laws that authorize the use of troops to preserve peace at elections should be repealed. That would accomplish the whole object. The use of the other words in the act of 1865 amounts to nothing. The whole of that sec-

tion was to cover that one thing, to preserve the peace at the polls.

“Now, Mr. Chairman, if there is a man on this floor who is in favor of peaceable elections and order throughout the length and breadth of this country, I profess to be equally strong with him in that wish and desire. Purity of elections is the greatest safeguard of liberty. I am for law and order. I have witnessed the presence of soldiers at the polls. I have seen no good from their presence. We had gotten along for three quarters of a century without it. I think the public sentiment is as much against the use of the troops to preserve the peace North as it is South. That the Government of the United States has got a right to control by law, alter, change, and prescribe the rules and manner of holding the election of members of Congress, I am not going to discuss here. It is not pertinent to this question. But we have got along well for many years without this provision; and I think that the future peace and harmony of the whole country, law, order, and prosperity, will be greatly promoted by hereafter adhering to the principles and practice and methods of the fathers of the Republic from the beginning down for more than three quarters of a century. Let the relics and vestiges of the war be buried with the things of the past. I do insist that there will be no harm done, no unsettling of our institutions, no revolution in our matchless system of government, by the repeal of this law. It seems to me, therefore, this amendment being germane, regulating the use and the control of the army, and being also within the purview of a liberal construction of the rule, it is admissible on this bill.

“Now, as to the use of the army, I wish in connection with some remarks which were offered yesterday on both sides upon this subject to state this: Congress has got a right to raise armies. Congress has got a right to designate the use to which the forces, naval or military, may be applied. But the President's right to control and direct the movements of those forces from one part of the country to the other, enlarging the declared function of Congress, is a clear executive right. We have no power to interfere with it, except by impeachment for the abuse of power conferred. But we can say that he shall not use the forces for any particular purposes. We have a right to say this—and I do not think the present Executive would desire it to be otherwise—we have a right to say the forces, land and naval, of the United States shall not be used for the purpose of controlling elections in the States, but that the elections shall be free and fair according to the laws of the land, State and Federal; and if any man violates the law, if there has been any violence at the polls, and a member of Congress has not been duly returned, we are to judge of it here on this floor, and we can set the return aside. Let the land and naval forces of our country be devoted to the

objects for which they were raised by Congress. Let the army protect the frontier. Let the navy be afloat on the seas protecting our flag and our commerce everywhere. Let each branch of these forces be kept in that sphere they were created for, and in which in past years they have won such honor and glory to our common country. Let them be performing their duties, and let the civil administration of the Government go on in its own channel. Let members of Congress be returned as heretofore; and if any man has been deprived of his rights to his seat here, then let this high constitutional court, the House of Representatives, decide that question, and not submit it to the decision of bayonets instead of ballots."

Mr. Chalmers of Mississippi: "I desire to say that the Democratic party introduced this law just as it will stand when we make this modification of it. After it was introduced in that form, Mr. Pomeroy, a Senator from Kansas, moved to amend by adding the words 'or to keep the peace at the polls.'

"What did Mr. Powell then say? He was a Kentuckian, whose State had been overrun by armed troops at the polls. He said: 'I object to that, for it will destroy the effect of the bill. The State authorities can keep the peace at the polls.' Upon that question every Democrat voted against putting that amendment upon the bill, and every Republican voted in favor of it. The Democratic party then stood as it stands to-day. After that amendment had been voted upon the bill, the Senator from Kentucky, having failed to secure the law as he introduced it, knowing that his State was ground down by the bayonet at the polls, agreed to accept the law even with that amendment upon it, for it would restrict the use of the troops even as amended. And the Democratic party of the House voted for it for the same reason."

Mr. White of Pennsylvania: "The gentleman from Mississippi has given correctly a part of the history of the passage of the act. It is quite true that Hon. Lazarus Powell introduced the bill originally and made an elaborate speech upon it; and the question was exhaustively discussed in the Senate of the United States. When the question arose upon the passage of the bill, an honorable gentleman, then a Senator from Kansas, moved to amend by adding the words 'to keep the peace at the polls.' Those are the objectionable words now—the bone of contention in this controversy. That motion was the subject of some colloquial debate. Incidentally the misuse of the *posse comitatus* power of marshals in the border-raid troubles in Kansas was brought into the discussion by Mr. Pomeroy. After he had presented the necessity of keeping peace at the polls in order to secure the right of suffrage, the amendment was incorporated upon the bill of Senator Powell. Let me call the attention of the House and the

country to the fact that a most distinguished lawyer, then a Senator, now a private citizen, a man whom the gentleman from Illinois [Mr. Sparks] will recognize as the Magnus Apollo of the Illinois bar, supported that amendment. I allude to Hon. Lyman Trumbull."

Mr. Sparks: "He was then a Republican, was he not?"

Mr. White: "Certainly he was; but he was a good lawyer, I apprehend, then, as he is now. He sanctioned this amendment. Hon. Mr. McDougall then moved to postpone the bill indefinitely. Mr. Powell said, 'No, no'; and upon his request the vote was taken on the passage of the bill, and it was passed. Hon. Mr. Harlan, then a Senator, entered a motion to reconsider, which was subsequently debated; and Hon. Reverdy Johnson (as gentlemen will find if they will follow the debates) made the point, in recognition of the virtue of this amendment, that it was competent to give the President of the United States this power for the purpose of enforcing peace at the polls. The yeas and nays were again called upon the passage of the bill in the Senate, and every Democrat voted for it.

"The bill came to this House and was referred to the Committee on the Judiciary. It was reported to the House, and the honorable gentleman, then a conspicuous member of this body as now, voted for it without making any complaint or criticism about this clause. So did my honorable colleague [Mr. Coffroth], who now represents on this floor a Republican district, and who, I trust, will be consistent with his record in the final vote on this question. So did every other Democrat in this House.

"The point we now make is that the Democratic party having sanctioned the passage of this bill containing this clause 'to keep the peace at the polls,' it is little short of revolutionary for them now to come in and undertake to repeal this legislation upon an appropriation bill. This is the point I make, and the point I for one am willing to stand upon before the country."

Mr. Chalmers: "One word to the gentleman from Pennsylvania [Mr. White]. He said that I had not given a full history of this law; that Reverdy Johnson, the great lawyer of Maryland, had endorsed it in the very words in which it now stands upon the statute-book, and that Mr. Johnson as Senator opposed the reconsideration when it was asked for in the Senate.

"Mr. Chairman, I bow in humble reverence before the name and the memory of Reverdy Johnson. I can never do too much honor to the Spartan firmness, to the more than Roman dignity with which he and Powell and Saubury and the little band of Democrats that stood around them then, battled for the Constitution, when an arrogant and intolerant majority banished men from the country for freedom of speech, when they were dragging mem-

bers from the halls of Congress, and when they were converting a constitutional Union into a military despotism. The gentleman from Pennsylvania has made the charge. Let Reverdy Johnson answer for himself, and, as his words come back to us from the silent echoes of the tomb, let his memory be for ever vindicated. Speaking of these laws, he said: 'The amendments made and which now form a part of this bill go further than I think we have a right to go, but in the name of freedom I implore the Senate not to go a step further. . . . Oh save us! save us in the name of freedom; save us in regard to the sacred memory of our ancestors; save us from the rule of military despotism.' Sir, I can now only add to that, may God in his mercy save us from any more political exigencies in which it may seem proper to gentlemen on this floor to misrepresent the dead and blacken the names of such men as Lazarus Powell and Reverdy Johnson by charging that they were ever the advocates of using the United States army to keep the peace at the polls!

"The gentleman from Ohio, and many others on his side of the House, in the last session, admitted that it was repugnant to the every idea of Anglo-Saxon liberty that troops should be used at the polls. He indicated then a willingness that these laws, as he expressed it, might be 'mustered out of service.' Now he has changed his front. His excuse for this change is twofold. First, he says that the Democracy of the Forty-fifth Congress showed no disposition to compromise. Upon this point he is flatly met by the gentleman from Tennessee [Mr. Atkins], chairman of the House conference committee, who states that he was not only willing but offered to compromise, but that no compromise could be made unless he yielded everything which the Republican Senate seriously contended for.

"But the second and the great excuse of the gentleman was that the Democratic party is inaugurating a revolutionary method of legislation by attempting to coerce a coördinate branch of the Government by placing legislation upon an appropriation bill, and this he denounces as revolutionary. If the mere fact that legislation is found upon an appropriation bill be revolutionary, then the history of Republican legislation shows revolution after revolution that has been accomplished by the Republicans during its period of power, and one of these bloodless revolutions has been accomplished by the gentleman from Ohio himself, who, when he was chairman of the Committee on Appropriations, tacked on an appropriation bill one of these objectionable election laws. If it be revolutionary to put upon an appropriation bill a measure which perchance the President may not approve, then the freedom of this House might as well be surrendered, we might as well permit the President to dictate to us what kind of legislation is pleasing to his most excellent highness. If, again, it is rev-

olution to put upon an appropriation bill a measure which we have reason to believe or know will not meet the approval of the President, then a Republican Congress has set that example in its most offensive form. If it be coercion to do what we now propose, then a Republican House in 1856 undertook to coerce both a Democratic Senate and a Democratic President; and in 1867 they absolutely did coerce Andrew Johnson into a surrender of a portion of his constitutional prerogatives. And all this was done upon an army appropriation bill. Yet the gentleman from Ohio, in a style that the elder Booth might have envied, has attempted to startle the country with the declaration that the Democratic party is entering upon a new and revolutionary method of legislation. The coercion of Andrew Johnson was one of the most iniquitous acts of usurpation ever perpetrated by the Republican party in the long list of its violations of constitutional rights. Andrew Johnson was a President elected by themselves, and yet, because he refused at their dictation to continue the violations of the Constitution which during a state of war were deemed necessary to save the Union, they pursued him with the remorseless fury of hyenas. In the act passed in March, 1867, they not only took from him his constitutional power to command the army, but, as has been well said by my colleague from Mississippi [Mr. Muldrow], they at the same time undertook to deprive ten sovereign States of their constitutional power to protect themselves; they disbanded their militia, and forbade its reorganization without the consent of Congress. Every man who voted for that iniquitous measure was a Republican. But, as I have just said to gentlemen on the other side, there were some Republicans so shocked at this outrageous violation of constitutional right that they refused to vote with the majority. Andrew Johnson on that trying occasion set an example to his Republican friends which they would do well to remember now. Rather than see the wheels of this Government stopped, he signed that bill; but he signed it under protest, and thus made his appeal to the country.

"If it is deemed necessary to make another appeal to the people on the question now at issue, the Republican President can make his choice. He can either follow the example of Andrew Johnson, or he can, as the gentleman from Ohio said, destroy this Government without firing a single hostile gun. It is for him, not for us, to say which course he will choose.

"Now, Mr. Chairman, legislation upon appropriation bills has been denounced by the Democratic party in the past, and even now we admit that it should never be resorted to except in the most extreme cases like this, where the will of the people has time after time been defeated by factious opposition, and where the resolutions of a Republican caucus that no legislation except appropriation bills

shall be acted on, warn us that our act can not be passed in any other mode."

Mr. Hurd: "Mr. Chairman, by the seventh section of the first article of the Constitution it is provided that 'All bills for raising revenue shall originate in the House of Representatives.' In the Forty-fifth Congress the House of Representatives, in the exercise of its unquestioned power, passed the army bill and the legislative bill, appropriating nearly fifty millions of money for the uses of the Government. To those bills they added certain provisions germane to their subject-matter and in the interest of economy, which repealed provisions of the existing statutes, most of which had been incorporated into the law of the land by being in the first instance attached to appropriation bills. These bills, when sent to the Senate, were amended, as that body had the undoubted power to do, by striking out these provisions to which I have referred. They went to committees of conference. Not having been a member of one of the committees of conference, nor familiar with the necessities of legislation at that time pending, I am unable to say what the propositions for settlement and adjustment of the differences between the two Houses were. I have heard it said upon the floor of this House that certain distinguished representatives of the Republican party were willing to concede very much to the wishes of the House, only insisting that there should be one amendment left out. These gentlemen had not power to speak for the body which differed with this House; and I do not know that any proposition was made by the Senate of the United States for a compromise. I do know that as a result of the disagreement of the committees of conference an extra session was called. I will not now discuss the question as to who is to be blamed for the extra session, excepting in the general discussion of the propositions that are involved in this debate. If the House were right in insisting upon these provisions, then the Senate was wrong in compelling an extra session. If the Senate were right in refusing to accept the propositions of the House, then the House was wrong; and I propose, in the few remarks that I shall submit to the consideration of this body to-day, to attempt to show that the House was right in every proposition which it insisted upon in the Forty-fifth Congress and which it insists upon now in the legislation of the Forty-sixth.

"Nor shall I discuss the method by which these amendments or provisions have been attempted to be made parts of the appropriation bills. If anything has been settled by the legislation of the last quarter of a century, it is that even general legislation may be tacked to appropriation bills; and certainly no man at any time in the history of this Government has disputed the proposition that measures in the interest of economy, propositions relating to the revenue, might be incorporated into bills when they were originated by the House under the

authority of the section to which I have referred. Who was right? Who is right now? I say, Mr. Chairman, that the House of Representatives was right in insisting that these bills should be repealed. I shall not speak to-day of the test-oath bill. I shall speak only of the two others which relate to elections, because they both are governed by the same principles and both must be settled by the same constitutional doctrine.

"The House of Representatives insisted that the law should be amended so as to strike out that part which authorized the use of troops at the polls; that the law should be amended so that supervisors of elections appointed by Federal authority should no longer possess the power they now have; and that there should be a repeal of all the statutes which conferred upon officers of the United States the power to interfere with or regulate State elections. The House was right and it is right in the demand it makes now, because, first, these provisions are unconstitutional. They interfere with the right of suffrage; they attempt the control of voting in a State in the Union where by the laws of the State the voting power alone is conferred. Have gentlemen who have considered this question read recently section 2, article 1, of the Constitution of the United States, which declares that 'The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.' It is the most numerous branch of the State Legislature that determines the qualifications of electors and not the Constitution of the United States. There is no such thing as the right of suffrage for a citizen of the United States. The right of suffrage is possessed and enjoyed by a citizen of a State under the laws created by the State expressly recognized by the fundamental law of the land.

"And if any doubt upon this subject had ever been entertained, I ask you to refer to the decision of the Supreme Court of the United States recently made, in which every doubt is taken away: 'The power of Congress'—I read from 2 Otto, page 215, the syllabus of the case—'The power of Congress to legislate at all upon the subject of voting at State elections rests upon this amendment, and can be exercised by providing a punishment only when the wrongful refusal to receive the vote of a qualified elector at such elections is because of his color, race, or previous condition of servitude.' The highest judicial tribunal of the United States has determined that there is no power in the Congress of the United States to interfere with voting at the State elections excepting in the single instance where the power was conferred upon the General Government by the fifteenth amendment to the Constitution.

"Now, on what theory, I ask you, does this

legislation of which I speak rest? On what theory does the United States Government send troops to the polls at a State election? On what theory do supervisors of elections stand at the polls to supervise and interfere with State elections? Only upon this: that the right of suffrage is a right guaranteed by the Constitution of the United States, in the exercise of which it is the business of Congress to protect the citizen. But, as I have shown you by the express phraseology of the Constitution and by the decision of the Supreme Court of the United States, no such right does exist to be protected by the Constitution of the United States and by the legislation of Congress. And, therefore, is not the conclusion inevitable and irresistible that any legislation upon the subject is unconstitutional?

"I know that gentlemen undertake to sustain the constitutionality of this legislation by referring to a provision of the Constitution, article 1, section 4: 'The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.' The manifest and true construction of this provision is that in the event of the people of a State failing to make provision on these subjects, Congress in the exercise of its discretion may make regulations on the subject, and that when States make regulations Congress may alter them as to 'the time, places, and manner of holding elections.'

"Who are the voters? They are determined by section 2, which I have already read. They are the persons who can vote under the law of a State and possess the qualifications requisite as voters of the most numerous branch of the State Legislature. The time of holding the election, the place of holding the election, the manner of holding the election, may be provided by Congress in the cases which I have suggested, but when the time and places of holding the elections are fixed, what power remains?

"The manner of voting may be determined, whether it is to be *viva voce* or by ballot, as Congress may decide, and this view is abundantly justified by the debates in the constitutional convention, and in the various conventions of the States which ratified the Constitution originally, and the speech of Mr. Iredell, of the State of North Carolina, is unanswerable, who said that it never was intended or designed to give the power over the elections in the States to Congress, only the regulation of the time, places, and methods of voting. It has been contended in the progress of this argument that the power over this subject may be derived from that provision of the Constitution which authorizes Congress to guarantee to every State a republican form of government, and to send troops to suppress domestic violence on the call of the executive in the ab-

sence of the Legislature, or of the Legislature of a State.

"There may be such domestic violence at the polls that the Governor of the State, if the Legislature be not in session, would be bound to call upon the President of the United States for assistance, and in such cases as that the power of the Government can be properly exercised; but the ground on which the power is exercised is, that it is at the request of the authorities of the State. The troops of the United States have no business at the polls except for the suppression of violence or for repelling invasion at the request of the State authorities, the State authorities having first indicated to the General Government the desire of assistance. Is not this very clause to which I have referred an additional argument in favor of the position that this law is unconstitutional? The troops of the United States can only be used to suppress domestic violence or repel foreign invasion, and here is a law which proposes to send troops to the polls at any time, at the order of anybody, without any request of the State authorities; and it is the plainest violation of that provision of the Constitution which directs the only way in which the troops of the United States shall be sent to a State. The Constitution thereby prohibited any other way of sending troops to a State. I say, then, that these provisions should be repealed because they are in direct conflict with the fundamental law of the country and in the plainest violation of an expressed adjudication of the highest judicial tribunal of the land.

"In the second place, these laws should be repealed because they introduce a dangerous method and practice into the conducting of elections and the administration of justice. They authorize men to interfere with the election of the local officers of the State. In the State of Ohio, and I believe in most of the States of the Union, the law is that all officers shall be voted for on a general ticket—State officers, county officers, municipal officers, township officers, and members of Congress. In the State of Ohio every man whose name is on the ballot is voted for as an officer of the State, and yet this provision of this law proposes to put United States supervisors to supervise the counting and casting of the votes for county officers and State officers. I submit that no such power was ever intended by the Constitution of the United States to be conferred upon Congress; and I submit that the State can not be shorn of her sovereignty in this way, as is claimed by the Republican party by such a provision as this, without danger to its institutions.

"What arises from the very section to which I have referred? Who are the voters? They are the persons whose qualifications are fixed by the constitution of the State, and under this law the supervisors of election are stationed at the polls, for what? If the law of Congress fixed the qualifications for the elec-

tors of a State, then it might be proper that the Federal supervisors should be present to interpret and execute the laws; but under what doctrine of constitutional law, on what principle of government will you say that supervisors appointed by the Federal Government, strangers to the laws of Ohio, shall stand at the polls and interpret our laws and execute them?

"The third objection is that these supervising officers are armed with authority unknown in the history of the common law or State laws. They have authority at the polls on the day of election to arrest, without warrant, any man whom they may suspect of being about to engage in a violation of the laws. There is no principle of common law or State law which can authorize the arrest of citizens on suspicion of an intention to commit an offense. Here are men who honestly believe that they have the right to vote, and who on going to the polls to deposit their ballots are confronted with this extraordinary invasion of the rights of civil liberty and arrested, and, as in the city of New York, incarcerated in many instances for days. What an extraordinary scene was presented for a republican government in the city of New York at the last election! Thousands of men who had failed to get out their naturalization papers in a way that suited the judgment of the supervisor of elections were arrested upon sight. At one time over six hundred men were under arrest who had gone to the polls honestly believing that they had the right to vote. They had committed no breach of the peace; they had committed no felony. They had attempted to exercise what they believed to be their right and their duty. Yet they were incarcerated and prevented from voting. Since that time a judicial tribunal to which the case was referred has determined that these men were not guilty; that they were innocent; that they were entitled to vote at the election. A power so outrageous as that upon the right of suffrage and the exercise of the duties of a freeman, I venture to say, has not within this century been exercised before under any government, monarchial or despotic.

"Another point which I urge against them as a reason for their repeal, and one which so overshadowingly is greater than the others that I have been loath and hesitated to discuss it. It is that these measures in their very nature and essence are dangerous and destructive to civil liberty. All history is full of warnings upon this subject. No republic which has ever perished from the face of the earth has gone to its grave save through military influence. The familiarization of the people through the army with the forms of despotism, the gradual abrogation of the forms of the republic, and the ultimate subversion of all civil government have marked the career of every republic from its birth to its grave, and shall we escape the force and application of

the universal rule? Is power less sweet, are rights more sacred, are liberties more secure in this country, so that we can dare without harm to trifle with a danger that has wrought ruin everywhere before? From lands where republics have died and where monarchies have been erected on their ruins; from lands where the contest for liberty is now going on; from lands where the shadow of despotism darkens every household and compels every citizen to seek shelter upon some foreign shore, helpless to free himself at home, there come the solemn notes of warning against military interference.

"From the presence of troops at the polls to the control of elections by troops is but a single step. In that step free elections are gone; and free elections are the source of free government and the author and originator of its power. Troops at the polls mean intimidation of voters; troops at the polls mean as its result the registration of the will of the commander; troops at the polls mean the substitution of the bayonet for the ballot, the enthronement of the Commander-in-Chief, and the deposition of the President. I have been astounded, as this debate has continued, to hear from gentlemen upon the other side arguments in favor of the use of troops at the polls, the last place in the world where such arguments should be heard; but my regret is lost in joy when I recollect that the party of the army is not in power in this Congress.

"I do not know, Mr. Chairman, even what will be the action of this House upon this bill. I certainly do not know what will be the action of the President of the United States when the bill is submitted to him, if it shall pass; much less can I know what will be the action of the House when the bill may be returned to us with his objections. But this much I do know, that if the power of withholding supplies shall be exercised, then never in all the contests for liberty in English history, never in all the victories which have made that little stormy island the center of civilization of the world, never in all the struggles for the rights of man, was the power of holding supplies exercised more wisely than it will be when we exercise it to preserve the freedom of elections, to subordinate in times of peace the military power to the civil authority, and to preserve pure and uncontaminated the sources of free government."

Mr. Robeson of New Jersey: "It seems to have been assumed on the other side of this Chamber that this is nothing but the repeal of a section of a law enacted in 1865; that it is a negative and not an affirmative provision. Let us see exactly what it is:

"That section 2002 of the Revised Statutes be amended so as to read as follows:

"No military or naval officer, or other person engaged in the civil, military, or naval service of the United States, shall order, bring, keep, or have under his authority or control any troops or armed men at the place where any general or special election is held

in any State, unless it be necessary to repel the armed enemies of the United States.'

"This omits the other exception contained in the original law, 'or to keep the peace at the polls.' This, then, refers to civil officers, and is an affirmative repeal of the right of the civil officers of the Government to keep the peace at the polls. We are not standing here on this side of the House resisting a proposition to take away a real or imaginary power of a standing army to crush the rights of freemen at the polls. We are resisting an affirmative enactment, for the repeal of an exception in a restricting law is itself an affirmative enactment. We are, then, resisting an affirmative enactment which designs to take away the power, not of the officers of the army alone, not of the officers at all, because they under that law as it now stands only have power as they may be ordered or summoned forth by the civil officer to whom the peace of his bailiwick is intrusted. What then is intended by this provision? To restrain the civil officers of the United States Government from keeping the peace at any election in any State, whether it be a United States election or not. By what means? By civil means, not by military means, for the rights of the civil officer, the marshal of the district if you please, to summon the *posse comitatus*, his right to summon any military organizations if they be within the body of his bailiwick, the right to summon armed troops to sustain his civil power, is a civil and not a military right, and is in the interest of the inviolability and the strengthening of the law against, if need be, armed military force. Can that be denied by any lawyer? Can it be controverted by any man?"

Mr. Kimmel: "Will the gentleman describe the bailiwick of United States officers?"

Mr. Robeson: "The jurisdiction of the United States runs into the States whenever it has a United States duty to perform. That is not only good logic but good law."

Mr. Kimmel: "To preserve the peace of an election at a State election?"

Mr. Robeson: "Wherever the United States has guaranteed a right, wherever a right is derived from the Constitution of the United States and is guaranteed or is secured by it, there the United States has the right and must have the power to enforce and carry out that right."

Mr. Kimmel: "What right has it guaranteed in this respect?"

Mr. Robeson: "It has guaranteed the right to every man in the State of Maryland, who has the right to vote for the most numerous branch of the Maryland Legislature, to vote at a peaceable election for members of Congress."

"I know what the decisions of the Supreme Court are upon that subject, and I will meet them fairly. I love the law and its principles, and I shall not shrink from the full effect of the decisions as they are pronounced by the highest tribunals of the country. I know that the Supreme Court of the United States has de-

clared that the United States has no voter 'of its own creation' in the States. I know that it has declared that the right of suffrage is not given in the States by the Constitution of the United States. But that does not cover the case. What does the Constitution say? 'The House of Representatives shall be composed of members chosen every second year by the people of the several States; and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the Legislature.' The right to vote for that most numerous branch of the Legislature is given by the States. The qualifications are made by the States. The United States does not confer the right of suffrage upon these individuals, but it adopts to its right of suffrage and takes as its voters a class which have already the right of suffrage given it by the States. It makes them its voters for the election of its officers, and if it does its duty it is bound to guarantee to them a free and fair election.

"Let me be fully understood. It is technically and verbally true that the Constitution of the United States does not confer the right of suffrage upon the individuals who vote for the most numerous branch of the State Legislature. That right of suffrage and the qualifications necessary to it are prescribed by the State. But the Constitution of the United States does say that every man who does belong to that class, every man who has that qualification, shall be an elector for members of this House. That is the right which it guarantees. It does not give to any individual the right to belong to that class; but when he belongs to that class it gives him the right to vote at an election for a member of Congress.

"What we are resisting here is an attempt to take away the power, not of the officers of the army, not of the commanding general, not of anybody clothed with military authority, but of the civil officers of the Government to keep the peace at the polls if need be by summoning all the power of his bailiwick, including any armed force there may be in it. That is what we are resisting here. We are not here in advocacy of a war measure, but we are here to resist this restraint of civil right.

"My friend, the gentleman from Ohio [Mr. Hurd], the other day said the danger of republics came from military usurpation; that all that had perished had fallen by the sword. Well, sir, and if this be true, how do they fall by the sword? They fall by the sword when the laws are negatory, when civil rights are denied, when the civil power of the Government can not be enforced. This right which we are now defending is a civil power given to the officers of the law, which should in time of peace be superior to the military power of a country. It is a power which may be exercised in an extreme case to summon the brave hearts and strong arms of the citizen soldiery of any section to put down any attempt of an

armed usurping power to interfere with free elections. This is not a fight we are making in behalf of a standing army; it is a fight in behalf of civil process and the power which must lie behind it, if it is to be effective.

"I have no right to speak for the President of the United States, but it has been given out here in debate, it has been given out through channels more or less authorized, it speaks to the common sense of the country when we see these clauses put upon an appropriation bill, that the gentlemen on the other side of the Chamber mean to say to us and to the President, 'Take the whole dose or none'; that they mean to say, 'Pass this affirmative repealing clause taking away the powers of civil officers to keep the peace at the polls, or do not take the appropriations of the bill. We do not want peace at the polls; take away the power of the law to enforce peace there, or we shall refuse your supplies.'

"It was argued by my friend from Ohio the other day that this position was right and proper, and he said that, if this should be done, there never was a case where it was more called for. Mr. Chairman, we are here members of a Government under a written Constitution which defines and limits the powers of all branches of the Government. One branch is hardly more popular than another. We have neither King nor Lords nor Commons. We have elements of popular government coördinate under our Constitution; three of them are responsible more or less directly to the people. The President of the United States goes to the people every four years to answer for his conduct and to receive their condemnation or their approval. This House goes every two years. Both are popular, both represent the people within those coördinate spheres and those limits which the Constitution has assigned. There is no analogy with the organization of the English Government, which has a monarch with kingly and royal prerogatives, who represents himself, his family, his royalty, his prerogative, and his inheritance, and a house of peers which represents their property, their dignity, and their peerage, and the House of Commons, which alone is elected by the people and alone is responsible to them. Here all the branches of our popular Government respond to the bidding and are dependent on the votes of the people. Our Constitution provides that when there is a law on the statute-book it shall not be repealed unless that repeal has the assent of both branches of Congress and the approval of the President; and if it fail to receive the approval of the President, then the law shall not be repealed unless two thirds of both Houses concur in that repeal. That is all that the Constitution provides on this subject, and it is all the power under the Constitution which gentlemen on the other side of this chamber and at the other end of this Capitol have. And, if they ask more than that, they ask what the Constitution does not give them, because the

Constitution says that when a law is once on the statute-book it shall not be swept away if the President and more than one third of either House object. That is the limit and extent of their constitutional right and power of repeal.

"And when they come here, not waiting for the time which they think they see, when they shall have all the branches of this Government under their own control, and say, 'We will force this repeal, although not constitutionally entitled to it, by withholding supplies,' do they not then do an unconstitutional thing? If they say to another branch of this Government, 'Give us what we have no constitutional right to ask, and if you do not give it we will refuse to do our constitutional duty, refuse to do what the Constitution requires us to do,' is not their action then unconstitutional? If they say to those who deny them, and who have the constitutional right to deny them, 'You shall agree, or we will refuse to discharge our constitutional duties; we will refuse to pay the salary of the President; we will refuse to pay the salaries and expenses of the courts; we will refuse to supply the money necessary to carry on the machinery of this Government,' is not that unconstitutional? And if it be unconstitutional to do that; if their refusal goes to the destruction of the Government itself; if it stops the wheels of Government; if it brings us to a standstill and a destruction, is not that revolutionary?"

Mr. Sparks: "I now move the committee rise and report the bill and amendments to the House."

The motion was agreed to.

Mr. Sparks: "I demand the previous question on the bill and amendments."

The amendments of the committee were concurred in. The bill, as amended, was ordered to be engrossed and read a third time.

The question was taken, and it was passed as follows:

YEAS—Aiken, Armfield, Atherton, Atkins, Bachman, Beltzhoover, Bicknell, Blackburn, Bliss, Blount, Bouck, Bragg, Bright, Buckner, Cabell, Caldwell, Carlisle, Chalmers, Clardy, John B. Clark, Jr., Clymer, Cobb, Coffroth, Colerick, Converse, Cook, Covert, Cravens, Culbertson, Davidson, Joseph J. Davis, Lowndes H. Davis, De La Matyr, Deuster Dibrell, Dickey, Dunn, Elam, Ellis, Evins, Ewing, Felton, Finley, Ford, Forney, Frost, Geddes, Gibson, Gillette, Goode, Gunter, N. J. Hammond, John T. Harris, Hatch, Henkle, Henry, Herbert, Herndon, Hill, Hooker, Hostetler, House, Hull, Hutton, Hurd, Johnston, Jones, Kenna, Kimmel, King, Kitchin, Klotz, Knott, Ladd, Le Fevre, Lewis, Lounsbury, Lowe, Manning, Benj. F. Martin, Edward L. Martin, McKenzie, McLane, McMahon, McMillin, Mills, Money, Morrison, Morse, Muldrow, Muller, Murch, Myers, New, Nicholls, O'Brien, O'Connor, O'Reilly, Persons, Phelps, Phister, Pochler, Reagan, John S. Richardson, Richmond, Robertson, Ross, Rothwell, John W. Ryon, Samford, Sawyer, Scales, Shelley, Simonton, James W. Singleton, O. R. Singleton, Slemmons, Hezekiah B. Smith, William E. Smith, Sparks, Speer, Springer, Steele, Stephens, Stevenson, Talbot, Taylor, Thompson, Tillman, R. W. Townshend, Tucker, Oscar Turner, Thomas Turner, Vance, Waddill,

Warner, Weaver, Wellborn, Whiteaker, Whitthorne, Thomas Williams, Willis, Wilson, Wise, Fernando Wood, Wright, Yocum, Casey Young—143.

NAYS—Nelson W. Aldrich, William Aldrich, Anderson, Bailey, Baker, Ballou, Barber, Barlow, Bedford, Bingham, Blake, Bowman, Boyd, Brewer, Briggs, Bringham, Browne, Burrows, Calkins, Camp, Cannon, Carpenter, Caswell, Chittenden, Claffin, Rush Clark, Conger, Cowgill, Crapo, Crowley, Daggett, George R. Davis, Deering, Dunnell, Dwight, Einstein, Errett, Farr, Ferdon, Field, Fisher, Forsythe, Fort, Frye, Garfield, Godshalk, Hall, John Hammond, Benj. W. Harris, Haskell, Hawk, Hawley, Hayes, Hazelton, Heilman, Henderson, Hiscock, Horr, Houk, Humphrey, James, Jorgensen, Joyce, Keifer, Kelley, Ketcham, Killinger, Lapham, Lindsey, Loring, Marsh, Mason, McCoid, McCook, McGowan, McKinley, Miles, Mitchell, Monroe, Morton, Neal, Newberry, Norcross, O'Neill, Orth, Osmer, Overton, Pierce, Pound, Prescott, Price, Reed, Rice, D. P. Richardson, Robeson, Robinson, William A. Russell, Thomas Ryan, Sapp, Shallenberger, Sherwin, A. Herr Smith, Starin, Stone, Thomas, Amos Townsend, Tyler, J. T. Updegraff, Thomas Updegraff, Urner, Valentine, Van Aernam, Van Voorhis, Voorhis, Wait, Ward, Washburn, White, Wilber, C. G. Williams, Willits, Walter A. Wood—122.

NOR VOTING—Acklen, Bayne, Beale, Bland, Butterworth, Alvah A. Clark, Cox, Dick, Harmer, Hubbell, Lay, Joseph J. Martin, Miller, Daniel L. Russell, Wells, Thomas L. Young—16.

In the Senate, on April 15th, the bill from the House was considered.

Mr. Blaine: "I will now offer an amendment to come in at the close of section 6."

The Chief Clerk: "It is proposed to add at the end of section 6 the following:

"And any military, naval, or civil officer, or any other person, who shall, except for the purposes herein named, appear armed with a deadly weapon of any description, either concealed or displayed, within a mile of any polling place where a general or special election for Representative to Congress is being held, shall, on conviction, be punished with a fine not less than five hundred nor more than five thousand dollars, or with imprisonment for a period not less than six months nor more than five years, or with both fine and imprisonment, at the discretion of the court."

Mr. Blaine: "Mr. President, the existing section of the Revised Statutes numbered 2002 reads thus:

"No military or naval officer, or other person engaged in the civil, military, or naval service of the United States, shall order, bring, keep, or have under his authority or control, any troops or armed men at the place where any general or special election is held in any State, unless it be necessary to repel the armed enemies of the United States, or to keep the peace at the polls.

"The object of the proposed section 6 is to get rid of the eight closing words, namely, 'or to keep the peace at the polls,' and therefore the mode of legislation proposed in the army bill now before the Senate is an unusual mode; it is an extraordinary mode. If you want to take off a single sentence at the end of a section in the Revised Statutes, the ordinary way is to strike off those words, but the mode chosen in this bill is to repeat and reenact the whole section, leaving those few words out. While I do not wish to be needlessly suspicious on a small point, I am quite persuaded that this

did not happen by accident, but that it came by design. If I may so speak, it came of cunning, the intent being to create the impression that, whereas the Republicans in the administration of the General Government had been using troops right and left, hither and thither, in every direction, as soon as the Democrats got power they enacted this section. I can imagine Democratic candidates for Congress all over the country reading this section to gaping and listening audiences as one of the first offsprings of Democratic reform, whereas every word of it, every syllable of it, from its first to its last, is the enactment of a Republican Congress.

"I repeat that this unusual form presents a dishonest issue, whether so intended or not. It presents the issue that as soon as the Democrats get possession of the Federal Government they intended to enact the clause which is thus embraced. The law was passed by a Republican Congress in 1865. There were forty-six Senators sitting in this Chamber at the time, of whom only ten or at most eleven were Democrats. The House of Representatives was overwhelmingly Republican. We were in the midst of a war. The Republican Administration had a million or possibly twelve hundred thousand bayonets at its command. Thus circumstanced and thus surrounded, with the amplest possible power to interfere with elections had they so designed, with soldiers in every hamlet and county of the United States, the Republican party themselves placed that provision on the statute-book, and Abraham Lincoln, their President, signed it. I beg you to observe, Mr. President, that this is the first instance in the legislation of the United States in which any restrictive clause whatever was put upon the statute-book in regard to the use of troops at the polls. The Republican party did it with the Senate and the House in their control. Abraham Lincoln signed it when he was Commander-in-Chief of an army larger than ever Napoleon Bonaparte had at his command. So much by way of correcting an ingenious and studied attempt at misrepresentation.

"The alleged object is to strike out the few words that authorize the use of troops to keep peace at the polls. This country has been alarmed, I rather think indeed amused, at the great effort made to create a widespread impression that the Republican party relies for its popular strength upon the use of the bayonet. This Democratic Congress has attempted to give a bad name to this country throughout the civilized world, and to give it on a false issue. They have raised an issue that has no foundation in fact, that is false in whole and detail, false in the charge, false in all the specifications. That impression sought to be created, as I say, not only throughout the North American continent but in Europe to-day, is that elections are attempted in this country to be controlled by the bayonet. I denounce it

here as a false issue. I am not at liberty to say that any gentleman making the issue knows it to be false; I hope he does not; but I am going to prove to him that it is false, and that there is not a solitary inch of solid earth on which to rest the foot of any man that makes that issue. I have in my hand an official transcript of the location and the number of all the troops of the United States east of Omaha. By 'east of Omaha,' I mean all the United States east of the Mississippi River and that belt of States that border the Mississippi River on the west, including forty-one million at least out of the forty-five million people that this country is supposed to contain to-day. In that magnificent area, I will not pretend to state its extent, but with forty-one million people, how many troops of the United States are there to-day? Would any Senator on the opposite side like to guess, or would he like to state how many men with muskets in their hands there are in the vast area I have named? There are two thousand seven hundred and ninety-seven! And not one more. From the headwaters of the Mississippi River to the lakes, and down the great chain of lakes, and down the Saint Lawrence and down the valley of the Saint John and down the Saint Croix striking the Atlantic Ocean and following it down to Key West, around the Gulf, up to the mouth of the Mississippi again, a frontier of eight thousand miles either bordering on the ocean or upon foreign territory is guarded by these troops. Within this domain forty-five fortifications are manned and eleven arsenals protected. There are sixty troops to every million of people. And the entire South has eleven hundred and fifty-five soldiers to intimidate, overrun, oppress, and destroy the liberties of fifteen million people! In the Southern States there are twelve hundred and three counties. If you distribute the soldiers, there is not quite one for each county; and when I give the counties I give them from the census of 1870. If you distribute them territorially, there is one for every seven hundred square miles of territory, so that if you make a territorial distribution, I would remind the honorable Senator from Delaware, if I saw him in his seat, that the quota for his State would be three, 'one ragged sergeant and two abreast,' as the old song has it. That is the force ready to destroy the liberties of Delaware!

"Mr. President, it was said, as the old maxim has it, that the soothsayers of Rome could not look each other in the face without smiling. There are not two Democratic Senators on that side who can go into the cloak-room and look each other in the face without smiling at this talk, or more appropriately I should say without blushing, the whole thing is such a prodigious and absolute farce, such a miserably manufactured false issue, such a pretense without the slightest foundation in the world, and talked about most and denounced the loudest in States that have not and have not had a sin-

gle Federal soldier. In New England we have three hundred and eighty soldiers. Throughout the South it does not run quite seventy to the million people. In New England we have absolutely one hundred and twenty soldiers to the million. New England is far more overrun to-day by the Federal soldier, immensely more than the whole South is. I never heard anybody complain about it in New England, or express any very great fear of their liberties being endangered by the presence of a handful of troops.

"As I have said, the tendency of this talk is to give us a bad name in Europe. Republican institutions are looked upon there with jealousy. Every misrepresentation, every slander is taken up and exaggerated and talked about to our discredit, and the Democratic party of the country to-day stand indicted, and I here indict them, for public slander of their country, creating the impression in the civilized world that we are governed by a ruthless military despotism. I wonder how amazing it would be to any man in Europe, familiar as Europeans are with great armies, if he were told that over a territory larger than Franco and Spain and Portugal and Great Britain and Holland and Belgium and the German Empire all combined, there were but eleven hundred and fifty-five soldiers! That is all this Democratic howl, this mad cry, this false issue, this absurd talk is based on—the presence of eleven hundred and fifty-five soldiers on eight hundred and fifty thousand square miles of territory—not double the number of the Democratic police in the city of Baltimore, not a third of the police in the city of New York, not double the Democratic police in the city of New Orleans. I repeat, the number indicts them, it stamps the whole cry as without any foundation, it derides the issue as a false and scandalous and partisan makeshift.

"You simply want to get rid of the supervision by the Federal Government of the election of Representatives to Congress through civil means; and therefore this bill connects itself directly with another bill, and you can not discuss this military bill without discussing a bill which we had before us last winter, known as the legislative, executive, and judicial appropriation bill. I am quite well aware, I profess to be as well aware as any one, that it is not permissible for me to discuss a bill that is pending before the other House. I am quite well aware that propriety and parliamentary rule forbid that I should speak of what is done in the House of Representatives; but I know very well that I am not forbidden to speak of that which is not done in the House of Representatives. I am quite free to speak of the things that are not done there, and therefore I am free to declare that neither this military bill nor the legislative, executive, and judicial appropriation bill ever emanated from any committee of the House of Representatives at all; they are not the work of any committee

of the House of Representatives, and, although the present House of Representatives is almost evenly balanced in party division, there has been allowed no solitary suggestion to come from the minority of that House in regard to the shaping of these bills. Where do they come from? We are not left to infer; we are not even left to the Yankee privilege of guessing, because we know. The Senator from Kentucky [Mr. Beck] obligingly told us—I have his exact words here—that the honorable Senator from Ohio [Mr. Thurman] was the chairman of a committee appointed by the Democratic party to see how it was best to present all these questions before us.' Therefore, when I discuss these two bills together, I am violating no parliamentary law, I am discussing the offspring and the creation of the Democratic caucus of which the Senator from Ohio, whom I do not see in his seat, is the chairman.

"Now, Mr. President, I say this bill connects itself directly with the provisions which are inserted by the Democratic caucus in the legislative, executive, and judicial bill. The two stand together; they can not be separated; because if to-day we enact that no civil officer whatever shall appear under any circumstances with armed men at the polls—I am not speaking of Federal troops or military or naval officers—I should like to know how, if you strike that out to-day in the military bill that is pending, you are going to enforce any provisions of the election laws even if we leave them standing. Take this section of the election law, section 2024 of the Revised Statutes:

"The marshal or his general deputies, or such special deputies as are thereto specially empowered by him, in writing, and under his hand and seal, whenever he or either or any of them is forcibly resisted in executing their duties under this title, or shall, by violence, threats, or menaces, be prevented from executing such duties, or from arresting any person who has committed any offense for which the marshal or his general or his special deputies are authorized to make such arrest, are, and each of them is, empowered to summon and call to his aid the bystanders or *posse comitatus* of his district.

"I should like any one to tell me whether a marshal can call together armed men under that if you repeal this section in the military bill. Under heavy penalties you say that no civil officer whatever, no matter what the disturbances, at an election of Representatives to Congress—no civil officer of the United States shall keep order. You do not say that in that same election the State officer may not be there with all the force he chooses, legal or illegal. You say that the United States in an election which specially concerns the Federal Government shall not have anything whatever to do with it. That is what you say, although the Constitution, as broadly as language can express it, gives the Government of the United States, if it chooses to exercise it, the absolute control of the whole subject—

familiar to school-boys, who have even once read the Constitution, in the clause: 'the times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.' And every one knows that the contemporaneous exposition of that part of the Constitution, familiar also to every one in the country, the exposition by Madison and Hamilton, was to the effect that 'every government ought to contain in itself the means of its own preservation,' and according to Mr. Madison, quoting a Southern authority, it was 'more consonant to just theories to intrust the Union with the care of its own existence than to transfer that care to any other hands.'

"There is not the slightest possible denial here that this is a constitutional exercise of power. If there is such a denial, it is a mere individual opinion. There has been no adjudication in the least degree looking to the unconstitutionality of these laws. Your individual opinion is no better than mine; mine is no better than that of any other man who can hear a horn blown from the front steps of the Capitol. No individual opinion is worth anything. We have a department of the Government to pass upon the question. The legislative department has enacted these laws under what is believed to be a clear and explicit grant of power, and you have never had it judicially determined otherwise. But now you propose to assault the election laws, the supervisors, and the marshals in this military bill; and under the pretense of getting rid of troops at the polls you propose that no Federal officer—no civil officer of the Federal Government—shall be there. That is the design; that is the plain, palpable object."

Mr. Withers of Maryland: "Mr. President, as the Senator to whom the charge of this bill has been intrusted by the committee, I propose to make one or two brief statements in response to the rhetorical and highly imaginative utterance to which we have just listened.

"The object of the Committee on Appropriations, or a majority of that committee, in reporting this bill, was simply to provide for the repeal of a law under the operation of which it is possible that the freedom of elections may be utterly destroyed. The fact which has been alluded to by the Senator from Maine so frequently and forcibly that few soldiers were to be found now in any of the States east of the Mississippi, and his futile attempt to divert public attention from the principle which lies at the bottom of this great question to a consideration of that immaterial issue, will not, I am sure, produce much effect upon this Senate or upon the country. It is not a question before this body to decide whether a sufficient number of soldiers are to be found distributed among the States of this Union to dominate

and control elections; but the question is, whether under the conditions of the existing law it may not be possible for an Executive who shall so desire to so distribute and so use the soldiery as to destroy the freedom of elections. It is not to confront a present danger which threatens imminently to interfere with elections, but it is to remove from the present or any future Executive the temptation which the possession of this power would offer, should he desire so to do, to destroy the liberties of this people, and erect upon the ruins of the Republic a despotism supported by the arms of a soldiery. Is this a vain and chimerical fear? The Senator from Maine seems so to regard it; and yet, if we look back at the history of every free people who have ever lost their liberties, we shall find that without one solitary exception their liberties have been destroyed through the operation of the military, through the agency of its commander, or under the direction of an ambitious prince or ruler.

"Mr. President, I will state frankly and fully that it is not in the utterances of Senators and Representatives discussing the policy of a party that we are to find those opinions upon which we can most rely in the settlement of so vital a principle as this. I do not profess myself to be above that silent influence which is exerted by political policy in forming opinions upon questions which press upon us for immediate solution; and, whether it be with regard to the use of troops to enforce the fugitive slave law or the various acts which were passed about the time Kansas was erected into a separate State, I am free to state that the parties held positions on those questions which are now precisely reversed. But, sir, I wish to go back to a period antecedent to this; I wish to view the question in the light of the declarations of those Senators who were part and parcel of this Constitution, of those who were contemporaneous with its formation; and I aver on this floor, without the fear of successful contradiction, that in the debates, both in the convention which framed the Constitution and in the State conventions which approved and ratified it, this question of a standing army and its possible use in controlling and dominating elections was, without distinction of party, the point which elicited most interest and most debate, and, whether in Federal Massachusetts or in Republican Virginia, those who stood highest in the councils of each of those States bore united testimony to the dangers to liberty which were involved in the presence of a standing army. It is not, therefore, out of place that I should solicit the attention of the Senate to the discussions which accompanied the adoption of the Constitution as furnishing opinions on which we can best rely as to the dangers that lurk in this feature of the question which we are now discussing.

"I have before me authorities from the debates which were held on this subject in various States, New York, Massachusetts, and

Virginia, notably the latter, where the contemporaneous opinion of those men who took an active part in the formation of this instrument, with one consent, declared that the liberties of no people could be regarded as safe in the presence of a military force wielded by the ruler of that country. I will not detain the Senate by reciting them *in extenso*. I simply remark that Hamilton himself, who was the head and front of the Federalists of that day, and who was accused of a strong leaning to monarchical government, admitted the dangers which lurked in the weakness of our Constitution in that regard. But it was George Mason of Virginia who more than any one else was instrumental in framing and shaping this instrument, who gave utterance to that sentiment which has lived from that time to the present, and is now accepted as an axiom among all lovers of civil liberty, that 'the liberty of the people has been destroyed only by those who are military commanders.'

"It is but a puerile effort (if Senators will pardon me for using the term) when a Senator on this floor rises in his place, and, instead of attacking the principles which underlie this great question, devotes himself for half an hour to the attempt to ridicule the arguments of those who oppose him by stating the fact that only one soldier to a county is to be found throughout the States east of the Mississippi. It is an admission on the part of that Senator of the poverty of his case when he can find no stronger argument to use in opposition to the bill which is now before this body. It is not that Senators here fear the presence of one or two or fifty men who may be in their respective States, but it is that a provision of law now exists which renders it possible that not only those who are there, but others, may be brought there if the exigency requires it, and the condition of the public mind or the exigencies of party necessity demand that they should be so used to dominate and control elections. In other words, the presence of the military at the polls is absolutely incompatible with free government; and I announce that as the principle upon which this bill, with this clause of which we hear so much, has been based."

Mr. Voorhees of Indiana: "In the present instance we have vastly more than the mere menace or threat of future subjugation by virtue of the laws under discussion. We are not left to conjecture what will be done hereafter. Already these laws have been executed over the prostrate forms and liberties of American citizens in a manner and to an extent which would arouse any people in Europe to revolt, except, perhaps, the serfs of Russia. I speak not now of the South, which has so long been considered a legitimate prey to the spoiler, but of the great, dominant, and stalwart North. Look to New York, that mighty emporium of the wealth and commerce of the western hemisphere. Scenes have been enacted there within the last few years which bring shame and

disgrace to the Republic wherever they are known. John I. Davenport is chief supervisor of elections in the city of New York, appointed by the Circuit Court of the United States. He is also the clerk of the United States Circuit Court, and a United States Commissioner. With all the powers of these manifold official positions combined in his own person, he has indeed been the autocrat of the ballot-box. In the elections of 1876 he had under him one thousand and seventy supervisors, twenty-five hundred deputy marshals, and an indefinite number of commissioners, at an expense for them and for himself of \$94,587. In 1878 he employed twelve hundred and twenty-five supervisors, thirteen hundred and fifty deputy marshals, and commissioners in proportion, for all whose pay and expenses he drew upon the money of the people in the Treasury. In June, 1876, as clerk of the United States Circuit Court, he issued warrants for the arrest of twenty-six hundred naturalized voters to be brought before him as United States commissioner and chief supervisor for the purpose of making them surrender their naturalization papers. The Federal courts themselves afterward held that the naturalization papers in question were all legal and valid, but the desired result had been accomplished. The terror inspired by these arrests intimidated thousands from going to the polls. It became well known that there was no personal security in New York in connection with the elections, and the poor, the timid, and the humble staid away. The same course was pursued in 1878. During the summer of that year nine thousand four hundred citizens were notified that they would be arrested unless they surrendered their naturalization papers to the head overseer, John I. Davenport. In the month of October, 1878, thirty-one hundred persons were actually arrested and a reign of terror inaugurated just in advance of the election. The pretense that these persons held fraudulent naturalization papers had already been shown to be false, but it was necessary to party success that an alarm should be raised and a panic created in the minds of foreign-born citizens and of the poor laboring classes generally. The movement was successful, and it has been estimated that ten thousand legal voters remained away from the polls rather than risk the jails and the prison-pens of the chief supervisor and his subordinates. But it was reserved for the day of election itself to give free scope to the frightful powers with which this band of Federal ku-klux is invested. Those who braved the dangers which environed the ballot-box, and approached it as if they were still freemen, soon found their mistake. They quickly ascertained that the previous threats and warnings which they had heard were neither idle nor unmeaning. As a specimen of thousands of similar occurrences on election day, I quote a statement recently made by a member of the other branch of

Congress from New York. Speaking from his place on the floor, he said:

"A neighbor of mine, who had resided in the same district for seventeen years and a soldier of the Union Army at that, was arrested. I was asked to go to the republican headquarters in an adjoining district, whither he had been taken. The street for an entire block was lined with carriages, in which the unfortunate citizens who had fallen into the hands of the Philistines had been or were to be conveyed. When I entered the building I found the front room decorated with the paraphernalia of a political headquarters, and filled with Republican politicians. In the back room a United States commissioner was holding court. The door was closed, watched by a Cerberus. No one was allowed inside but the prisoners and the Republican managers. After about half an hour's waiting I was informed by the doorkeeper that the man I was looking for was no longer there. I asked whither he had been taken. 'Suppose to Fort Davenport,' was the laconic reply.

"Sir, most likely this soldier of the Union Army was with Grant in the Wilderness, at Cold Harbor, and at Petersburg; or perhaps he was with Sherman in his march to the sea, and as a soldier of the Army of the Tennessee took part in the bloody battle of Atlanta. Wherever he was, however, and on whatever field he was baptized with fire, he was assured that he was offering his life for the preservation of the Union under the safeguards of constitutional liberty. He was also assured that human slavery should not survive the triumph of the Union cause, and he rejoiced to believe that his country would in fact soon be the land only of the free. What must have been his reflections, therefore, in November last to find, in attempting to cast his ballot, that he was as very a slave in the hands of a brutal overseer as any negro ever driven in a cotton-field, and that he had no more power under existing laws to protect his personal freedom than an African bondsman on the auction-block before the war. Did he not, most probably, conclude that one of the fruits of the war, under the nurture and cultivation of the Republican party, was the extension of slavery, rather than its overthrow and destruction? Was he not impressed with the fact that the liberation of one race had been followed by the enslavement of another? What were his thoughts, and the thoughts of his fellow victims, who had also been his fellow soldiers, as they lay like felons in prison, in 'Fort Davenport,' for offering to vote? How did their bitter thoughts in that hour of degradation compare with their glorious dreams as they often lay together on the tented field; when their

— "bugles sang truce; for the night-cloud had lowered,
And the sentinel stars set their watch in the sky;
And thousands had sunk on the ground overpowered—
The weary to sleep, and the wounded to die."

The President *pro tempore*: "The question is on the amendment offered by the Senator from Maine [Mr. Blaine], upon which the yeas and nays have been demanded."

The Secretary proceeded to call the roll, and the result was announced—yeas 25, nays 85.

The bill was ordered to a third reading, and

was read the third time. The Secretary proceeded to call the roll, and the result was announced as follows:

YEAS—Bailey, Bayard, Beck, Butler, Call, Cockrell, Coke, Davis of Illinois, Eaton, Farley, Garland, Gordon, Groome, Grover, Hampton, Harris, Hereford, Hill of Georgia, Houston, Johnston, Jonas, Jones of Florida, Kernan, Lamar, McDonald, Maxey, Morgan, Pendleton, Randolph, Ransom, Saulsbury, Slater, Thurman, Vance, Vest, Voorhees, Walker, Wallace, Whyte, Williams, Withers—41.

NAYS—Allison, Anthony, Bell, Blaine, Booth, Bruce, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Carpenter, Chandler, Conkling, Dawes, Edmunds, Ferry, Hamlin, Hill of Colorado, Ingalls, Jones of Nevada, Kellogg, Kirkwood, Logan, McMillan, Morrill, Paddock, Platt, Plumb, Rollins, Saunders, Teller—30.

ABSENT—Davis of West Virginia, Hoar, McPherson, Sharon, Windom.—5.

So the bill was passed.

In the House on April 30th, the following veto of the bill was received:

To the House of Representatives:

I have maturely considered the important questions presented by the bill entitled "An Act making appropriations for the support of the army for the fiscal year ending June 30, 1880, and for other purposes," and I now return it to the House of Representatives, in which it originated, with my objections to its approval.

The bill provides in the usual form for the appropriations required for the support of the army during the next fiscal year. If it contained no other provisions, it would receive my prompt approval. It includes, however, further legislation, which, attached as it is to appropriations which are requisite for the efficient performance of some of the most necessary duties of the Government, involves questions of the gravest character. The sixth section of the bill is amendatory of the statute now in force in regard to the authority of persons in the civil, military, and naval service of the United States "at the place where any general or special election is held in any State." This statute was adopted February 25, 1865, after a protracted debate in the Senate, and almost without opposition in the House of Representatives, by the concurrent votes of both of the leading political parties of the country, and became a law by the approval of President Lincoln. It was reenacted in 1874 in the Revised Statutes of the United States, sections 2002 and 5528, which are as follows:

Sec. 2002. No military or naval officer, or other person engaged in the civil, military, or naval service of the United States, shall order, bring, keep, or have under his authority or control, any troops or armed men at the place where any general or special election is held in any State, unless it be necessary to repel the armed enemies of the United States, or to keep the peace at the polls.

Sec. 5528. Every officer of the army or navy, or other person in the civil, military, or naval service of the United States, who orders, brings, keeps, or has under his authority or control, any troops or armed men at any place where a general or special election is held in any State, unless such force be necessary to repel armed enemies of the United States or to keep the peace at the polls, shall be fined not more than \$5,000, and suffer imprisonment at hard labor not less than three months nor more than five years.

The amendment proposed to this statute, in the bill before me, omits from both of the foregoing sections the words "or to keep the peace at the polls." The effect of the adoption of this amendment may be considered:

First. Upon the right of the United States Government to use military force to keep the peace at the elections for members of Congress; and,

Second. Upon the right of the Government, by civil authority, to protect these elections from violence and fraud.

In addition to the sections of the statutes above quoted, the following provisions of law relating to the use of the military power at the elections are now in force:

Sec. 2008. No officer of the army or navy of the United States shall prescribe or fix, or attempt to prescribe or fix, by proclamation, order, or otherwise, the qualifications of voters in any State, or in any manner interfere with the freedom of any election in any State, or with the exercise of the free right of suffrage in any State.

Sec. 5529. Every officer or other person in the military or naval service who, by force, threat, intimidation, order, advice, or otherwise, prevents, or attempts to prevent, any qualified voter of any State from freely exercising the right of suffrage at any general or special election in such State, shall be fined not more than \$5,000, and imprisoned at hard labor not more than five years.

Sec. 5530. Every officer of the army or navy who prescribes or fixes, or attempts to prescribe or fix, whether by proclamation, order, or otherwise, the qualifications of voters at any election in any State, shall be punished as provided in the preceding section.

Sec. 5531. Every officer or other person in the military or naval service who, by force, threat, intimidation, order, or otherwise, compels, or attempts to compel, any officer holding an election in any State to receive a vote from a person not legally qualified to vote, or who imposes, or attempts to impose, any regulations for conducting any general or special election in a State different from those prescribed by law, or who interferes in any manner with any officer of an election in the discharge of his duty, shall be punished as provided in section 5529.

Sec. 5532. Every person convicted of any of the offenses specified in the five preceding sections, shall, in addition to the punishments therein severally prescribed, be disqualified from holding any office of honor, profit, or trust under the United States; but nothing in those sections shall be construed to prevent any officer, soldier, sailor, or marine from exercising the right of suffrage in any election district to which he may belong, if otherwise qualified according to the laws of the State in which he offers to vote.

The foregoing enactments would seem to be sufficient to prevent military interference with the elections. But the last Congress, to remove all apprehension of such interference, added to this body of law section 15 of an act entitled "An Act making appropriations for the support of the army for the fiscal year ending June 30, 1879, and for other purposes," approved June 18, 1873, which is as follows:

Sec. 15. From and after the passage of this act it shall not be lawful to employ any part of the army of the United States, as a *posse comitatus* or otherwise, for the purpose of executing the laws, except in such cases and under such circumstances as such employment of said force may be expressly authorized by the Constitution or by act of Congress; and no money appropriated by this act shall be used to pay any of the expenses incurred in the employment of any troops in violation of this section, and any person willfully violating the provisions of this section shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by a fine not exceeding \$10,000 or imprisonment not exceeding two years, or by both such fine and imprisonment.

This act passed the Senate, after full consideration, without a single vote recorded against it on its final passage, and, by a majority of more than two thirds, it was concurred in by the House of Representatives.

The purpose of the section quoted was stated in the Senate by one of its supporters as follows:

Therefore I hope, without getting into any controversy about the past, but acting wisely for the future, that we shall take away the idea that the army can be used by a general or special deputy marshal, or any marshal, merely for election purposes as a *posse*, ordering them about the polls or ordering them anywhere else, when there is no election going on, to prevent disorders or to suppress disturbances that should be suppressed by the peace officers of the State, or if they must bring others to their aid they should summon the unorganized citizens and not summon the officers and men of the army as a *posse comitatus* to quell disorders and thus get up a feeling which will be disastrous to peace among the people of the country.

In the House of Representatives the object of the act of 1878 was stated by the gentleman who had it in charge in similar terms. He said:

But these are all minor points and insignificant questions compared with the great principle which was incorporated

by the House in the bill in reference to the use of the army in time of peace. The Senate had already conceded what they called, and what we might accept as the principle, but they had stricken out the penalty, and had stricken out the word "expressly," so that the army might be used in all cases where implied authority might be inferred. The House committee planted themselves firmly upon the doctrine that, rather than yield this fundamental principle, for which for three years this House had struggled, they would allow the bill to fail, notwithstanding the reforms which we had secured, regarding these reforms as of but little consequence alongside the great principle that the army of the United States, in time of peace, should be under the control of Congress and obedient to its laws. After a long and protracted negotiation, the Senate committee have conceded that principle in all its length and breadth, including the penalty, which the Senate had stricken out. We bring you back, therefore, a report with the alteration of a single word, which the lawyers assure me is proper to be made, restoring to this bill the principle for which we have contended so long and which is so vital to secure the rights and liberties of the people.

Thus have we this day secured to the people of this country the same great protection against a standing army which cost a struggle of two hundred years for the Commons of England to secure for the British people.

From this brief review of the subject, it sufficiently appears that under existing laws there can be no military interference with the elections. No case of such interference has, in fact, occurred since the passage of the act last referred to. No soldier of the United States has appeared under orders at any place of election in any State. No complaint even of the presence of United States troops has been made in any quarter. It may therefore be confidently stated that there is no necessity for the enactment of section 6 of the bill before me to prevent military interference with the elections. The laws already in force are all that is required for that end.

But that part of section 6 of this bill which is significant and vitally important is the clause which, if adopted, will deprive the civil authorities of the United States of all power to keep the peace at the Congressional elections. The Congressional elections in every district, in a very important sense, are justly a matter of political interest and concern throughout the whole country. Each State, every political party, is entitled to the share of power which is conferred by the legal and constitutional suffrage. It is the right of every citizen possessing the qualifications prescribed by law to cast one unintimidated ballot, and to have his ballot honestly counted. So long as the exercise of this power and the enjoyment of this right are common and equal, practically as well as formally, submission to the results of the suffrage will be accorded loyally and cheerfully, and all the departments of Government will feel the true vigor of the popular will thus expressed.

Two provisions of the Constitution authorize legislation by Congress for the regulation of the Congressional elections.

Section 4 of article 1 of the Constitution declares:

The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

The fifteenth amendment of the Constitution is as follows:

SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

SEC. 2. The Congress shall have power to enforce this article by appropriate legislation.

The Supreme Court has held that this amendment invests the citizens of the United States with a new constitutional right which is within the protecting power of Congress. That right the Court declares to be exemption from discrimination in the exercise of the elective franchise on account of race, color, or previous condition of servitude. The power of Congress

to protect this right by appropriate legislation is expressly affirmed by the Court.

National legislation to provide safeguards for free and honest elections is necessary, as experience has shown, not only to secure the right to vote to the enfranchised race at the South, but also to prevent fraudulent voting in the large cities of the North. Congress has, therefore, exercised the power conferred by the Constitution, and has enacted certain laws to prevent discriminations on account of race, color, or previous condition of servitude, and to punish fraud, violence, and intimidation at Federal elections. Attention is called to the following sections of the Revised Statutes of the United States, namely:

Section 2004, which guarantees to all citizens the right to vote without distinction on account of race, color, or previous condition of servitude;

Sections 2005 and 2006, which guarantee to all citizens equal opportunity, without discrimination, to perform all the acts required by law as a prerequisite or qualification for voting;

Section 2022, which authorizes the United States marshal and his deputies to keep the peace and preserve order at the Federal elections;

Section 2024, which expressly authorizes the United States marshal and his deputies to summon a *posse comitatus* whenever they or any of them are forcibly resisted in the execution of their duties under the law, or are prevented from executing such duties by violence;

Section 5522, which provides for the punishment of the crime of interfering with the supervisors of elections and deputy marshals in the discharge of their duties at the elections of Representatives in Congress.

These are some of the laws on this subject which it is the duty of the executive department of the Government to enforce. The intent and effect of the sixth section of this bill are to prohibit all the civil officers of the United States, under penalty of fine and imprisonment, from employing any adequate civil force for this purpose at the place where their enforcement is most necessary, namely, at the places where the Congressional elections are held. Among the most valuable enactments to which I have referred are those which protect the supervisors of Federal elections in the discharge of their duties at the polls. If the proposed legislation should become the law, there will be no power vested in any officer of the Government to protect from violence the officers of the United States engaged in the discharge of their duties. Their rights and duties under the law will remain, but the National Government will be powerless to enforce its own statutes. The States may employ both military and civil power to keep the peace, and to enforce the laws at State elections. It is now proposed to deny to the United States even the necessary civil authority to protect the national elections. No sufficient reason has been given for this discrimination in favor of the State and against the national authority. If well-founded objections exist against the present national election laws, all good citizens should unite in their amendment. The laws providing the safeguards of the elections should be impartial, just, and efficient. They should, if possible, be so non-partisan and fair in their operation that the minority—the party out of power—will have no just grounds to complain. The present laws have, in practice, unquestionably conduced to the prevention of fraud and violence at the elections. In several of the States members of different political parties have applied for the safeguards which they furnish. It is the right and duty of the National Government to enact and enforce laws which will secure free and fair Congressional elections. The laws now in force should not be repealed, except in connection with the enactment of measures which will better accomplish that important end. Believing that section 6 of the bill before me will weaken, if it does not altogether take away, the power of the National Government to protect the Federal elections by the civil authorities, I am forced to the conclusion that it ought not to receive my approval.

This section is, however, not presented to me as a separate and independent measure, but is, as has been stated, attached to the bill making the usual annual appropriations for the support of the army. It makes a vital change in the election laws of the country, which is in no way connected with the use of the army. It prohibits, under heavy penalties, any person engaged in the civil service of the United States from having any force at the place of any election prepared to preserve order, to make arrests, to keep the peace, or in any manner to enforce the laws. This is altogether foreign to the purpose of an army appropriation bill. The practice of tacking to appropriation bills measures not pertinent to such bills did not prevail until more than forty years after the adoption of the Constitution. It has become a common practice. All parties when in power have adopted it. Many abuses and great waste of public money have in this way crept into appropriation bills. The public opinion of the country is against it. The States which have recently adopted constitutions have generally provided a remedy for the evil by enacting that no law shall contain more than one subject, which shall be plainly expressed in its title. The constitutions of more than half of the States contain substantially this provision. The public welfare will be promoted in many ways by a return to the early practice of the Government, and to the true principle of legislation, which requires that every measure shall stand or fall according to its own merits. If it were understood that to attach to an appropriation bill a measure irrelevant to the general object of the bill would imperil and probably prevent its final passage and approval, a valuable reform in the parliamentary practice of Congress would be accomplished. The best justification that has been offered for attaching irrelevant riders to appropriation bills is that it is done for convenience' sake, to facilitate the passage of measures which are deemed expedient by all the branches of Government which participate in legislation. It can not be claimed that there is any such reason for attaching this amendment of the election laws to the army appropriation bill. The history of the measure contradicts this assumption. A majority of the House of Representatives in the last Congress was in favor of section 6 of this bill. It was known that a majority of the Senate was opposed to it, and that as a separate measure it could not be adopted. It was attached to the army appropriation bill to compel the Senate to assent to it. It was plainly announced to the Senate that the army appropriation bill would not be allowed to pass unless the proposed amendments of the election laws were adopted with it. The Senate refused to assent to the bill on account of this irrelevant section. Congress thereupon adjourned without passing an appropriation bill for the army, and the present extra session of the Forty-sixth Congress became necessary to furnish the means to carry on the Government.

The ground upon which the action of the House of Representatives is defended has been distinctly stated by many of its advocates. A week before the close of the last session of Congress the doctrine in question was stated by one of its ablest defenders as follows:

It is our duty to repeal these laws. It is not worth while to attempt the repeal except upon an appropriation bill. The Republican Senate would not agree to, nor the Republican President sign, a bill for such a repeal. Whatever objection to legislation upon appropriation bills may be made in ordinary cases does not apply where free elections and the liberty of the citizens are concerned. . . . We have the power to vote money; let us annex conditions to it, and insist upon the redress of grievances.

By another distinguished member of the House it was said:

The right of the Representatives of the people to withhold supplies is as old as English liberty. History records numerous instances where the Commons, feeling that the people were oppressed by laws that the Lords would not consent to repeal by the ordinary methods of legislation, obtained redress at last by refusing appropriations unless accompanied by relief measures.

That a question of the gravest magnitude, and new in this country, was raised by this course of proceeding, was fully recognized also by its defenders in the Senate. It was said by a distinguished Senator:

Perhaps no greater question, in the form we are brought to consider it, was ever considered by the American Congress in time of peace; for it involves not merely the merits or demerits of the laws which the House bill proposes to repeal, but involves the rights, the privileges, the powers, the duties of the two branches of Congress, and of the President of the United States. It is a vast question; it is a question whose importance can scarcely be estimated; it is a question that never yet has been brought so sharply before the American Congress and the American people as it may be now. It is a question which, sooner or later, must be decided, and the decision must determine what are the powers of the House of Representatives under the Constitution, and what is the duty of that House in the view of the framers of that Constitution according to its letter and its spirit.

Mr. President, I should approach this question, if I were in the best possible condition to speak and to argue it, with very grave diffidence, and certainly with the utmost anxiety, for no one can think of it as long and as carefully as I have thought of it without seeing that we are at the beginning, perhaps, of a struggle that may last as long in this country as a similar struggle lasted in what we are accustomed to call the mother land. There the struggle lasted for two centuries before it was ultimately decided. It is not likely to last so long here, but it may last until every man in this chamber is in his grave. It is the question whether or no the House of Representatives has a right to say, "We will grant supplies only upon condition that grievances are redressed. We are the representatives of the tax-payers of the Republic; we, the House of Representatives, alone have the right to originate money bills; we, the House of Representatives, have alone the right to originate bills which grant the money of the people. The Senate represents States; we represent the tax-payers of the Republic; we, therefore, by the very terms of the Constitution, are charged with the duty of originating the bills which grant the money of the people. We claim the right, which the House of Commons in England established after two centuries of contest, to say that we will not grant the money of the people unless there is a redress of grievances.

Upon the assembling of this Congress, in pursuance of a call for an extra session, which was made necessary by the failure of the Forty-fifth Congress to make the needful appropriations for the support of the Government, the question was presented whether the attempt made in the last Congress to ingraft, by construction, a new principle upon the Constitution should be persisted in or not. This Congress has ample opportunity and time to pass the appropriation bills, and also to enact any political measures which may be determined upon in separate bills by the usual and orderly methods of proceeding. But the majority of both Houses have deemed it wise to adhere to the principle asserted and maintained in the last Congress by the majority of the House of Representatives. That principle is that the House of Representatives has the sole right to originate bills for raising revenue, and therefore has the right to withhold appropriations upon which the existence of the Government may depend, unless the Senate and the President shall give their assent to any legislation which the House may see fit to attach to appropriation bills. To establish this principle is to make a radical, dangerous, and unconstitutional change in the character of our institutions. The various departments of the Government, and the army and the navy, are established by the Constitution, or by laws passed in pursuance thereof. Their duties are clearly defined, and their support is carefully provided for by law. The money required for this purpose has been collected from the people, and is now in the Treasury ready to be paid out as soon as the appropriation bills are passed. Whether appropriations are made or not, the collection of the taxes will go on. The public money will accumulate in the Treasury. It was not the intention of the framers of the Constitution that any single branch of the Government should have the power to dictate conditions upon which this treasure should be applied to the purposes for which it was collected. Any such intention, if it had been entertained, would have been plainly expressed in the Constitution.

That a majority of the Senate now concurs in the

claim of the House adds to the gravity of the situation, but does not alter the question at issue. The new doctrine, if maintained, will result in a consolidation of unchecked and despotic power in the House of Representatives. A bare majority of the House will become the Government. The Executive will no longer be what the framers of the Constitution intended, an equal and independent branch of the Government. It is clearly the constitutional duty of the President to exercise his discretion and judgment upon all bills presented to him, without constraint or duress from any other branch of the Government. To say that a majority of either or both of the Houses of Congress may insist upon the approval of a bill under the penalty of stopping all of the operations of the Government for want of the necessary supplies, is to deny to the Executive that share of the legislative power which is plainly conferred by the second section of the seventh article of the Constitution. It strikes from the Constitution the qualified negative of the President. It is said that this should be done because it is the peculiar function of the House of Representatives to represent the will of the people. But no single branch or department of the Government has exclusive authority to speak for the American people. The most authentic and solemn expression of their will is contained in the Constitution of the United States. By that Constitution they have ordained and established a government whose powers are distributed among coordinate branches, which, as far as possible consistently with a harmonious coöperation, are absolutely independent of each other. The people of this country are unwilling to see the supremacy of the Constitution replaced by the omnipotence of any one department of the Government.

The enactment of this bill into a law will establish a precedent which will tend to destroy the equal independence of the several branches of the Government. Its principle places not merely the Senate and the Executive, but the judiciary also, under the coercive dictation of the House. The House alone will be the judge of what constitutes a grievance, and also of the means and measure of redress. An act of Congress to protect elections is now the grievance complained of. But the House may, on the same principle, determine that any other act of Congress, a treaty made by the President with the advice and consent of the Senate, a nomination or appointment to office, or that a decision or opinion of the Supreme Court is a grievance, and that the measure of redress is to withhold the appropriations required for the support of the offending branch of the Government.

Believing that this bill is a dangerous violation of the spirit and meaning of the Constitution, I am compelled to return it to the House in which it originated without my approval. The qualified negative with which the Constitution invests the President is a trust that involves a duty which he can not decline to perform. With a firm and conscientious purpose to do what I can to preserve, unimpaired, the constitutional powers and equal independence, not merely of the Executive, but of every branch of the Government, which will be imperiled by the adoption of the principle of this bill, I desire earnestly to urge upon the House of Representatives a return to the wise and wholesome usage of the earlier days of the Republic, which excluded from appropriation bills all irrelevant legislation. By this course you will inaugurate an important reform in the method of Congressional legislation; your action will be in harmony with the fundamental principles of the Constitution and the patriotic sentiment of nationality which is their firm support; and you will restore to the country that feeling of confidence and security and the repose which are so essential to the prosperity of all of our fellow citizens.

RUTHERFORD B. HAYES.

EXECUTIVE MANSION, April 29, 1879.

In the House on May 1st the question on the vetoed bill was considered.

The Speaker: "The question is, Will the House on reconsideration agree to pass the bill? Under the Constitution it is required that this vote shall be taken by yeas and nays."

The question was taken, as follows:

YEAS—Acklen, Aiken, Armfield, Atherton, Atkins, Beale, Beltzhoover, Bicknell, Blackburn, Bliss, Bragg, Bright, Buckner, Cabell, Caldwell, Carlisle, Chalmers, Alvah A. Clark, John B. Clark, Jr., Clymer, Cobb, Coffroth, Colerick, Converse, Covert, Cox, Cravens, Culberson, Davidson, Lowndes H. Davis, De La Matyr, Deuster, Dibrell, Dickey, Dunn, Elam, Ellis, Evins, Ewing, Felton, Forney, Frost, Geddes, Gibson, Gunter, N. J. Hammond, John T. Harris, Henkle, Henry, Herbert, Herndon, Hill, Hooker, Hostetler, House, Hurd, Johnston, Kimmel, King, Kitchin, Klotz, Knott, Ladd, Le Fevre, Lewis, Manning, Benjamin F. Martin, McKenzie, McLane, McMillin, Mills, Morrison, Muldrow, Myers, New, O'Brien, O'Connor, O'Reilly, Persons, Phister, Poehler, Reagan, J. S. Richardson, Richmond, Robertson, Ross, Rothwell, Samford, Sawyer, Scales, Shelley, J. W. Singleton, O. R. Singleton, Slemmons, Hezekiah B. Smith, William E. Smith, Sparks, Speer, Springer, Steele, Stephens, Stevenson, Talbot, Taylor, Thompson, Tillman, R. W. Townshend, Oscar Turner, Thomas Turner, Vance, Waddill, Warner, Wellborn, Whiteaker, Whitthorne, Thomas Williams, Willis, Wise, Wright, Casey Young—120.

NAYS—Nelson W. Aldrich, William Aldrich, Anderson, Baker, Bayne, Belford, Bingham, Blake, Bowman, Boyd, Brewer, Briggs, Brigham, Browne, Burrows, Butterworth, Cannon, Carpenter, Caswell, Chittenden, Claffin, Conger, Cowgill, Crapo, Daggett, George R. Davis, Deering, Dunnell, Einstein, Errett, Farr, Ferdon, Field, Fisher, Ford, Forsythe, Fort, Frye, Garfield, Gillette, Hall, John Hammond, Harmer, Benjamin W. Harris, Haskell, Hawk, Hawley, Hazelton, Heilman, Hiscock, Horr, Houk, Hubbell, Humphrey, James, Jones, Jorgensen, Joyce, Keifer, Kelley, Lindsey, Lowe, Marsh, Mason, McCoid, McGowan, McKinley, Miles, Mitchell, Monroe, Morton, Murch, Newberry, Norcross, O'Neill, Overton, Pierce, Pound, Prescott, Reed, Rice, D. P. Richardson, Robeson, Robinson, William A. Russell, Thomas Ryan, Shallenberger, Sherwin, A. Herr Smith, Thomas, Amos Townsend, Tyler, J. T. Updegraff, Thomas Updegraff, Urner, Valentine, Van Aernam, Voorhis, Van Voorhis, Wait, Ward, Washburn, Weaver, White, Wilber, C. G. Williams, Willets, Walter A. Wood, Yocum, Thomas L. Young—110.

NOT VOTING—Bachman, Bailey, Ballou, Barber, Barlow, Bland, Blount, Bouck, Calkins, Camp, Clardy, Cook, Crowley, Joseph J. Davis, Dick, Dwight, Finley, Godshalk, Goode, Hatch, Hayes, Henderson, Hull, Hunton, Kenna, Ketcham, Killinger, Lapham, Lay, Loring, Lounsbury, Edward L. Martin, Joseph J. Martin, McCook, McMahon, Miller, Money, Morse, Muller, Neal, Nicholls, Orth, Osmer, Phelps, Price, Daniel L. Russell, John W. Ryan, Sapp, Simonton, Starin, Stone, Tucker, Wells, Wilson, Fernando Wood—55.

So the bill failed to pass.

On June 6th another bill making appropriations for the army was reported. The objectionable feature of the previous bills was omitted, and instead thereof the following clause was inserted:

That no money appropriated in this act is appropriated or shall be paid for the subsistence, equipment, transportation, or compensation of any portion of the army of the United States to be used as a police force to keep the peace at the polls at any election held within any State.

In this form the bill passed both Houses and was approved by President Hayes.

In the House, on May 7th, a bill to prohibit military interference at elections came up for consideration. The bill was read, as follows :

Whereas, The presence of troops at the polls is contrary to the spirit of our institutions and the traditions of our people, and tends to destroy the freedom of elections : Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall not be lawful to bring to, or employ at, any place where a general or special election is being held in a State any part of the army or navy of the United States, unless such force be necessary to repel the armed enemies of the United States, or to enforce section 4, article 4, of the Constitution of the United States and the laws made in pursuance thereof, upon the application of the Legislature or the executive of the State where such force is to be used ; and so much of all laws as is inconsistent herewith is hereby repealed.

Mr. Knott of Kentucky said : " I have been informed by gentlemen representing the minority of the committee that it is desired to offer a substitute for the bill just reported. When that substitute has been offered, I propose that the previous question be immediately ordered upon the bill and substitute."

Mr. Robeson of New Jersey : " I offer as a substitute what I send to the desk."

The clerk read as follows :

A bill to further protect the freedom of elections.

Whereas, The unnecessary presence of troops at the polls is contrary to the spirit of our institutions and the traditions of our people and would tend to destroy the freedom of elections ; and

Whereas, The presence of troops at the polls has heretofore been and may hereafter be necessary and proper for the suppression of illegal and powerful combinations of armed men in military array engaged in obstructing by force the due execution of the laws of the United States and in destroying the freedom and peace of elections ; and

Whereas, Experience has shown that the existence of the Republic, the supremacy of its laws, and the liberties of its people can only be maintained against the military and other powerful combinations of their enemies by the exertion of the military power of the Government in subordination to the civil power in the support of the laws ; and

Whereas, The injunction of the Constitution that the President " shall take care that the laws be faithfully executed " is equally binding in respect to the laws relating to elections, the course of justice, and all other laws of the United States, without distinction of days, places, or occasions : Therefore,

Be it enacted, etc., That it shall not be lawful to bring to, or employ at, any place where a general or special election is being held in a State, any part of the army or navy of the United States, unless such employment be necessary to carry out the provisions of the Constitution of the United States, or to overcome forcible obstruction to the execution of laws made in pursuance thereof.

Sec. 2. Every person who violates the provisions of this act shall be subject to the penalties named in section 5523 of the Revised Statutes of the United States.

Mr. Knott : " I demand the previous question on the bill and the substitute."

The previous question was seconded, and the main question was ordered to be put. The question first recurred on Mr. Robeson's sub-

stitute. The question was taken ; and it was decided in the negative, as follows :

YEAS—N. W. Aldrich, William Aldrich, Anderson, Bayne, Belford, Bingham, Blake, Bowman, Boyd, Brewer, Briggs, Brigham, Browne, Burrows, Cannon, Carpenter, Caswell, Chittenden, Claffin, Conger, Cowgill, Crapo, Daggett, George R. Davis, Deering, Dunnell, Farr, Ferguson, Field, Fisher, Fort, Frye, Garfield, Godshalk, Hall, Harmer, Benjamin W. Harris, Haskell, Hawk, Hawley, Hayes, Heitman, Horr, Houk, Hubbell, Humphrey, Joyce, Keifer, Kelley, Killinger, Lindsey, Loring, Marsh, Mason, McCoId, McCook, McGowan, McKinley, Mitchell, Monroe, Morton, Neal, Newberry, Norcross, O'Neill, Overton, Pierce, Pound, Prescott, Reed, Rice, D. P. Richardson, Robeson, William A. Russell, Thomas Ryan, Shallenberger, Sherwin, A. Herr Smith, Stone, Tyler, J. T. Updegraff, Thomas Updegraff, Valentine, Van Aernam, Van Voorhis, Voorhis, Wait, Ward, Washburn, White, Wilber, Walter A. Wood, Thomas L. Young—93.

NAYS—Acklen, Aiken, Armfield, Beltzhoover, Bicknell, Blackburn, Bliss, Blount, Bouck, Bright, Buckner, Caldwell, Carlisle, Chalmers, John B. Clark, Jr., Clymer, Cobb, Coffroth, Colerick, Converse, Covert, Cox, Cravens, Culberson, Davidson, Lowndes H. Davis, De La Matyr, Deuster, Dibrell, Dickey, Dunn, Elam, Ellis, Evins, Ewing, Felton, Ford, Forney, Frost, Geddes, Gibson, Goode, Gunter, N. J. Hammond, John T. Harris, Henkle, Henry, Herbert, Herndon, Hill, Hooker, Hostetler, House, Hurd, Johnston, Jones, Kimmel, King, Kitchin, Knott, Ladd, Le Fevre, Lewis, Lowe, Manning, Benjamin F. Martin, Edward L. Martin, McKenzie, McLane, McMillan, Mills, Morrison, Muldrow, Murch, Myers, New, O'Reilly, Persons, Phister, Poehler, Reagan, J. S. Richardson, Richmond, Robertson, Ross, Rothwell, John W. Ryan, Samford, Sawyer, Scales, O. R. Singleton, Slemmons, Hzekiah B. Smith, William E. Smith, Sparks, Speer, Springer, Steele, Stephens, Stevenson, Taylor, Thompson, Tillman, R. W. Townsend, Oscar Turner, Thomas Turner, Vance, Waddill, Warner, Weaver, Wellborn, Wells, Whiteaker, Whitthorne, Thomas Williams, Willis, Wise, Fernando Wood, Wright, Yocum—120.

NOR VOIX—Atherton, Atkins, Bachman, Bailey, Baker, Ballou, Barber, Barlow, Beale, Bland, Bragg, Butterworth, Cabell, Calkins, Camp, Clardy, Alvah A. Clark, Cook, Crowley, Joseph J. Davis, Dick, Dwight, Einstein, Errett, Felton, Forsythe, Gillette, John Hammond, Hatch, Hazlet, Henderson, Hiscock, Hull, Hunton, James, Jorgensen, Kenna, Ketcham, Klotz, Lapham, Lay, Lounsbury, Joseph J. Martin, McMahon, Miles, Miller, Money, Morse, Muller, Nicholls, O'Brien, O'Connor, Orth, Osnor, Phelps, Price, Robinson, Daniel L. Russell, Sapp, Shelley, Simonton, J. W. Singleton, Starin, Talbott, Thomas, Amos Townsend, Tucker, Urner, C. G. Williams, Willits, Wilson, Casey Young—72.

So the substitute was not agreed to.

The Speaker : " The question is now on the passage of the bill."

The question was taken, as follows :

YEAS—Acklen, Aiken, Armfield, Beltzhoover, Bicknell, Blackburn, Bliss, Blount, Bouck, Bright, Buckner, Cabell, Caldwell, Carlisle, Chalmers, John B. Clark, jr., Clymer, Cobb, Coffroth, Colerick, Converse, Covert, Cox, Cravens, Culberson, Davidson, Lowndes H. Davis, De La Matyr, Deuster, Dibrell, Dickey, Dunn, Elam, Ellis, Evins, Ewing, Felton, Ford, Forney, Forsythe, Frost, Geddes, Gibson, Gillette, Goode, Gunter, N. J. Hammond, John T. Harris, Henkle, Henry, Herbert, Herndon, Hill, Hooker, Hostetler, House, Hurd, Johnston, Jones, Kimmel, King, Kitchin, Klotz, Knott, Ladd, Le Fevre, Lewis, Lowe, Manning, Benjamin F. Martin, Edward L. Martin, Joseph J. Martin, McKenzie, McLane, McMillan, Mills, Morrison, Muldrow, Murch, Myers, New, O'Reilly, Persons, Phister, Poehler, Reagan, J. S.

Richardson, Richmond, Ross, Rothwell, John W. Ryon, Samford, Sawyer, Seales, O. R. Singleton, Slemmons, Hezekiah B. Smith, William E. Smith, Sparks, Speer, Springer, Steele, Stephens, Stevenson, Taylor, Thompson, Tillman, K. W. Townshend, Oscar Turner, Thomas Turner, Vance, Waddill, Warner, Weaver, Wellborn, Wells, Whiteaker, Whitthorne, Thomas Williams, Willis, Wise, Fernando Wood, Wright, Youcum—124.

YAYS—N. W. Aldrich, William Aldrich, Anderson, Bayne, Belford, Bingham, Blake, Bowman, Boyd, Brewer, Briggs, Brigham, Browne, Burrows, Cannon, Carpenter, Caswell, Chittenden, Claflin, Conger, Cowgill, Crapo, Daggett, George R. Davis, Deering, Dunnell, Farr, Ferdon, Field, Fisher, Fort, Frye, Garfield, Godshalk, Harmer, Benjamin W. Harris, Haskell, Hawk, Hawley, Hayes, Heilman, Horr, Houk, Hubbell, Humphrey, Joyce, Keifer, Killinger, Lindsey, Marsh, Mason, McCoid, McCook, McGowan, McKinley, Mitchell, Monroe, Morton, Neal, Newberry, Norcross, O'Neill, Overton, Pierce, Pound, Prescott, Reed, Rice, D. P. Richardson, Robeson, William A. Russell, Thomas Ryan, Shallenberger, Sherwin, A. Herr Smith, Stone, Tyler, J. T. Updegraff, Thomas Updegraff, Valentine, Van Aernam, Van Voorhis, Voorhis, Wait, Ward, Washburn, White, C. G. Williams, Walter A. Wood, Thomas L. Young—90.

NOR VOYING—Atherton, Atkins, Bachman, Bailey, Baker, Ballou, Barber, Barlow, Beale, Bland, Bragg, Butterworth, Calkins, Camp, Clardy, Alvah A. Clark, Cook, Crowley, Joseph J. Davis, Diek, Dwight, Einstein, Errett, Finley, Hall, John Hammond, Hatch, Hazelton, Henderson, Hiscock, Hull, Hunton, James, Jorgensen, Kelley, Kenna, Ketcham, Lapham, Lay, Loring, Lounsbery, McMahon, Miles, Miller, Money, Morse, Muller, Nicholls, O'Brien, O'Connor, Orth, Osmer, Phelps, Price, Robertson, Robinson, Daniel L. Russell, Sapp, Shelley, Simonton, J. W. Singleton, Starin, Talbott, Thomas, Amos Townsend, Tucker, Urner, Wilber, Willits, Wilson, Casey Young—71.

So the bill was passed.

In the Senate, on May 8th, the bill was considered.

Mr. Blaine of Maine said: "I gave notice of an amendment to this bill, which I should be glad to have read and ordered to be printed."

The Chief Clerk read as follows:

SEC. 2. Any person who shall carry a concealed deadly weapon at any place, or within a mile of any place where a general or special election for Representative to Congress is being held, shall, on conviction thereof, be punished with a fine not less than five hundred nor more than five thousand dollars, or with imprisonment for a period not less than six months nor more than five years, or with both fine and imprisonment, at the discretion of the court.

Mr. Blaine: "I withdraw my amendment for the present."

The bill was reported to the Senate without amendment.

The President *pro tempore*: "If there be no amendment in the Senate the question is, Shall the bill be read the third time?"

Mr. Blaine: "Mr. President, I want to make a single remark on the bill itself, if there is to be a vote upon it. I desire simply to put a punctuation point in the progress of things as they are now going on, and that punctuation point is to mark the high tide which the ancient doctrine of State rights is reaching in this Chamber and in this Congress. That question has engaged the attention of the American people for just about fifty years. It has had

its ups and downs, its victories and its defeats. It was strangled for the time by Jackson; it was dallied with by Van Buren; it rose to full strength under Polk and Pierce and Buchanan; it marshaled itself for a deadly struggle under Breckenridge; and if I mistake not a majority of Senators who sit on that side of the Chamber supported Breckenridge when he embodied that deadly heresy. In whatever there was in the issue between Calhoun and Jackson, that side of the Senate Chamber represents Calhoun. Whatever there was in the contest dividing the Democratic party between Breckenridge and Douglas that side of the Chamber represents all the evil there was in the politics of Breckenridge. And I desire here to affirm and point out that there never was before the rebellion, there never was at any time in the history of the country, any such assertion of State rights, any such assertion of mastery of the State Government over the Federal Government in its own domain, as is here asserted by the heirs lineal of Calhoun and of Breckenridge.

"I shall not debate this bill. It were useless. It has been exhaustively debated. The whole measure is a removal of the Federal Government from its proper domain, and the installation of the States into degrees of power that were not dreamed of by Calhoun and were not asserted by Breckenridge. We thought there had been something gained on this question in a costly war and in amendments to the Constitution. But the tide as it now sweeps is on the ebb, and the power of the Federal Government was never so weak as these laws and these proceedings will make it.

Pass this bill. While warning off all interference or control of the Federal Government, you voted down on the other bill a proposition that armed men should not come to the polls. You voted down on the other bill a proposition that armed men should not come to the polls with the express intent of interfering with the rights of voters, and you did it under the paltry quibble that it was not within the constitutional power of the United States Government to warn bloody-handed ruffians from the polls where the Representatives in the Federal Congress were being chosen.

"Pass this bill. Pass it as the triumph of the reactionary party against the spirit of the Union. Pass it in defiance of all the lessons and all the teachings that have come from a bloody and abortive rebellion. Pass it, and mark it as the high tide of that reaction which were it to rise higher could lead only to another and more formidable rebellion against the legitimate authority of the Union."

Mr. Chandler of Michigan: "History, Mr. President, is repeating itself. It has been said that the old Bourbons learned nothing and forgot nothing. This is more preëminently true with the old Bourbons of Democracy in America. In 1851 the Bourbons had absolute con-

trol of this Government, in both Houses of Congress, the White House, and the Supreme Court. The whole of this Government was under your control. You had a majority in this body, a majority in the other House; and you brought up the repeal of the Missouri compromise. You forced your men then, as you are forcing them now, to vote for that repeal, and you did it by caucus dictation. Then, sir, you crowded your Northern allies until you crowded them off the bridge.

"In 1857, when I first took my seat in this body with Mr. Jefferson Davis, there were in this body forty-four Democrats, twenty Republicans, and two Independents. Of those Democrats, twenty-eight were from the Southern States, sixteen from the Northern States. Then, as now, the Independents in this body, upon every question connected with slavery, voted with the South. You in caucus, soon after I entered the Senate, decreed that Stephen A. Douglas, because he asserted that he did not care whether slavery was voted up or voted down, should be degraded from the chairmanship of the Committee on Territories; and there were but three Northern Democrats out of the sixteen on this floor who dared to resist caucus dictation. You did degrade him and put him off from that committee. Ah, sir, then you crowded your men off the bridge, and they sank into the waters of oblivion to rise no more for ever. Then you had from the Northern States on this floor: from California two members; from Illinois one; from Indiana two; from Iowa one; from Michigan one. I am giving the Democratic Senators from the North who obeyed and those who did not obey caucus dictation. From Minnesota you had two; from New Jersey two; from Ohio one; from Oregon two; from Pennsylvania one; from Rhode Island one; which made the sixteen. Of those sixteen members not a solitary man from the North ever came up to the surface of the waters of oblivion. You crowded them off the bridge. You compelled them to vote for measures which the North could not and would not sustain.

"To-day you are doing the self-same thing. To-day you have in this body forty-two Democrats, thirty-three Republicans, and one Independent. To-day, as twenty-two years ago, on all questions connected with State rights, the Independent party as a unit votes with the Democratic party. To-day you have, as I said, forty-three Democrats in this body, forty-two leaving out the Independent party. You have twelve members of this body from the North. There are twelve Democratic Senators from the North, and they are arranged thus: from California one; from Indiana, now as then, you have two; from New Jersey you have two, now as then; from Ohio you have two, you had but one then; from Oregon you have two now and you had two then; from Pennsylvania you have one now, you had one then; from Rhode Island you have none now, but

you have one from Connecticut; and you have one from New York.

"Mr. President, as I said in the beginning, history is to-day repeating itself. You are to-day repeating what you did in 1857 and 1858; you are crowding your men off the bridge, and the men of to-day, as the men of 1857, will sink into the waters of oblivion to rise no more for ever. Look at the elections of this last year. Look at the change that has taken place since the 1st day of March, 1859. Sir, the people are more thoroughly aroused to-day against this heresy of State rights than they were from 1857 to 1861. You proposed to pension Jefferson Davis, and every single one of your Northern allies voted to pension him. You eulogized him as a patriot to be compared side by side with Washington and all the patriots of the Revolution, and every one of your Northern allies voted 'ay.' After the close of the rebellion you claimed that you were poor, that you were suffering; and we found you poor and suffering; we found you ragged and we clothed you. We put upon you the robe of American citizenship which you had forfeited, and we killed for you the fatted calf and invited you to the feast, supposing that, after being clothed, you were in your right mind; and when we have invited you to the feast you say, 'We always owned the calf, and you have no interest in it.'

"But, Mr. President, I did not rise to discuss this question. I rose simply to say to gentlemen upon the other side, You have your day in court; make the most of it; your time is short. The people of the North have taken this question in hand, and from the Atlantic to the Pacific, from one end of this land to the other, the people are aroused and alarmed at the statements that have been made and the action that has been taken in this Senate Chamber and in the other House within the last sixty days. And let me say to you, gentlemen upon the other side of the Chamber, that *mene, mene, tekel, upharsin* is written all over your brows."

The President *pro tempore*: "The question is, Shall the bill be read the third time?"

The Secretary proceeded to call the roll.

The result was announced—yeas 33, nays 23. So the bill was ordered to a third reading, and was read the third time. The Secretary proceeded to call the roll, and the result was announced as follows:

YEAS—Bayard, Beck, Butler, Call, Cockrell, Coke, Davis of West Virginia, Eaton, Garland, Groome, Hampton, Harris, Hereford, Houston, Johnston, Jones, Jones of Florida, Kernan, Lamar, McDonald, Maxey, Morgan, Pendleton, Randolph, Ransom, Salsbury, Slater, Thurman, Vance, Vest, Voorhees, Walker, Withers—33.

NAYS—Allison, Anthony, Booth, Bruce, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Chandler, Conkling, Edmunds, Hill of Colorado, Hoar, Ingalls, Kellogg, Logan, McMillan, Morrill, Platt, Plumb, Rollins, Saunders, Teller, Windom—23.

ABSENT—Bailey, Bell, Blaine, Carpenter, Davis of Illinois, Dawes, Farley, Ferry, Gordon, Grover, Ham-

lin, Hill of Georgia, Jones of Nevada, Kirkwood, McPherson, Paddock, Sharon, Wallace, Whyte, Williams—20.

So the bill was passed.

On May 12th, the President sent the following veto of the bill to the House:

To the House of Representatives:

After careful consideration of the bill entitled "An Act to prohibit military interference at elections," I return it to the House of Representatives, in which it originated, with the following objections to its approval:

In the communication sent to the House of Representatives on the 29th of last month, returning to the House without my approval the bill entitled "An Act making appropriations for the support of the army for the fiscal year ending June 30, 1880, and for other purposes," I endeavored to show, by quotations from the statutes of the United States, now in force, and by a brief statement of facts in regard to recent elections in the several States, that no additional legislation was necessary to prevent interference with the elections by the military or naval forces of the United States. The fact was presented in that communication that at the time of the passage of the act of June 18, 1878, in relation to the employment of the army as a *posse comitatus* or otherwise, it was maintained by its friends that it would establish a vital and fundamental principle which would secure to the people protection against a standing army. The fact was also referred to that, since the passage of this act, Congressional, State, and municipal elections have been held throughout the Union, and that in no instance has complaint been made of the presence of the United States soldiers at the polls.

Holding as I do the opinion that any military interference whatever at the polls is contrary to the spirit of our institutions, and would tend to destroy the freedom of elections, and sincerely desiring to concur with Congress in all of its measures, it is with very great regret that I am forced to the conclusion that the bill before me is not only unnecessary to prevent such interference, but is a dangerous departure from long-settled and important constitutional principles.

The true rule as to the employment of military force at the elections is not doubtful. No intimidation or coercion should be allowed to control or influence citizens in the exercise of their right to vote, whether it appears in the shape of combinations of evil-disposed persons, or of armed bodies of the militia of a State, or of the military force of the United States.

The elections should be free from all forcible interference, and, as far as practicable, from all apprehension of such interference. No soldiers, either of the Union or of the State militia, should be present at the polls to take the place or to perform the duties of the ordinary civil police force. There has been and will be no violation of this rule under orders from me during this administration. But there should be no denial of the right of the National Government to employ its military force on any day and at any place in case such employment is necessary to enforce the Constitution and laws of the United States.

The bill before me is as follows:

Be it enacted, etc., That it shall not be lawful to bring to, or employ at, any place where a general or special election is being held in a State, any part of the army or navy of the United States, unless such force be necessary to repel the armed enemies of the United States, or to enforce section 4, article 4, of the Constitution of the United States, and the laws made in pursuance thereof, on application of the Legislature or executive of the State where such force is to be used; and so much of all laws as is inconsistent herewith is hereby repealed.

It will be observed that the bill exempts from the general prohibition against the employment of military force at the polls two specified cases. These exceptions recognize and concede the soundness of the principle

that military force may properly and constitutionally be used at the place of elections, when such use is necessary to enforce the Constitution and the laws. But the excepted cases leave the prohibition so extensive and far-reaching that its adoption will seriously impair the efficiency of the executive department of the Government.

The first act expressly authorizing the use of military power to execute the laws was passed almost as early as the organization of the Government under the Constitution, and was approved by President Washington May 2, 1792. It is as follows:

SEC. 2. *And be it further enacted,* That whenever the laws of the United States shall be opposed, or the execution thereof obstructed, in any State, by combinations too powerful to be suppressed by the ordinary course of judicial proceedings, or by the powers vested in the marshals by this act, the same being notified to the President of the United States by an associate justice or the district judge, it shall be lawful for the President of the United States to call forth the militia of such State to suppress such combinations, and to cause the laws to be duly executed. And if the militia of a State where such combination may happen shall refuse or be insufficient to suppress the same, it shall be lawful for the President, if the Legislature of the United States be not in session, to call forth and employ such numbers of the militia of any other State or States most convenient thereto as may be necessary; and the use of militia, so to be called forth, may be continued, if necessary, until the expiration of thirty days after the commencement of the ensuing session.

In 1795 this provision was substantially reenacted in a law which repealed the act of 1792. In 1807 the following act became the law by the approval of President Jefferson:

That in all cases of insurrection or obstruction to the laws, either of the United States or of any individual State or Territory, where it is lawful for the President of the United States to call forth the militia for the purpose of suppressing such insurrection, or of causing the laws to be duly executed, it shall be lawful for him to employ, for the same purposes, such part of the land or naval forces of the United States as shall be judged necessary, having first observed all the prerequisites of the law in that respect.

By this act it will be seen that the scope of the law of 1795 was extended so as to authorize the National Government to use not only the militia but the army and navy of the United States in "causing the laws to be duly executed."

The important provision of the acts of 1792, 1795, and 1807, modified in its terms from time to time to adapt it to the existing emergency, remained in force until by an act approved by President Lincoln, July 29, 1861, it was reenacted substantially in the same language in which it is now found in the Revised Statutes, viz.:

SEC. 5298. Whenever, by reason of unlawful obstructions, combinations, or assemblages of persons, or rebellion against the authority of the Government of the United States, it shall become impracticable, in the judgment of the President, to enforce, by the ordinary course of judicial proceedings, the laws of the United States within any State or Territory, it shall be lawful for the President to call forth the militia of any or all the States, and to employ such parts of the land and naval forces of the United States as he may deem necessary to enforce the faithful execution of the laws of the United States, or to suppress such rebellion, in whatever State or Territory thereof the laws of the United States may be forcibly opposed, or the execution thereof forcibly obstructed.

This ancient and fundamental law has been in force from the foundation of the Government. It is now proposed to abrogate it on certain days and at certain places. In my judgment no fact has been produced which tends to show that it ought to be repealed or suspended for a single hour at any place in any of the States or Territories of the Union. All the teachings of experience in the course of our history are in favor of sustaining its efficiency unimpaired. On every occasion when the supremacy of the Constitution has been resisted, and the perpetuity of our institutions imperiled, the principle of this statute, enacted by the fathers, has enabled the Government of the Union to maintain its authority and to preserve the integrity of the nation.

At the most critical periods of our history, my predecessors in the executive office have relied on this great principle. It was on this principle that President Washington suppressed the whisky rebellion in Pennsylvania in 1794.

In 1806, on the same principle, President Jefferson broke up the Burr conspiracy by issuing "orders for the employment of such force either of the regulars or of the militia, and by such proceedings of the civil authorities, . . . as might enable them to suppress effectually the further progress of the enterprise." And it was under the same authority that President Jackson crushed nullification in South Carolina, and that President Lincoln issued his call for troops to save the Union in 1861. On numerous other occasions of less significance, under probably every administration, and certainly under the present, this power has been usefully exerted to enforce the laws, without objection by any party in the country, and almost without attracting public attention.

The great elementary constitutional principle which was the foundation of the original statute of 1792, and which has been its essence in the various forms it has assumed since its first adoption, is that the Government of the United States possesses under the Constitution, in full measure, the power of self-protection by its own agencies altogether independent of State authority, and, if need be, against the hostility of State governments. It should remain embodied in our statutes unimpaired, as it has been from the very origin of the Government. It should be regarded as hardly less valuable or less sacred than a provision of the Constitution itself.

There are many other important statutes containing provisions that are liable to be suspended or annulled at the times and places of holding elections, if the bill before me should become a law. I do not undertake to furnish a list of them. Many of them—perhaps the most of them—have been set forth in the debates on this measure. They relate to extradition, to crimes against the election laws, to quarantine regulations, to neutrality, to Indian reservations, to the civil rights of citizens, and to other subjects. In regard to them all, it may be safely said that the meaning and effect of this bill is to take from the General Government an important part of its power to enforce the laws.

Another grave objection to the bill is its discrimination in favor of the State and against the national authority. The presence or employment of the army or navy of the United States is lawful, under the terms of this bill, at the place where an election is being held in a State, to uphold the authority of a State government then and there in need of such military intervention, but unlawful to uphold the authority of the Government of the United States then and there in need of such military intervention. Under this bill the presence or employment of the army or navy of the United States would be lawful, and might be necessary to maintain the conduct of a State election against the domestic violence that would overthrow it, but would be unlawful to maintain the conduct of a national election against the same local violence that would overthrow it. This discrimination has never been attempted in any previous legislation by Congress, and is no more compatible with sound principles of the Constitution or the necessary maxims and methods of our system of government on occasions of elections than at other times. In the early legislation of 1792 and of 1795, by which the militia of the States was the only military power resorted to for the execution of the constitutional powers in the support of State or national authority, both functions of the Government were put upon the same footing. By the act of 1807 the employment of the army and navy was authorized for the performance of both constitutional duties in the same terms.

In all later statutes on the same subject-matter the same measure of authority to the Government has been accorded for the performance of both these duties. No precedent has been found in any previous legislation, and no sufficient reason has been given for the dis-

crimination in favor of the State and against the national authority which this bill contains.

Under the sweeping terms of the bill the National Government is effectually shut out from the exercise of the right and from the discharge of the imperative duty to use its whole executive power whenever and wherever required for the enforcement of its laws at the places and times when and where its elections are held. The employment of its organized armed forces for any such purpose would be an offense against the law unless called for by, and therefore upon permission of, the authorities of the State in which the occasion arises. What is this but the substitution of the discretion of the State governments for the discretion of the Government of the United States as to the performance of its own duties? In my judgment this is an abandonment of its obligations by the National Government; a subordination of national authority and an intrusion of State supervision over national duties which amounts, in spirit and tendency, to State supremacy.

Though I believe that the existing statutes are abundantly adequate to completely prevent military interference with the elections in the sense in which the phrase is used in the title of this bill and is employed by the people of this country, I shall find no difficulty in concurring in any additional legislation limited to that object which does not interfere with the indispensable exercise of the powers of the Government under the Constitution and laws.

RUTHERFORD B. HAYES.

EXECUTIVE MANSION, May 12, 1879.

The previous question was seconded and the main question ordered.

The Speaker: "The question is, Will the House on reconsideration pass the bill? On this question the Constitution requires that the vote shall be taken by yeas and nays."

The question was taken as follows:

YEAS—Acklen, Aiken, Armfield, Atherton, Bachman, Beale, Bicknell, Blackburn, Bliss, Bouck, Bright, Buekner, Cabell, Caldwell, Carlisle, Clardy, John B. Clark, jr., Clymer, Cobb, Coffroth, Converse, Cook, Covert, Cox, Cravens, Culberson, Davidson, Joseph J. Davis, Lowndes H. Davis, De La Matyr, Deuster, Dibrell, Dickey, Dunn, Elam, Evins, Ewing, Felton, Ford, Forney, Geddes, Gibson, Gillette, Goode, Gunter, John T. Harris, Hatch, Henkle, Herbert, Herndon, Hooker, Hostetler, House, Hurl, Johnston, Jones, Kenna, Kimmel, King, Kitchin, Klotz, Knott, Ladd, Le Fevre, Lewis, Lounsbury, Love, Manning, Benjamin F. Martin, Edward L. Martin, McKenzie, McLane, McMahon, McMillan, Mills, Morrison, Muldrow, Muller, Murch, Myers, New, O'Connor, Persons, Phelps, Phister, Pochler, Reagan, J. S. Richardson, Richmond, Robertson, Ross, Rothwell, Samford, Sawyer, Seales, Shelley, J. W. Singleton, O. R. Singleton, Slemmons, Hezekiah B. Smith, William E. Smith, Sparks, Springer, Steele, Stephens, Stevenson, Talbot, Taylor, Thompson, Tillman, R. W. Townshend, Oscar Turner, Thomas Turner, Vance, Waddill, Warner, Weaver, Wellborn, Wells, Whiteaker, Whitthorne, Thomas Williams, Willis, Wilson, Fernando Wood, Wright, Yocum, Casey Young—128.

NAYS—N. W. Aldrich, William Aldrich, Anderson, Bailey, Barber, Bayne, Belford, Blake, Bowman, Boyd, Brewer, Briggs, Brigham, Browne, Burrows, Camp, Cannon, Carpenter, Caswell, Clafin, Conger, Cowgill, Crapo, Crowley, Daggrett, George R. Davis, Deering, Dunnell, Einstein, Errett, Farr, Ferdon, Field, Fort, Frye, Garfield, Hall, John Hammond, Haskell, Hawley, Hawley, Hayes, Hazelton, Heilmann, Henderson, Horr, Houk, Humphrey, Joyce, Keifer, Kelley, Ketcham, Killinger, Lindsey, Marsh, Mason, McCoid, McCook, McGowan, McKinley, Miles, Monroe, Morton, Neal, Newberry, Norcross, O'Neill, Orth, Osmer, Overton, Pound, Prescott, Price, Reed, Rice, Robeson, Robinson, Thomas Ryan, Sapp, Shallen-

berger, Sherwin, A. Herr Smith, Starin, Stone, Thomas, Amos Townsend, Tyler, J. T. Updegraff, Thomas Updegraff, Urner, Valentiue, Wait, Ward, Washburn, C. G. Williams, Willits, Thomas L. Young—97.

NOT VOTING—Atkins, Baker, Ballou, Barlow, Beltzhoover, Bingham, Bland, Blount, Bragg, Butterworth, Calkins, Chalmers, Chittenden, Alvah A. Clark, Colerick, Dick, Dwight, Ellis, Finley, Fisher, Forsythe, Frost, Godshalk, N. J. Hammond, Harmer, Benjamin W. Harris, Henry, Hill, Hiscock, Hubbell, Hull, Hunton, James, Jorgenson, Lapham, Lay, Loring, Joseph J. Martin, Miller, Mitchell, Money, Morse, Nicholls, O'Brien, O'Reilly, Pierce, D. P. Richardson, Daniel L. Russell, William A. Russell, John W. Ryan, Simonton, Speer, Tucker, Van Aernam, Van Voorhis, Voorhis, White, Wilber, Wise, Walter A. Wood—60.

So, on reconsideration, the bill was rejected, two thirds not having voted in favor thereof.

In the House, on April 8th, the bill making appropriations for the legislative, executive, and judicial departments of the Government was taken up.

Mr. Atkins of Tennessee said: "I desire to state that a good many gentlemen on both sides of the House have requested me to report this bill upon the basis of the conference reports of the two Houses as nearly as possible. I will state to the House that the entire money part of the bill—the appropriations—was agreed to by the conference committees of the two Houses, or very nearly so. There are several subjects, however, upon which we did not agree; and in respect to those and these parts upon which we do not agree, the bill conforms to the bill as it passed the House; but in regard to all other particulars, where the conference did agree, the bill conforms to the conference report."

Mr. Coffroth of Pennsylvania: "Mr. Chairman, I turn to the bill under discussion. In it we propose to repeal certain statutes regulating supervisors of election and the appointing of deputy marshals.

"*First.* The judges of the United States Circuit Court, at the instance of any two citizens of any town or city having upward of twenty thousand inhabitants, or at the instance of any ten citizens in any county or parish, may appoint two citizens resident of the city, town, or voting precinct, being of different political parties, who shall be designated as supervisors of election. These supervisors are required to attend at all times and places fixed for the registration of voters who are entitled to vote for a Representative or Delegate in Congress, to challenge any votes supposed to be improperly offered, to remain with the ballot-box after the voting is over until the votes are entirely counted, and after the votes are counted out and tabulated to certify their correctness or append objections, and do and perform other acts and things in the premises.

"*Second.* United States marshals are authorized to appoint deputy marshals, who are authorized 'either at the place of registration or polling-place or elsewhere, and either before

or after registering or voting, to arrest and take into custody without process any person who commits or attempts or offers to commit any of the acts or offenses prohibited herein, or who commits any in excess against the laws of the United States.'

"Sir, it will be seen that this law authorizes the arrest of a citizen without process on the mere whim or caprice of a deputy marshal. If the most upright citizen in this great nation offers to vote, not having been registered, he is liable to be seized, taken into custody, and imprisoned by a deputy marshal. Sir, where is the boasted liberty of the citizen if he can be arrested and imprisoned without process of law? Why, sir, under the law of my State about one in twenty of all the voters at every Congressional election is subject to arrest under this statute, inasmuch as about that proportion is generally not registered; yet, by the law of the State, non-registered citizens are entitled to vote by making affidavit to their residence if otherwise qualified.

"The Constitution of the United States provides in Article IV. that 'the right of the people to be secure in their persons against unreasonable seizures shall not be violated; that no warrant shall issue but upon probable cause, supported by oath or affirmation.' And in Article V. it declares that no person shall be deprived of 'liberty or property without due process of law.' Thus it will be seen that the power given to deputy marshals is not only dangerous to the dearest rights of the citizen, but is in violation of the Constitution of the United States.

"I beg permission to read from the report of the committee appointed by the last Congress to examine into and report on the laws in regard to the appointment and pay of supervisors of election and deputy marshals:

"The law was enacted professedly to aid in securing a full, free, fair, honest ballot. That it has failed has become a matter of history; for since the enactment of these sections and the exercise of power under them there has been complaint of more and greater fraud than ever existed prior to its passage.

"The power to anticipate an election fraud, real or fanciful, prior to its attempted perpetration, to seize and hold to bail or put in prison a voter as a means of preventing his coming to the poll, or to deter therefrom upon suspicion, is a little more power than should be conferred upon any partisan.

"The experiment to secure an honest vote, by the medium of appointees under this law, we believe has signally failed, and the powers conferred have been too often used to prevent rather than to secure an honest vote. The administration of these laws has not only been productive of no affirmative good, but has cost large sums of money without any good return.

"Mr. Chairman, at the elections held in 1876 there were 4,863 supervisors and 11,610 deputy marshals, at a cost to the United States of \$275,296.70. At the elections held in 1878 the number of supervisors was 4,599, and there were 4,467 deputy marshals, at a cost to the United States of the enormous sum of \$202,291.69. In New York City alone there were

1,494 supervisors and 3,563 deputy marshals in 1876, at a cost to the United States of \$155,021.88. This enormous sum of money was taken from the people to hire men to corrupt the voters and pollute the ballot-box in order to carry the State of New York for the Republican party. In Pennsylvania there were 1,592 supervisors and 396 deputy marshals in 1876, at a cost to the United States of \$33,590. All the supervisors and deputy marshals were in Philadelphia, except 273, and the amount expended in Philadelphia to coerce the voter and keep that city Republican was \$30,860. In 1878 in Pennsylvania there were 1,682 supervisors and 773 deputy marshals, at the enormous cost to the United States of \$43,943. All of the deputy marshals and all of the supervisors except 312 were at Philadelphia. The sum spent at Philadelphia at this election was \$40,820. The sworn testimony of the marshal of the eastern district of Pennsylvania before the Wallace-Teller investigating committee of the United States Senate shows the most astounding fact that every one of the deputy marshals in Philadelphia was a Republican. Even if they had been reputable persons, which they were not, this would be so unjust that it should meet the condemnation of every fair-minded citizen.

"Now, sir, I will give a summary of part of the sworn testimony before that committee to prove the desperate and depraved character of these deputy marshals. Detective Charles Miller, connected with the district attorney's office of that city, testified that

"He knew Philip Madden, a deputy of the Fourth Ward. He was one of the worst men in Philadelphia, violent and dangerous. He has been out of prison about eight months for highway robbery. Andrew Lamvello, of the First Ward, is a fugitive from justice. Dan Rodding is a bad, dangerous character, and has been tried for murder. George Cornelius is of bad reputation. Michael Slater is a notorious repeater and thief. Pitts, of the Seventh Ward, keeps a gambling place; he is colored, and has been arrested. Henry Scott, colored, of Lombard Street, has a bad reputation. Radney F. Springfield, of the Fifteenth Ward, was tried for murder and acquitted. All these men were deputy marshals to the knowledge of the detective.

"Other witnesses testified to the bad and debased character of the deputy marshals; that many of them were drunk; that they insulted and maltreated the voters. From this sworn testimony, and which I am told can not be contradicted, among the deputy marshals in the great city of Philadelphia appointed to protect the purity of the ballot-box and sustain a free and untrammelled election, we find the most debased characters, highway robbers, fugitives from justice, repeaters, thieves, keepers of gambling-houses, murderers, keepers of bawdy-houses, and drunkards.

"Mr. Chairman, this is an astonishing revelation. Think of it, sir! This is the city where 'old Independence bell' first rang out the joyous peals of liberty. Liberty of the citizen was then the thrilling cry of the patriots of the

Revolution; but now, more than one hundred years thereafter, comes up a bitter and shameful complaint that the inestimable right of the citizen to a free ballot, uncontrolled by military or civil Federal power, is trampled under foot by a horde of debased and drunken deputy marshals.

"Mr. Chairman, as a native of the great State of Pennsylvania and one of its Representatives on this floor, I enter my solemn protest against this debasing interference with the elections in my State. Pennsylvania has laws upon its statute-books which secure to every elector his right to vote."

Mr. Robeson of New Jersey: "The real question between the gentlemen on the other side and myself is a difficulty which arises on the main propositions of this case; not a difficulty in logic or in argument, not even in verbal propositions; but we differ about our premises, about the principles from which we start. And, if that were otherwise, I should hesitate myself before I arrived at a different conclusion from the distinguished gentlemen who have so clearly and ably presented the other side of this case. But the difference between us is found in our ideas of the organic principles of our Government, about the design of the men who established it, and the purposes for which it was constituted. These gentlemen seem to argue, and I believe—for such is the influence of early education and habit of thought—they honestly and habitually think that we are living, not under the Constitution of the United States, but under a confederacy of separate sovereignties; whereas I think that we are members of a government established for the government of the people and not of the States, a government which has all the attributes of a government, including sovereignty—a government which acts directly upon the people, upon their rights, and upon their property. It seems to me, if I have read aright the principles and history of our Government, that it was for this very purpose that our fathers abandoned the original idea of the Confederation, and appealing again to the people, not to the States, drew from that rich and natural source the powers with which they endowed the Government under the Constitution. And when they turned to that source and took from that natural well their powers of government, they took them pure and unalloyed by any intervening element which could impair or weaken; they drew them direct and pure, not through the doubtful vehicle of intervening government or State sovereignty. If I have read history aright, sir, our fathers found that a confederation of States, where the central power was dependent upon the several States for the execution of its laws, the enforcement of its decrees, and the protection of its people, was insufficient for the purposes of government; and therefore these men, learned in all the principles of government and law, elevated

to a loftier mood by their contact with great principles and the great sacrifices they had made, turned again to the people of the country, and from them sought anew the authority upon which this Government was founded; and, clothed with full powers by the people whom they directly represented, they proceeded to establish and ordain a new government with far different, broader, and better-established duties and powers.

"Let us look at the objects which the founders sought in establishing the Government, as it is expressed in the preamble of the Constitution itself. What did they mean to do? 'To form a more perfect union, establish justice, insure domestic tranquillity'—not by the power of State laws or the interference of State officers, but by the force and action of the Government itself; and to 'secure the blessings of liberty to ourselves and our posterity, we'—who?—'we, the people of the United States'—do what? Do we enter into an agreement between parties? No. Do we join in a league between States? No. Do we make a confederation between governments? No. Is this a compact between sovereignties? No. 'We do *ordain and establish*'—What?—'this Constitution'—for what?—'for the United States of America.'

"This, then, is not a confederation of powers, not a league between States, not an agreement between sovereignties, but a Government established and ordained, constituted by this written Constitution—established and restrained, empowered and restricted by this written Constitution thus ordained. I admit, Mr. Chairman, that all the powers of this Government are and must be found within the written Constitution. Here is the source from which the river of our power must flow or else run dry. Nothing is to be claimed, nothing is to be exercised except what flows from the powers there declared, the rights there guaranteed. And if there be any power in these laws which can not be rationally, legitimately, and logically inferred from the provisions and powers of this written Constitution of the country, it should be swept from the statute-book in disdain and dishonor. But, my friends, if there be powers that are necessary for the maintenance of the Government itself, if there be powers that are necessary for its security and preservation, and if these powers be clearly derivable by right and proper reasoning from the Constitution itself or its proper inferences, it is just as much a violation of the Constitution to misconstrue them or deny their force as if you sought to ingraft some foreign power on the Constitution, to the injury of the people for whose government and protection it was established.

"We come now more directly to the consideration of the authority which is to be found in this Constitution for the enactment of the laws now under consideration; for, as I have said, if they are unconstitutional, let them be

swept from the statute-book; but if they be constitutional, although in your wisdom, acting as a majority, you may see fit to repeal them, do not put it on the ground of their unconstitutionality, or else your judgment may remain a false precedent for future action, a landmark and guide-post to error and to wrong.

"The gentleman from Kentucky [Mr. Carlisle], who has so ably presented his side of the case, has said that the power derived from the second section of the first article of this Constitution was a power which I had the honor to discover. I should be proud if that were so, but it is a power which is as old as the Constitution itself, as old as the principles which are there set forth; a power which I do not believe has ever before been denied by any one."

Mr. Carlisle: "Was it ever asserted?"

Mr. Robeson: "It would have been asserted if it had been denied. There are many things which are so self-evident when written upon the face of laws that they assert themselves to the understanding of law-givers; and this has been so plainly written that it needed no re-assertion by the feeble language of men like myself, for there it is, written on pages of the Constitution of our country, a self-existing, self-standing, self-asserting proposition which has challenged denial since the Constitution was formed: 'The electors in each State shall have the qualifications requisite for the electors of the most numerous branch of the State Legislature.' Electors for what? For the House of Representatives. The House of Representatives of what? Of the national Legislature, of the Congress of the United States. 'All legislative powers granted shall be vested in a Congress'—what of?—'of the United States, which shall consist of a Senate and House of Representatives.' Not the Legislature of a State, not a governmental body to make laws for a State, but a legislature of the United States, deriving its powers directly from the people and not from the States; a legislature that makes laws for the United States, the members of which swear to maintain the Constitution of the United States and not the constitution of any State. They may not be civil officers, such as come within the list of those enumerated as subject to impeachment. I know it has been held in the case of Senator Blount that he, for acts which he did as a private citizen or as Governor of Tennessee, was not such an officer, and did not do such acts as made him liable to impeachment as one of the civil officers of the Government under that clause of the Constitution. But the decision of that case goes to this extent, and no more. I care not whether you call Representatives in this House officers or not, I care not whether they are civil officers or not, it is a quarrel about words and names; they hold no commission, but they are members of the United States Government, to whom are commit-

ted important legislative functions. They discharge United States duties; they are amenable to the rules and government of this House, call them what you will.

"I have said that this clause which I have read, though it confers no right of suffrage, yet adopts to its suffrage that class of voters which are here described. The doctrine of conveying rights by description is not unknown to any of my friends. I may convey to my friend a lot in this city; if I choose I may describe it by proper metes and bounds, or I may say 'lot numbered 1 in subdivision of square numbered 1, as surveyed and recorded in the clerk's office by the surveyor of the city,' and when my friend takes the title for that lot does he take it from me or does he take it from the surveyor who describes it?"

"The fourteenth amendment of the Constitution of the United States declares that all persons born or naturalized in the United States are citizens of the United States and citizens of the State in which they reside. Do they take their title of citizenship from the mothers who bore them or the court which naturalized them, or from the Constitution of the United States which describes and adopts them? The Speaker of this House, under certain contingencies, may become the President of the United States, because he had been elected by the citizens of Philadelphia, and afterward selected by our votes to be Speaker. Does he derive that title from the Constitution of the United States or from the votes of the Fourth Ward of the city of Philadelphia? It seems to me to be too clear for argument. There are some propositions which in their statement are so conclusive that you confuse them by illustration or argument.

"Now, then, if this be a United States election for members of the United States Government, who are to have United States qualifications and to execute United States laws, is it not a right guaranteed to every citizen that that election shall be fair? Gentlemen will say there are no citizens—or would have said in the old time—there are no citizens except the citizens of a State, and therefore it is they who must protect the rights which are guaranteed to citizens. Since the adoption of the fourteenth amendment, as I have said, there are citizens of the United States independent of and above the States; and by that Constitution they are as citizens entitled to every right which is there guaranteed and secured. More than that, this House, this national Legislature, is the judge of the election, qualification, and returns of its own members. Is that a State function or a United States function? And may it not be reasonably said, may it not be irresistibly argued, that the Congress of the United States has the right, if it chooses to exercise it, to make all laws and all rules which are necessary to give them all the information which it is proper and necessary they should have in order to decide upon these questions?"

"But it is not necessary to argue from gen-

eral propositions upon this subject. By the eighth section of the first article of the Constitution it is provided that Congress shall have power 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof.' In the very section of the Constitution which gives this right and declares this qualification and establishes this election, and which also gives the right to Congress, when they choose, to make all needed regulations with regard to the time, place, and manner of holding it—in the very concluding section of that article the power to make these laws is expressly and explicitly given. Now, then, Mr. Chairman, what does that mean? If there is any remark to be made about this Constitution, it is that it was the work of master hands, and that, dealing in general statements and general terms, there is nothing within it which is unnecessary to its operation. Let us see whether it covers the whole of this case. The distinguished gentleman from Alabama [Mr. Lewis], who opened this debate in a speech which seemed to me to be as fair, as compendious, and as logical as any that I have heard, put this proposition on what seemed to me to be its strongest ground, if strong ground it has. He said that this was an alternate power of the United States Government, which resided originally in the States, and could not be exercised by the United States unless the State refused or neglected properly to exercise it. If I have misstated the proposition, I see the gentleman in his seat, and I hope he will correct me. He founded that assertion on the language of some of the writers of that time, and also on the debates on the Constitution in various of the States, and on the protests which some of the States made against its adoption. But it seems to me that the very argument on which he founded it avails for its overthrow. It was an objection made by the States. Why? Because it was not an ultimate power, but because it was an original power. It was an objectionable clause to which they proposed amendments, but those amendments, after consideration, were not adopted, and the original Constitution remained as it was."

Mr. Chalmers of Mississippi: "There are two laws standing upon the statute-book in regard to supervisors of elections, one made for the country, the other made for the city, confessedly made for the city of New York; and John Davenport boasts that they were made at his dictation. The city of New York is Democratic; the country districts are Republican. Hence we find that, through the ingenuity of this matchless trickster in politics, we have one law for the Democrat and another for the Republican. The supervisors who are to watch over the Democratic polls are entrusted with extraordinary power, to supervise registration, in effect to determine the qualifi-

cations of voters, and, with or without warrant, to arrest citizens at the polls. In the country districts there is no such power.

"By section 2029 of the Revised Statutes, which remains unchanged, it is expressly provided: 'The supervisors of election appointed for any county or parish in any Congressional district, at the instance of ten citizens, as provided in section 2011, shall have no authority to make arrests, or to perform other duties than to be in the immediate presence of the officers holding the election, and to witness all their proceedings, including the counting of the votes and the making of a return thereof.'

"Now, all that is proposed by this bill is, that we shall equalize the powers of supervisors everywhere in the Union—make their power the same in the cities that it is in the country districts, the same for the Democrat that it is for the Republican, the same for the bond-holding, purse-proud man in the rural districts of New York that it is for the toiling masses in the city of New York, who have been denounced on the floor of Congress as thieves, scoundrels, and the very scum of the earth. That is the full extent of the legislation here proposed—no more. Yet when we have proposed to equalize the power of supervisors it has been suddenly discovered that they are mere 'stool-pigeons with their wings clipped.' If they are stool-pigeons, we did not create them; the Republican party created them, and at the same time that they made stool-pigeons with clipped wings to nestle gently at Republican polls, they created vultures with fierce beaks and sharpened talons to hover around Democratic precincts and to tear the vitals of Democratic voters. We simply demand that the law shall be equalized. We leave the supervisors as we found them. We do not even change their pay, lest perchance it should be said that we recognized the constitutionality of their appointment, which we utterly deny. We leave them the same in the South that they are to-day, not because it is right, but because we do not desire to demand upon an appropriation bill anything that is not vital and immediately essential for the preservation of civil liberty. That is all there is in this bill as to supervisors of elections."

Mr. Atkins demanded the previous question on the passage of the bill; and the question was taken as follows:

YEAS—Acklen, Aiken, Armfield, Atherton, Atkins, Bachman, Beale, Beltzhoover, Bicknell, Blackburn, Bliss, Bragg, Bright, Buckner, Cabell, Caldwell, Carlisle, Chalmers, Clardy, Alvah A. Clark, John B. Clark, jr., Clymer, Cobb, Coffroth, Colerick, Converse, Cook, Covert, Cravens, Culberson, Davidson, Joseph J. Davis, Lowndes H. Davis, De La Matyr, Deuster, Dibrell, Dickey, Dunn, Elam, Ellis, Evins, Ewing, Felton, Finley, Forney, Frost, Geddes, Gibson, Gillette, Goode, Gunter, N. J. Hammond, Hatch, Henkle, Henry, Herbert, Herndon, Hill, Hostetler, House, Hull, Hinton, Hurd, Johnson, Jones, Kenna, Kimmel, King, Kitchin, Klotz, Knott, Le Fevre, Lewis, Lounsbury, Lowe, Manning, Benjamin F. Martin, Edward L. Martin, McKenzie, McLane, McMillan, Mills, Money, Morrison, Muldrow, Muller, Murch, Myers,

New, Nicholls, O'Connor, O'Reilly, Persons, Phelps, Phister, Poehler, Reagan, John S. Richardson, Richmond, Robertson, Ross, Rothwell, John W. Ryan, Samford, Sawyer, Seales, Shelley, Simonton, James W. Singleton, O. R. Singleton, Slemmons, Hezekiah B. Smith, William E. Smith, Sparks, Speer, Springer, Steele, Stephens, Stevenson, Talbott, Thompson, Tillman, R. W. Townshend, Tucker, Oscar Turner, Thomas Turner, Vance, Waddill, Warner, Weaver, Wellborn, Whiteaker, Whittlethorne, Thomas Williams, Willis, Wise, Fernando Wood, Wright, Yocum, Casey Young—140.

NAYS—Nelson W. Aldrich, William Aldrich, Anderson, Bailey, Baker, Barber, Barlow, Bayne, Bedford, Bingham, Blake, Bowman, Boyd, Brewer, Briggs, Brigham, Browne, Burrows, Butterworth, Calkins, Camp, Cannon, Carpenter, Caswell, Clafin, Rush Clark, Conger, Cowgill, Crapo, Daggett, George R. Davis, Deering, Dunnell, Dwight, Errett, Far, Fardon, Field, Fisher, Ford, Fort, Frye, Garfield, Godshalk, Hall, John Hammond, Harner, Benjamin W. Harris, Haskell, Hawk, Hawley, Hayes, Heilman, Henderson, Hiscock, Hubbard, Humphrey, James, Jorgensen, Joyce, Keifer, Kelley, Ketcham, Killinger, Lapham, Lindsey, Loring, Marsh, Joseph J. Martin, Mason, McCoid, McCook, McGowan, McKinley, Miles, Miller, Mitchell, Monroe, Morton, Neal, Newberry, Norcross, O'Neill, Osmer, Overton, Pierce, Pound, Prescott, Price, Reed, Rice, D. P. Richardson, Robinson, William A. Russell, Thomas Ryan, Sapp, Shallenberger, Sherwin, A. Herr Smith, Starin, Thomas, Amos Townsend, Tyler, J. T. Updegraff, Thomas Updegraff, Urner, Valentine, Van Aernam, Van Voorhis, Voorhis, Wait, Ward, Washburn, White, Wilber, C. G. Williams, Willits, Walter A. Wood, Thomas L. Young—119.

In the Senate, on April 24th, the bill was considered.

Mr. Conkling of New York said: "Why now should there be an attempt to block the wheels of government on the eve of an election at which this whole question is triable before the principals and masters of us all? The answer is inevitable. But one truthful explanation can be made of this daring enterprise. It is a political, a partisan manoeuvre. It is a strike for party advantage. With a fair election and an honest count, the Democratic party can not carry the country. These laws, if executed, insure some approach to a fair election. Therefore they stand in the way, and therefore they are to be broken down. I reflect upon no man's motives, but I believe that the sentiment which finds expression in the transaction now proceeding in the two Houses of Congress has its origin in the idea I have stated. I believe that the managers and charioteers of the Democratic party think that with a fair election and a fair count they can not carry the State of New York. They know that with unrestrained course, such as existed in 1868, to the ballot-box and count, no matter what majority may be given in that State where the green grass grows, the great cities will overbalance and swamp it. They know that with the ability to give eighty, ninety, one hundred thousand majority in the county of New York and the county of Kings, half of it fraudulently added, it is idle for the three million people living above the Highlands of the Hudson to vote. This is a struggle for power. It is a fight for empire. It is a contrivance to clutch the Na-

tional Government. That we believe; that I believe.

"The nation has tasted and drunk to the dregs the sway of the Democratic party, organized and dominated by the same influences which dominate it again and still. You want to restore that dominion. We mean to resist you at every step and by every lawful means that opportunity places in our hands. We believe that it is good for the country, good for every man North and South who loves the country now, that the Government should remain in the hands of those who were never against it. We believe that it is not wise or safe to give over our nationality to the dominion of the forces which formerly and now again rule the Democratic party. We do not mean to connive at further conquests, and we tell you that, if you gain further political power, you must gain it by fair means, and not by foul. We believe that these laws are wholesome. We believe that they are necessary barriers against wrongs, necessary defenses for rights; and, so believing, we will keep and defend them even to the uttermost of lawful honest effort.

"The other day, it was Tuesday, I think, it pleased the honorable Senator from Illinois [Mr. Davis] to deliver to the Senate an address, I had rather said an opinion, able and carefully prepared. That honorable Senator knows well the regard not only, but the sincere respect in which I hold him, and he will not misunderstand the freedom with which I shall refer to some of his utterances. Whatever else his sayings fail to prove, they did, I think, prove their author, after Mrs. Winslow, the most copious and inexhaustible fountain of soothing sirup. The honorable Senator seemed like one slumbering in a storm and dreaming of a calm. He said there was no uproar anywhere—one would infer you could hear a pin drop—from center to circumference. Rights, he said, were secure. I have his language here. If I do not seem to give the substance aright I will stop and read it. Rights secure North and South; peace and tranquillity everywhere. The law obeyed, and no need of special provisions or anxiety. It was in this strain that the Senator discoursed.

"Are rights secure, when fresh-done barbarities show that local government in one portion of our land is no better than despotism tempered by assassination! Rights secure, when such things can be as stand proved and recorded by committees of the Senate! Rights secure, when the old and the young fly in terror from their homes and from the graves of their murdered dead! Rights secure, when thousands brave cold, hunger, death, seeking among strangers in a far country a humanity which will remember that

"Before man made them citizens,
Great Nature made them men!"

"Read the memorial signed by Judge Dillon, by the Democratic mayor of Saint Louis, by

Mr. Henderson, once a member of the Senate, and by other men known to the nation, detailing what has been done in recent weeks on the southern Mississippi. Read the affidavits accompanying this memorial. Has any one a copy of the memorial here? I have seen the memorial. I have seen the signatures. I hope the honorable Senator from Illinois will read it, and read the affidavits which accompany it. When he does, he will read one of the most sickening recitals of modern times. He will look upon one of the bloodiest and blackest pictures in the book of recent years. Yet the Senator says all is quiet. 'There is not such faith, no, not in Israel.' Verily 'order reigns in Warsaw.' *Solitudinem faciunt, pacem appellant.*

"Mr. President, the Republican party everywhere wants peace and prosperity—peace and prosperity in the South as much and as sincerely as elsewhere. Disguising the truth will not bring peace and prosperity. Soft phrases will not bring peace. 'Fair words butter no parsnips.' We hear a great deal of loose flabby talk about 'fanning dying embers,' 'rekindling smoldering fires,' and so on. Whenever the plain truth is spoken, these unctuous monitions, with a Peter Parley benevolence, fall copiously upon us. This lullaby and hush has been in my belief a mistake from the beginning. It has misled the South and misled the North. In Andrew Johnson's time a convention was worked up at Philadelphia, and men were brought from the North and South for ecstasy and gush. A man from Massachusetts and a man from South Carolina locked arms and walked into the convention arm in arm, and sensation and credulity palpitated and clapped their hands, and thought a universal solvent had been found. Serenades were held at which 'Dixie' was played. Later on, anniversaries of battles fought in the war of Independence were made occasions by men from the North and men from the South for emotional, dramatic, hugging ceremonies. General Sherman, I remember, attended one of them; and I remember also that, with the bluntness of a soldier, and the wisdom and hard sense of a statesman, he plainly cautioned all concerned not to be carried away, and not to be fooled. But many have been fooled, and, being fooled, have helped to swell the Democratic majorities which now display themselves before the public eye. Of all such effusive demonstrations I have this to say: Honest, serious convictions are not ecstatic or emotional. Grave affairs and lasting purposes do not express or vent themselves in honeyed phrase or sickly sentimentality, rhapsody, or profuse professions. This is as true of political as of religious duties. The Divine Master tells us, 'Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven.' Facts are stubborn things, but the better way to deal with them is to look them squarely in the face.

"The Republican party and the Northern people preach no crusade against the South. I will say nothing of the past beyond a single fact. When the war was over no man who fought against his flag was punished even by imprisonment. No estate was confiscated. Every man was left free to enjoy life, liberty, and the pursuit of happiness. After the Southern States were restored to their relations in the Union no man was ever disfranchised by national authority—not one. If this statement is denied, I invite any Senator to correct me. I repeat it. After the Southern State governments were rebuilt and the States were restored to their relations in the Union by national authority, not one man for one moment was ever denied the right to vote, or hindered in the right. From the time that Mississippi was restored there never has been an hour when Jefferson Davis might not vote as freely as the honorable Senator in his State of Illinois. The North, burdened with taxes, draped in mourning, dotted over with new-made graves tenanted by her bravest and her best, sought to inflict no penalty upon those who had stricken her with the greatest, and, as she believed, the guiltiest rebellion that ever crimsoned the annals of the human race. As an example of generosity and magnanimity, the conduct of the nation in victory was the grandest the world has ever seen. The same spirit prevails now. Yet our ears are larmed with the charge that the Republicans of the North seek to revive and intensify the wounds and pangs and passions of the war, and that the Southern Democrats seek to bury them in oblivion of kind forgetfulness.

"We can test the truth of these assertions right before our eyes. Let us test them. Twenty-seven States adhered to the Union in the dark hour. Those States send to Congress two hundred and sixty-nine Senators and Representatives. Of these two hundred and sixty-nine Senators and Representatives, fifty-four, and only fifty-four, were soldiers in the armies of the Union. The eleven States which were disloyal send ninety-three Senators and Representatives to Congress. Of these, eighty-five were soldiers in the armies of the rebellion, and at least three more held high civil station in the rebellion, making in all eighty-eight out of ninety-three. Let me state the same fact, dividing the Houses. There are but four Senators here who fought in the Union Army. They all sit here now; and there are but four. Twenty Senators sit here who fought in the army of the rebellion, and three more Senators sit here who held high civil command in the Confederacy. In the House there are fifty Union soldiers from twenty-seven States, and sixty-five Confederate soldiers from eleven States. Who, I ask you, Senators, tried by this record, is keeping up party divisions on the issues and hatreds of the war?

"The South is solid. Throughout all its borders it has no seat here save two in which

a Republican sits. The Senator from Mississippi [Mr. Bruce] and the Senator from Louisiana [Mr. Kellogg] are still spared, and whisper says that an enterprise is afoot to deprive one of these Senators of his seat. The South is emphatically solid. Can you wonder if the North soon becomes solid too? Do you not see that the doings witnessed now in Congress fill the North with alarm and distrust of the patriotism and good faith of men from the South? Forty-two Democrats have seats on this floor; forty-three if you add the honorable Senator from Illinois [Mr. Davis]. He does not belong to the Democratic party, although I must say, after reading his speech the other day, that a Democrat who asks anything more of him is an insatiate monster. If you count the Senator from Illinois, there are forty-three Democrats in this Chamber. Twenty-three is a clear majority of all, and twenty-three happens to be exactly the number of Senators from the South who were leaders in the late rebellion. Do you anticipate my object in stating these numbers? For fear you do not, let me explain. Forty-two Senators rule the Senate; twenty-three Senators rule the caucus; a majority rules the Senate; a caucus rules the majority; and the twenty-three Southern Senators rule the caucus. The same thing in the same way, governed by the same elements, is true in the House.

"This present assault upon the purity and fairness of elections, upon the Constitution, upon the executive department, and upon the rights of the people—not the rights of a king, not on such rights as we heard the distinguished presiding officer, whom I am glad now to discover in his seat, dilate upon of a morning some weeks ago; not the divine right of kings, but the unborn rights of the people—the present assault upon them could never have been inaugurated without the action of the twenty-three Southern Senators here, and the Southern Representatives there [pointing to the House]. The people of the North know this and see it. They see the lead and control of the Democratic party again where it was before the war, in the hands of the South. 'By their fruits ye shall know them.' The honorable Senator from Alabama [Mr. Morgan], educated no doubt by experience in political appearances and spectacular effects, said the other day that he preferred the Democrats from the North should go first in this debate. I admired his sagacity. It was the skill of an experienced tactician to deploy the Northern levies as the sappers and miners; it was very becoming certainly. It was not from cruelty, or to make them food for powder, that he set them in the fore-front of the battle; he thought it would appear better for the Northern auxiliaries to go first and tunnel the citadel. Good, excellent, as far as it went; but it did not go very far in misleading anybody; putting the tail foremost and the head in the sand only showed the species and habits of the bird.

"We heard the other day that the logic of events had filled the Southern cities with men banded together by a common history and a common purpose. The Senator who made that sage observation perhaps builded better than he knew. The same logic of events, let me tell Democratic Senators and the communities behind them, is destined to bring from the North more united delegations.

"I read in a newspaper that it was proposed the other day in another place to restore to the army of the United States men who, educated at the nation's cost and presented with the nation's sword, drew that sword against the nation's life. In the pending bill is a provision for the retirement of officers now in the army with advanced rank and exaggerated pay. This may be harmless, it may be kind. One sparrow proves not spring; but along with other things suspicion will see in it an attempt to coax officers now in the army to dismount, to empty their saddles, in order that others may get on.

"So hue and cry is raised because courts on motion, for cause shown in open court, have a right to purge juries in certain cases. No man in all the South under thirty-five years of age can be affected by this provision, because every such man was too young, when the armies of the rebellion were recruited, to be subject to the provision complained of. As to the rest, the discretion is a wholesome one. But, even if it were not, let me say in all kindness to Southern Senators, it was not wise to make it a part of this proceeding, and raise this uproar in regard to it.

"Even the purpose, in part already executed, to remove the old and faithful officers of the Senate, even Union soldiers, that their places may be snatched by others, to overturn an order of the Senate which has existed for a quarter of a century, in order to grasp all the petty places here, seems to me unwise. It is not wise, if you want to disarm suspicion that you mean aggrandizing, gormandizing, unreasonable things.

"Viewing all these doings in the light of party advantage—advantage to the party to which I belong, I could not deplore them; far from it; but, wishing the repose of the country, and the real, lasting, ultimate welfare of the South, and wishing it from the bottom of my heart, I believe they are flagrantly unwise, hurtfully injudicious.

"What the South needs is to heal, build, mend, plant, sow. In short, go to work. Invite labor; cherish it; do not drive it out. Quit proscription, both for opinion's sake and for color's sake. Reform it altogether. I know there are difficulties in the way; I know there is natural repugnance in the way; but drop passion, drop sentiment which signifies naught, and let the material prosperity and civilization of your land advance. Do not give so much energy, so much restless, sleepless activity, to an attempt so soon to get possession once more

and dominate and rule the country. There is room enough at the national board, and it is not needed, it is not decorous, plainly speaking, that the South should be the MacGregor at the table, and that the head of the table should be wherever he sits. For a good many reasons it is not worth while to insist upon it.

"Mr. President, one of Rome's famous legends stands in these words: Let what each man thinks of the Republic be written on his brow. I have spoken in the spirit of this injunction. Meaning offense to no man, and holding ill will to no man because he comes from the South or because he differs with me in political opinion, I have spoken frankly, but with malice toward none.

"This session, and the bill pending are acts in a partisan and political enterprise. This debate, begun after a caucus had defined and clinched the position of every man in the majority, has not been waged to convince anybody here. It has resounded to fire the democratic heart, to sound a blast to the cohorts of party, to beat the long roll and set the squadrons in the field. This is the object of it, as plainly to be seen as the ultimate object of the attempted overthrow of laws. Political speeches having been thus ordained, I have discussed political themes, and, with ill will to no portion of the country, but good will toward every portion of it, I have with candor spoken somewhat of my thoughts of the duties and dangers of the hour."

Mr. Hill of Georgia: "Mr. President, the speech of the Senator from Vermont ought to be studied by every statesman in this Union, for it shadows, as that distinguished Senator only knows how to shadow, the great distinction that lies at the bottom of all the differences between the two parties that now contend for the mastery in this Government. This whole argument goes upon the idea that there is no protection for the citizens of this country save by the military arm. This whole argument of the honorable Senator from Vermont is replete with the idea that when you withdraw the army, or fail to furnish the military arm for the protection of the citizen, he is without protection; when you fail to give the President the army and the navy to enforce the laws, the President is without power to enforce the laws!

"Well, sir, if we have arrived at that condition of things, our condition is indeed lamentable. We have been taught from our youth to believe that this was a country of self-government, that the people are able to protect themselves, that freemen did not need a standing army and a navy to protect themselves—protect themselves from themselves. It has not been customary to teach our people that they must look to the arms of military power through a Federal centralism for the protection and preservation of their rights; and yet I challenge any gentleman to give this speech a critical reading, and it goes altogether on the

assumption that if military protection is withdrawn there is no protection worth having remaining; and the practical result of the Senator's argument is to show that by passing this bill, which simply declares that the army and the navy shall not be used at the polls, we repeal all the acts which authorize the enforcement of the laws previously passed, and leave the President powerless to enforce the laws and the citizens without protection.

"I heard a similar argument from that distinguished Senator on another memorable occasion. I noticed it then, and I call the attention of the country to it now. I heard it on one of those bills during the last Congress before us making appropriations for the army, in which there was a clause prohibiting the army from being used as a *posse comitatus* to execute the law. If Senators will turn to the short speech made by the distinguished Senator on that occasion, they will find that he said broadly that if that clause of the appropriation bill became a law, and a mob should be organized in the city of Washington to rob the Treasury, there would be no power to protect the Treasury from that mob; impressing the country with the idea that its defense, that its safety, that its protection rests in the arm of the military power. Can it be true? If a mob should organize in the city of Washington for the purpose of capturing the Treasury and robbing it, is it true that because there is no army here, because the army can not be used as a *posse comitatus*, therefore the mob has only to go and take possession of the Treasury? In a city of one hundred and fifty thousand inhabitants is there no power to protect the Treasury from a mob save through an army? Sir, that idea is at war with every feature of our Government, and certainly at war with all its fundamental principles. Our Government rests upon the idea that we are capable of self-government, that the people are patriotic, and the defense and protection of the property and liberties of the country rest in that belief—the people and the authority of the courts, which are the same thing, because they come from the body of the people. It rests upon the idea that we do not need a standing army to protect the American people from outrage by the American people as a body. Of course there are exceptions, as in all countries. The people must be protected from mobs, but the people can be protected from mobs without the use of the army.

"What would be the result of this style of argument? Gentlemen strangely have come out here now, and, in opposition to the bill passed yesterday, they have taken the distinct position that it is necessary to keep upon your statute-book the right to use the army and navy for the purpose of keeping the peace at the polls. Well, sir, it is idle, it is worse than idle, to give the President of the United States authority to use your army for any purpose, and not furnish him an army for use. You

say the President must have the right to use the army to control the elections. That is what you say by your opposition to this bill, for that is the only idea that the bill negatives. If it is necessary to have the right to use the army, the right is worthless unless you furnish an army to use. Make the calculation. Let the citizens of this country make the calculation, and see what destiny is in wait for them when the proposition is once established that an army must be supplied for the purpose of keeping the peace at the polls. How many troops will it take? What sized army must you have? You must have an army in every State, in every county, in every town; for, if one portion of the country is entitled to protection, and that protection can only be extended by the army, every other portion of the country is entitled to protection; every other portion of the country must have an army; and America, free America, will present to the world the singular spectacle of standing more in need of an army than any country on the globe, and we must have a larger standing army than Germany or Russia.

"Sir, does not every man see, in the very idea that the people of this country, on that day when they as sovereigns come to exercise the power of a sovereign, that they must have an army to control them, an army to protect them, an army to regulate them, an army to keep the peace among themselves in the exercise of this great power, that even by that very idea they must admit that free self-government is a failure? It is the last idea that an American ought to admit. Of all ideas possible in this day and age of degeneracy, I should have supposed the very last idea an American statesman would have admitted as at all applicable to the condition of things in this country would be that we needed military interference on the days of elections for the purpose of protecting the people at the polls. Whenever the American Congress shall in solemn form tell the world that an army is needed to protect American freemen when American freemen go to the polls, they have admitted that the American popular system of government is at an end.

"I must say that I am loth to believe, and I do not believe, that the distinguished gentleman who made the argument of this kind on yesterday, and which necessarily leads to this result, any more believes the statement he was making than did the Senator from the State of New York believe the statement of figures he made was correct. Neither of them had any purpose to make an incorrect statement, but both of them were after the great purpose of this whole movement—to excite one section of this country against the other, and to avail themselves of any occasion for that purpose. I have been watching during the progress of this discussion not only the character of the speeches that have been made, which have convinced my mind thoroughly of the whole purpose of it, but simultaneously the extraor-

inary movements that are going on through the country. Take the Republican newspapers of the day, and it seems to me that they are fuller of abuse, misrepresentation, and vituperation of the section of the country from which I have come than they ever were before. I know, from direct communication to myself, that various gentlemen who have been living for a few years in the South are going through the North, some of them as lecturers, some of them in the garb of ministers of the Gospel, and their whole lectures are simply replete with the most extravagant and false statements of wrongs and injuries in the South.

"Designing persons are circulating letters and documents among the poor colored people, telling them that in Kansas they can have forty acres and a mule and money free of cost, and the Government, the great good Government that freed them, will take care of them. For what purpose is this second signal movement among the poor negroes of the South, the effect of which is to dissatisfy them with their condition? That they may, as many of them have been, be deceived and undertake to emigrate to this heavenly region, the new Canaan of the negro—the colored man. Why is that done? Not for the purpose of benefiting the poor colored man—oh, no; but for the double purpose of making it an occasion to vituperate the Southern people before the Northern people, charging their own duplicity to be the effect of cruelty and wrong by the very men whose advantage it is to be kind to their laborers and to keep them among them in contentment. There is the political purpose. Thus they get thousands of poor creatures away from home, naked and hungry, and then the appeal comes to the philanthropy of Northern people and the plethora of the Treasury to come and take care of them; and the agents who circulate the falsehoods and create the dissatisfaction and produce the mischief come in, of course, as dispensers of the alms. It is a sad fact that these sectional passions are yet used by statesmen, by politicians, by bad men, and by thousands of small men in a hundred shapes and forms—these sectional passions that keep the people of the North and the people of the South distrustful of each other, and which are made commerce of by these people for their own selfish ends without any regard to consequences.

"We are to be told that the military arm is essential to the protection of the country, but that under no circumstances can the North trust one third of the people of this Union. No man can read these remarkable declarations of the leading men of that great party, and not feel that the American Rubicon is in sight, and that Cæsar is ready to cross over.

"But, sir, I should not have perhaps said one word, notwithstanding my convictions, of the purposes of the discussion here, the style of discussion, the manner of the discussion, its perfect consonance with what is

going on outside, notwithstanding the conviction on my part that there is this day a concerted movement in this country permeating the whole Republican party, high and low, for the purpose of consolidating one section in this country against the other for no purpose but that of dominion, right or wrong—I perhaps should have said nothing in view of all this but for the fact that in the present case the immediate legislation and the purpose manifested in opposing that legislation would amount to nothing unless they could control the President of the United States. If the President should oppose the bill passed by the majority of Congress, of course that was an end to the contest here; and distinguished gentlemen who had made such tremendous clamor against the bill would be like Othello—their occupation would be gone. I do not wish to do any one injustice, but it can not be disguised before the country that a persistent, earnest, arbitrary, I almost said dictatorial, purpose has been manifested by that party to get control of the President and influence him to veto the bill. I have never believed it would be done. I do not believe the President will lend himself to the scheme, and I have not believed it. The present Chief Magistrate of this country distinguished his administration in a manner worthy of his best predecessor when he first took charge of it, by signalizing the beginning of that administration by the removal of the troops from the polls of the States and from interference with the States. I can not believe that a President who thus signalized his administration in the beginning would be guilty of the enormous inconsistency of now insisting, against the will of a majority of Congress, that he should have the power to use troops, not only to control the States, but to control all the elections in the country. It would be too manifestly inconsistent.

"There is no clause in the Constitution which says in so many words that Congress shall vote appropriations; but the preservation of the Government itself requires that appropriations shall be voted. The taxes are paid into the Treasury for the purposes of supporting the Government, and the Congress which willfully refuses to appropriate money to support the Government, in my judgment, is guilty of revolutionary conduct which can not be excused. I suppose I have stated that with sufficient strength for the Senator from New York. Now, what are the facts? Mark what I state: that the refusal to vote the appropriations to support the Government is unconstitutional, that we are bound by the very terms of our oath to take care of this Government, to support it, to maintain it, and to that end to make the necessary appropriations. What are the facts? Take the Forty-fifth Congress. Every Democrat in the House voted for appropriations; every Democrat in the Senate voted for appropriations; and every Republican in the House

and Senate voted against the appropriations. Who violated the Constitution? Did the Democrats who voted to make the appropriations violate the Constitution? Did the Republicans who voted not to make the appropriations support the Constitution? The Senator says it is a constitutional duty to make appropriations. I admit it. Why was it that appropriations were not voted by the Forty-fifth Congress to support the army and to carry on the Government? It was because every Republican in this body rallied and defeated the bill making appropriations for that purpose. There is the record. Let us get the facts right, and I will attend to the excuses afterward. The unconstitutional act of voting against appropriations was done by the Republican party. The constitutional duty of voting for appropriations was performed by every Democrat in both Houses. How, then, can it be charged over the country that the Democratic party is responsible for the failure of the appropriations?

"Not only was that true in the Forty-fifth Congress, but it is true of the Forty-sixth. This Congress was called together, and every Democrat in both Houses voted for a bill appropriating money to support the army, all that the departments demand and need. Every Republican in both Houses voted against it. If it is unconstitutional to refuse appropriations, who has refused appropriations? But the Senator is right again. If it is a constitutional duty on the part of Representatives and Senators to vote for appropriations, it is equally a constitutional duty on the part of the Executive to approve the appropriation bill, because under the forms of the Constitution every bill has to go to him for approval or disapproval. The appropriations can not be made by a majority of Congress without the concurrence of the President; and, therefore, it is just as unconstitutional for the President to defeat an appropriation as for Congress to do so. The President has done it in this case, but they say there are excuses for it.

"The first question I wish to put to the Senator is this: What excuse can justify a man in doing an unconstitutional act? The Senator says it is unconstitutional to vote against appropriations. What excuse can justify a man in voting against an appropriation? What excuse can justify the President therefore in vetoing an appropriation bill? I think it must be conceded on all hands that no man can be justified in doing an unconstitutional thing for any reason less than the preservation of the Constitution itself. Now, what are the excuses offered in this case? The excuse is the general legislation that was attached to the appropriation bill. What was the form of that legislation? First, it is admitted to be usual and constitutional. The Senator from New York himself admits that. The Senator from New York goes further, and says that so far as the mere form is concerned any bill which Con-

gress has the power to pass can be attached to an appropriation bill, and, unless the President can find cause on its merits, it is difficult to see how the veto of such a bill could be sustained; and the Senator is right. The form was usual and constitutional. So the President can not be justified in vetoing the bill, nor can the gentlemen on the other side be justified in voting against the bill because of the form, if the form of the bill is usual and constitutional. Mark you, they say to vote against the bill is unconstitutional. To refuse an appropriation (and every man by his vote against an appropriation does refuse it) is unconstitutional. Then you can not plead that you do not like the form for the purpose of justifying the unconstitutional act. Then take the substance of the bill. What is it? It is nothing in the world but to repeal certain legislation. That is constitutional. The Senator from New York would admit that Congress has a right to repeal those acts; that it is constitutional to repeal the acts we seek to repeal.

"Mr. President, I advance to a more significant proposition, one which I consider still more important than any that has been discussed. You can not believe that this great party, led by such intelligent gentlemen, is simply influenced, and influenced alone, by a desire to control an election. There is a greater significance. I will not say the manifest purpose, but I will say the logical tendency of the doctrines which have been advanced, and which are in perfect consonance with the history of the Republican party, is the destruction of the States as an element in the character of this Union. Take the argument of the Senator from New York. Let me read what he said. The Senator from New York said:

"In the city of New York all the thugs and shoulder-hitters and repeaters, all the carriers of slungshots, dirks, and bludgeons, all the fraternity of the bucket-shops, the rat-pits, the hells, and the slums, all the graduates of the nurseries of modern so-called democracy [laughter], all those who employ and incite them, from King's Bridge to the Battery, are to be told in advance that on the day when the million people around them choose their members of the National Legislature, no matter what God-daring or man-hurting enormities they may commit, no matter what they do, nothing they can do will meet with the slightest resistance from any national soldier or armed man clothed with national authority.

"Now, does the Senator from New York mean to say (and his argument is utterly worthless unless he does mean to say so) that protection from thugs and shoulder-hitters and the various unnamable bad men that he enumerates is impossible in New York except through the national soldiery, except through the arm of the National Government? Is that what the honorable Senator means? Yet that is what he says. He says that every one of these terrible characters is to be told that he may commit any enormity he pleases; he can not be interfered with by any national soldiery. That is all true; but does it therefore follow that they can do these great crimes with im-

punity? Has New York no power to protect her citizens in the exercise of the right of suffrage? Is New York so given up to thugs and shoulder-hitters—I can not remember those other hard names—but is New York such a hell that New York can not protect her own people; and does the ambassador from New York, in his high place, say that to the country? If New York can protect her people, why does she clamor for the national arm? Is New York unable to protect her citizens? Then let New York petition this Congress and say so, and we will help the poor, feeble, emasculated State of New York! Is New York able to protect her citizens and yet unwilling to protect them? Then New York does not deserve help; then New York does not deserve to be a State. One or the other must be true. If she demands the Federal arm, if she demands the army and the navy, if she demands that the soldiery shall protect her people, it must be because she is either unable to protect them or unwilling to protect them."

Mr. Kernan: "She is neither."

Mr. Hill of Georgia: "Ah, my friend, you are right; she is neither. She is able and she is willing to protect her citizens in this right. But let the argument progress. If the Senator is right, and if in New York the national soldier must protect her citizens in the exercise of the right of suffrage, must we not do the same thing in every other right? If New York can not protect her people in one right, can she protect them in any other right? If New York must have the national arm to help her protect her people in the exercise of one right, I repeat, must not New York demand the national arm to help her protect her people in all other personal rights, and what is the result? The argument comes just to this, that the State of New York is unable to protect her people in any of their rights, and therefore it is necessary for New York to have the protection and the help of the National Government in the protection of all. If New York can not protect her people, what State can? If New York, with her five million people, the largest State in this Union, the wealthiest State in this Union, having the commercial metropolis of this great country, is unable to protect her people from thugs and shoulder-hitters and rat-pitters, what other State is able to protect her people? Does not every man see the necessary logical result of the honorable Senator's argument, that States must be destroyed, that the Government must absorb to itself all the power of protecting the citizens of this country, all their rights, and reduce the States to incompetent provinces? That is the goal of the Republican party. Every hour of their history has been a direct march to the destruction of the States.

"Here is the truth, Mr. President: the whole war was the result of crimination between two extreme ideas. I deny that the Union, as interpreted by Madison and expounded by Web-

ster, was any party to the late war except as a victim, a threatened victim, and a very dangerously threatened one. It is true that the war was the result of a collision of ideas and interests between the extreme nationalists and the extreme federalists. They brought about the war; but the slavery question entering into it sectionalized it, and therefore the North became consolidated on one side, and the South, or a portion of the States of the South, consolidated on the other. After the war arose the Union became involved, and therefore it is that those who fought on the side of the Federal Government fought for the Union, and are entitled to all the benefits that result from that relation, and no man will always give them to them more cheerfully than myself. The war being the result of this collision of extremes, the consolidationists, the centralizationists, the monarchists (for that is what they mean) had the advantage in that they had possession of the Union, possession of its power, possession of its army, and possession of its navy—an advantage which they acquired by secession folly. The collision coming on in this form, secession was crushed out in the conflict, utterly crushed out. I want the country to understand that. It was utterly crushed out. There is no longer any danger to this country by reason of secession. It has no advocate in the South. It is a heresy which has had its day, wrought its wrongs, and gone to its grave, for which there is no resurrection, unless it gets that resurrection in the home of its birth, New England.

"But, sir, that other extreme enemy of the Constitution and Government and Union, as expounded by Madison and Webster, was not crushed out by war. It was the cardinal principle of the Republican party. All good Union men at the North, by reason of the condition of things, being compelled to go into the Federal army, as others in the South of a like character who had no sympathy with secession were compelled to go into secession, it was by the aid of the Democracy of the North, of the conservative men of the North who did not agree to absolute nationalism, who did not agree to the doctrine of consolidation, who did not agree to the absolute theory of a national government in the Federal head—it was by the aid of these Democrats and conservative men that the Federal armies were enabled to triumph and crush out secession. A united North overpowered a divided South. But the men who happened to be the party in power, and who are the representatives of this extreme idea of consolidation, took all the credit to themselves; and one of the dangers now arising to this country is from the fact that the party which represents this central, absolutely national idea—this consolidation idea, this monarchizing idea—that party claims the credit of having saved the Union. It gives no credit to its allies whatever. What would you have done without the Democrats in the war? And

yet it was amusing to hear the distinguished Senator from New York the other day in his own way describing the Democratic party as consisting of a Northern tail and a Southern head. What would you have done without that tail in the war? If the conservative Union men North and South could have left the war to be fought out by the advocates of secession on the one hand and the advocates of consolidation on the other, there would have been some other party in control of this country for the last eighteen years.

"But, as I say, the respective sections became involved without regard to the individual opinions of their people. This national party, this party of absolutism, is not only the party in power by reason of its representation that it saved the Union, and taking all the credit of saving the Union, but it claims all the credit of having suppressed the rebellion, and demands that it shall be esteemed as the secessionists shall be hated.

"These two sources of strength to the Republican party are now endangering the States. Why, sir, every step of the Republican party is to the destruction of the States. Take the very measures now under consideration. What are they? In 1862, for purposes which every man can explain, a test oath was prescribed for jurors. In 1865 a clause was put in an army bill authorizing the use of troops to keep the peace at the polls. Neither of these statutes was ever known on our statute-book before; they did not exist in the early days of the Republic; they never existed until they were enacted during the war. In 1870 and 1871 your election laws were passed. They never existed before. Up to that time all parties had agreed that the States were both able and willing to take care of the elections and protect their citizens. Now, I put it to every intelligent man, what stronger indication of a desire to grasp power, what stronger indication of a purpose to crush out the States than the attempt to drive intelligence and virtue and property from the jury-box and use the army at the elections, and to place in the Federal Government power by supervisors and deputy marshals to take absolute control of the States in their elections, things that were never done before?

"If either one of the laws which we now propose to repeal had been proposed for enactment in any administration of this Government from the days of Washington to 1860, it would have ruined the man that made the proposition. No man could have stood before the indignation of the American people who would have proposed to place upon the statute-book a law keeping intelligence and virtue from the jury-box, a law surrounding the polls with the army and the navy, or a law giving to the Federal Government absolute control of the elections, and, as my friend from Kentucky [Mr. Beck] suggests, fixing the Congressional elections to come off on the same day with

Presidential elections and State elections, so as to control all.

"I have given this subject careful consideration. I wish to do no man injustice; but, with a full sense of responsibility to my country, I affirm to-day that this heated contest we have had here for six weeks has no meaning, has no purpose, and can have no result but the absolute control of the States by force through the Federal Government to perpetuate the Republican party in power, whether the people will it or not; and if the President shall use the veto power, conferred upon him for a high conservative purpose, to aid these party schemes, and the people shall not rise in their indignation and drive from power these men who thus abuse power and disregard their duty, the Union will be destroyed in the destruction of the States.

"I grant you that the people of the North ought to have solid arguments on this subject. I grant what the Senator from New York intimated, that gush will not do; simply talking about shaking hands and locking arms does not amount to much. That will do for children and Sunday-school teachers. Statesmen want facts; statesmen want arguments; statesmen want reasons why the Southern people are not the enemies of the Government, and therefore ought to be friends and can be safely trusted. I propose to give some of those reasons.

"The laws that are now proposed to be repealed have been made the occasions for all kinds of intimations from the leaders of the Republican party that the South is not worthy to be trusted. How on earth can a proposition to repeal a law which was unknown to the country for the first seventy-five years of the existence of the Government be an evidence of disloyalty? How is it any evidence that we are not to be trusted because we want intelligence and virtue in the jury-box? How is it an evidence that we are not to be trusted because we want the absence of the army from the polls when the army was never known at the polls in the days of our fathers? How is it that we are to be declared disloyal because we are in favor of taking away from the Federal Government the control of the elections through the deputy marshals and the supervisors? United States deputy marshals and supervisors in elections were never known to the history of this country for the first eighty years of its government. Are we disloyal because we want what Washington had, what Jefferson had, what Madison had, what Jackson had? The President in his message says that he invites us back to the good old habits and customs of the country, and he says that the habit of tacking legislation to appropriation bills was unknown in the first forty years of the Government, and invites us back to those good old days. I mean to accept his invitation. I say to the President, 'Come sir, let us go back to the good old days when for not forty but seventy-five years troops were

not known at the polls; let us go back to the good old days when for not forty but for eighty years supervisors and deputy marshals in control of the elections were unknown to the Federal statute-book. Now, come, let us go back.' Why not? That is what we are trying to do.

"But I want to give the reasons why the South is trustworthy, and I want to call the attention of the country to them. First, the Southern men went to war for what they believed their self-preservation. They defended their convictions bravely. They have surrendered; they have abandoned their convictions; they have abandoned secession, both as a doctrine and a remedy; and a people who were brave enough to defend their convictions with their blood are honorable enough to keep their pledges. When the Senator from New York points out that eighty-five out of the ninety-three Southern Senators and Representatives—I will not quarrel with the figures—went to the battle-field and shed their blood for their convictions, he stated a strong reason why they are trustworthy; when he shows that twenty Southern Senators on this floor were willing to defend their convictions with their life, and only four on that side of the Chamber, he shows a large proportion of Republicans who were very anxious to get up war, and very few who were willing to fight in the wars.

"But, sir, there is another reason why the South ought to be trusted. I say here that the South did not secede from hostility to the Union nor from hostility to the Constitution. That is your assumption. You are always talking about the Southern people as enemies of the Union. Not a word of it is true. As I said, the South was driven into secession by the opposite extreme at the North, who were as inimical to the Constitution as the secessionists themselves. That is the truth, and every intelligent man and every honest man admits it. The aggravations of the slavery question got possession of their respective sections and carried them into war, but do you suppose that every Southern man who stood by his section in a sectional war was hostile to the Union? Not a word of it.

"No, sir; the South seceded because there was a war made upon what she believed to be her constitutional rights by the extreme men of the North. Those extreme men of the North were gaining absolute power in the Federal Government as the machinery by which to destroy Southern property. Then the Northern people said, a large number of the leaders and the Republican party said, that if secession was desired to be accomplished it should be accomplished in peace. Mr. Greeley said that they wanted no union pinned together by bayonets. Here is the condition in which the South was placed: They believed the Northern extremists would use the machinery of the Government to their injury; the people of the South believed that they would protect their property by forming a new union in the

South precisely upon the basis of the old. They believed they could do it in peace; and I say here there were thousands upon thousands, yea, hundreds of thousands of the best men of the South who believed that the only way to avoid a war was to secede. They believed the Northern conscience wanted to get rid of the responsibility for slavery; they believed they had a right to protect their slave property, and they thought they would accommodate the Northern conscience by leaving the Union and preserving that property. They believed they could do it in peace; and if they had believed that a war would result they never would have seceded.

"Sir, if the South were solid from any motives of hostility to the Union, from any motives of hostility to the Constitution, from any motives of hostility to the Northern people, the South would be exceedingly reprehensible. We were made solid in defense of our own preservation; we are now solid in defense of our own honor and self-respect. We will be kept solid in defense of the Constitution of our fathers as interpreted by Madison and expounded by Webster. We would be glad, if it could be, to see two national parties in this country, national in organization, national in principles, national in hopes, and consistent with the true interpretation of the Constitution; but the Northern man who after having made the South solid by calumny, by wrongs piled mountain high extending through years, that Northern man who takes advantage of the wrongs he has inflicted upon the South, and thereby made them solid, who now undertakes for that very reason to make the North solid too, having a solid North against a solid South, is a disunionist in fact; for whenever we shall have a solid North and a solid South in this country the Union can not last.

"No, my good Northern Democratic brethren, you saved the country at last; you saved the Union in the hour of its peril; not the Republican party. You who had shown your devotion to your flag saved the Union, and now it is for you to go before your people and tell them that the solid North must never become a fact against the solid South. If so, disunion will be accomplished. It is you that we look to. You saved the Union, and you will save the States. We could not help you save the Union, but we are here with all the power that God has given us to help you preserve and save the States of this country against the only remaining enemy of either the States or the Union."

Mr. Chandler of Michigan: "Mr. President, this is the fourth time since 1861 that allusion has been made to a letter written by me to the Governor of the State of Michigan: first it appeared in a newspaper published in Detroit, a copy of which was sent to me, and a copy was likewise sent to the late Senator Powell. The letter was a private note written to the Governor and no copy retained. Senator Powell

approached me with his copy of the letter and asked me if it was a correct copy. I told him I did not know; I had written to the Governor of Michigan a private note and had kept no copy, and could not say whether this was correct or not. He told me that if it was a correct copy he would wish to make use of it; and, if it was not, he did not propose to make use of it. I said, 'Sir, I will adopt it, and you may make any use of it you please.' So today that is my letter. If not originally written by me, it is mine by adoption.

"And, Mr. President, what were the circumstances under which that letter was written? I had been in this body then nearly four years, listening to treason day by day and hour by hour. The threat, the universal threat daily, hourly, was, 'Do this, or we will dissolve the Union; if you do not do that, we will dissolve the Union.' Treason was in the White House, treason in the Cabinet, treason in the Senate, and treason in the House of Representatives; bold, outspoken, rampant treason was daily and hourly uttered. The threat was made upon this floor in my presence by a Senator, 'You may give us a blank sheet of paper and let us fill it up as we please, and then we will not live with you.' And another Senator stood here beside that Senator from Texas and said, 'I stand by the Senator from Texas.' Treason was applauded in the galleries of this body, and treason was talked on the streets, in the street-cars, in private circles; everywhere it was treason—treason in your departments, traitors in the White House, traitors around these galleries, traitors everywhere. The flag of rebellion had been raised; the Union was already dissolved, we were told; the rebel Government was already established with its capital in Alabama. 'And now we will negotiate with you,' was said to us. Upon what basis would you negotiate? Upon what basis did you call your peace convention? With rampant rebellion staring us in the face, sir, it was no time to negotiate. The time for negotiation was past. We had offered everything we could in the way of negotiation, everything in the way of compromise, and all our proffers had been indignantly refused.

"Sir, this was the condition of affairs when that letter was written; and, after Mr. Powell had made his assault upon me in this body for it, I instantly responded, relating what I have related here now with regard to the letter, and I said, 'I stand by that letter,' and I stand by it now. What was there in it then, and what is there in it now? The State of Michigan was known to be in favor of the Constitution and the Union and the enforcement of the laws, even to the letting of blood if need be, and that was all there was and all there is in that letter. Make the most of it.

"The Senator from Georgia says that I did not shed any blood. How much blood did he shed? Will somebody inform us the exact

quantity of blood that the Senator from Georgia shed?"

Mr. Hill: "The difference between us is, that I was not in favor of shedding anybody's blood."

Mr. Chandler; "Nor I, except to punish treason and traitors. Sir, the Senator is not the man to stand up on this floor and talk about other men saving their own blood. He took mighty good care to put his blood in Fort Lafayette, where he was out of the way of rebel bullets as well as Union bullets. He is the last man to stand up here and talk to me about letting the blood of others be shed.

"Mr. President, I was then, as I am now, in favor of the Government of the United States. Then, as now, I abhorred the idea of State sovereignty over national sovereignty. Then, as now, I was prepared even to shed blood to save this glorious Government. Then, as now, I stood up for the Constitution and the Union. Then, as now, I was in favor of the perpetuity of this glorious Government. But the Senator from Georgia was, as he testified before a committee, 'a Union secessionist.' I have the testimony here before me. Will somebody explain what that means—'a Union secessionist'? Mr. President, I should like to see the dictionary where the definition can be found of 'a Union secessionist'! I do not understand the term.

"He says that they have a right to have a solid South, but a solid North will destroy the Government. Why, Mr. President, the South is no more solid to-day than it was in 1857."

Several Senators: "Eighteen hundred and sixty-one, you mean."

Mr. Chandler: "Well, it was the same in 1857. It was just as solid in 1857 as it is to-day. It has been solid ever since, and it was no quarrel with the North that made it solid. It was solid because it was determined either to 'rule or ruin' this nation. It tried the 'ruin' scheme with arms; and now, having failed to ruin this Government with arms, it comes back to ruin it by withholding supplies to carry on the Government. Sir, the men have changed since 1857. There is now but one member on this floor who stood here with me on the 4th of March, 1857. The men have changed, the measures not at all. You then fought for the overthrow of this Government, and now you vote and talk for the same purpose. You are to-day, as you were then, determined either to rule or ruin this Government, and you can not do either."

Motions were made on the Republican side to strike out all the clauses of the bill repealing the portions of acts relating to jurors, supervisors, and marshals. These were rejected by a strict party vote.

The President *pro tempore*: "If there are no further amendments, the question is, Shall the bill be read the third time?"

The bill was read the third time.

The President *pro tempore*: "The question now is, Shall the bill pass?"

The roll-call having been concluded, the result was announced as follows:

YEAS—Bailey, Bayard, Beek, Call, Cockrell, Coke, Davis of West Virginia, Eaton, Garland, Gordon, Groome, Grover, Hampton, Harris, Hereford, Houston, Johnston, Jonas, Jones of Florida, Kernan, Lamar, McDonald, McPherson, Maxey, Morgan, Randolph, Ransom, Saulsbury, Slater, Thurman, Vance, Voorhees, Walker, Wallace, Whyte, Williams, Withers—37.

NAYS—Allison, Anthony, Bell, Blaine, Booth, Bruce, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Chandler, Conkling, Edmunds, Ferry, Hill of Colorado, Hoar, Ingalls, Kellogg, Kirkwood, Logan, McMillan, Morrill, Paddock, Platt, Rollins, Saunders, Teller, Windom—27.

ABSENT—Butler, Carpenter, Davis of Illinois, Dawes, Farley, Hamlin, Hill of Georgia, Jones of Nevada, Pendleton, Plumb, Sharon, Vest—12.

So the bill was passed.

In the House, on May 29th, the following veto from President Hayes was received and read:

To the House of Representatives:

After mature consideration of the bill entitled "An Act making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1880, and for other purposes," I herewith return it to the House of Representatives, in which it originated, with the following objections to its approval:

The main purpose of the bill is to appropriate the money required to support during the next fiscal year the several civil departments of the Government. The amount appropriated exceeds in the aggregate \$18,000,000.

This money is needed to keep in operation the essential functions of all the great departments of the Government, legislative, executive, and judicial. It the bill contained no other provisions, no objection to its approval would be made. It embraces, however, a number of clauses relating to subjects of great general interest, which are wholly unconnected with the appropriations which it provides for. The objections to the practice of tacking general legislation to appropriation bills, especially when the object is to deprive a coordinate branch of the Government of its right to the free exercise of its own discretion and judgment touching such general legislation, were set forth in the special message in relation to House bill No. 1, which was returned to the House of Representatives on the 29th of last month. I regret that the objections which were then expressed to this method of legislation have not seemed to Congress of sufficient weight to dissuade from this renewed incorporation of general enactments in an appropriation bill, and that my constitutional duty in respect of the general legislation thus placed before me can not be discharged without seeming to delay, however briefly, the necessary appropriations by Congress for the support of the Government. Without repeating those objections, I respectfully refer to that message for a statement of my views on the principle maintained in debate by the advocates of this bill, namely, that "to withhold appropriations is a constitutional means for the redress" of what the majority of the House of Representatives may regard as "a grievance."

The bill contains the following clauses, namely:

And provided further, That the following sections of the Revised Statutes of the United States, namely, sections 2016, 2018, and 2020, and all of the succeeding sections of said statutes down to and including section 2027, and also section 5522, be, and the same are hereby, repealed; . . . and that all the other sections of the Revised Statutes, and all laws and parts of laws authorizing the appointment of chief supervisors of elections, special deputy marshals of elections, or general

deputy marshals, having any duties to perform in respect to any election, and prescribing their duties and powers and allowing them compensations, be, and the same are hereby, repealed.

It also contains clauses amending sections 2017, 2019, 2028, and 2031 of the Revised Statutes.

The sections of the Revised Statutes which the bill, if approved, would repeal or amend, are part of an act, approved May 30, 1870, and amended February 28, 1871, entitled "An act to enforce the rights of citizens of the United States to vote in the several States of this Union, and for other purposes." All of the provisions of the above-named acts which it is proposed in this bill to repeal or modify relate to the Congressional elections. The remaining portion of the law, which will continue in force after the enactment of this measure, is that which provides for the appointment, by a judge of the Circuit Court of the United States, of two supervisors of election in each election district, at any Congressional election, on due application of citizens who desire, in the language of the law, "to have such election guarded and scrutinized." The duties of the supervisors will be to attend at the polls at all Congressional elections, and to remain after the polls are open until every vote cast has been counted, but they will "have no authority to make arrests, or to perform other duties than to be in the immediate presence of the officers holding the election, and to witness all their proceedings, including the counting of the votes, and the making of a return thereof." The part of the election law which will be repealed by the approval of this bill includes those sections which give authority to the supervisors of election "to personally scrutinize, count, and canvass each ballot," and all the sections which confer authority upon the United States marshals and deputy marshals, in connection with the Congressional elections. The enactment of this bill will also repeal section 5522 of the Criminal Statutes of the United States, which was enacted for the protection of United States officers engaged in the discharge of their duties at the Congressional elections. This section protects supervisors and marshals in the performance of their duties by making the obstruction or the assaulting of these officers, or any interference with them by bribery or solicitation, or otherwise, crimes against the United States.

The true meaning and effect of the proposed legislation are plain. The supervisors, with the authority to observe and witness the proceedings at the Congressional elections, will be left; but there will be no power to protect them, or to prevent interference with their duties, or to punish any violation of the law from which their powers are derived. If this bill is approved, only the shadow of the authority of the United States at the national elections will remain—the substance will be gone. The supervision of the elections will be reduced to a mere inspection, without authority on the part of the supervisors to do any act whatever to make the election a fair one. All that will be left to the supervisors is the permission to have such oversight of the elections as political parties are in the habit of exercising without any authority of law, in order to prevent their opponents from obtaining unfair advantages. The object of the bill is to destroy any control whatever by the United States over the Congressional elections.

The passage of this bill has been urged upon the ground that the election of members of Congress is a matter which concerns the States alone; that these elections should be controlled exclusively by the States; that there are and can be no such elections as national elections; and that the existing law of the United States regulating the Congressional elections is without warrant in the Constitution. It is evident, however, that the framers of the Constitution regarded the election of members of Congress in every State and in every district as, in a very important sense, justly a matter of political interest and concern to the whole country. The original provision of the Constitution on this subject is as follows (section 4, article 1):

The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof: but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

A further provision has been since added, which is embraced in the fifteenth amendment. It is as follows:

SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

SEC. 2. The Congress shall have power to enforce this article by appropriate legislation.

Under the general provision of the Constitution (section 4, article 1), Congress in 1866 passed a comprehensive law which prescribed full and detailed regulations for the election of Senators by the Legislatures of the several States. This law had been in force almost thirteen years. In pursuance of it all the members of the present Senate of the United States hold their seats. Its constitutionality is not called in question. It is confidently believed that no sound argument can be made in support of the constitutionality of national regulation of senatorial elections which will not show that the elections of members of the House of Representatives may also be constitutionally regulated by the national authority.

The bill before me itself recognizes the principle that the Congressional elections are not State elections, but national elections. It leaves in full force the existing statute under which supervisors are still to be appointed by national authority, to "observe and witness" the Congressional elections whenever due application is made by citizens who desire said elections to be "guarded and scrutinized." If the power to supervise, in any respect whatever, the Congressional elections exists under section 4, article 1, of the Constitution, it is a power which, like every other power belonging to the government of the United States, is paramount and supreme, and includes the right to employ the necessary means to carry it into effect.

The statutes of the United States which regulate the election of members of the House of Representatives, an essential part of which it is proposed to repeal by this bill, have been in force about eight years. Four Congressional elections have been held under them, two of which were at the Presidential elections of 1872 and 1876.

Numerous prosecutions, trials, and convictions have been had in the courts of the United States in all parts of the Union for violations of these laws. In no reported case has their constitutionality been called in question by any judge of the courts of the United States. The validity of these laws is sustained by the uniform course of judicial action and opinion.

If it is urged that the United States election laws are not necessary, an ample reply is furnished by the history of their origin and of their results. They were especially prompted by the investigation and exposure of the frauds committed in the city and State of New York at the elections of 1868. Committees representing both of the leading political parties of the country have submitted reports to the House of Representatives on the extent of those frauds. A committee of the Fortieth Congress, after a full investigation, reached the conclusion that the number of fraudulent votes cast in the city of New York alone in 1868 was not less than 25,000. A committee of the Forty-fourth Congress, in their report submitted in 1877, adopted the opinion that for every 100 actual voters of the city of New York in 1868, 108 votes were cast; when, in fact, the number of lawful votes cast could not have exceeded 88 per cent. of the actual voters of the city. By this statement the number of fraudulent votes at that election, in the city of New York alone, was between thirty and forty thousand. These frauds completely reversed the result of the election in the State of New York, both as to the choice of Governor and State officers, and as to the choice of electors of President and Vice-Presi-

dent of the United States. They attracted the attention of the whole country. It was plain that if they could be continued and repeated with impunity free government was impossible. A distinguished Senator in opposing the passage of the election laws declared that he had "for a long time believed that our form of government was a comparative failure in the larger cities." To meet these evils and to prevent these crimes the United States laws regulating Congressional elections were enacted.

The framers of these laws have not been disappointed in their results. In the large cities, under their provisions, the elections have been comparatively peaceable, orderly and honest. Even the opponents of these laws have borne testimony to their value and efficiency, and to the necessity for their enactment. The committee of the Forty-fourth Congress, composed of members a majority of whom were opposed to these laws, in their report on the New York election of 1876, said:

The committee would commend to other portions of the country and to other cities this remarkable system, developed through the agency of both local and Federal authorities acting in harmony for an honest purpose. In no portion of the world, and in no era of time, where there has been an expression of the popular will through the forms of law, has there been a more complete and thorough illustration of republican institutions. Whatever may have been the previous habit or conduct of elections in those cities, or howsoever they may conduct themselves in the future, this election of 1876 will stand as a monument of what good faith, honest endeavor, legal forms, and just authority may do for the protection of the electoral franchise.

This bill recognizes the authority and duty of the United States to appoint supervisors to guard and scrutinize the Congressional elections, but it denies to the Government of the United States all power to make its supervision effectual. The great body of the people of all parties want free and fair elections. They do not think that a free election means freedom from the wholesome restraints of law, or that the place of an election should be a sanctuary for lawlessness and crime. On the day of an election peace and good order are more necessary than on any other day of the year. On that day the humblest and feeblest citizens, the aged and the infirm, should be, and should have reason to feel that they are, safe in the exercise of their most responsible duty and their most sacred right as members of society, their duty and their right to vote. The constitutional authority to regulate the Congressional elections which belongs to the Government of the United States, and which it is necessary to exert to secure the right to vote to every citizen possessing the requisite qualifications, ought to be enforced by appropriate legislation. So far from public opinion in any part of the country favoring any relaxation of the authority of the Government in the protection of elections from violence and corruption, I believe it demands greater vigor, both in the enactment and in the execution of laws framed for that purpose. Any oppression, any partisan partiality, which experience may have shown in the working of existing laws, may well engage the careful attention both of Congress and of the Executive in their respective spheres of duty for the correction of these mischiefs. As no Congressional elections occur until after the regular session of Congress will have been held, there seems to be no public exigency that would preclude a seasonable consideration at that session of any administrative details that might improve the present methods designed for the protection of all citizens in the complete and equal exercise of the right and power of the suffrage at such elections. But with my views, both of the constitutionality and of the value of the existing laws, I can not approve any measure for their repeal except in connection with the enactment of other legislation which may reasonably be expected to afford wiser and more efficient safeguards for free and honest congressional elections.

RUTHERFORD B. HAYES.

EXECUTIVE MANSION, May 29, 1879.

Mr. Atkins: "I ask that the House now proceed to the reconsideration of the bill as prescribed by the Constitution."

The Speaker: "The question is, Will the House on reconsideration agree to pass this bill, notwithstanding the objections of the President? This question, according to the requirements of the Constitution, must be taken by yeas and nays. The Clerk will call the roll."

The question was taken as follows:

YEAS—Acklen, Aiken, Atherton, Atkins, Bachman, Beale, Beltzhoover, Bicknell, Blackburn, Bliss, Blount, Bright, Cabell, Caldwell, Carlisle, Chalmers, Clardy, John B. Clark, Clymer, Cobb, Coffroth, Colerick, Converse, Cook, Covert, Cox, Cravens, Culherson, Davidson, Joseph J. Davis, Loundes H. Davis, Dibrell, Diekey, Elam, Ellis, Ewins, Ewing, Felton, Finley, Forney, Frost, Geddes, Gibson, Goode, Gunter, N. J. Hammond, John T. Harris, Hatch, Henkle, Henry, Herbert, Herndon, House, Hunton, Johnston, Kenia, Kimmel, King, Klotz, Ladd, Le Fovre, Lewis, Manning, Benjamin F. Martin, Edward L. Martin, McKenzie, McLane, McMahon, McMillan, Mills, Morrison, New, Nicholls, O'Connor, Persons, Phelps, Phister, Poehler, Reagan, J. S. Richardson, Richmond, Robertson, Ross, John W. Ryan, Sanford, Sawyer, Scales, Simonton, O. R. Singleton, Slemmons, William E. Smith, Spear, Springer, Steele, Stephens, Stevenson, Talbot, Taylor, Thompson, Tillman, R. W. Townsend, Oscar Turner, Thomas Turner, Vance, Waddill, Wellborn, Whiteaker, Whittorne, Thomas Williams, Willis, Wilson, Wise, Wright, Casey Young—114.

NAYS—N. W. Aldrich, Anderson, Baker, Barber, Barlow, Bayne, Belford, Bingham, Blake, Bowman, Boyd, Brewer, Briggs, Brigham, Browne, Burrows, Calkins, Cannon, Carpenter, Caswell, Conger, Crapo, Daggett, George R. Davis, Deering, Dunnell, Errott, Farr, Ferdon, Fisher, Ford, Fort, Frye, Godshalk, Hall, John Hammond, Harmer, Benjamin W. Harris, Haskell, Hawk, Hawley, Hayes, Hazelton, Heilman, Henderson, Hiseock, Horr, Houk, Hubbard, Humphrey, Joyce, Ketcham, Lindsey, Marsh, McCoid, McGowan, Miller, Mitchell, Monroe, Neal, Newberry, Norcross, O'Neill, Orth, Osmer, Overton, Pound, Prescott, Price, Rice, D. P. Richardson, Robinson, William A. Russell, Thomas Ryan, Sapp, Shallenberger, Sherwin, A. Herr Smith, Starin, Stone, Thomas, Tyler, Thomas Updegraff, Umer, Valentine, Van Aernam, Van Voorhis, Voorhis, Wait, Ward, Wilber, C. G. Williams, Willis—98.

NOT VOTING—William Aldrich, Armfield, Bailey, Ballou, Bland, Bouck, Bragg, Buckner, Butterworth, Camp, Chittenden, Claffin, Alvah A. Clark, Cowgill, Crowley, De La Matyr, Deuster, Dick, Dunn, Dwight, Einstein, Field, Forsythe, Garfield, Gillette, Hill, Hooker, Hostetler, Hull, Hurd, James, Jones, Jorgensen, Keifer, Kelley, Kilinger, Kitchin, Knott, Lapham, Lay, Loring, Lounsbery, Lowe, Joseph J. Martin, Mason, McCook, McKinley, Miles, Money, Morse, Morton, Muldrow, Muller, Murch, Myers, O'Brien, O'Reilly, Pierce, Reed, Robeson, Rothwell, Daniel L. Russell, Shelley, J. W. Singleton, Hezekiah B. Smith, Sparks, Amos Townsend, Tucker, J. T. Updegraff, Warner, Washburn, Weaver, Wells, White, Fernando Wood, Walter A. Wood, Yocum, Thomas L. Young—78.

So the bill was not passed, two thirds not voting in favor thereof.

In the House, on June 10th, an amended appropriation bill was considered. Mr. Atkins of Tennessee said: "Mr. Speaker, I am unanimously authorized and directed by the Committee on Appropriations to report a substitute for the bill presented a few days ago

(H. R. No. 2172) making appropriations for defraying the expenses of the legislative, executive, and judicial departments of the Government, and which was recommitted; and I now ask unanimous consent to submit a brief statement, and that the gentleman from Connecticut [Mr. Hawley] may likewise be allowed to make a statement."

There was no objection, and it was ordered accordingly.

Mr. Atkins: "The restriction that was upon the vetoed bill, and which created such a contest upon this floor, is not embraced in this bill. Nor is the appropriation for the contingent expenses of the courts of the country, amounting to \$2,600,000 or \$2,700,000, embraced in this bill. You will remember, Mr. Speaker, that it was upon that portion of the appropriation bill that the restrictive clauses were placed with regard to the payment of deputy marshals and supervisors of elections. That matter will be embraced in a subsequent bill, a supplemental bill, if I may so style it, a supplemental judicial appropriation bill, which my honorable friend from Ohio [Mr. McMahon] will probably report to-day to the House."

Mr. Hawley: "As the chairman of the Committee on Appropriations has said, this bill aims to do what was aimed at in the more regular legislative, executive, and judicial appropriation bill, omitting what are characterized as the political sections. Now, we of the minority of the committee, and I might say the Republicans in general, are opposed to the present form of the bill—very much opposed to it. The minority would very much have preferred to pass the regular appropriation bill for these branches of the public service which was substantially approved by the last Congress, which went through this House and the Senate, came back from the Senate with certain amendments in which the House concurred, making approval No. 3, and which was again approved by a majority of the House when it was attempted to pass the bill over the veto, which makes approval No. 4. Four times Congress, within four months, has approved the legislative, executive, and judicial bill, which, minus the politics, we should have preferred to take because of its very much better form, because of its clearness in doing the work aimed at. It contains, as has been stated sufficiently, no political matters of the kind ordinarily described as such, and we finally rather consented to its passage than approved of it."

Mr. Atkins: "I now move that the rules be suspended and the bill passed."

So the bill was passed—ayes, 187; noes, 22; not voting, 77.

In the Senate, on June 14th, the bill was considered.

Mr. Beck of Kentucky said: "Mr. President, I am instructed by the Committee on

Appropriations to report back the bill sent to us from the House with the amendments added by the Committee on Appropriations; but I am not authorized by the committee to offer the amendment which I propose to offer as a substitute for it. I desire to say before the bill is read, if the Senate will allow me, that the Committee on Appropriations of the House, instead of pursuing the usual form of presenting a detailed bill, thought it best to send House bill No. 2251, which makes this provision as its principal operative clause:

"That for the purpose of providing for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1880, there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the same sums of money and for the like purposes (and continuing the same provisions relating thereto), as were appropriated for the service of the fiscal year ending June 30, 1879, by the act entitled 'An Act making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1879, and for other purposes,' approved June 19, 1878 (except as hereinafter declared), subject to all the limitations and conditions in respect to the disbursement of the appropriations hereby made that were imposed by said act, and the other laws of the United States upon or in respect to the appropriations made by said act.

"Then follow first a number of exceptions, from line 20 to line 46; then from line 47 to line 57 are provisions affirmatively changing the act of June 19, 1878, saying that no more than the sums stated respectively are appropriated; and from line 58 down to the close of section 1, on line 121, are amendments to that act. Section 2 provides for the salary of certain offices created by acts of 1879, and for matters provided for in other acts, and for the mints and assay offices, and 'the following additional sums are hereby appropriated'; then follows a list of them running through each of the departments, with two other sections at the end making general provisions.

"Therefore, Mr. President, as I was directed to take charge of this bill and present it to the Senate, I desire to say to Senators, first, that before they can understand the bill intelligently they will have to obtain the act approved June 19, 1878, being public act No. 135 of the second session of the Forty-fifth Congress, which I suppose can be obtained in the document-room; at least I obtained a few copies there. As that is the act which the House has reenacted in substance, without that act no Senator can very well know what he is doing or what he is voting for in the House bill now before us.

"I have endeavored in the amendment I offered to present the bill of the current year as now amended in a form to be easily understood. Therefore it was that I thought the House bill as amended by the Committee on Appropriations of the Senate ought to be read at length, with my amendment in the hands of Senators, as it differs in its form so essentially from the bills ordinarily presented."

A discussion ensued, during which some amendments were made to the bill, and it was passed.

The House disagreed to the amendments of the Senate. The result of this disagreement was a conference between the two Houses, at which the differences were adjusted and approved by each House, and the bill became a law.

In the House, on June 10th, the judicial appropriation bill was considered.

Mr. McMahon said: "I desire to make a privileged report from the Committee on Appropriations. I report back the bill (H. R. No. 2252) making appropriations for certain judicial expenses, and I ask for its consideration now."

The bill was read.

Mr. McMahon: "Mr. Chairman, I desire to make a short statement to the Committee in regard to this bill. The bill which we now present for consideration has heretofore been a part of the sundry civil bill. The amount appropriated by this bill has generally been appropriated in one sum, the sum of \$2,500,000, some years, \$2,600,000, \$2,700,000, and \$2,800,000, in other years, and sometimes \$3,000,000, but always in one sum and undivided as to its uses. The Committee have thought it proper to have this large sum itemized. We have required the Department of Justice to estimate to the Committee the appropriations needed for the several different purposes, and we have followed the estimates sent to us except as to three different items. We have reduced the appropriation for the pay of district attorneys and their assistants \$50,000 below the estimates. We have also reduced the pay of United States marshals and their deputies \$50,000. We have reduced the pay of jurors \$190,000, because we have incorporated into the bill a provision reducing their compensation from three to two dollars a day, and we have the authority of the Attorney-General himself that such a reduction will enable us to dispense with \$200,000 of the appropriations. The fees of witnesses we have left according to the estimate of the Department of Justice; so also for the support of United States prisoners; so also for the rent of United States court-rooms, and for certain miscellaneous purposes, such as fuel, lights, stationery, furniture, sweepers, etc., a total appropriation of \$280,000, which amount may seem very large, but it covers a very large and uncertain contingent ground. The entire amount appropriated for all purposes is \$2,690,000 for the next fiscal year. I think the appropriations will be found amply sufficient for the purpose.

"In answer to numerous inquiries I desire to call attention to one clause of this bill, and to state that no money is appropriated for the payment of deputy marshals, 'special' deputy marshals as they are sometimes called, for ser-

vice on the day of election. The last clause of the first section of the bill provides that 'no part of the money hereby appropriated is appropriated to pay any salaries, compensation, fees, or expenses under or in virtue of title 26 of the Revised Statutes or of any provision of said title.' Now, if gentlemen will look at that title of the Revised Statutes they will see that it covers the appointment of deputy marshals, their duties, pay, etc., the subpoenaing of witnesses in certain cases before the supervisors of elections, etc. I will say that the clause in the bill which I have quoted is a very sweeping one, and is intended to prevent the enforcement of the supervisors and deputy-marshals clauses of the Revised Statutes during the next fiscal year, so far as a failure to appropriate money for their compensation will effect the purpose.

"In the second section is a provision that all sums appropriated in this bill shall be in full for the persons and purposes designated for the next fiscal year. And to that we have added a clause by which we slightly modify the existing law, to the effect that 'no department or officer of the Government shall, during said fiscal year, make any contract or incur any liability for the future payment of money, until an appropriation to meet such contract or pay such liability shall have first been made by law.' The present law is that no department of the Government shall involve the Government in any liability for the future payment of money or make any contract until the money shall have been first appropriated. We have added the words 'no officer of the Government,' and have also added the words 'or incur any liability.'

"In section 3 of this bill we have included what is generally known as the jury clause, repealing the juror's test oath, and providing a new method of drawing jurors. In that we have only followed out the frequent recommendations of the Attorneys-General of the United States, and particularly of Mr. Pierpont in a letter to the first session of the Forty-fourth Congress, that some uniform system was necessary. There is no department of our Government that ought to be purer in its administration, but I am sorry to say that there is none where, in proportion to the amount of money appropriated, greater scandals are involved. I think I can say that upon the authority of some of the Attorneys-General of the United States.

"We have also added a proviso which will not be found in any of the previous bills passed by this House upon the subject, providing that 'no citizen possessing all other qualifications which are or may be prescribed by law shall be disqualified for service as grand or petit juror in any court of the United States on account of race, color, or previous condition of servitude.' The purpose of that amendment will be apparent to every one. It is intended only to demonstrate what was already the fact,

that we did not in any way intend to abridge the rights of our colored citizens as jurors, and that we intended to guarantee them all their rights everywhere, whatever may be the State law upon the subject.

"We have added another clause, section 4. In looking over the reports of the Attorneys-General we discovered a very extraordinary fact. We discovered that the report which the Attorney-General makes to the House of Representatives of his annual expenditures in any one year covers only the amount expended *during* that fiscal year out of the funds appropriated *for* that particular year. To illustrate, if at the end of the fiscal year ending June 30, 1879, there was left an unexpended balance of \$500,000, and that amount should be expended for obligations incurred during the year ending June 30, 1880, it would not be found in the next annual report made to this Congress for the expenditures of the fiscal year ending June 30, 1879, nor would it be found in the expenditures for the fiscal year beginning July 1, 1880. Therefore a very large amount of money is and may be expended by the Department in that way which is never accounted for to Congress anywhere. Your committee, therefore, have never been able to ascertain what was annually expended by the Department in any one fiscal year."

The Speaker: "The question recurs on the passage of the bill."

The question was taken, as follows:

YEAS—Aeklen, Armfield, Atherton, Atkins, Bachman, Beale, Beltzhoover, Bicknell, Blackburn, Bliss, Bouck, Bright, Cabell, Caldwell, Carlisle, Clardy, John B. Clark, Clymer, Cobb, Coffroth, Colerick, Cook, Covert, Cravens, Calherson, Davidson, Joseph J. Davis, Loundes H. Davis, Deuster, Dibrell, Dunn, Elam, Felton, Finley, Forney, Frost, Geddes, Gibson, Gunter, N. J. Hammond, John T. Harris, Hlatch, Honkle, Henry, Herbert, Herndon, Hill, Hooker, Hostetler, Hull, Hutton, Johnston, Kenna, Kimmel, King, Klotz, Manning, Benjamin F. Martin, Edward L. Martin, McMahon, McMillan, New, O'Connor, Persons, Phelps, Phister, Poehler, Reagan, Robertson, Ross, Rothwell, John W. Ryan, Sainford, Sawyer, Seales, Simonton, O. R. Singleton, Slemons, Hezekiah B. Smith, William E. Smith, Sparks, Springer, Steele, Stephens, Stevenson, Taylor, Thompson, Tillman, R. W. Townshend, Oscar Turner, Upson, Vance, Waddill, Wellborn, Wells, Whiteaker, Whitthorne, Thomas Williams, Willis, Wilson, Wise, Wright—102.

NAYS—N. W. Aldrich, William Aldrich, Anderson, Bailey, Baker, Barber, Bayne, Bingham, Blake, Bowman, Brewer, Briggs, Brigham, Burrows, Butterworth, Calkins, Camp, Carpenter, Clavin, Conger, Crapo, Crowley, Daggett, George R. Davis, Deering, Dunnell, Errett, Farr, Ferdon, Field, Fisher, Frye, Garfield, Godshalk, Hall, John Hammond, Harner, Haskell, Hawk, Hawley, Hayes, Hiseock, Horr, Humphrey, Joyce, Keifer, Killinger, Loring, Marsh, Mason, McCoid, McGowan, McKinley, Mitchell, Monroe, Morton, Newberry, Norcross, O'Neill, Osmer, Overton, Pound, Price, Rice, D. P. Richardson, Robinson, W. A. Russell, Thomas Ryan, Sapp, Shallenberger, Sherwin, A. Herr Smith, Stone, Thomas, Tyler, J. T. Updegraff, Urner, Valentine, Van Aernam, Voorhis, Wait, Wilber, C. G. Williams, Willits, Thomas L. Young—85.

NOT VOTING—Aiken, Ballou, Barlow, Belford, Bland, Blount, Boyd, Bragg, Browne, Buckner, Car-

non, Caswell, Chalmers, Chittenden, Alvah A. Clark, Converse, Cowgill, Cox, De La Matyr, Dick, Dickey, Dwight, Einstein, Ellis, Evins, Ewing, Ford, Forsythe, Fort, Gillette, Goode, Benjamin W. Harris, Hazelton, Heilman, Henderson, Houk, House, Hubbell, Hurd, James, Jones, Jorgensen, Kelley, Ketcham, Kitchin, Knott, Ladd, Lapham, Lay, Le Fevre, Lewis, Lindsey, Lounsbery, Lowe, Joseph J. Martin, McCook, McKenzie, McLane, Miles, Miller, Mills, Money, Morrison, Morse, Muldrow, Muller, Murch, Myers, Neal, Nicholls, O'Brien, O'Keilly, Orth, Pierce, Prescott, Reed, J. S. Richardson, Richmond, Robeson, Daniel L. Russell, Shelley, J. W. Singleton, Speer, Starin, Talbot, Amos Townsend, Tucker, Thomas Turner, Thomas Updegraff, Van Voorhis, Ward, Warner, Washburn, Weaver, White, Fernando Wood, Walter A. Wood, Yocum, Casey Young—99.

So the bill passed.

In the Senate, on June 14th, the bill was considered and amended, and passed by the following vote:

YEAS—Bayard, Call, Cockrell, Coke, Davis of West Virginia, Davis of Illinois, Eaton, Garland, Groome, Hampton, Harris, Hill of Georgia, Houston, Jonas, Jones of Florida, Kernan, Lamar, McDonald, Maxcy, Morgan, Pendleton, Ransom, Slater, Vance, Vest, Walker, Wallace—27.

NAYS—Blaine, Bruce, Burnside, Cameron of Pennsylvania, Cameron of Wisconsin, Carpenter, Chandler, Conkling, Dawes, Hill of Colorado, Ingalls, Logan, Morrill, Rollins, Windom—15.

ABSENT—Allison, Anthony, Bailey, Beek, Bell, Booth, Butler, Edmunds, Farley, Ferry, Gordon, Grover, Hamlin, Hereford, Hoar, Johnston, Jones of Nevada, Kellogg, Kirkwood, McMillan, McPherson, Paddock, Platt, Plumb, Randolph, Saulsbury, Saunders, Sharon, Teller, Thurman, Voorhees, Whyte, Williams, Withers—34.

The House disagreed to the Senate's amendments, and they were adjusted in a conference and approved, and the bill sent to the President. He returned it with the following veto message:

To the House of Representatives:

After careful examination of the bill entitled "An Act making appropriations for certain judicial expenses," I return it herewith to the House of Representatives, in which it originated, with the following objections to its approval:

The general purpose of the bill is to provide for certain judicial expenses of the Government for the fiscal year ending June 30, 1880, for which the sum of \$2,690,000 is appropriated. These appropriations are required to keep in operation the general functions of the judicial department of the Government, and if this part of the bill stood alone there would be no objection to its approval. It contains, however, other provisions, to which I desire respectfully to ask your attention.

At the present session of Congress a majority of both Houses, favoring a repeal of the Congressional election laws embraced in title 26 of the Revised Statutes, passed a measure for that purpose, as part of a bill entitled "An Act making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1880, and for other purposes." Unable to concur with Congress in that measure, on the 29th of May last I returned the bill to the House of Representatives, in which it originated, without my approval, for that further consideration for which the Constitution provides. On reconsideration the bill was approved by less than two thirds of the House, and failed to become a law. The election laws, therefore, remain valid enactments, and the supreme law of the land, binding not only upon all private citizens, but also alike and equally binding upon all who are charged with the duties and respon-

sibilities of the legislative, the executive, and the judicial departments of the Government.

It is not sought by the bill before me to repeal the election laws. Its object is to defeat their enforcement. The last clause of the first section is as follows:

"And no part of the money hereby appropriated is appropriated to pay any salaries, compensation, fees, or expenses under or in virtue of title 26 of the Revised Statutes, or of any provision of said title."

Title 26 of the Revised Statutes, referred to in the foregoing clause, relates to the elective franchise, and contains the laws now in force regulating the Congressional elections.

The second section of the bill reaches much further. It is as follows:

SEC. 2. That the sums appropriated in this act for the persons and public service embraced in its provisions are in full for such persons and public service for the fiscal year ending June 30, 1880, and no department or officer of the Government shall, during said fiscal year, make any contract or incur any liability for the future payment of money under any of the provisions of title 26 of the Revised Statutes of the United States authorizing the appointment or payment of general or special deputy marshals for service in connection with elections or on election day, until an appropriation sufficient to meet such contract or pay such liability shall have first been made by law.

This section of the bill is intended to make an extensive and essential change in the existing laws. The following are the provisions of the statutes on the same subject which are now in force:

SEC. 3679. No department of the Government shall expend, in any one fiscal year, any sum in excess of appropriations made by Congress for that fiscal year, or involve the Government in any contract for the future payment of money in excess of such appropriations.

SEC. 3732. No contract or purchase on behalf of the United States shall be made unless the same is authorized by law or is under an appropriation adequate to its fulfillment, except in the War and Navy Departments, for clothing, subsistence, forage, fuel, quarters, or transportation, which, however, shall not exceed the necessities of the current year.

The object of these sections of the Revised Statutes is plain. It is, first, to prevent any money from being expended unless appropriations have been made therefor; and, second, to prevent the Government from being bound by any contract not previously authorized by law, except for certain necessary purposes in the War and Navy Departments.

Under the existing laws the failure of Congress to make the appropriations required for the execution of the provisions of the election laws would not prevent their enforcement. The right and duty to appoint the general and special deputy marshals which they provide for would still remain, and the Executive Department of the Government would also be empowered to incur the requisite liability for their compensation. But the second section of this bill contains a prohibition not found in any previous legislation. Its design is to render the election laws inoperative and a dead letter during the next fiscal year. It is sought to accomplish this by omitting to appropriate money for their enforcement and by expressly prohibiting any department or officer of the Government from incurring any liability under any of the provisions of title 26 of the Revised Statutes authorizing the appointment or payment of general or special deputy marshals for service on election days until an appropriation sufficient to pay such liability shall have first been made.

The President is called upon to give his affirmative approval to positive enactments which in effect deprive him of the ordinary and necessary means of executing laws still left in the statute-book, and embraced within his constitutional duty to see that the laws are executed. If he approves the bill and thus gives to such positive enactments the authority of law, he participates in the curtailment of his means of seeing that the law is faithfully executed while the obligation of the law and of his constitutional duty remains unimpaired.

The appointment of special deputy marshals is not

made by the statute a spontaneous act of authority on the part of any executive or judicial officer of the Government, but is accorded as a popular right of the citizens to call into operation this agency for securing the purity and freedom of elections in any city or town having twenty thousand inhabitants or upward. Section 2021 of the Revised Statutes puts it in the power of any two citizens of such city or town to require of the marshal of the district the appointment of these special deputy marshals. Thereupon the duty of the marshal becomes imperative, and its non-performance would expose him to judicial mandate or punishment, or to removal from office by the President, as the circumstances of his conduct might require. The bill now before me neither revokes this popular right of the citizens nor relieves the marshal of the duty imposed by law, nor the President of his duty to see that this law is faithfully executed.

I forbear to enter again upon any general discussion of the wisdom and necessity of the election laws or of the dangerous and unconstitutional principle of this bill, that the power vested in Congress to originate appropriations involves the right to compel the Executive to approve any legislation which Congress may see fit to attach to such bills, under the penalty of refusing the means needed to carry on essential functions of the Government. My views on these subjects have been sufficiently presented in the special messages sent by me to the House of Representatives during their present session. What was said in those messages I regard as conclusive as to my duty in respect to the bill before me. The arguments urged in those communications against the repeal of the election laws and against the right of Congress to deprive the Executive of that separate and independent discretion and judgment which the Constitution confers and requires are equally cogent in opposition to this bill. This measure leaves the powers and duties of the supervisors of elections untouched. The compensation of those officers is provided for under permanent laws, and no liability for which an appropriation is now required would therefore be incurred by their appointment. But the power of the National Government to protect them in the discharge of their duty at the polls would be taken away. The States may employ both civil and military power at the elections, but by this bill even the civil authority to protect Congressional elections is denied to the United States. The object is to prevent any adequate control by the United States over the national elections by forbidding the payment of deputy marshals, the officers who are clothed with authority to enforce the election laws.

The fact that these laws are deemed objectionable by a majority of both Houses of Congress is urged as a sufficient warrant for this legislation.

There are two lawful ways to overturn legislative enactments. One is their repeal; the other is the decision of a competent tribunal against their validity. The effect of this bill is to deprive the executive department of the Government of the means to execute laws which are not repealed, which have not been declared invalid, and which it is, therefore, the duty of the Executive and of every other department of Government to obey and to enforce.

I have in my former message on this subject expressed a willingness to concur in suitable amendments for the improvement of the election laws; but I can not consent to their absolute and entire repeal, and I can not approve legislation which seeks to prevent their enforcement.

RUTHERFORD B. HAYES.

EXECUTIVE MANSION, June 23, 1879.

The Speaker: "The question before the House is, Will the House on reconsideration agree to pass the bill? on which the Constitution requires the yeas and nays shall be taken; and, in obedience thereto, the Clerk will now call the roll."

The question was taken; and it was decided in the negative—yeas 102, nays 78, not voting 106.

At this extra session of Congress there were introduced in the Senate 727 bills and 46 joint resolutions, of which 26 bills and 7 joint resolutions became laws. In the House there were introduced 2,395 bills and 119 joint resolutions, of which 36 bills and 17 joint resolutions became laws. The following are of general importance, in addition to those above mentioned:

A bill to prevent the introduction of contagious or infectious diseases into the United States.

A bill to authorize the Secretary of the Treasury to contract for the construction of a refrigerating ship for the disinfection of vessels and cargoes.

A joint resolution relating to the organization of the National Board of Health.

To provide for the appointment of a Mississippi River Commission for the improvement of said river from the head of the passes near its mouth to its head-waters.

To put salts of quinine and sulphate of quinine on the free list.

To provide for the exchange of subsidiary coins for lawful money of the United States under certain circumstances, and to make such coins a legal tender in all sums not exceeding ten dollars, and for other purposes.

In addition to the five bills originating in the House which were disapproved by the President, there was one bill originating in the Senate vetoed—namely, the bill to amend the act of March 3, 1879, for the relief of Joseph B. Collins.

Both Houses adjourned on July 1st to the regular session commencing in December.

CONKLING, ROSCOE, an American statesman, born in Albany, New York, October 30, 1829. His father, Alfred Conkling, was a Representative in the Seventeenth Congress, and was appointed by John Quincy Adams Judge of the United States for the Northern District of New York in 1825, and Minister to Mexico by President Fillmore in 1852. He was the author of several valuable books on law.

His son Roscoe received a common-school and academic education. Removing to Auburn and Geneva with his father, he studied law three years under his tuition. In 1846 he entered the law-office of Spencer and Kernan in Utica, the latter of whom is now his colleague in the Senate. In 1849 he was appointed by Hamilton Fish District Attorney for Oneida County, several months before he attained his majority. On the day he was twenty-one he was admitted to the bar, at which he had already acquired considerable reputation. During the next decade he disclosed rare managing qualities, and was looked to as a leader in local politics. In law he ranked with the first of the profession as an advocate. The triumphs which he achieved at the bar, and which were his passport to public preferment, were gained before he reached the age of twenty-nine. In later years he has accepted only a few cases, but in these his success has been marked. He married Julia Seymour, a sister of ex-Governor Horatio Seymour.

In 1858 he was elected Mayor of Utica. The campaign which followed Mr. Conkling's election as Mayor resulted in a tie vote between J. C. Hoyt and Charles S. Wilson, a circumstance which necessitated Mr. Conkling's holding over for the full year, neither gentleman being qualified to succeed him.

In November, 1858, he was elected a Representative to the Thirty-sixth Congress, and took his seat in that body at the beginning of its first session, in December, 1859—a session noted for its long and bitter contest over the Speakership. He was a member of the Committee on the District of Columbia. He was reelected in 1860. His brother, Frederick A. Conkling, was elected at the same time from a New York City district. The two brothers entered the Thirty-seventh Congress at the opening of the special session convened by President Lincoln, July 4, 1861. In this Congress, Roscoe Conkling was Chairman of the Committee on the District of Columbia, and also of a special committee to frame a bankrupt law.

A candidate for reelection to the Thirty-eighth Congress, he was defeated by his old law partner Francis Kernan. At the election in 1864, the same parties being nominated, Mr. Conkling gained the victory, and resumed his seat in the Thirty-ninth Congress, where he served on the Committees on Ways and Means and on Reconstruction. The fame of Mr. Conkling as an orator had preceded him, as had his reputation as a party manager. He startled the nation by a vigorous assault upon the tactics of General McClellan, and gave the keynote for earnestness in all future war legislation at a time when hesitancy and vacillation prevailed. In February, 1862, he opposed Mr. Spaulding's legal-tender act by speech and vote, sustaining, contrary to the prevailing party policy, Mr. Horton's amendment providing for the issue of an interest-bearing note, and against the final passage of the bill as amended by Thaddeus Stevens. In the same session he voted for the payment of interest on the debt in coin. Mr. Conkling was a firm supporter of all legislation tending to uphold the hands of the Administration in prosecuting the war for the suppression of the rebellion.

In the fall of 1866 Mr. Conkling was elected to the Fortieth Congress, but before that Congress met he was chosen to succeed Judge Ira Harris as United States Senator from the State of New York. He took his seat in the Senate March 4, 1867; was reelected, his second term beginning March 4, 1873; was again elected, and began his third term as Senator March 4, 1879. He was a zealous supporter of General Grant's Administration. The general policy of that Administration toward the South was largely directed by Senator Conkling, who advocated it with all the powers of his eloquence and all the potency of his personal and political influence. He was also largely instrumental in the inception and passage of the civil rights bill. Upon the vital question of hard money

Mr. Conkling was, in harmony with the sentiment of his party, strictly in favor of the resumption of specie payments.

One of the most important acts of Senator Conkling's political career was the prominent part he took in framing the act for an Electoral Commission in 1876. Many of the foremost men of his own and of the other party were the prey of extreme partisan views, which, if insisted on, might have plunged the country into civil strife. It was largely owing to his indefatigable labors, his thorough knowledge of the history of the question and of all the precedents, and the powerful effect of the speech he delivered in the Senate, that the success of the Electoral Commission bill was due. In regard to the powers conferred upon the Commission by this bill, he said: "Mr. President, I had supposed that the Constitution had raised not only a hedge and a fence, but a wall of limit, to the powers it confers. I supposed that, when five of the most largely instructed and trusted members of the Senate, and five of the most largely instructed and trusted members of the House, were authorized to meet five Judges of the highest and most largely instructed judicial tribunal of the land, we might trust to them to settle what a Court of Oyer and Terminer settles whenever it is called upon to determine whether it has jurisdiction to try an indictment for homicide or not. I had supposed that, giving it the instrument by which its jurisdiction is to be measured, we could trust this provisional tribunal of selected men to run a boundary and fix the line marking their jurisdiction."

CONNECTICUT. The Legislature of this State assembled at Hartford on January 8th, and for the first time opened their regular session in the new State House, where they had closed the session of 1878. In the Lower House, Dexter R. Wright of New Haven was elected Speaker. Gilbert W. Phillips of the Fourteenth District was appointed President *pro tempore* of the Senate.

Upon taking the chair as President, Senator Phillips addressed the Senate as follows:

SENATORS: I thank you very heartily for the kindness which permits me to be your temporary presiding officer, and I can assure you that it will be my aim to serve you in such a manner as shall meet your approval. We meet in obedience to the public voice, and I trust it will be our pleasure, as well as our duty, to so conduct the business intrusted to us as to meet the approbation of our constituents.

Before addressing ourselves to the duties before us, allow me to say a word concerning this proud edifice in which we meet for the first time. It is a cause of sincere congratulation that it has been carried on to completion under management so satisfactory. The commission in charge, it seems to me, for its wisdom, deserves the thanks of the State. In all ages of the world, nations have displayed their characters by the beauty and magnificence of their public buildings. The Greek temple, the Gothic cathedral, the Parliament House at London, our own proud Capitol at Washington, and the hut of the Indian in the American wilderness, each represents, or did represent, somewhat the thought and character of the people

who caused their construction. This of ours no less stands as a representative of our people and of our times—having for its primary object the increase of personal convenience and comfort, yet, whether considered in its architecture or its construction, artificial in all. Commemorative of liberty and civilization, of cultivation and refinement, and of prosperity and happiness, it shadows forth that proper State pride, that high aspiration of thought, which will ever serve to elevate and ennoble the people of this good old Commonwealth.

Senators, in all our acts let us bear in mind the honor of the State, and the upholding of the best government that the world ever beheld. Armed in all the strength of justice, may it stand to the latest day to bless mankind!

In his address to the House of Representatives, before occupying the Speaker's chair, Mr. Wright referred favorably and at some length to the resumption of specie payments, upon which subject the following joint resolution was passed, and concurred in by the Senate:

Resolved, by this Assembly, that we cordially unite with our people and Government in their congratulations over the successful resumption of specie payments, together with the signs of returning prosperity which everywhere accompany it; and we request our Senators and Representatives in Congress to continue to stand firm in their efforts to resist all attempts to debase our currency.

On the first day of the session Governor Hubbard, having been officially notified by a joint committee that the two Houses were organized and ready for business, sent them a written communication dated January 8th, informing them of the appointments to office which, under resolutions passed by the last General Assembly, he had made since its adjournment, and of the action he had taken to fix the weekly rate to be paid in the hospitals of Hartford and New Haven for the admission, medical treatment, and support of invalid soldiers and sailors who served on the quota of the State in the late civil war.

A joint convention was held by the two Houses on January 9th for the purpose of electing a Governor and the other executive State officers, as none of the candidates at the general election in November, 1878, had been elected. The joint committee appointed to canvass the votes cast at the said election reported the two competing candidates who had received the greatest number of votes for the respective offices: For Governor, Charles B. Andrews of Litchfield and Richard D. Hubbard of Hartford; for Lieutenant-Governor, David Gallup of Plainfield and Charles Durand of Derby; for Secretary of State, David Torrance of Derby and Dwight Morris of Bridgeport; for State Treasurer, Talmadge Baker of Norwalk and Edwin A. Buck of Windham; for State Comptroller, Chauncey Howard of Coventry and Charles C. Hubbard of Middletown. These competitors were also balloted for by the joint Assembly, with the result that the first-named one for each office received a majority of votes, and was declared by the President as duly elected "for the term of two years ending on the Wednesday after the first

Monday of January, 1881." The proportional number of votes cast for Republican and Democratic candidates at the said ballots was nearly uniform in all—about 150 to 100. After the joint Assembly had been dissolved, separate resolutions declaring each of the Republican candidates duly elected to his respective office were passed by the House of Representatives, and concurred in by the Senate. Later on the same day the two Houses met again in joint Assembly, and the new Governor was inaugurated.

The Hall of Representatives in the new Capitol is much complained of by members of the Legislature, as being seriously defective on several accounts. Within the first week of the session the following resolution was introduced and adopted:

Resolved, That a committee, consisting of eight members of the House, be appointed to consider and report to the House what changes and alterations are required in the Representatives' Hall to render the hall more convenient and comfortable both to the members of the House and to the citizens of the State who may desire to witness its proceedings.

The author of the resolution pointed out several defects, especially with reference to the acoustic properties, in which respect he characterized the hall as "a complete failure." These defects he laid to the charge of the architect, and also of the Commissioners on the Capitol Building, "whose duty it was to see that the architect constructed a building that would answer all the purposes for which it was intended to be used; but they had, he thought, failed to attend to their duty in the particular named." After the resolution had been passed, other members spoke against the acoustic defect of the new hall, which some said is "not so good" as the Representatives' Hall in the old State House.

The official term of William H. Barnum, a United States Senator from Connecticut, expired on March 3, 1879. The Republican members held a caucus on January 16th, to select their candidates. Out of the 149 votes cast on the thirty-eighth ballot, Orville H. Platt received 76, Joseph R. Hawley 72, and Marshall Jewell 1. The nomination of Mr. Platt was then, on motion, made unanimous. On January 21st Mr. Barnum, the previous incumbent, and Mr. Platt were voted for by the two Houses separately, and the votes stood 13 to 6 in the Senate, and 139 to 91 in the Lower House; so Mr. Platt was elected.

The short experiment of winter sessions seems to have made on the members of the Legislature a decidedly adverse impression. The subject of changing the time from January to May was proposed in the House on January 22d, when several members advocated the change as advantageous and preferable on many accounts, including a saving to the State of some two hundred dollars a day, which she must now expend for heating and matters relating to it. A joint resolution was then of-

ferred by a member and passed by the House unanimously, "instructing the Committee on Constitutional Amendments to prepare and report an amendment providing for spring sessions of the General Assembly." This resolution, by a vote subsequently taken in the House, was "continued to the adjourned session of the General Assembly in January, 1880," which the Senate concurred in.

The following joint resolution was passed by the Lower House and concurred in by the Senate respecting the bill on Chinese immigration then under deliberation in Congress:

Resolved, by this General Assembly, that the proposed law now pending in the Congress of the United States, restricting Chinese immigration, is a flagrant violation of a sacred and honorable treaty, and is wholly inconsistent with the principles and traditions of our republic, and with the broad principles of human freedom; and it is our earnest hope that its provisions may not disgrace our statutes.

Governor Andrews, in his message to the Legislature, endorsed and urged the recommendations made by his predecessor at the opening of the session of 1878, more particularly those relating to a reduction of the number of probate districts in the State; to the correction

of the joint-stock laws, for the prevention of fraud and other abuses, or their punishment; to the engrossment of bills; and to taking a provisional adjournment before closing the session, its time to be employed in perfecting what had been acted upon during the session, and not for action on any new business. Concerning the two last-named subjects he suggested that the provisional adjournment which in 1878 took place in pursuance of the advice given by his predecessor, should be made obligatory by the enactment of a statute, or by the adoption of a joint rule; and as to the engrossment of bills he recommended a change of the existing statute, so as to permit them to be printed instead of being engrossed in writing. He says: "Such a change would to a great extent relieve the Secretary, would lighten the labors of the Committee on Engrossed Bills, and enable them much more speedily to prepare bills for presentation to the presiding officers of the two Houses for their signatures, and to the Governor for his approval." He recommended that the taxes on property recognized by the laws of 1877 and 1878 as belonging to married women exclusively should be assessed against

NEW LONDON.

the wife, and not set in the lists of the husband, as is now done by statute. A bill to effect that object was acted upon at the session of 1878, but failed to pass. He urged the repeal of all the statutes, whether public or private, under which a large amount of property in the State is claimed by its owners to be exempted from taxation. From this general rule he excepted only "clear cases of exemption by irrevocable grant from the Legislature." Upon this subject of taxation for State purposes, the Governor pointed out the absurdity and injustice now committed in the assessment of property of the same kind, its average valuation at different and not distant localities being so different as to be in one town double

what it is "in a town next beside it." In order to secure as much uniformity as possible on this point, he suggested periodical assessments to be made by officers appointed by the State, who should actually visit every town once in five or ten years, and make an appraisal. He says: "An assessment made once in ten years would establish a basis for the Board of Equalization, such as they do not now possess, and enable them to act intelligently in the adjustment of State taxation." The Commissioners appointed under a resolution of the General Assembly of 1878, "to inquire into the feasibility of simplifying the system of legal procedure in the State, and secure a more speedy administration of justice," having submitted a

detailed report of their labors, with a bill intended to carry their recommendations into effect, Governor Andrews invites the Legislature to give these documents "a careful and most cautious consideration," and to pass the new procedure act "if it may render the means of access to the tribunals of justice more easy and plain, . . . and free the courts of the State of Connecticut from the reproach of that delay which oftentimes amounts to a practical denial of justice." In this connection he urged them to attend to the matter of "costs in civil cases," and "by all means to do away with continuances, at least after the first term." He suggested the limitation of these costs by the passage of a law enacting that "a certain sum should be payable each time the cause advances one stage, as at the entry of the action, when issue is joined, and at final judgment," concluding with these words: "Let it be fixed so that the costs shall be a spur to diligence, and not a premium to delay." He recommended the submission to the people for adoption or rejection of the constitutional amendment for biennial sessions, and pointed to the advantages that will result to the State from such a measure, especially in regard to economy and the "relief from the growing mischief of over-legislation."

The January session of the Legislature in 1879 was closed by final adjournment on March 28th.

An act was passed to provide for the printing of bills, instead of engrossing them by hand while yet under action of the Legislature, as recommended by the Governor.

The bill entitled "An act to simplify procedure in civil causes, and to unite legal and equitable remedies in the same action," submitted with their report by the Commissioners appointed to inquire into the feasibility of simplifying the system of legal procedure, was favorably reported upon by the Committee on the Judiciary, and passed by both Houses. This act, which alters the method of legal procedure heretofore obtaining in the State, and is now in force, is said to be received with disfavor by the lawyers generally, who object against it especially on the ground that it is calculated to work confusion and increase litigation. At the time of its final passage in the Senate, on March 13th, a Senator moved that "the bill and the report of the Committee be continued to the next session of the General Assembly, and that the bill and the report of the Commission be published with the laws of the present session, and that the Secretary of State be requested to send a copy of the bill and report of the Commission to the President of each County Bar for consideration and action." This motion was lost by a tie vote. In regard to the object of the said act, a joint resolution was also passed by the Lower House and concurred in by the Senate on March 21st, "continuing the Commission appointed to consider the feasibility of simplifying the system of legal procedure."

Two constitutional amendments, separately proposed by the Lower House at the session of 1878, were approved by both Houses at the session of 1879, and submitted to the people's vote for adoption or rejection at the State election, October 6, 1879. One provided for biennial sessions of the General Assembly, and the other that Judges of the Supreme Court of Errors and of the Superior Courts should hold office during good behavior, but not after seventy-five years of age. In the Senate these amendments were approved with but one negative vote.

"An act concerning tramps" was passed, being a substitute for the original bill, to which many amendments were made. It now resembles in several particulars the New Hampshire tramp law in a milder form.

An act was also passed repealing the act of January, 1877, which made a reduction of ten per cent. in salaries and fees paid by the State.

By acts passed in 1879, the catching of salmon is prohibited till May, 1883; and the fishing season for shad is fixed between March 1st and June 20th each year.

A joint resolution was adopted "raising a commission to examine and revise the laws relating to joint-stock companies"; also a joint resolution "continuing to the adjourned session of this Assembly in January, 1880, the joint resolution of the House of Representatives No. 32, instructing the Committee on Constitutional Amendments to report an amendment to the Constitution of this State providing for spring sessions of the General Assembly"; also a joint resolution "appointing a joint standing committee, to consist of one Senator and eight Representatives, on retrenchment, reform, and abuses; and providing that hereafter such a committee shall be appointed on or before the third day of each session."

A bill "relating to the taxation of the separate property of married women," providing that such property shall be set in the tax-lists in the wife's own name, and not in the lists of the husband, as recommended by the Governor, was introduced in the House of Representatives, reported on adversely by the Committee on the Judiciary, and finally rejected by the House, and by the Senate in concurrence, on March 3d.

The following four bills were also introduced in the Lower House in behalf of women, reported upon unfavorably by the appropriate committees, and after deliberation rejected in the Lower House: An act "providing that all the property, real and personal, owned in her own right by any woman in this State, shall be entirely exempt from taxation"; an act "conferring upon tax-paying women the right to vote in city, borough, and town meetings"; an act "conferring upon women the right to vote in school districts"; and an act "conferring upon women the right to vote on all questions relating to the sale of intoxicating liquors."

A very large number of bills acted upon at this session were defeated at various stages by either of the two Houses, such as the following: Acts "to regulate railroad fares"; "for cheaper railway travel"; "to secure the representation of minorities in corporations"; "creating the office of Attorney-General," with an annual salary of \$5,000; "to establish a Bureau of Labor Statistics"; "regulating the hours of labor in manufacturing establishments," limiting ordinary workmen's labor to ten hours a day; "relating to the laying of pipes through the land of adjoining proprietors, for the purpose of conducting water from springs or streams for domestic uses"; "in alteration of an act concerning crimes and criminal prosecutions," the object of which was the abolition of capital punishment; and "concerning the Sabbath," designed to repeal the laws prohibiting trading, driving, etc., on Sunday.

At the State election held on October 6th, the two constitutional amendments, providing for biennial sessions of the Legislature and for the office-tenure of Judges of the Supreme and Superior Courts till the seventy-fifth year of their age, were both rejected by great majorities; the votes having been, on the Judges' tenure of office, 21,321 for, 45,845 against; and on biennial sessions, 17,843 for, 48,859 against.

The general election of November 4, 1879, was restricted to the choice of members of the Legislature, namely, all the Representatives and eleven of the twenty-one Senators, representing the unevenly numbered districts, and resulted in favor of the Republicans. Of the 11 Senators, the Republicans elected 9, the Democrats 2. Of the 245 Representatives, the Democrats elected 82, the Republicans 163. The political complexion of the Legislature at the January session of 1880 will be as follows: In the Senate—Republicans 16, Democrats 5; in the House of Representatives—Republicans 163, Democrats 82. At the January session of 1879 the proportions were: In the Senate—Republicans 14, Democrats 7; in the House of Representatives—Republicans 143, Democrats 100.

The financial condition of the State continues satisfactory. Her public debt at the close of the last fiscal year was the same as in the previous year—\$4,967,650, in bonds payable within different periods hereafter, and all bearing interest. The balance in the State Treasury at the beginning of the fiscal year 1879 was \$842,322.11, and the public revenue from all sources during the same year amounted to \$1,534,288.48, making a total of \$2,376,660.59. The aggregate public expenditures for all purposes in the said year, including \$287,626 paid as interest on State bonds, were \$1,534,513.64. Balance in the Treasury for the new year, \$842,146.95. The ordinary expenses of the State in 1879 were about the same as in 1878, except the judicial, which were increased more than \$41,000. The total public revenue for the fiscal year 1880 is estimated at \$1,550,050,

and the expenditure at \$1,397,246, leaving an estimated balance of \$152,804 in the Treasury at the end of the year. The amount of the grand list for the value of all the taxable property in Connecticut in 1879 fell short of what it was in 1878 by more than ten million dollars.

The savings banks in the State seem to be in a more prosperous condition than heretofore, showing also a tendency to further progress. During the year ended October 1, 1879, their total deposits increased \$326,974.86. The increase of interest and surplus for the same time was \$11,974.70, and their liabilities decreased \$120,832.88.

The education of youth in Connecticut is generally satisfactory. The number of schools during the scholastic year 1879 was 1,638, with an average yearly school-time of 178½ days. The aggregate number of children in the State of school age, between four and sixteen years, was 138,423, of whom 119,382 attended the public schools, and 11,212 other than public schools; the percentage of children in attendance at schools of all kinds having been last year 94.2. The total revenue for school purposes from school fund, State, town, and district taxes, and other sources, amounted to \$1,300,972.54. The aggregate amount expended was \$1,375,881.01, showing an excess of expenses over income of \$74,908.47. The sum expended for the erection of new school-buildings in 1879 was about \$37,000. The same item of expense in 1878 amounted to \$125,000. The school expenditures in 1879 were reduced in the aggregate by about \$130,000.

In the Connecticut Hospital for the Insane at Middletown, on December 1, 1879, there were 510 patients. Their number during the year was 644. All of these, except three who are paying patients, were supported at the charge of the State. Of the three paying patients, two are themselves paupers, their expenses being paid by relatives who live out of the State. Besides the above-mentioned number of indigent insane at the hospital, there were at the close of the year four hundred more poor insane persons in the State, kept in almshouses or elsewhere, supported wholly or in part by their respective towns.

In the State Prison the number of convicts on November 30, 1879, was 251. During the year 137 prisoners were discharged, and 110 received. The income of the prison within the year has covered all the expenses of board, clothing, and medical care for the prisoners, the salaries of all its officers, and the incidental expenses, and left a cash balance of \$602.79. For repairs and other matters of the Penitentiary, the sum of \$7,644.95 was expended and paid from the State Treasury.

The militia of Connecticut is now completely organized, as the maximum of the number of companies allowed by the State law has been reached, and no room left for new organizations. The muster held in November, 1879,

shows the present military force of the State to consist of 183 commissioned officers and 2,894 enlisted men, which is an increase of 632 over the previous year. The battalion of colored men, which was authorized by act of the Legislature at the January session of 1879, forms part of the said increase, it having actually been organized, and consisting of 274 men. Of the 3,077 men, the present whole number of the National Guard, 2,958 are fully uniformed, armed, and equipped; 2,775 of these, including the colored battalion, have received entirely new uniforms during the year, at a cost of a little less than \$25 each. The expense of the National Guard for the year, not including the uniforms, was about \$65,000. The commutation tax will amount to \$94,000.

The divorces granted in Connecticut within the year ending January 31, 1879, were 401, which is something less than their number in the preceding year. It is observed that, out of every ten divorces, eight at least are granted upon uncontested hearings, husband and wife often colluding with one another to be divorced.

The long-pending dispute between the States of Connecticut and New York, in regard to their boundary-line on the Connecticut western and southern border, appears to have been determined by amicable adjustment. The Governor of the State of New York, under act of its Legislature passed in March, 1879, appointed the Secretary of State, the Attorney-General, and the State Engineer a commission for that purpose; and a similar commission was then appointed by Governor Andrews on the part of the State of Connecticut, consisting of Origen S. Seymour, Lafayette S. Foster, and William T. Minor. The two commissions have met together, and settled the matter by a unanimous agreement upon the entire line between the two States. Their report will be laid before the Legislature in 1880.

CORONINI, Count FRANZ, the President of the Austrian Reichsrath, was born in Görz in 1833. After having studied philosophy in the University of Vienna, he entered the army in 1850. In the war of 1859 he was at first in Italy, but afterward was stationed in Bohemia. In 1866 he was with the Army of the North, and distinguished himself at the battle of Sadowa. After this war he left the army and went to Görz, where he was elected to the Provincial Diet in 1870. His general popularity was shown even at this election, the Italians as well as the Slavs voting for him. The Emperor appointed him immediately afterward Landeshauptmann (Governor) of Görz, which position he held until 1878. In 1871 he was elected by the Diet to the Reichsrath, after having declined the election the year before, and has since belonged uninterruptedly to that body. He voted at first generally with the Constitutional party, and acted with the Club of the Left, and then with the Progress Club. This he left recently on account of his views on the Bosnian question. He was, however,

respected and honored by all parties, and when he was elected President of the Chamber of Deputies he received 338 out of 341 votes. He also belonged to the Delegations after 1872, and at the last session was the President. He is the author of an essay on the nationality question in the "Oestreichischen Revue," and of a book on Aquileja.

COSTA RICA (REPÚBLICA DE COSTA RICA).* The President of the Republic is General Tomás Guardia; the first Vice-President, Sr. Pedro Quiroz; and the second Vice-President, Sr. Rafael Barroeta. The Cabinet comprises the following Ministers: Interior, War, and Marine, Sr. Rafael Machado; Foreign Affairs, Justice, Public Instruction, and the Poor-Commission, Dr. José María Castro; Commerce and Finance, Sr. Salvador Lara; Public Works, Sr. M. Argüello. The Bishop of San José is the Rt. Rev. Luis Bruschetti. The Minister of Costa Rica to the United States is Sr. Manuel M. Peralta (absent), accredited in March, 1878; and the Consul-General at New York, Sr. J. M. Muñoz. The United States Minister (resident in Guatemala and accredited to the five Central American Republics, Costa Rica, Nicaragua, San Salvador, Honduras, and Guatemala) is Dr. Cornelius A. Logan; and the United States Consul at San José is Mr. A. Morrell.

The military force of the republic consists of the militia, comprising all male inhabitants between the ages of eighteen and thirty, numbering 16,370, of whom 900 are usually engaged in active service; and the reserves, made up of men between the ages of thirty and fifty-five.

The revenue for the year ending April 30, 1878 (see "Annual Cyclopædia" for that year), was \$3,819,211, and the expenditures were \$3,904,657, leaving a deficit of \$85,446, of the means to be resorted to for the covering of which no mention was made in the ministerial returns. In the budget for 1878-'79 the revenue and expenditures were estimated at \$3,023,780 and \$1,794,767 respectively, the prospective surplus to be devoted to the prosecution of the railways. "It should, however, be noted," says a journalist, "that the revenue, as estimated, would be in excess of the total value of the imports for the year referred to, and would constitute no inconsiderable proportion of the estimated value of the exports." In a semi-official report, published in July, 1879, the so-called actual revenue for 1878-'79 stands at \$3,113,631; from which, however, should be deducted \$324,365, alluded to as "balance from previous year." Any balance from 1877-'78, as already seen, could only be accounted for by the non-liquidation of a portion of the liabilities of that year, the more so as those liabilities exceeded the revenue by \$85,446. The finances of the republic are, nevertheless, in a much more satisfactory condition now than a decade ago, and quite enough so to jus-

* For geographical situation, area, territorial division, population, etc., see previous volumes of "Annual Cyclopædia," and particularly that for 1877.

tify the commendatory remarks of the author of the report just mentioned. "Let it not be supposed," he writes, "that this *enormous revenue* tends to impoverish the people, or is derived from oppressive imposts. In the first place, the people are rich, and the profits of their agricultural industries are such as to enable them to pay their taxes without embarrassment; and, in the second place, if these taxes be compared with those of other countries, it will be seen that the Costaricans have no cause to complain of being overburdened. It has now become so natural to see the Government with ample means at command for the execution of its numerous projects of improvement or reform, that the marvels it has already accomplished have passed almost unnoticed. After the heavy outlays made or contracted for by the Government for thirty miles of rails for the Atlantic and twenty-five for the Pacific division of the railway, locomotives, thirty iron and a number of wooden bridges, the tripling of the number of workers, and other measures necessary for the simultaneous prosecution of the enterprise on both divisions of the line, the Peruvian Minister comes forward to claim the \$100,000 (with interest to double the amount) loaned by his Government to that of Costa Rica to enable it to carry on the war against the filibusters in 1857; and the debt was liquidated at once, without bringing any of the Government wheels to a standstill." Another proof of the prosperity of the country is furnished by the fact that the yield of the custom-house in 1869-'70—the first year of the decade above spoken of—was but \$278,595.53, while in 1877-'78 it reached \$1,010,787, and in 1878-'79, \$1,088,890.30. The total foreign debt of Costa Rica in 1877 was \$5,058,055, all to England, arising from loans negotiated in 1871 and 1872 for the purpose of building the interoceanic railway already referred to, and defraying the expenses to be incurred by other public works.

The most recent statistics of the foreign commerce of the republic are those given in the "Annual Cyclopædia" for 1878. The coffee crop for the year 1878-'79 comprised 400,000 quintals (of 100 lbs. each), of which 287,387 quintals had been exported up to April 12, 1879. The early setting in of the wet season prevented the export of nearly 100,000 quintals, according to good authority, while it is claimed that losses were sustained during the season by the scarcity of coffee-gatherers. All difficulties of transportation will cease with the completion of the railway.

The educational system of the country, under the able administration of Dr. Castro, has of late been greatly improved. The laws divide public instruction into the following grades or classes: Instruction primary-inferior, primary-superior, secondary, university or professional. The primary-inferior establishments, which are mostly situated in small country places, number 145 for males, with 6,949 pupils and 176

teachers; and 91 for females, employing 147 teachers, and with an attendance of 4,742. The cost of this branch of the public-school system for the last year was \$101,783. The schools known as primary-superior are situated in the capitals of provinces and of departments. For boys there are 28 schools of this class, employing 68 teachers, the attendance at which averaged during the year 2,991. Twenty-five girls' schools also exist, employing 70 teachers, with an average of 2,176 pupils. The cost of this department for the year was \$57,140. To the girls' schools in this department is attached a class in telegraphy, which employed during the year six teachers, the expense incurred being \$2,880. Secondary instruction is that which is imparted at the National Institute, and for boys only. A moderate sum is collected from the pupils for board and maintenance, and any deficiency at the end of the year is made up by the Government. During the year 1878 there were 224 students in all, employing 1 director and 20 professors, the total expense being \$26,874, to which the fees of students contributed to the amount of \$14,501. Belonging to this same grade of instruction, although including with it the inferior grades previously mentioned, are establishments in the principal cities and towns, which receive \$3,600 annually from the Government. The female college at Alajuela, under the management of the Daughters of Zion, is not directly subsidized by the Government, except that the gift of the building, grounds, furnishing, etc., which cost \$77,292.20, was borne by the Government. This college numbers 98 students, and the results of its operations are already most satisfactory. In Cartago there is another prosperous seminary for females, under the control of another order of sisterhood. It has at present 66 pupils. A subsidy of \$3,000 is annually paid to the College of the Catholic Seminary, which at present numbers 57 regular students. The professional or university course is as complete and varied as will be found in colleges elsewhere, and is under most able management. The number of pupils is small, however (only 22), owing to various causes, among which is the former inferior character of the schools of secondary instruction wherein are prepared the candidates for the university. This evil is fast disappearing. There are, besides, 22 private schools in the republic, with 612 pupils, male and female. The total expenditure for public instruction during the year was \$197,803, or \$58,721 more than in 1877. It is remarkable that in Costa Rica there are more school-teachers than soldiers in active service—a fact unparalleled in all Spanish America.

"The republic," says the President in his message, "maintains cordial relations with its more immediate brethren, although a marked coldness appears in its relations with Guatemala and Honduras on account of misunderstandings, differences of policy in certain matters, etc., with the Presidents of those coun-

tries. In the interior peace reigns undisturbed, and the people have been able to devote themselves to their various industries without molestation or disturbance, and with their well-known industry and zeal."

CUSHING, CALEB, a lawyer, soldier, and statesman, was born at Salisbury, Mass., January 17, 1800, and died at Newburyport, January 2, 1879. He was a member of a family that has been noted in Massachusetts from the early colonial days. He graduated at Harvard College in 1818, and afterward became a student at the college for two years in moral philosophy, mathematics, and law. After continuing the study of law for five years, he was admitted to practice, and settled in Newburyport. While he rose rapidly in the legal profession, he did not neglect literature or abstain from political pursuits. He was a frequent contributor to the "North American Review" and other periodicals. He was soon chosen a member of the Lower House of the State Legislature, and afterward was elected a Senator. In 1829 he visited Europe, and was absent two years. On his return to Massachusetts he published an "Historical and Political Review" of European affairs consequent on the occurrence of the French Revolution of 1830, and also his "Reminiscences of Spain." He was again sent to the Legislature for the years 1833 and 1834, and finally elected to represent the district in the Lower House of Congress. To this position he was three times reelected, serving regularly until March 4, 1843. In 1840 the Whig party triumphed by the election of William Henry Harrison of Ohio as President and John Tyler of Virginia as Vice-President; while Martin Van Buren, the Democratic candidate, was defeated. After an administration of thirty days President Harrison died, and Vice-President Tyler became President. Henry Clay, Senator from Kentucky, as the leader of the Whigs, attempted to pass through Congress certain measures forming a system of policy. Among these was the charter of a United States Bank. This measure was passed and twice vetoed by President Tyler, who undertook to compromise on a "Fiscal Agency." A break in the party ensued, and Mr. Cushing was one of the very few Northern Whigs who continued to support the President, who nominated him for Secretary of the Treasury. The Senate refused to confirm him. He was subsequently confirmed as Commissioner to China, and made the first treaty between that country and the United States. On his return he was elected a Representative in the Massachusetts Legislature, and in 1847 he raised a regiment for the Mexican war and became its

colonel, and was subsequently made brigadier-general. In 1847, and again in 1848, he was nominated by the Democrats for Governor, but failed of an election. He continued to represent Newburyport in the Legislature until 1852, when he was appointed Associate Justice of the State Supreme Court. In 1853 he was appointed U. S. Attorney-General by President Pierce, and retained the office until 1857. Again he became a member of the Massachusetts Legislature, and coöperated with the Democratic party in its opposition to the anti-slavery aggressions. In April, 1861, he tendered his services to Governor Andrew "in any capacity, however humble, in which it may be possible for me to contribute to the public weal in the present critical emergency." The Governor, an ardent anti-slavery and war champion, did not respond. His services were often employed during the war in the departments at Washington, and in 1866 he was appointed Commissioner to codify the laws of Congress. In 1868 he was sent to Bogotá to arrange a diplomatic difficulty. President Grant appointed him one of the American counsel before the Tribunal of Arbitration that was provided for by the treaty of Washington for the settlement of the Alabama claims, which met at Geneva in 1871 and concluded its labors nine months later. The other counsel were Mr. Waite, now Chief Justice of the Supreme Court of the United States, and Mr. Evarts. In 1873 General Cushing published a volume entitled "The Treaty of Washington," in which a history of the arbitration is given—a work written in his seventy-fourth year, but showing no decline of mental power in the author. The death of Chief Justice Chase, in the spring of 1873, created a vacancy in the highest judicial office in the country. At the close of the year President Grant sought to have the office filled by the appointment of General Cushing, but the Senate evinced so much reluctance to confirming the nomination that he declined it. Soon afterward he was nominated and confirmed as Minister to Spain, our relations with which had become exceedingly critical, owing to circumstances that grew out of the Cuban insurrection. Assuming this arduous post in his seventy-fifth year, General Cushing discharged its duties with ability and fidelity, and to the entire satisfaction of the appointing power, and also of his country. He arrived home in April, 1877. Notwithstanding General Cushing's prominent career and many public services, he was never popular. Neither the Whig nor the Republican party really liked him, and he was still further from being a favorite with the Democrats.

D

DANA, RICHARD HENRY, editor, poet, and essayist, was born in Cambridge, Mass., November 15, 1787, and died in Boston, February 2, 1879. He passed nine years of his early life at Newport, R. I., and in 1804 entered Harvard College, and left in 1807 without graduation. His regular studies were, however, completed at Newport during the next two years. He was admitted to the practice of law in 1811. He still further pursued his legal studies in Baltimore, and after a time returned to Boston, and was elected a member of the Legislature. Being more inclined to literature than to legal practice, he became a member of the Anthology Club, by which the publication of the "North American Review" was commenced in 1815. To that work Mr. Dana contributed his earliest writings—his essay on "Old Times," an article on Allston's "Sylph of the Seasons," and papers on the Edgeworths, Hazlitt, and Irving. His writings were distinguished not only by their ability, but because of the boldness with which they assailed some received opinions, to question the justice of which was held to be heretical action. In 1820 he withdrew from the "Review," and soon after started a periodical for tales and essays called "The Idle Man," which went through six numbers, and contained some of the best of his pieces. His first poem, "The Dying Raven," was sent to the "New York Review," then (1821) edited by Bryant; the "Husband and Wife's Grave" appeared in the same periodical. In 1827 "The Buccaneer and Other Poems" appeared in a small volume, and in 1833 these poems and his prose articles from "The Idle Man" were published. These poems and prose writings were republished in 1850, in two 12mo volumes. The "United States Review," in 1826-'27, contained articles from his pen on Mrs. Radcliffe and Charles Brockden Brown. In 1839 and the following year he wrote a series of ten critical essays upon Shakespeare's characters, and these were delivered in 1839-'40 in Boston, New York, Philadelphia, and many other cities. They were received with much favor, and are among his most valuable contributions to literature. He was also a contributor to the "Spirit of the Pilgrims," writing for it papers on Pollok's "Course of Time," pamphlets on "Controversy," "Natural History of Enthusiasm," and "Henry Martyn." To the "American Quarterly Observer" he furnished an article on "The Past and the Present," and to the "Biblical Repository" one on "Law as suited to Man." His connection with periodical literature ceased in 1835, just as that literature was beginning to show some signs of becoming a paying pursuit.

The first fifty years of his life Mr. Dana

was regarded as an invalid on account of the morbid condition of his nervous system; but after that period his health began to mend, and from the age of sixty-five to within a few weeks of his death he was in excellent bodily condition. Most of his life was passed in retirement and literary pursuits. He had no taste for active affairs, and never sought popularity. His personal appearance at the time of his eighty-fifth year, with his whitened locks and flowing beard, is described as attracting marked attention on the street. In his home, however, he was seen to the best advantage as a gentleman of the old school, with "his mild countenance and soft, beaming eyes of grayish-blue, lighting up his face, otherwise marked by sorrow and deep thought." His forehead was high and broad. His person was slight, and a little below the medium height.

DARGAN, EDMUND SPAWN, a Congressman and Chief Justice, born in Montgomery County, North Carolina, April 15, 1805, died in Mobile, Alabama, about November 22, 1879. He was the son of a Baptist minister of Irish descent, at whose death the son was left without means wherewith to acquire an education; but by his own exertions he obtained a fair knowledge of English, Latin, and Greek. He was engaged on a farm till he was twenty-three years old, and then read law in the office of Joseph Picket at Wadesboro. In 1829 he went to Alabama, and taught school three months at Washington, Autauga County. Here he was elected a justice of the peace, and filled that office for some years, in the mean time practicing law. In 1833 he removed to Montgomery, and there rose rapidly in his profession. In 1840 he was a candidate for the State Legislature, and defeated. A year later he was elected by the General Assembly to the bench of the Circuit Court of the Mobile District, and at once removed to Mobile. He resigned the office of Judge in 1842, and in 1844 was elected to the State Senate from Mobile. He resigned the following year, when he became the nominee of his party for Congress, and was elected. While in Congress the question of the northwestern boundary of Oregon became very important. On this he made an able speech and offered some valuable amendments to the resolution of notice. He declined a renomination; and a vacancy occurring on the bench of the Supreme Court, he was elected by the Legislature, at the session of 1847, to fill the place. In July, 1849, he became Chief Justice by the resignation of Justice Collier. He occupied this position till December, 1852, when he resigned and resumed the practice of law in Mobile. He was not again in public life till 1861, when he was elected a delegate to the State Convention of that year, and voted for

the ordinance of secession. At the first election of Representatives in the Confederate Congress, he was returned from the Mobile District and served throughout the term. He declined a reelection, and afterward remained in private life, successfully engaged in legal practice. He was a man of a very estimable character and an eminent jurist.

DAZA, HILARION, a Bolivian soldier and statesman, of humble parentage, partly Indian, born at Sucre in 1840. The name of his father, who was a Spaniard, was Grosolé; but, owing to domestic dissensions, that gave place to the maternal family name, Daza. While still but eighteen years of age, he began his military experience as a volunteer in the army of the "Liberals," then engaged in a revolutionary movement; and that party having been victorious, he remained in the service and gained rapid advancement. Subsequent successful revolutions lifted him into notoriety, and won for him the patronage and confidence of Melgarejo, whom for a time he faithfully served and supported. Two large Bolivian rivers, the Pilcomayo and Bermejo, crossing the wooded plains of the Gran Chaco, and emptying into the Paraguay, would if navigable afford a ready outlet to the Atlantic Ocean, and favor the development of Bolivian industry and commerce, hitherto paralyzed by the lack of easy means of communication with the Pacific seaboard. To explore the courses of those rivers, numerous fruitless expeditions have been organized; and in one of these, during the brief lull from political strife which marked the dictatorship of Melgarejo, the year 1867 found young Daza second in command, with the rank of lieutenant-colonel. He next became conspicuous in January, 1871, in league with Colonel Juan Granier against his former friend and patron, whose tyranny had brought upon him the odium of all parties. On the deposition of Melgarejo, Daza, at the head of his famous regiment of cuirassiers, held in check the turbulent factions at La Paz, for which service he was rewarded by President Morales with further promotion and the portfolio of War. As minister and general, he again succeeded in maintaining order after the death of Morales, assassinated (1872) by his own nephew, and insured the peaceful accession of the constitutional successor. In the same year he supported the candidature of Ballivian, and on the death of the latter became himself a candidate for the Presidency, against Salinas (civil candidate), Oblitas, and Vásquez (representative of the Corral party). The elections once over, a dispute ensued as to the majority, and Daza, it is contended, apprehensive of undue favor from the Government toward his rival, seized the power as his right, and was inaugurated on May 4, 1876. Notwithstanding this unconstitutional act, his government was as popular and troubled with as few revolutions as that of any of his predecessors. On the outbreak of the war with Chili, he assumed the title of Captain-

General. (For the remainder of his public acts, see BOLIVIA and PERU.)

DE KOVEN, Rev. JAMES, D. D., born at Middletown, Connecticut, about 1832, died at Racine, Wisconsin, March 20, 1879. He graduated at Columbia College in 1850. He then entered the General Theological Seminary of New York, passed through the course of studies, and was ordained. Then he went to Minnesota at the age of twenty-three years, and was in charge of a parish three or four years. In 1859 Racine College (founded in 1852) and St. John's Hall of Neshotah were united, and he was called to take the place of warden of the institution, which is now styled the University of Racine. It is situated in the midst of ninety acres of ground overlooking the lake, and has accommodations for 110 students. Its discipline and methods of study are modeled upon those of Rugby, England. In 1873 he lacked only a few votes of being elected Bishop of Massachusetts. The issue of the election was between the High and Low Church parties of New England, and he was the candidate of the former. It had put him forward as one of the most powerful orators of the Episcopalian pulpit. But a more general attention was attracted to him by an able address which he made in the Convention of 1874. The issue between the High and Low Church parties of the denomination in this country had assumed a bitter antagonism, which threatened a serious dissension if not a final division. The High Church movement had been growing in importance for several years previously, and was regarded with some alarm by a majority of the Episcopal clergy. The address of Dr. De Koven on the question at issue created a profound impression. His party, however, was in a minority. In September, 1875, he was elected Bishop of Illinois. He declined to accept, but continued his efforts to sustain the struggling university at Racine. In 1878 he was called to be assistant rector of Trinity Church, New York, but declined the call. A short time before his death the vestry of St. Mark's Church, Philadelphia, elected him as rector, but he did not live either to accept or decline it. In his social relations, Dr. De Koven was distinguished for genial humor, kindly courtesy of manners, and brilliant conversational powers. As an orator he possessed the rare quality of compactness of composition, combined with a fascinating mellowness of voice, graces of action, and emotional power. A volume of his sermons has been published since his death.

DELANE, JOHN THADDEUS, a British journalist, born in October, 1817, died November 24, 1879. He was educated privately and at Magdalen Hall, Oxford, where he graduated B. A. in 1840, and took his M. A. degree in 1846. His first connection with the "Times," of which his father was financial manager, dates from the year 1839, when he became one of the assistant editors to Mr. Thomas Barnes, on whose death in 1841 he succeeded to the

chief post as editor of that journal, when he had barely attained his twenty-fourth year. He retained that post until November, 1877, when he resigned on account of ill health, with a liberal pension, and was succeeded by the present editor, Mr. Thomas Chenery, late Professor of Arabic at Oxford. He studied law, and was called to the bar at the Middle Temple in 1847, but never practiced that profession. As an editor he was eminently successful, and under his management the "Times" flourished greatly and wielded an immense influence.

DELAWARE. The biennial session of the Legislature of Delaware commenced on January 7th. The Senate elected Charles J. Harrington as Speaker. In the House, Swithin Chandler was elected to that office.

The most important occurrence in the first part of the session was the inauguration of Governor Hall, which took place on January 21st. It was considered as brilliant and attractive as could be desired, the display eclipsing that of any previous occasion. A large number of prominent men assembled, and the military and people from all parts of the State. It was estimated that there were at least 3,000 persons present. The account proceeds to state that the members of the Legislature, numbering altogether thirty persons, and their officers, formed in line, the Speakers of both Houses in advance, and escorted the Governor elect, who walked with the retiring Governor, to the court-house, on the public square, several hundred yards distant. The court-house is a new red-brick building, three stories high. It was in the second story of this building that the oath was administered. Here, in advance of the all-important arrival, a numerous assemblage of well-dressed people, including many ladies, had gathered to do honor to the occasion. The judges' "bench," a platform, the bar, and the jurors' box had been specially reserved for members of the Legislature, judges, and other official personages, ladies, etc. For these reserved places cards of admission in limited numbers had been issued. Though small, the audience was notable for its fine-looking men and beautiful women. The General Assemblymen sat in the bar. Governor Cochran and Secretary of State Grubb, the Governor elect and Mr. Walcott, the new Secretary of State, judiciary, members of Congress, ex-Governors, etc., sat on the judges' platform, over which was inscribed in letters of evergreen the name of the new Governor. In the jury-box sat Mrs. Hall, the Governor's wife, his daughter, Mrs. Lister, and other members of the family. Among the judges on the bench were Chief Justice Joseph P. Comegys, the State Chancellor, Hon. Willard Saulsbury, who was formerly one of the United States Senators of Delaware, and Associate Justice John W. Houston. Among other prominent men assisting on the occasion were United States Senator Eli Saulsbury, Hon.

James Williams, Representative of the State in Congress, and Hon. E. L. Martin, elected his successor to Congress; ex-Governors James Poudler and Gove Saulsbury, Adjutant-General J. Park Postles, and other State officials. The inauguration ceremony was very brief. Prayer and benediction by legislative chaplains opened and closed the proceedings.

Among the appointments made by the Governor during the year were those of Captain J. Park Postles as Adjutant-General of the State, and George Gray to be Attorney-General for five years from October 3d. James M. Walcott was also selected as Secretary of State by the Governor.

The Legislature consists of three Senators and seven Representatives from each of the three counties of the State. Both Houses are entirely Democratic. In 1875 there was one Republican in the Legislature, and in 1873 there were eight.

An act was passed in relation to tramps. It declares that any person without a home in the town or hundred in which he may be found wandering about, without employment and the regular and visible means of living, shall be deemed and taken to be a tramp, and shall be dealt with accordingly. It is further made the duty of the corporate officers of every city and town in the State to cause every tramp, found within the limits of such town, to be immediately arrested and put to work on the streets, or other public works thereof, or to hire out such tramps to private persons, and for this purpose said officers may employ such overseers as may be necessary. The term of working them on the streets, etc., shall not exceed one month, and they shall receive such wages as the officers may deem just.

A canvass of the votes for Governor by the Legislature showed the following result:

COUNTIES.	Hall.	K. J. Stewart.	Scattering.	Total.
New Castle.....	5,080	675	51	5,656
Kent.....	2,203	83	7	2,243
Sussex.....	3,492	2,127	0	5,619

Hall's majority over Stewart, 7,507.

A joint resolution reducing the compensation to the Secretary of State from \$275 to \$200 was adopted.

Some applications for divorce were made to the Legislature, so that a joint resolution was offered in the Senate to the effect that no divorces would be granted during this session for causes cognizant before the Delaware courts. In asking its adoption Senator Sharpley said that it was a stigma on Delaware that people were justly led to remark that "marriage was hard in Delaware and divorce was easy." The conducting of divorce cases in the State was not proper so far as the decision upon them in the Legislature went. If we open the Senate chamber as a divorce court, said the Senator in concluding, we will have no less than fifty cases of divorce upon our hands.

Mr. Denney offered an amendment to the effect that no bills for incorporations cognizable before the courts be taken up.

Mr. Sharpley said that often when divorces were applied for to the Legislature that body overstepped its powers. The causes for which divorces are granted are adultery, desertion for three years, drunkenness, impotency, extreme cruelty, marriage under age, and willful neglect. Over all these the court has sole charge. The Legislature only has the right to decide on cases whenever the cruelty has not been extreme or something like that. The list which had just been recited covered all causes for which husband and wife could be separated. It seemed to the Senator that the Legislature was going too far when those petitions were granted, when the courts were the proper place for them. As to the adoption of the amendment, Mr. Sharpley thought that it should be presented in a separate petition.

The amendment to the resolution was lost.

In speaking on the resolution, Mr. Cooch said that the Legislature was not prepared to hear the cases fully and properly.

Mr. McWhorter: "There is a strong feeling in the courts of justice that many of the divorces granted by the Legislature are illegal, and out of this many questions concerning the illegitimacy of children and the settlement of real estate will arise in after-years and be decided in the courts. The courts have the sole power to grant divorces."

Mr. Sharpley: "There is frequent illegality in the petitions for divorce in which the petitioner makes affidavit that there is no collusion between him and the other party—that is, that there is no mutual agreement to that effect. In nearly every case that comes before the General Assembly there has been an understanding of that kind."

The resolution was adopted, all the members voting in the affirmative.

In the House the resolution was amended so as to provide for summoning one or more responsible witnesses before a joint committee, and thus approved by each House.

An act was passed requiring a stamp on oleomargarine to distinguish it from butter.

An act was passed to regulate the business of insurance companies created by the State. It provided for the establishment of an Insurance Department and an Insurance Commissioner to be appointed by the Governor, who is to be an expert accountant, and to give \$2,000 security for the performance of his duties, which are described in the bill as follows: To see that all the insurance laws of the State are enforced, and to demand from all companies doing business in the State certified copies of their charters, with the names and residence of their agents. When he deems it advisable, or upon application of policy-holders to the amount of \$10,000, a thorough examination shall be made of the affairs and condition of any company, and the result of such examination published;

and if necessary an expert is to be employed, to be paid by the company so examined, and the books and papers of such company must be submitted to the examination of the Commissioner. When the Commissioner is satisfied that any company is fraudulently conducted, and that its accounts are not sufficient to carry on its business, or upon any non-compliance with the act, the facts are to be certified to the Attorney-General, who is to apply for a rule upon the company to show cause why its business should not be closed; and the Chancellor is authorized in vacation to appoint a receiver, upon sufficient cause shown, to wind up the business of such company. He is to publish annually a statement showing the condition, with the assets and liabilities, of all companies doing business in the State for the preceding year, in at least three papers in the State, the cost of such publication to be borne equally by said companies. He shall, as soon as possible in each year, ascertain the net value on the 31st day of December of the preceding year of all policies in force on that day in each life-insurance company doing business in the State. He may accept the valuations made by the Insurance Commissioner of any other State, if the same have been properly made; and each such company is required to furnish him with a certificate of any valuation of its policies made by the Insurance Commissioner of any other State on or before the first day of March, and if such company fail to comply with this demand he is to revoke its authority to do business in this State; and if he shall find that such company is unsafe, he is to revoke its authority to do business in the State. Upon payment of the proper fine he is to give certified copies of any paper in his office to any one asking for them. He is to make a semi-annual report to the Legislature of his acts during the two years, and exhibit the condition of the insurance companies doing business in the State. All insurance companies doing business in the State are to make a detailed report every year to the Commissioner of the actual condition of such companies, which are to be sworn to by some authorized officer of each company.

An act was also passed to refund the State debt to the amount of \$300,000. The debt outstanding consisted of \$500,000 in bonds due in 1885, and \$300,000 in bonds due in 1890, all at 6 per cent. These it is proposed to refund in bonds due in 1900 at 4½ per cent. The total State debt at the beginning of the year was \$953,000, with no floating debt. If the total assets were deducted from the total debt, it would leave the assets in excess of the indebtedness \$165,799, with sums due January 1st amounting to \$90,858.

The most important subject before the Legislature was the bill to create a Board of Railroad Commissioners. It provided for the appointment of three Railroad Commissioners, one from each county, with a salary each of \$500 a year. The Commissioners have gen-

eral supervision over all railroads in the State, and when they think that any railroad combination is violating the State laws and the provisions of its charter, they shall inform the president or some officer of the company in the State; and if such violation continues, the Attorney-General is to be directed to take such action as is expedient. Whenever repairs upon any railroad are necessary, or any addition to the rolling stock, etc., or any change in the rates of fare, for the transportation of passengers or freight, or other changes are deemed expedient, the Commissioners shall notify the president of such road or some officer in the State, and a report of such proceedings shall be included in the annual report of the Commissioners. All railroad corporations are required to furnish all information sought by the Commissioners concerning the management and operation of the road; and copies of its books, leases, contracts, and agreements are to be furnished upon application, together with all rates, charges, etc.; and any discrimination in freight charges against any individual or corporation shall be reported to the Governor and to the Attorney-General. Upon refusal to furnish such information and an annual report of the operation of the road sworn to, they shall forfeit \$1,000, to be recovered by suit at law in the name of the State. The Commissioners are required to make an annual report, with recommendations, etc. The Commissioners are to draw upon the State Treasurer for \$100 per year for expenses of experts, incidentals, etc., and they, with their experts and other agents whom the Commissioners may deem valuable, are to ride over the roads free of charge.

The bill originated from the complaints of the fruit-growers. Petitions were presented in which it was charged that the Philadelphia, Wilmington, and Baltimore Company had discriminated grossly against the fruit-growers, who stated that the charges notwithstanding did not exceed the limit of eight cents allowed in the charter, being only seven and a half cents per mile. One petition from the fruit-growers to the Legislature commences with the statement that, "from Jersey City, the New Jersey Central Railroad has offered to carry carloads of fruit, ferriage included, at three cents per ton per mile, as against seven and a half cents per ton per mile charged by the Philadelphia, Wilmington, and Baltimore and Pennsylvania Railroads; a difference amounting to a total, since 1868, of over two million dollars, exacted from the now impoverished fruit-growers," etc., etc.

The constitutionality of the bill was the chief point in question. Those who denied its constitutionality urged that one section in the State Constitution provided that the people should be secure in their persons, houses, papers, and possessions from unreasonable searches and seizures; and it was claimed that the essential parts of the bill would be decided to conflict with the prohibition against unreason-

able searches so far as the Philadelphia, Wilmington, and Baltimore Company's books were concerned. As they were kept without the jurisdiction of the State, they could not be demanded with any force. Reference was also made to a decision of the highest court showing the power of legislation against chartered railroad corporations. This was a decision of the State Court of Errors and Appeals made in 1873, upon an appeal taken by the aforesaid railroad company. The circumstances of the case were that the company had charged one Bowers for passage from Philadelphia to Wilmington 50 cents, which is at the rate of \$0.0189 per mile, and on the same day had charged him \$1.85 to Port Deposit, which is at the rate of \$0.05 per mile; and had charged for freight at the rate of \$0.39.33.37 per mile for 9,000 feet of lumber from Port Deposit to Wilmington, and from Newport to Wilmington had charged for the same quantity of lumber at the rate of \$1.82 $\frac{1}{2}$ per mile. The Legislature had previously passed an act the fourth section of which was as follows:

That if the said Philadelphia, Wilmington, and Baltimore Railroad Company, or any other railroad company in this State, shall, either as an operator of its own railroad or railroads, or as lessee of other roads within the State, charge and receive a greater rate per mile for the carriage of passengers, or for the carriage or transportation of goods, wares, or merchandise, or other property whatsoever, from place to place within the State, or from a place within the State to a place without the State, than is charged by such company for the carriage of passengers and the transportation of property or freight for like distances, or per mile, from places without the State to places within the State, or from places without the State through the State to other places without the State, the person or persons paying such charges, either as fare or freight, shall be entitled to recover from such company, so charging and receiving the same, a sum of tenfold the amount of money so paid, to be recovered in an action of debt or assumpsit as like amounts are now recovered by law.

The intention of this act was to prevent discrimination in the freight and passenger tariff on the part of the railroads in the State, and Mr. Bowers sought under the act to recover \$56.80 before certain justices of the peace, from whose verdict in his favor the company took an appeal as above mentioned. Chancellor Bates announced the unanimous opinion of the Court upon an issue taken as to the constitutionality of the fourth section above cited of the act. The Court decided that the charter of a railroad company was a contract between the State and the company, and under the provisions of the Constitution of the United States, which declared that "no State shall pass any law impairing the obligation of contracts," an act of the Legislature having the effect to abridge or restrict any power or privileges vested by the charter, which were material to the beneficial exercise of the franchise granted—without the reservation of the right to pass such an act, and passed without the consent of the company—impaired the obligation of the contract and was invalid. The other part

of the decision had a more direct bearing. The power of the railroad company to charge for passengers and freight was adjudged to be one of the essentials to the enjoyment of the franchise, and a part of the consideration of the contract; "and," proceeded the Chancellor, "the power to adjust its tariffs of charges by its own officers, according to their views of the necessities of business and of justice to the public, without any reservation in the charter of such legislative control or supervision over them, being a part of the franchise as it was granted, an act of the Legislature which assumes for the State the right to regulate what under the charter was granted as an absolute discretion of the corporation, viz., the right to adjust its tariff of charges for the carriage of passengers and freight, undoubtedly impairs the obligations of the contract in the sense of the constitutional prohibition, and is inoperative and void."

These views were enforced by a letter from U. S. Senator Bayard, then at Washington, of which the following is an extract:

I regret the introduction of the bill, because I do not see how the rights and powers and duties of the companies under their charters can be modified or restrained by legislation now. I am disposed to doubt the power of the Legislature to make the inquisition into the business of the companies, and examine their books and papers. I think that it would be resisted, and then not only would angry contest be engendered, but large expenses, which in the end would come out of the people of the State. As we now stand, we receive a full and regular revenue, paid without trouble or expense into our Treasury by the companies, which saves us from laying other taxes on our people. A system of commissionership, which might be needed and be very useful in a large, extensive, and complicated system of railroads in the construction and ownership of which the State was interested, such as in Massachusetts, New York, and other large States, would not apply so well to our little State. We have no men who, for \$500 per annum, would be competent to give such counsel to the State as would be safe to rely upon.

There is an unavoidable monopoly in the transportation by every important railroad, and competition is the only sure cure for this, unless in incorporating the companies the State shall reserve power to regulate fares, etc.; and Delaware has omitted to do this.

The reply of the advocates for the Board of Commissioners to this letter consisted in the publication of an extract from the speech of Senator Bayard in the Senate, April 5, 1878, "on the act compelling the Pacific Railroads to pay an amount in opposition to the decision of the Supreme Court, and also enacting a conditional revocation of all the rights, privileges, grants, and franchises derived or obtained by said railroads from the United States." This was accompanied with opinions of other respectable authorities. The bill, however, failed to pass.

A bill was passed making Wilmington the county-seat of New Castle County.

An unsuccessful effort was made to pass a bill for the enrollment of a State militia. Its passage was urged upon the grounds that it was the duty of the State to protect its citi-

zens against violence by its own strong arm, and not to depend upon the dangerous influence of the National Government. Pennsylvania had failed of its duty, and now a bill was pending to take from the State Treasury over \$4,000,000 to pay for the ravages of the mob in Philadelphia and Pittsburgh.

A bill to grant "local option" to towns for the sale of liquors was reported by a committee of the House, but failed to pass. An unsuccessful effort was also made to establish a State Board of Health.

The estimate of the receipts of the year ending January 14, 1880, was \$147,211, and the expenditures \$118,920. The receipts from licenses are estimated at \$52,000, and from railroad taxes \$40,000. The sum of \$81,000 is due to the State on arrears of taxes and interest. The expenses of the executive government are estimated at \$9,500. The total expenses of the government during the year 1878 were only \$25,781.90. This includes the State expenses only, and not any amount expended in payment of interest and redemption of bonds. The largest item of expenses was for judicial salaries, \$12,000. The Executive Department cost \$9,775, which includes salaries of Secretary of State, State Treasurer, Auditor, Attorney-General, and School Superintendent. An examination of the sources of revenue shows that there was raised by taxation for State purposes \$106,687.39. This does not include revenue from investments, or from box-tax paid by the county treasurers, but only the taxes current during the year and the amounts of fines from the counties, which are for State purposes. Of this amount of taxation, New Castle County paid about \$90,000, Kent about \$10,500, and Sussex \$6,000. The State revenues are obtained from certain investments, from interest on the Junction and Breakwater and Breakwater and Frankford Railroad bonds, from indirect taxation in the shape of fees and license-tax, and from tax on the railroads and banks. None of the railroads in the two lower counties, except the Maryland and Delaware road, are taxed, nor is the Delaware road. The assessments in New Castle County amount to \$40,682,378, and the per cent. of tax paid to the State upon this assessment is 0.002. The assessment of property in Kent is \$12,639,255, and the per cent. of taxes paid 0.0008. The assessment of property in Sussex is \$8,576,215, and the per cent. of State tax is 0.0007. Although there appear in the State Treasurer's account receipts for State tax from counties amounting to \$31,099.19, there is in fact not now any direct tax levied in the counties for State purposes. The counties had not, when the old 18 per cent. real estate law was repealed, paid up their assessments, and are now doing so. New Castle has paid all of her arrears of taxes, but both Kent and Sussex still owe the State Treasury, the former \$12,000 and the latter \$13,000. In addition to the revenue from the sources men-

tioned above, the State has the following investments, which pay annually into its Treasury a considerable sum:

Farmers' Bank stock, 1,275 shares, at \$50 per share.	\$63,750
Stock of the Bank of Delaware, 20 shares, at \$465 per share	9,300
Loan to Junction and Breakwater Railroad	400,000
Loan to Breakwater and Frankford Railroad	200,000
Total	\$673,050

The receipts and expenses of schools in New Castle County for the year 1877-'78 were: from the district tax, \$90,743; amount received from the school fund, \$8,013.50; total, \$98,743.39. There was paid for tuition \$61,334.36, and for contingencies \$32,288.73; total, \$93,623.09. The School Commissioners had in their hands an unexpended balance of \$11,344.40. There was a falling off of receipts as compared with the years 1876-'77 of \$62,000, and a decrease of expenses of \$57,000. In New Castle County there were reported 11,485 scholars, 112 schools, and the average time of operation of each school was nine months and four days. None of these figures take in account the schools of Wilmington. In Kent County, for the same period, the amount received from taxes was \$25,589.25; from the school fund, \$8,124.64; total, \$33,713.89. Amount paid for tuition, \$28,052.75; for contingencies, \$4,744.11; total, \$32,796.36. Balance in hands of Commissioners, \$3,989.36. In Kent there were reported 5,325 scholars, 113 schools, and the average time of operation of each school seven months and two days. In Sussex County, during the same period, there was received from taxes \$15,937; from school fund, \$9,048.03; total, \$24,985.03. Amount expended for tuition, \$22,286.24; for contingencies, \$3,748.33; total, \$26,034.57; amount in hands of Commissioners, \$4,095.88. In the year previous there was \$25,965.26 received and \$26,816 expended; balance in hands of Commissioners, \$5,036.65. In Sussex there were reported 6,422 scholars, 162 schools, and the average time of operation of each school four months and fourteen days. These results show an increase in scholars in New Castle of 1,229 as compared with the previous year, and an increase of 11 schools and a decrease of 12 days in the average operation. In Kent there was an increase of 507 scholars and 5 schools, and a decrease of two months in the average operation. In Sussex there was an increase of 20 scholars, a decrease of 4 schools, and an increase of five days in the average operation of schools. The colored schools are supervised by the Actuary of the "Delaware Association for the Education of Colored People." The number of schools during the year 1878 was 52, being an increase of 6 over the previous year. The number of pupils enrolled was 2,249. The manner of establishing the schools is thus described by the Actuary:

The opening and closing of the schools is governed by no systematic rules. Usually the people interested in the schools assemble in their different localities,

and, after an interchange of views as to their financial means, etc., select trustees for the management of the schools, and then address the Actuary, stating how much salary they can pay a teacher, when the school will be ready to open, and asking him to send a suitable and competent teacher. Within a short time the necessary arrangements are completed, the teacher is sent, the school is opened, and continues until the falling off in the attendance or the lack of financial support necessitates its close. I have endeavored to use my best judgment in the selection of teachers. Many of them are graduates of the school for colored youths in Philadelphia, who have been educated especially with the view of teaching; others come from New England, and still others from our own State. The salaries in our schools are so low that we are deprived of the best and most experienced teachers; but, taken altogether, I am convinced that the colored schools in Delaware have never had a better educated, more energetic, and ambitious corps of teachers than during the past year.

The State appropriates for the education of the blind, deaf and dumb, and feeble-minded, the sum of \$2,971. There are 13 of these pupils.

The subject of the construction of the Delaware and Maryland Ship-Canal was brought before the Lower House of Congress and referred to the Committee on Canals and Railways. A sub-committee of the same was appointed to investigate and determine on the routes. A report was made at the winter session of 1879, based chiefly on surveys and estimates made at the instance of Congress by engineers under the direction of Colonel Churchill and Major Hutton.

It appears that the peninsula is fifty-six miles wide from the mouth of the Choptank River to Cape Henlopen. At the mouth of the Sassafras it is twenty-eight miles wide. There is deep water on the eastern side of the Chesapeake at nearly all points, but the western shore of the Delaware River is marked by wide shoals and by marshes. The watershed of the peninsula is nowhere more than ten to fifteen miles distant from Delaware Bay. Its general surface is flat, the ridge having an elevation increasing from twenty-five feet on the lower routes to eighty feet on the line of the Sassafras. The tides on the Delaware have a range of about four feet, but on the Chesapeake of less than two feet. The facilities for the construction will be considerable. Excavations will be easy to make, and the excavated earth easily handled. The underlying clays afford the basis for good foundations, and the streams are easy to follow or cross without requiring costly safeguards to protect the structure from flood of tide or freshet. Surveys were made of five routes, omitting the Sassafras route, which had already been fully surveyed. The lengths of the various routes are as follows: Ferry Creek, from Baltimore to the Atlantic Ocean, 149'81 miles; Wye River, 128'42; Queenstown, 109'29; Centreville, 106'13; Southeast Creek, 115'78; Sassafras River, 129'25. The miles of excavation would be: Ferry Creek, 37'67; Wye River, 42'99; Queenstown, 53'78; Centreville, 50'95; Southeast

Creek, 38.35; Sassafras River, 14.20. All of the routes will be easy to dredge and keep free from silt and filling up. The various routes are briefly described as follows:

The Queenstown route starts at the mouth of the Chester River, at Queenstown, and proceeds thence in a straight line over a high and generally flat country to Broad Kill Creek, and thence through the marshes to the Delaware Bay, near Lewes, 53½ miles from Queenstown.

The Centreville route leaves Chesapeake Bay 27½ miles from Baltimore, and passes through a shallow "jut" into Chester River, 3½ miles from its mouth, by this cut gaining 8 miles. It proceeds up the Chester River to Corsica Creek, 5½ miles, thence in nearly a straight line over a flat country ranging from 65 to 75 feet above tide, entering Delaware Bay at the same point as the Ferry Creek and Queenstown line, the distance from Corsica Creek being 51 miles.

The Wye River route enters Wyo River from Eastern Bay (the *débochure* of Miles River), passes up to head of tide at Skipton Creek, thence directly to Milford, Delaware, 37½ miles. The ridge between the bays at these points does not exceed 60 feet.

The Southeast Creek route enters Chester River as by Centreville route, ascends that river 12 miles to Southeast Creek, follows the latter 2½ miles, thence in a straight line 29 miles over a flat country 60 to 70 feet above low water to Little Creek, on the Delaware. It follows this marshy creek for 3½ miles, reaching Delaware Bay at a point 30 miles above Lewes.

The Sassafras route passes from Baltimore 30 miles up the Chesapeake Bay, and up the Sassafras River 16½ miles over a flat country rising to 80 feet at summit. It then crosses the ridge by Blackbird Creek, entering Delaware Bay 14½ miles from the head of tide on Sassafras River and about one mile from a point giving 24 feet water on the bay.

The Ferry Creek route leaves the Choptank River about 25 miles above its mouth, passes through low country and marshy grounds to the Nanticoke River, up the latter for 12 miles in navigable water and 4 miles farther in shoal water, then over a sandy country of height ranging from 7 to 50 feet, to the Delaware Bay, 3 miles above Lewes, following the bed of Broadkill Creek.

The following are the estimates for a ship-canal 26 feet deep at low tide, and 100 feet wide at bottom and 178 feet wide at surface of canal: Ferry Creek route, \$16,412,312; Wye River, \$26,554,498; Queenstown, \$37,261,235; Centreville, \$41,556,000; Southeast Creek, \$24,825,350; Sassafras, \$8,085,330. The cost will be greatly reduced if the canal be made but 75 feet wide at bottom. The report recommends the Queenstown route, and that it be built under the supervision of the War Department.

The fruit crops of the State were large. The heart of the fruit country is that section of Kent County directly around the State capital, Dover. It is there that the great evaporating and canning establishments cluster thickest, and at the capital itself, which from its position is an admirable center, the greater part of the business between the fruit-growers and their customers from the outer world is transacted. Next to Dover, the district about Milford, on the Junction and Breakwater Railroad, farther south, forms another point of attraction, with its extensive establishments for "putting up" the fruit. The entire fruit district is now estimated at 29,500 acres. At the

same time farming in many sections is very indifferent and unsatisfactory. This has led to the consideration of the culture of beets for the manufacture of sugar. During the year a large factory for its manufacture was erected near Edge Moor, on the Delaware River. About 810 tons of beets were received as the full crop, and some 40,000 pounds of melado had been manufactured.

DENMARK, a kingdom of Northern Europe. The reigning sovereign is Christian IX., fourth son of the late Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, appointed to the succession of the Danish crown by the Treaty of London of May 8, 1852, and by the Danish law of succession of July 31, 1853. He succeeded to the throne on the death of King Frederick VII., November 15, 1863. He was married May 26, 1842, to Louise, Princess of Hesse-Cassel. The heir apparent is Prince Frederick, born June 3, 1843, and married July 28, 1869, to Louisa, only daughter of King Charles XV. of Sweden. Their children are three sons, born in 1870, 1872, and 1876, and a daughter, born in 1875. The King has a civil list of 500,000 rigsdalers, and the heir apparent of 60,000 rigsdalers. The present ministry was formed on June 11, 1875, and at the close of 1879 was composed as follows: President of the Council and Minister of Finance, J. B. S. Estrup; Minister of the Interior, E. V. R. Skeel; Minister of Justice and Minister for Iceland, J. M. V. Nelleman; Minister of Worship and Public Instruction, J. C. H. Fischer; Minister of Foreign Affairs, O. D. Baron Rosenörn-Lehn, appointed October 11, 1875; Minister of War, General Kaufmann, appointed January 4, 1879; and Minister of the Navy, Commodore Ravn, January 4, 1879.

The area of Denmark proper, inclusive of lakes, is 14,753 square miles; of European dependencies (Faroe Islands and Iceland), 40,268 square miles; of American possessions (Greenland, St. John, St. Thomas, and St. Croix), 759,000 square miles. The population of Denmark proper, according to the census of 1870, was 1,784,781; and in 1878 it was estimated at 1,940,000. The population of the dependencies in 1870 was 127,401, and in 1878, 130,400. The emigration from Denmark in 1878 amounted to 2,972.

The annual financial accounts, called *statsregnskab*, for the years 1875-'76, 1876-'77, and 1877-'78 (the financial year closes on March 31st), were as follows (in crowns—1 crown = 27 cents):

YEAR.	Revenue.	Expenditure.
1875-'76.....	51,494,068	46,542,244
1876-'77.....	47,016,647	40,529,423
1877-'78.....	46,956,231	43,880,407

In the budget estimates for the financial year ending March 31, 1880, the revenue was estimated at 46,347,086 crowns, the expenditure at 40,909,737 crowns, and the probable surplus

at 5,437,349 crowns. The chief sources of revenue and expenditure were as follows:

REVENUE.		Crowns.
1. { Domain, net.....		587,411
1. { Forests, net.....		607,608
2. State property.....		4,078,570
3. Direct taxes.....		9,083,400
4. Indirect taxes.....		23,183,000
5. Postal and telegraph department*.....		800,000
6. Surplus of lottery.....		49,778

Total.....	3,279	258,325.5

Several American Protestant churches have established missions in Denmark, the largest of which is that of the Methodist Episcopal Church, with 8 Danish ministers, 618 members, and 121 probationers. Other missions are those

* The cost of administering the posts and telegraphs exceeded the receipts by 139,658 crowns.

The total strength of the Danish army in 1879 was as follows:

ARMS.	REGULAR ARMY.		ARMY OF RESERVE.	
	Officers.	Rank and file.	Officers.	Rank and file.
Infantry.....	774	26,992	245	10,925
Cavalry.....	123	2,180
Artillery.....	145	4,755	41	2,063
Engineers.....	59	624
Total.....	1,106	84,551	286	12,993

The staff of the army was composed of 25 commissioned and 21 non-commissioned officers.

The navy in 1878 consisted of 35 steamers, of which 8 were armor-clad ships, and the rest unarmored vessels, mostly of small size. The navy is recruited by conscription from the coast population. It was manned by 2,830 men, and officered by 1 admiral, 15 commanders, 34 captains, and 67 lieutenants.

The following table exhibits the value (in crowns) of Danish commerce in 1877:

COUNTRIES.	Imports.	Exports.
Great Britain.....	53,559,000	63,638,000
Germany.....	84,888,000	53,230,000

Other countries.....	14,376,000	1,911,000
Total.....	225,380,000	164,258,000

The movement of shipping during the year 1877 was as follows:

of the Seventh-Day Adventists, with one missionary, three native laborers, and 80 members; the Disciples of Christ, with one missionary and 70 members; the Brethren (or Tankers), with one missionary and 8 members. The Friends have one missionary, and the New Jerusalem Church has ministers laboring in the kingdom.

The elections for the Folkething took place on January 3d. In this election the Right gained 10 members, having now 37. The Radicals elected 35, against 30 in the former Parliament; but their former leader, Tauber, was not reelected. The Moderate party lost 10 seats, electing 28 members only. The opposi-

tion, therefore, still disposed of 63 votes. The Folkething met on January 31st, and, after reflecting its former President, Krabbe, began with the examination of the elections. The Left attempted to declare the elections invalid for those districts which the Right had gained from them. It began with the election of Dahl in Slagelse, which Tauber had formerly represented, and, in spite of the large majority of Dahl, his election was declared invalid by 62 to 32 votes. In February the Folkething demanded of the Government an explanation of Article V. of the Treaty of Prague and its abrogation, as well as of the position of Denmark toward the foreign Powers. (See GERMANY.) The Government thereupon declared in the Landsting that it would give to the Rigsdag all explanations with regard to Article V. of the treaty which had now been repealed by Germany and Austria, without being requested to do so by the Rigsdag, and as far as was compatible with the public interest; but that it would not permit a discussion on this subject in the Chambers. In the beginning of March, the Left in the Folkething proposed measures to relieve the distress among the lower classes of the population caused by the prostration of all industries. As the Government holds fast to the principle that the communes and not the state should provide for the poor, and that only if the former were not able to do so should they call upon the Government for help, the Left proposed that 500,000 crowns be set aside by the Government for the purpose of loaning them to communes for the relief of people without work. In 1877 a million crowns were set aside for the same purpose, but only 240,000 crowns were borrowed. As the Folkething did not pass the budget by April 1st, the beginning of the new financial year, the Government as in preceding years submitted a temporary one in which the expenses up to May 15th were estimated on the basis of the budget of the preceding year, which was sanctioned by the Chambers. In the latter part of April the Government submitted a bill giving to those inhabitants of Frederikstad, on the island of St. Croix, who had suffered by the negro rebellion of last year, 55,000 crowns, and loaning to them 50,000 crowns. In May the Folkething passed the budget as reported by the leader of the opposition, Berg, by 68 votes to 6. Six Krupp cannons demanded by the Government for the sea-forts were granted by 53 to 39 votes, while the demand for two new war-vessels, an ironclad and a corvette, was denied by 56 to 30 votes. The provisional financial law, which expired on May 15th, was extended to June 15th; and on June 14th the Chambers adjourned.

The new Chambers were opened on October 6th. In November the Minister of War introduced a bill for the reorganization of the army. His proposal was that the military forces of the country should be divided into

the line, the reserve, and the landwehr, the last named forming two classes. The line is intended for active operations, the reserve and the first section of the landwehr for the defense of fortified places, and the second section of the landwehr for coast defense. The line is to consist of ten regiments, each having three battalions of infantry and the guard, the regiments being formed into brigades by groups of two each. The cavalry of the line is to consist of four regiments, each with four squadrons, a squadron of escort, and cavalry school. The artillery is to be made up of four regiments of field artillery, with three batteries of eight guns and a train company, and of two regiments with four battalions for the defense of fortresses. There are to be ten companies of engineers, sappers, and miners, two companies of telegraph-men, one of railway-men, and one for pontoon-work. The reserve is to be made up of one battalion of the guard; four reserve battalions for Copenhagen, five regiments each, with three battalions for the provinces; four field batteries and four fixed batteries, two of which are to be at Copenhagen. The first section of the landwehr is to comprise old soldiers under forty-two years of age, and the second section those between forty-two and fifty. The field officers in the landwehr are to be nominated by the Crown, and the others elected by the troops. The preamble of the bill gives a sketch of the plan proposed for defending the country from invasion, from which it appears that the Government would not attempt to protect the whole of the territory, but would concentrate their defense upon Copenhagen and the island of Seeland, abandoning Jutland and the rest of the country to the enemy. The whole of the army would be concentrated in Seeland, covered by the fleet; and, in order to facilitate operations, it is proposed to complete the railway system of Seeland, and to fortify the capital both seaward and inland.

On June 16th the Superior Court of Justice gave judgment in a political trial, which in Denmark had become a *cause célèbre*. On June 3, 1877, a manifesto was published in the "Morgenbladet," signed by nine of the leading members of the Radical party in the Lower House, in which, without actually preaching treason, the Cabinet Ministers were, among other things, charged with having, "knowingly and with malice aforethought, kept the King in ignorance of, or wickedly misrepresented to his Majesty, the true political feeling in the country," as well as with having violated the Constitution. The Premier, M. Estrup, on behalf of himself and his colleagues, prosecuted the nine signatories of the manifesto, among whom were M. Berg and Count Holstein-Ledreborg; and the judgment condemned each of the defendants to three months' imprisonment, without the option of a fine.

On June 4th the four hundredth anniver-

sary of the University of Copenhagen was celebrated with great pomp. The university is situated opposite the metropolitan church, called "Frue Kirke," in which stand Thorwaldsen's "Twelve Apostles," hewn in marble. The ceremonies were held in this church. Several members of the royal family, the whole corps diplomatique, delegations from the Universities of Christiania, Upsala, and Lund, the most prominent members of the clergy, and a large number of poets, statesmen, actors, painters, and singers, were present. The principal speaker was Geheimeraad Madvig, Rector Magnificus of the University. Four hundred years ago, he said, the King of Denmark, together with some of the most prominent men of the country and a host of foreign *doctores et magistri*, assembled on the same spot where the anniversary was celebrated to-day, for the purpose of founding, with the permission of the Pope, a Danish university. If we would compare these men with those who stand at the head of the university to-day, we would find a great difference. They would hardly be able to understand that it was their work which was being continued. They would even be astonished to hear that such a solemn ceremony as the present one was carried on in the vernacular instead of in Latin. In the course of his speech Geheimeraad Madvig mentioned several eminent men who had graduated from and taught at the university, and whose genius and vast learning had carried the name of Denmark to the remotest corners of the globe; among others Hans Christian Oersted, whose discovery, he said, is every minute of the day whispered through all the telegraph wires in the world. It was at first intended to send out invitations to all the universities in the world; but on the abrogation of Article V. of the Treaty of Prague, by which North Schleswig was incorporated with Prussia, an influential section of the professors of the university, headed by the Rector Magnificus, M. Madvig, determined not to invite deputations from German universities; and finally, but not without protests from the entire press, it was decided to celebrate the four hundredth anniversary of the creation of the university solely as a national *fête*. This decision was much regretted; but as the only alternative was that of losing the services of M. Madvig, his decision was submitted to.

The Althing, the Parliament of Iceland, which sits every other year, met in 1879 on July 1st, and adjourned on August 27th. This was the third session since the grant of the new Constitution in 1874, and with it closed the first parliamentary period, the elections for the new Parliament occurring in the course of 1880. Both Houses seized the occasion of a general dissolution to vote addresses to the King, congratulating him and the country upon the complete success of the experiment of self-government, and thanking him anew for the gift of a Constitution. Many old laws had been

carefully remodeled, and the new ones had been such as greatly to promote the prosperity of all classes. The biennial budget had been promptly voted, and the taxes had been so liberally levied that each period of two years had shown a surplus of from 50,000 to 100,000 crowns. Of the new laws, the one most nearly concerning foreigners was that completely abolishing the tonnage duty on vessels entering Icelandic ports, which had hitherto amounted to two crowns a ton. To make good the deficiency likely to result from the loss of these imposts, the customs duties on spirituous liquors were largely increased. The postal laws were so amended as to provide for the issue of postal cards and for the increase of the number of trips made by the post-steamers. Several important educational schemes came before the assembly. One of the last bills passed made it the duty of each priest to see that all the children of his parish are taught writing and arithmetic, and authorized him, together with the civil overseer of the parish, to remove any children whose parents are negligent in the matter to another farmstead, where they are to be instructed at the expense of the parents. The laws passed during the previous session establishing a school of law at Reykjavik and a technical school at Mödruvellir, in the north of the island, were greatly modified, both the number of teachers and the amount of the annual appropriation being increased. Some changes were also made in the government of the National College at Reykjavik, rendered necessary by the larger number of students who yearly frequent it. Within a few years the National Library had outgrown its old quarter in the large loft of the cathedral at the capital, while a considerable collection of Icelandic antiquities had grown up, chiefly through the exertions of a single enthusiastic artist and scholar, the late Sigurdur Gudmundsson. To provide for these and for the accumulating collections in natural history, as well as to furnish increased accommodation for its own body and various public departments, the Althing voted 80,000 crowns for the erection of a Capitol, or Althing-house.

DIPLOMATIC CORRESPONDENCE. See UNITED STATES.

DISCIPLES OF CHRIST. The *General Christian Missionary Convention* of the Disciples of Christ met at Bloomington, Ill., October 17th. The Treasurer reported that his total receipts during the year in cash and pledges had been \$24,510, and his disbursements had been \$5,891. The Society had employed nine men for a greater or less part of their time, who had preached 1,220 sermons, and through whose instrumentality 408 persons had been added to the church. The Board had circulated about 60,000 pages of tracts within the field of its operations. The report of the Board showed the following aggregate results: Whole number of baptisms, 1,803; of other accessions, 983; whole amount of money received for mis-

sions, \$31,414; whole amount of pledges received, \$82,484; making the total amount of money and pledges together, \$63,898.

The *Foreign Christian Missionary Society* met at Bloomington, Ill., October 16th. The report of the Board was published in the "Christian Standard" of October 25th. It stated that the "general current of sentiment was that, after fulfilling our present obligations to our missions in Paris, Copenhagen, Constantinople, and in England, any enlargement of our work should look to France, Italy, Japan, Africa, and China; and that at least one new mission should be undertaken, if possible, in some one of the three countries last named during the next year." The receipts of the Treasurer for the year had been \$12,547, and his expenses had been \$11,577. His report showed that pledges of an estimated value of \$25,000 would fall due between the time of the meeting and October, 1884. The operations of the Society in the foreign field embraced stations at Southport, Chester, Southampton, and Tranmere, England; Paris, France; Copenhagen, Denmark; and Constantinople, Turkey; all of which, except those at Southampton and Copenhagen, which were established in 1876, had been established since the beginning of 1878. The stations in England had 464 members and 2,161 attendants; the station at Copenhagen, 99 members and 325 attendants; and that at Paris, 27 members and 250 attendants; making an aggregate of 590 members and 2,740 attendants. The Rev. G. N. Shishmanian, an Armenian, had been appointed a missionary to Constantinople, where there were already two members. A missionary had been dispatched to Acapulco, Mexico, where he had immersed seven members, but had since been obliged to give up his enterprise. The Society adopted a report recommending that new missions should be entered upon at the first possible moment, and mentioning Japan, Africa, and China, among the heathen, and Italy and France (outside of Paris or new quarters in Paris), among civilized nations, as the most suitable fields.

The *Christian Woman's Board of Missions* met at Bloomington, Ill., October 14th. The total receipts of the Treasurer for the year had been \$4,283, and the expenditures \$2,130. The Society had an endowment fund of \$1,020, of which \$1,000 were lent at interest. A report was made from a mission in Jamaica, where a branch society had been organized, and an appropriation was made for the salary of a teacher in the French mission.

DIX, JOHN ADAMS, an eminent public officer, born at Boscawen, New Hampshire, July 24, 1798, died in New York, April 21, 1879. His father, Timothy Dix, was once Lieutenant-Governor of New Hampshire. The son early went to a school in Montreal, where he had the opportunity of learning the rudiments of the French language, which became of much service to him when he was Minister to France

in 1867. In 1812 he was made a cadet in the Military Academy at West Point, and thus, at the age of fourteen years, entered the service of the Federal Government. In the latter part of the year 1813 he surrendered his appointment to become an ensign in the army. In this position he engaged in service on the northern frontier during the war of 1812-'15. In 1814 he was made a third lieutenant; in 1815, a second lieutenant; in the same year he was transferred from the Twenty-first Infantry to the artillery; a year later he became an adjutant. His service in the army continued sixteen years. In 1818 he was made a first lieutenant. In 1819 he was aide-de-camp on the staff of General Jacob Brown, then Commander-in-Chief of the Army. When he left the service in 1828, he was captain of the Third Artillery. His years of staff duty were mostly spent at Washington, during an interesting period of the country's history. On retiring from the army, he made a prolonged visit to Europe. About 1830 he became a lawyer and settled in Cooperstown, New York. He soon became interested in politics, and was an ardent advocate of the measures of President Jackson. In 1831 he received from Governor Throop an appointment as Adjutant-General of the State. Two years later he became Secretary of State, and the office was held by him six years. He then retired to private life for three years, and in 1842 was chosen member of the New York Legislature from Albany County. In 1845 he was chosen to succeed Silas Wright in the Senate of the United States. In 1848 the "Free-Soil" agitation broke out in the Democratic party of New York, and made a division in it. Senator Dix ultimately joined the Free-Soilers, and made one or two important speeches in the Senate sustaining their views, which were summarized in the motto "Free Soil, Free Labor, Free Speech, and Free Men." His most notable speech, however, was on the question of the Oregon boundary. In the same year he was the Free-Soil Democratic candidate for Governor, but Hamilton Fish was elected. In 1849 he was succeeded in the Senate by William H. Seward. In 1852, the Democratic party of the State having become united on the Presidential candidate, Mr. Dix warmly supported Mr. Pierce of New Hampshire for the office, and after his election he received the appointment of Assistant Treasurer of the United States in New York. This office he soon resigned, and devoted himself to his private affairs until 1860, when he was appointed by President Buchanan Postmaster at New York. In January, 1861, he was appointed Secretary of the Treasury by Mr. Buchanan, and held the office until March 4th, when Mr. Lincoln became President. It was during this short and exciting period that he issued the most famous utterance of his life: "If any man attempts to haul down the American flag, shoot him on the spot!" It was more significant than anything

else he ever said, and meant much for the Union cause. The sentence was the last one of a brief telegram to Treasury Agent W. Hemphill Jones of Delaware, then at New Orleans. It was sent January 29, 1861. In the same year President Lincoln made him a major-general in the army. His commands during the war comprised in succession the departments of Maryland, of Virginia and North Carolina, and of New York. It was while holding the latter command, on May 16, 1864, that he received orders from Washington to place a strong military guard in the newspaper-offices of the New York "Journal of Commerce" and "World," and issued warrants for the arrest of the editors and their imprisonment in Fort Lafayette. At the same time a vessel was lying under steam at one of the wharves to convey them there. The suppression of the papers continued for two days, when the offices were restored to the proprietors. Governor Horatio Seymour caused the arrest of General Dix and his officers, but an order came from Washington directing the General "not to relieve himself of his command or be deprived of his liberty for obeying any order of a military nature while the civil war lasts." (See "Annual Cyclopædia," 1864, page 391.) In 1866 General Dix was President of the Philadelphia Union Convention. In the same year he was appointed Minister to France by President Johnson; in 1869 he resigned that position. In 1872 he received the Republican nomination for Governor of New York, and was elected. On the expiration of his term he was renominated, and defeated by Samuel J. Tilden. He afterward made public addresses in political campaigns, but held no other political office. For a short time he acted as President of the Board of Directors of the Erie Railway. In every sphere of life to which he was called he acquitted himself well. He had many qualities which insure success in public positions. He was careful of details and fond of them. He was punctual, diligent, orderly, and deliberate. This made him a good executive official. Moreover, he had learned the duties of command in the school of obedience, and his career was an ascensive instruction. As a soldier, he was identified with no battles of the civil war. He tempered martial law in loyal or unmenaced posts, and he yielded less to the spirit of arbitrary arrest than others. An officeholder by profession, he was an honest one, as well as a citizen of many virtues, fair talents, and marked and varied cultivation. Industrious, courteous, abstemious, and honorable in his inclinations, his career will be at least as notable for duration as for service, and his service will be more notable for quantity than for any extraordinary results. He was a man of culture and fine literary tastes, and his writings were always models of good English. His works of travel were widely read, and he was the author of a very useful volume on "The Resources of

the City of New York." His miscellaneous speeches and addresses have been collected into two handsome volumes of interesting reading. He remained a scholar throughout his busy life. In manners he was ever the calm and courteous gentleman to all coming into his presence. In person he was erect and soldierlike, with a native dignity of bearing.

DIXON, WILLIAM HEPPORTH, a British author, born in Yorkshire, June 30, 1821, died December 27, 1879. He had no academic training, but was very observing and fond of reading, and when still quite young made his literary *début* by privately printing a five-act tragedy, which has remained unknown to the public. He was an early contributor of verse to Douglas Jerrold's "Illuminated Magazine," and about 1844 became literary editor of a paper at Cheltenham. In 1846 he settled in London as a law student at the Inner Temple, and began contributing to the "Daily News" a series of articles on the "Literature of the Common People" and on "London Prisons," which were well received. His first published book, "John Howard, a Memoir," appeared in 1849. In 1850 he was appointed a deputy commissioner for the organization of the World's Fair of 1851. In 1851 he published a "Life of William Penn," in which he defended the celebrated Quaker from the attacks of Macaulay in his "History of England." In 1852 he made a tour of the Continent, and the following year became chief editor of the "Athenæum," which post he held until 1869. His treatment of American subjects and American authors in this journal, as well as in his books on America, was considered in the United States unjust and incorrect, although he made many friends in his visits to this country. In 1864 he made a long tour in the East, which resulted in a work on "The Holy Land" (2 vols., 1865). He spent a few months in 1866 in travel in the United States, paying especial attention to Mormonism and spiritualism. As a result he published his two best known works, "New America" (1867) and "Spiritual Wives" (1868). The former was translated into most of the languages of Europe. In 1869 he made a tour of Russia, the narrative of which he entitled "Free Russia" (2 vols., 1870). His largest work was entitled "Her Majesty's Tower" (4 vols., 1869-71), which was supplemented in 1878 by a similar work on "Royal Windsor." He made many other trips to the Continent, and revisited America in 1874-75. This visit produced his "White Conquest" (2 vols., 1876), which contained some useful information about the condition of the negroes, the Indians, and the Chinese in America, and which was generally regarded as his best book on America. In 1878 he visited Cyprus, and wrote a book on that island. Other of his writings are: "The Lives of the Archbishops of York" (1868); "The Switzers" (1872); "The History of Two Queens—Catharine of Aragon and Anne

Boleyn" (4 vols., 1873-'74); "Diana, Lady Lyle" (3 vols., 1877); and "Ruby Grey" (3 vols., 1878).

DOMINION OF CANADA. The Conservative party, after a seclusion of five years, returned to office upon gaining the general election of September 17, 1878, upon the tariff issue. Sir John A. Macdonald, assuming the Ministry of the Interior, formed the present Cabinet, as follows: Sir Leonard Tilley, Minister of Finance; Sir Charles Tupper, Public Works; J. H. Pope, Agriculture; James Macdonald, Justice; F. R. Masson, Militia; Mackenzie Rowell, Customs; F. G. Baby, Inland Revenue; J. C. Pope, Marine and Fisheries; A. Wilnot, without portfolio; John O'Connor, President of the Council; J. C. Aikins, Secretary of State; Mr. Langevin, Postmaster-General; Alexander Campbell, Receiver-General.

The first session of the Fourth Dominion Parliament was opened on the 14th of February, 1879. The Marquis of Lorne delivered the speech from the throne, amid unusual ceremonial. It pledged the Ministry to the promised alterations in the tariff, and proposed the assumption of the business of insurance by the Government, in view of the success of Government savings banks. J. G. Blanchet was elected Speaker of the new House of Commons. This sitting of Parliament was perhaps the most momentous one since the confederation of the provinces, made so by the adoption of the national policy, which can not but have a serious influence upon the prosperity of the Dominion for many years to come. Whether the policy of protection, to which the Canadian people have committed themselves almost irrevocably, will not prove too burdensome for a people who are engaged to far the greatest extent in agricultural and similar pursuits, will depend in the first place upon the facility with which the industries which are propagated by the new fiscal measures can supply the nation with suitable manufactures, and next upon the willingness of the protected capitalists to forego a portion of the profits which, in a country where competition can not be strong in capitalistic industry, the protective measures will enable them to extort. There will remain, however, a way by which the Canadians can return to their old system without openly recanting their newly avowed principles—that is, by making a new reciprocity treaty with the United States, whose provisions, according to the rules insisted upon by the Imperial Government, would apply to Great Britain as well. In such a treaty any desired compromise between free trade and protection could be effected. One cause of the popularity of the national policy has been the belief that by such a strong course of action Canada would be enabled to exact more favorable terms in her future commercial negotiations with the United States.

The programme of protection which brought the Conservatives into power was heralded as

a new departure, which would produce great and striking improvements in the material condition of Canada. The new tariff was elaborated by Mr. Tilley and laid before Parliament on the 14th of March. As was expected by the country, it embodied protective principles of the strongest character. The protective measures were directed chiefly against the import trade from the United States. The general depression of trade had disposed the people to welcome any innovation in the commercial policy of the Dominion, and the large increase in imports from the United States which had taken place during several years, accompanying a diminishing importation from Great Britain, had aroused a feeling of discontent among all classes, and had grated against both the sentiment of Canadian patriotism and of British loyalty. The free-trade Liberal party, which had possessed the popular favor a few years back, had rejoiced in the large imports as a sign of prosperity, and welcomed the commercial bonds which were forming between Canada and the American Republic. The new commercial system, which was proclaimed as the National Policy, was designed in a sense and spirit directly opposed to the objects which had prompted the treaty of reciprocity. The Canadians of the older provinces, whose lands, like those of the Atlantic States of the Union, had become less valuable for agricultural purposes since the development of the resources of the interior, hoped by emulating the protective policy of the Americans to build up flourishing manufacturing industries likewise. The tariff framed with this purpose could not fail to prove exceedingly hostile to the interests of British as well as American manufactures. Besides the general depression which had produced a disposition among the people favorable to an alteration of the fiscal policy, the deficit in the Treasury would in a measure justify the Government in establishing the new tariff even if it failed of attaining the expected objects, if it only produced a larger revenue—furnishing the excuse, in the event of its not affording the promised commercial relief, that at least it produced a revenue. Although protective measures, however beneficial they may prove in the end, can not produce immediate relief in a depressed state of trade, but rather tend on the whole to augment the financial distress, yet if the introduction of the new policy is concurrent in time with a renewed activity in business, even though the improvement is directly due to a commercial revival in the United States, whose intimate commercial relations with the Dominion it would take much more decisive measures of exclusion to break off, it will appear justified, in spite of the continued and able remonstrances of an active free-trade opposition. The inauguration of this bold and experimental course involves also active efforts on the part of the Government to provide an outlet for the fostered manufactures, the encouragement and, if necessary, subvention of

lines of communication with promising foreign markets, and the promotion of other facilities of exportation, and particularly the conclusion of special treaties of reciprocity with countries from whom no competition with the infant industries is to be feared. Sir Alexander T. Galt was sent to England, being endowed with the new title of Resident Minister, to look after the commercial interests of Canada in Europe. He entered into negotiations with Spain and France with reference to reciprocal commerce, while the authorities in Canada sought to make special arrangements with the Government of Brazil, which affords a favorable market for Canadian fish, lumber, and agricultural implements and other manufactures.

The new tariff is a protective one of the most pronounced character, and avowedly discriminates against the products of the United States where it is possible. Two of the duties specifically discriminate against American imports—one a duty on tea imported from the States of 2 cts. per lb. and 10 per cent. ad valorem, and the other a duty on all salt not from Great Britain or British dependencies of 8 cts. per cwt. The instructions to Lord Lorne did not contain the clause, then omitted for the first time, stating that any bill imposing differential duties should be submitted for approval to the home authorities. The general ad valorem duties were raised from $17\frac{1}{2}$ to 20 per cent. Numerous classes of imports were additionally subjected to duties of a highly protective character. The duty on cotton fabrics is 2 cts. per square yard or 1 cent per linear yard, and 15 per cent. ad valorem. Silk goods pay 30 per cent. ad valorem. The duty on flannels, blankets, and shawls, woolens, yarns, and knit goods is $7\frac{1}{2}$ cts. per lb. and 20 per cent. ad valorem. Articles of apparel and ready-made clothing pay 10 cts. per lb. and 25 per cent. ad valorem; woolen carpets, 10 cts. per square yard and 20 per cent. ad valorem. The duty on pig iron is \$2 per ton; on iron in slabs, etc., $12\frac{1}{2}$ per cent. ad valorem; in bars rolled or hammered, on boiler and plate iron, nails, and spikes, $17\frac{1}{2}$ per cent.; on rolled wire in coils, 10 per cent.; on iron rails, 15 per cent.; on fish-plates, etc., $17\frac{1}{2}$ per cent.; on iron and steel wire, 25 per cent.; on tin plates, 10 per cent. Cabinet furniture must pay 35 per cent.; agricultural implements and wooden ware, 25 per cent. A duty of 15 per cent. is imposed on breadstuffs and barley. Machinery for cotton and woolen milling enters free. Foreign vessels must pay 10 per cent. duty for registration in Canada. The drawbacks allowed by the American Government on manufactured sugar exported are opposed by a duty irrespective of such drawbacks of 35 per cent. ad valorem, in addition to 1 cent per lb. on all above No. 14 by the Dutch color standard; on all below that grade and above No. 9, $\frac{1}{2}$ ct. per lb. and 30 per cent. ad valorem; and on all under No. 9, $\frac{1}{2}$ ct. per lb. and 30 per cent. ad valorem. For the benefit of the coal interests

of Nova Scotia, a duty of 50 cts. per ton of 2,000 lbs. is imposed on coal, both anthracite and bituminous. The average percentage of revenue is $13\frac{3}{4}$ per cent. of the average value of all imports. On evidence of exportation of manufactures, a drawback is allowed on the materials imported. The cordage used in ships, which pays a duty of 10 per cent., is not released from the duty, but the other portions of all new ships have their duties remitted. The development of the iron-ore deposits which have been discovered, not only in Nova Scotia, but in New Brunswick, in Quebec, in Ontario, and in the Ottawa Valley, was one of the favorite schemes of protection, and with this object the duty of \$2 per ton was laid on pig iron. Pamphlets and periodicals are made to pay a duty of 6 cts. per lb.; British copyright publications, $12\frac{1}{2}$ per cent. ad valorem and 6 cts. per lb.; books and periodicals imported through the mail, 1 ct. for every two ounces or fraction thereof; newspapers by mail, free. Advertising pamphlets pay \$1 per hundred, and other printed work, as advertising cards, bills, posters, etc., 30 per cent. ad valorem. All printed music pays 6 cts. per lb.

In the new duties on alcoholic beverages an object is aimed at which is independent of considerations both of revenue and protection. The duties are arranged in the interest of temperance, so as to encourage the consumption of malt liquors in comparison with strong drink, and to render spirits less accessible than before. For this purpose the excise duties have been changed as well as the customs duties. The customs duty on brandy has been raised from \$1.20 to \$1.45 per imperial gallon, and that on other spirits from the same to \$1.32 per gallon. The excise duty on spirits has likewise been raised 10 per cent., while that on ales and beers has been decreased. French light wines have to pay a duty of only 25 cts., which is made thus light for the same object of encouraging the consumption of the more harmless beverages. Champagne wines, on the other hand, as a luxury, are taxed \$3 per gallon.

The inspiring motive of the new fiscal policy is declared in the following words of Sir John A. Macdonald: "As between English and American manufacturers, we prefer the English; but as between the English and Canadian manufacturers, we prefer the Canadian. We know that we can gain the two objects of giving full protection to all our infant industries against the industries of any other country, including England, at the same time giving a preference to England in our markets; so that if we have to go out of Canada to make purchases, we will go to England rather than elsewhere." The effect of the new tariff was declared by Sir Leonard Tilley, eight months after its going into force, to have been a falling off in the imports of the leading manufactures from England of 9 per cent., and in the imports of the same articles from the United States of 47 per cent. The new tariff

was expected to increase the revenue from \$21,670,000 to about \$24,120,000, and to soon wipe out the deficit in the Treasury accounts, which had been accumulating for four years, and which amounted altogether to about \$7,000,000. The division on the new tariff, or the national policy, was taken in the middle of April, 136 voting in its favor and 53 against it.

A constitutional question, arising from the dismissal by Lieutenant-Governor Letellier, of Quebec, of the De Boncherville Ministry in March, 1878, on account of what he judged to be an infringement on the privileges of his office and an official affront, became more and more complicated by later events. The Province of Quebec, already in a very unhealthy state of political agitation, was wrought up to a condition of feverish passion, and the excitement spread throughout the Dominion, as the Dominion Government, the Governor-General, and finally the British Government, were drawn into the controversy. The election of a Conservative Parliament in September, 1878, was the means of making the question of Letellier's act a Dominion matter. The Macdonald Ministry decided in April, 1879, to remove Letellier, and advised Lord Lorne accordingly. To this the new Governor-General demurred, and applied to the Home Government for instructions, being of opinion that the interference of the Federal Government was a violation of the prerogative of the Crown on the one hand (as the British North America Act of 1867 states that the office of Lieutenant-Governor shall continue "during the good pleasure of the Governor-General"), and on the other hand that it plainly trench on the autonomy of the provinces, and openly violated the principle of responsible government, since the Joly Cabinet, which had succeeded the De Boucherville Ministry, had received the support of the country in the next provincial election. The Dominion Minister of Public Works, Mr. Langevin, repaired to England to present the case of the Government before the British Cabinet. The position of the Dominion Ministry was upheld by the British Government, and the Marquis of Lorne was informed in dispatches from Sir Michael Hicks-Beach that the advice of his constitutional advisers must be followed. The right of the Federal Government to remove the provincial Governor was thus established as a principle of the Canadian Constitution and a concomitant of responsible government. This decision, which was due partly perhaps to the political exigencies of the moment, and to the unwillingness of the home authorities to incur any responsibility in the direction of colonial affairs, not even so far as regards the interpretation of the Constitution, creates a principle against which the very people who were clamoring for Federal intervention might under ordinary circumstances be the first to rebel; the *habitans* of this same old French colony

will probably be the loudest in their protestations against any further advances in the direction of centralization. The Province of Quebec had been long subjected to a chronic political fermentation on account of the disputes growing out of this situation. This was one of the first questions to which the attention of the Governor-General was called upon his arrival. He was unwilling to accede to the demands of the Conservatives of the French provinces to dismiss the Lieutenant-Governor, and it looked as if the whole country might be plunged through this affair into a constitutional crisis of great peril. It seemed to the Marquis of Lorne to be straining the Federal authority very much to dismiss the Lieutenant-Governor for acts the entire responsibility for which rested with and was assumed by his constitutional advisers, who still retained the confidence of the provincial Legislature and were able to conduct the government of the province. There was no precedent in this case, and the question was settled by Sir John A. Macdonald's insisting that his demands should be acceded to, and by the prompt reply from the Home Government, which complacently interpreted the Constitution in the sense required by the Federal Government.

The transaction of the public business of the province was facilitated through the happy issue of a somewhat dangerous and violent act of the Legislative Council, resulting in the retirement of the Liberal Government and the assumption of the reins of power by a Conservative Ministry. The ministerial crisis was brought about by the refusal of the Legislative Council to vote supplies, and a motion offered by the Minister, Mr. Joly, in the Assembly for indemnity for Government expenditures. Such an application, being for a money grant, should, according to all precedent, have been made in the form of a message from the new Lieutenant-Governor, Robitaille. An amendment presented by Mr. Lynch, which, without upholding the action of the Legislative Council, imputed weakness to the Government, was passed, and was the occasion of the resignation of the Joly Ministry. If the province had not tired of the long rivalries and contentions, the course of the Legislative Council would have aroused the liveliest animosity. As it was, the motion that Mr. Joly had "lost his usefulness" was carried through the votes of several of his former supporters, who now desired tranquillity above all things. Upon receiving the sense of the Parliament thus plainly expressed, Mr. Joly was perfectly free to resign, and Mr. Chapleau to form a new administration.

A late ministerial crisis in Manitoba recalls unpleasantly the old dissensions which long rent Lower Canada, when the people were divided into hostile camps by a strict race and creed line. When a Constitution was given to Manitoba, and an inceptive Constitution to the Northwest Territory, the ultra-Protestant element found much fault with its provisions, de-

claring that its effect would be to create a second Province of Quebec in the west and insure the ascendancy of the French Canadians. The Premier, Mr. Norquay, was recently confronted with an interpellation from the leader of the French-speaking section of the inhabitants, and another member of the Cabinet, asserting that his government had not the confidence of the majority of the English-speaking population. Mr. Norquay responded that it was on account of the presence in it of these two gentlemen, and requested them to resign. After a considerable search he replaced them with Messrs. Beggs and Taylor, and was sustained in his action by the vote of the Legislature. The Government subsequently published a programme proposing a reapportionment of the electoral districts to secure a larger majority in the Legislature to the English, the adoption of English for the official language, and the appointment of English premiers. Some of these changes are unconstitutional, but, as the tide of immigration into Manitoba is now from English-speaking countries, the Constitution is susceptible of alteration in the sense demanded.

In different provinces a sentiment is growing in favor of the abolition of the Legislative Councils. This reform has already been accomplished with good results in Ontario, the most progressive of the provinces, and is demanded in the others, principally on the score of economy. The power which this branch of the Legislature, which is a relic of the old era of Crown domination, holds to thwart the purposes of responsible government, is exemplified by the action of the Legislative Council of Quebec, which refused to vote the supply bill until the Lieutenant-Governor should change his constitutional advisers, thus forcing the retirement of the Joly Cabinet, and involving the province in the expenses of a new election. In Nova Scotia the Government presented an act for the abolition of the Legislative Council, and in the Quebec Parliament Mr. Joly introduced the same measure.

A legislative union of the maritime provinces has been proposed, and the scheme of legislative union of all the provinces has gained many supporters since the Letellier affair. The simplification of government is demanded, among other reasons, in the interest of retrenchment, a ground which always has great weight in Canada. A reduction in the number of Cabinet officers is agitated on the same ground. The office of Receiver-General has been abolished. Civil-service reform is one of the questions of the day, the permanent civil service, constituted as it is at present, being unpopular. Some advocate the American system of rotation, or the redistribution of all the offices upon a change of administration, while others deem the introduction of the English system of competitive examination sufficient to remove the objections.

The Ontario elections on the 4th of June resulted in the victory of the Ministry by a

large majority, notwithstanding the hopes of the Conservative party to supplant the Mowat Government in consequence of their triumph in the Dominion.

In the election of Dr. Medley, the new Metropolitan, the principle was established that the order of seniority should henceforth prevail in the Canadian Church in the appointment of the Metropolitan. The new Primate was born in England in 1804, and came to Canada in 1845 to be consecrated as Bishop of Fredericton, over which see he has since presided.

The alleged discovery of pleuro-pneumonia among cattle arrived at Liverpool on the Dominion steamer Ontario, from Portland, January 27th, led to an order in Council prohibiting the entrance of American cattle into Canada for three months commencing February 1st. The trade in live animals has been cultivated to a greater extent in Canada than in the United States; the exports in 1878 from the Dominion were 32,115 head, against 6,412 in the preceding year.

One of the most prominent questions in Canadian affairs of late years is that of the extension of railway communications, and especially the construction of the Pacific Railway. The plan of the former Conservative Government, before it went out of power in 1873, was to grant to a company a subsidy of 50,000,000 acres of land and \$30,000,000 in money for the building of the road. Under the Mackenzie Government it was undertaken as a public work. The present Government determined to return as far as possible to their original plan. The terminus chosen by the late Administration, Burrard Inlet, does not seem to meet the approval of the present Government, who speak of going back to their first choice, Bute Inlet, although it would make the road 57 miles longer and carry it over very difficult grades. The progress reported by the Department of Public Works in the construction of the Pacific Railway is as follows: the Pembroke branch, 84½ miles in length; from Fort William to English River, 102 miles laid with rails, and 60 miles ballasted; from Keewatin to Cross Lake, 36 miles under construction; from Cross Lake to Selkirk, 76 miles graded and bridged, and 75 miles laid with rails. On the extension of the Canada Central, 37 miles were located and 25 being constructed. The line from Pembroke to Lake Nipissing was being built under a subsidy not to exceed \$1,404,000, and the line from Nipissing to Cantin's Bay on the French River was contracted for. Under the new Government, the section of Lake Superior and the Province of Manitoba, about 185 miles in length, has been placed under contract, and the line has been extended west of the Red River to a point south of Lake Manitoba. Tenders have also been accepted for the construction of 150 miles from Emory's Bar to Kamloops. In July 50,000 tons of steel rails were purchased by Sir

Charles Tupper in England, the Government taking advantage of the low range of prices and paying for them \$1,212,000, or \$1,518,000 less than Mr. Mackenzie had paid for an equal quantity in 1874. The Canada Pacific Telegraph line had been constructed at the time of the report of the Minister of Public Works, in February, 1879, from Selkirk to the longitude of Edmonton, 1,197 miles, and was in operation to Battleford, 967 miles. The line between Selkirk and Fort William, 410 miles, was in use; and the line in British Columbia from Cache Creek eastward to Kamloops, 50 miles, was completed and equipped. There were 642 miles of telegraph in operation in British Columbia.

The North Shore Railway, built under the auspices of the Quebec Government, was completed on the 9th of February, 1879, bringing Quebec and the country north of the St. Lawrence into communication with Montreal.

The junction of the Pembina branch of the Canada Pacific Railway with the St. Paul and Pacific at St. Vincent connects the Canadian road with the system of the Northwestern States. The route was changed under the new political administration from the northern or Narrows course to one running south of Lake Manitoba. Lands lying within twenty miles of the track on both sides have been reserved for the Government, and their sale is expected to pay for the gradual extension of the road. Thus 100,000,000 acres have been set aside for purposes of construction, and invested in a commission, upon which the Imperial Government is represented. The cost of the Pacific Railway for the portions completed or under contract up to 1879 has been \$25,396,000, embracing the subsidy of \$1,500,000 to the Canada Central, \$18,000,000 for the road between Kaminitiquia and the Red River, \$1,900,000 for the road from Georgian Bay to the mouth of French River, \$1,750,000 for the Pembina branch, \$1,100,000 for the Pacific Telegraph under contract, 1,300 miles, and \$3,861,000 expended on surveys.

A plan of certain American capitalists to increase the international communications by building a bridge over the St. Lawrence at Coteau du Lac, and a line of railroad from Ottawa connecting with the New York and New England system of railroads, awakened the keenest opposition in Canada. It was thought that such a line would divert the traffic of the North Shore and the Intercolonial Railways, and greatly injure the commercial prospects of Montreal, Quebec, St. John, and Halifax. An outcrop of the excitement attending the inauguration of the national policy was the expectation that Halifax might become, or easily be made, the winter port of Canada.

The enlargement of the Lachine Canal gives it a width of 270 feet between gate-quoins and 45 feet at bottom. There are two locks between the harbor of Montreal and Wellington bridge, having a depth of 18 feet on the sills.

The canal between these points will have a depth of 19 feet. The three locks at St. Gabriel, Cote St. Paul, and Lachine will have a depth of 14 feet on the sills. All permanent structures have been so built that the prism of the canal may be eventually deepened to 15 feet without disturbing them. The two lower locks are connected by a basin 540 feet long, with an average width of 260 feet. No. 2 basin has been enlarged at its southwest end. Wellington basin is 1,210 feet long and 225 feet wide. A second basin is projected, of the same length and depth and 250 feet wide, parallel to it. From below Wellington bridge to Cote St. Paul lock the canal will have an average width of 200 feet, and from the lock to Lachine 150 feet. The new locks are located adjoining the old locks as independent structures, and hereafter the canal will be navigable through the double range of locks, with double entrance at Montreal and Lachine.

Government has entered into an examination of a new route for the grain of Manitoba and the fertile but yet uncultivated regions about Lake Winnipeg. It is proposed to convey the grain to Port Nelson, at the mouth of the Nelson River, or some other port on Hudson's Bay, and to ship it on steamships from there to Liverpool. A railroad 300 miles in length would connect Lake Winnipeg with Hudson's Bay. Port Nelson is distant only 2,966 geographical miles from Liverpool by the route proposed, which would cross the ocean from Cape Farewell, the southernmost extremity of Greenland, to the north of Ireland in a direct line. The route from the mouth of the Nelson River would be shorter than the nearest route between Liverpool and New York. Hudson's Bay and Straits are said to be navigable from July to October inclusive. The navigable tributaries of Lake Winnipeg—the Saskatchewan, Qu'Appelle, Assiniboine, and Red Rivers—run far back into the grain countries of Manitoba and the Northwest Territory.

The rush of settlers to the Red River country has been stronger this last year than ever. The province of Manitoba, situated between latitude 49° and 53° 30' north and longitude 96° and 99° west from Greenwich, having the United States boundary-line on the south and Lakes Winnipeg and Manitoba on the north, was purchased from the Hudson's Bay Company by the British Government in 1869, and constituted into a province the following year. It is only within the last three or four years that the tide of emigration has set strongly in that direction. Not only emigrants from Ireland, England, and Scotland, and Canadian farmers, have been attracted, but settlers from Iceland and Russian Mennonites, and even prosperous farmers from the United States, have flocked to this land of promise. In 1876 the sales of land amounted to 153,535 acres to 807 settlers; in 1877 they were 1,392,368 acres, and the takers numbered 8,648. In the month of April, 1878, the Emerson Land-Office alone sold 52,960 acres, and

30,400 acres in the first week of the following month. At the same season in 1879 the arrivals of new settlers amounted to as many as 2,000 per week. The wheat-growing region of western British America is said to be more fertile than Minnesota, and, instead of possessing the polar climate which has hitherto been ascribed to it, to be so temperate that melons and cucumbers ripen in August, and stock can be wintered without shelter, and find ample nourishment in the succulent grasses which are kept green by the snow. Manitoba soil yields 20 bushels of remarkably fine flinty wheat to the acre, of 63 to 66 lbs. to the bushel. Oats, barley, rye, potatoes, turnips, beets, flax, and hemp thrive admirably. Wild fruits abound; the forests are full of game, large and small, and the lakes and streams of fish—whitefish abounding in the lakes, pike, catfish, sturgeon, etc., in the rivers, and trout in the brooks. The capital of the province, Winnipeg, formerly Fort Garry, has grown in three years into an intensely active business town of 10,000 inhabitants. The price of wheat, owing to the want of railway communications, is only 45 cents a bushel. When the Pacific Railway is completed and the country settled, the Canadians expect that Manitoba and the Northwest Territory will be able to undersell the Americans in both breadstuffs and meat and provisions, and supply the entire European demand for imported food materials. The area of their newly discovered wheat-fields is, according to a sanguine estimate accepted in Canada and Great Britain, at least 2,984,000 square miles, or three quarters of the area of entire Europe.

The public accounts of the Dominion show a total indebtedness at the close of the fiscal year 1878 of \$174,957,268, with assets of \$34,675,834, against \$174,675,834 of liabilities and \$41,440,525 of assets in 1877. The Treasury receipts for the year were \$22,375,011. The total expenditures were \$23,503,158, incurred under the following heads: debt and subsidies, \$11,659,523; charges on the revenue, \$5,301,124; ordinary expenditure, \$6,542,510. There was a decrease in the ordinary expenditure of \$293,167, compared with the previous year. The estimates of public expenditures for 1879 were \$23,427,882, a decrease of \$241,171 compared with the appropriations of the previous year. The Finance Minister went to England about the middle of the year to negotiate a loan of £3,000,000, which he succeeded in placing on favorable terms.

According to the last volume of the census of 1871, the increase of population in the four provinces of Ontario, Quebec, New Brunswick, and Nova Scotia was from 2,312,919 in 1851 to 3,090,561 in 1861, and 3,485,761 in 1871. The area of these provinces is 337,524 square miles, making the population per square mile 6·8 in 1851, 9·2 in 1861, and 10·3 in 1871. Of the inhabitants of Canada in 1871, 20·26 per cent. were of English extraction, 15·77 per cent. of Scotch, and 24·48 per cent. of Irish

descent, while the descendants of the French original settlers comprised 31·07 per cent. The immigration from the United States was found to have been very considerable, the number of those born in the United States numbering more than half as many as the immigrants from Scotland. The inhabitants in the Province of Quebec who had come from the States exceeded in number the English-born settlers in that province. The most populous of the four provinces in proportion to its extent is New Brunswick. Quebec is the least thickly populated.

The religious statistics show that 42·80 per cent. of the population are Catholics, 16·27 per cent. Methodists, 15·63 per cent. Presbyterians, and 14·20 per cent. members of the Church of England. In Quebec the Roman Catholics form an absolute majority; in another province they are relatively the most numerous, and in a third are nearly equal in numbers to the most numerous religious body. In Ontario the Methodists exceed any other denomination in numerical strength, and in Nova Scotia the Presbyterians.

According to the trade and navigation returns, the aggregate import and export trade of the Dominion again shows a falling off, the value of exports having been \$79,323,667 in the fiscal year ending June 30, 1878, against \$75,875,393 in 1877, an increase of \$3,448,274, while the value of imports was \$93,081,787 in 1878, against \$99,327,962 in 1877, a decrease of \$6,246,175. The total for 1878 was \$217,304,516; for 1877, \$172,175,876; for 1878, \$170,523,244. The trade with Great Britain in 1878 was made up as follows: imports, \$37,431,180; exports, \$45,941,539. The imports from Great Britain decreased \$2,141,059 in 1878, while the exports increased \$4,374,070 as compared with the previous year. The trade with the United States decreased \$3,211,777 in 1878, the exports showing a reduction of \$531,347, and the imports a reduction of \$2,680,930. Trade with the British and Spanish West Indies fell off \$700,000: in imports, \$210,000; in exports, \$490,000. Trade with Australia increased \$185,000, which may be attributed to the impetus given to the export of Canadian manufactures by the Sydney Exhibition.

The total number of vessels registered in the Dominion of Canada in 1878 was 7,469, measuring 1,333,015 tons. This gives Canada the fourth largest merchant marine in the world, Great Britain, the United States, and Germany alone leading her. The number of steamers registered was 834, with a gross tonnage of 183,935 tons. The estimated value of the total shipping is \$39,990,000. The number of vessels built during the year was 329, measuring 100,873 tons. The number of ocean-going ships which visited the port of Montreal during the year was 516—249 iron ships, with an aggregate tonnage of 311,968, and 267 wooden ships, with a tonnage of 85,298; 482 of the vessels, with a tonnage of 382,056 tons, were British.

The products of the fisheries in 1878 were valued at \$13,373,486, against \$12,029,957 in 1877. The increase took place in the takings of cod, mackerel, lobster, and salmon. The exports of fish amounted to \$6,929,366, an increase of \$1,055,006.

The latest report of Canadian railway statistics gives the length of the roads in operation as 6,143 miles, of rails laid in partially constructed roads as 721, and of railways under construction as 1,042; making a total length of 7,906 miles, against 5,594½ miles in operation and 1,996¾ under construction at the time of the preceding report. The total nominal capital outlay represented is about \$360,000,000: of this, \$122,176,000 consists of the ordinary share capital, \$69,155,000 of preferred stock, and \$83,710,000 of the bonded debt. The amount subscribed and guaranteed by the Government and municipal authorities was \$87,456,000, which was reduced \$1,887,000 by paid-up securities. The aid received from the Dominion Government amounted to \$65,939,000, that from the provincial Governments to \$14,291,000, that from municipal sources to \$7,224,000. The capital investment per mile is \$45,995. Steel rails are laid on 3,583 miles. The tonnage of freight handled during the year ending June 30, 1878, was 7,893,472 tons, an increase of 15 per cent. over the business of the preceding year. The total earnings amounted to \$20,520,000, an increase of \$1,778,000; the earnings per mile were \$3,479, an increase of \$61. The net profits were \$4,419,000, an increase of 28 per cent. The revenue from the canals has decreased by \$42,898, or 11.38 per cent., the decrease on the Welland Canal amounting to \$37,959.

DORSEY, Mrs. SARAH A., died in New Orleans on Saturday, July 4th. She was the daughter of Thomas G. Ellis, a planter in Mississippi, and was born in Natchez, February 16, 1829. She received a careful education, and enjoyed the advantage of extended foreign travel. Her mother was the sister of the poetess and novelist Mrs. Catherine Anne Warfield, *née* Ware, authoress of "Poems by Two Sisters of the West," "The Household of Bouverie," "Beauseincourt," and other romances marked by a certain wild, untutored originality. This lady, who died in 1877, exercised a formative influence on her niece, who became her literary executor, Mrs. Warfield having left in her hands a mass of manuscript, the greater part of which is still unpublished. After her mother's second marriage, Sarah Ellis, on January 19, 1853, married Samuel W. Dorsey of Ellicott's Mills, Maryland. At the time he was practicing law and planting in Tensas Parish, Louisiana. Mr. Dorsey was a man of ability, wealth, and social position, and, despite disparity of years, the union proved a happy one. Mrs. Dorsey was fond of society, travel, and literature. Having no children, she gave herself unreservedly to the indulgence of these tastes. She spoke fluently several modern lan-

guages, was a proficient in Greek and Latin, and an ardent student of Sanskrit. She published a biography of Governor Henry W. Allen of Louisiana, and the novels "Athalie," "Lucia Dare," "Agnes Graham," and "Panola." Of these "Panola" is the latest, having appeared in 1877, and "Agnes Graham" is the best known. In addition she wrote a treatise on the Aryan philosophy, and was an industrious contributor to various journals and periodicals. Mrs. Dorsey was at one time an Episcopalian with high ritualistic tendencies. She built a chapel on her plantation, and devoted herself to the religious instruction of her slaves. Her studies of comparative theology and investigations of Eastern systems for a while unsettled her convictions; but these doubts passed away, and during her lingering illness she was sustained by the faith of her childhood. She was widely known in literary circles at home and abroad. She kept up an active interchange of ideas with *savants* in India, Germany, Italy, France, and England. Among her correspondents were the Rossettis, Dean Stanley, Carlyle, Herbert Spencer, and other celebrities.

Mrs. Dorsey was far more distinguished as a conversationalist than as a writer. Her quick intellect and fervent affections gave her a peculiar charm. By temperament she was a hero-worshiper. She was enthusiastic and unchanging in her friendships. Although her means were much diminished after the war, the hospitality of her home was as freely extended as ever. There Mr. Jefferson Davis and his family were frequent and honored guests during the years of poverty and misfortune following the failure of the Confederacy. Mrs. Dorsey made no secret of her intention to constitute Mr. Davis or one of his children her heir, and thus do her part toward repairing his losses. Having given liberally to her own family during her lifetime, and deriving her entire means from her husband, she felt herself entitled to make this disposition of her property, and only regretted the smallness of the legacy. The appraised value of her whole estate is under twenty-five thousand dollars. After the death of Mr. Dorsey in 1875, she removed from her plantation in Tensas Parish, and resided at Beauvoir, a small place on the Gulf-shore. Here she continued to employ herself in literary labors, chiefly acting as amanuensis to Mr. Davis, in the progress of whose autobiography she felt a profound interest. These occupations she never intermitted, although suffering from the ravages of an hereditary malady, an internal cancer, which would have disabled one with less powers of endurance. When it became necessary, she faced the alternatives of life and death with composure. Removing to New Orleans, she submitted calmly to a surgical operation which proved unavailing. She died professing herself at peace with the world and in the Christian faith, and left behind her an unblemished character.

E

EASTERN ROUMELIA, an autonomous province of Turkey; area, 13,664 square miles; population, 751,000. The dissatisfaction in this province with the division of Bulgaria continued in 1879, and led to serious excesses against the International Commission and its agents. Thus, in February the financial director Schmidt was mobbed at Haskioi, Slivno, and other places. Not even the presence of General Stolypine, the Russian Governor, was sufficient to restore order, and it was necessary to send for troops for this purpose. The population elected delegates to the Bulgarian Constituent Assembly, which met in Tirnova on February 22d; but these delegates were not admitted. The disordered state of the country gave rise to a Russian note to the Powers, in which a mixed occupation of the country was suggested. (See RUSSIA.) The Russian note was immediately followed by a Turkish note complaining of the treatment the Mohammedans in Eastern Roumelia received at the hands of the Bulgarians. It was as follows:

The situation of the Mussulman population in Roumelia had never ceased to be precarious, full of dangers and difficulties, but there was reason to believe that with time the exclusive and hostile spirit which animates the Bulgarians would give way to juster and more humane sentiments. This hope has not been realized, and it is with the greatest pain that the Sublime Porte finds itself obliged to observe that the condition of the Mussulman inhabitants of Eastern Roumelia has become almost intolerable in every part of the province, and especially at Bournar, Yamboli, and Sagra. They are constantly subjected to acts of oppression and violence on the part of their Bulgarian fellow countrymen. The latter seem to pursue a system of extermination which the repeated measures of our authorities have not been able to check. The victims, in despair, are leaving their homes and seeking safety in expatriation. The emigration is considerable. Adrianople has already received a great number of emigrants within its walls, and their number, daily increasing, is becoming a source of serious embarrassment for our newly installed authorities there. Please to call the serious attention of the Government to which you are accredited to this situation. We appeal to the humane feelings of the Powers to deliver the Mussulman population of Eastern Roumelia from the persecution to which it is subjected, and to obtain security for their persons and property. You will not fail to point out that the Treaty of Berlin, conforming to the most elementary principles of justice, meant that all sections of the population of Eastern Roumelia, without distinction of race or religion, should be treated on the footing of the most perfect equality. It is therefore impossible that the signatory Powers of that treaty should allow a certain class of inhabitants openly to seek the suppression or systematic exclusion of another class, which has the same rights and which should enjoy the same protection.

The proposal for a mixed occupation at first met with general approval, but was finally abandoned, as no agreement could be reached by the Powers in the settlement of the details. In its stead a plan proposed by the Turkish Government, of prolonging the supervising au-

thority of the European Commission, was adopted. On April 14th the Turkish Government nominated Aleko Pasha, Prince Vogorides, as Governor. (See ALEKO PASHA.) This nomination was confirmed by all the Powers. The time for the withdrawal of the Russian troops from the province fixed by the Treaty of Berlin was May 3d, the evacuation to be completed within three months—by August 3d. In accordance with this provision, the Russians began to withdraw from the province on May 2d. The organic statute for the province was approved by the Porte. It provides that the Governor shall be in full possession of the executive powers in the province. He is to have at his disposal military and gendarmerie, and is to be allowed to call for Turkish troops when necessary, to proclaim a state of siege, to submit financial and other bills to the Provincial Assembly, and to open and close its sessions. The Sultan has the right to occupy the frontiers, to call the Governor-General to account, to nominate his General Secretary, to sanction the laws voted by the Provincial Assembly, and to approve the officers of administration and justice nominated by the Governor-General. In the administration the Governor-General is to be aided by a Senate, consisting of the commander of the militia and gendarmerie, and the heads of the departments of Justice, Finance, Public Education, Agriculture, Commerce, and Public Works. The making of laws is vested in the Provincial Assembly. Besides this, the province has to send deputies to the Turkish Parliament at Constantinople. The Provincial Assembly has besides the right to modify all laws promulgated by the Porte so far as they regard Eastern Roumelia. The province is divided into six circles and twenty-eight districts, the former having each a council. The official language with the Porte is to be the Turkish, but in the circles and districts the language will be that of the majority of the inhabitants, whether Bulgarian, Turkish, or Greek. In respect to the financial obligations of the country, the International Commission estimated the yearly income at 800,000 Turkish pounds. Three tenths of this amount, £240,000 Turkish, is to be paid to the Porte. Besides this, Eastern Roumelia will share in proportion to her income in Turkey's financial burdens for the maintenance of order and peace, as well as for the expenses of the national administration. The gendarmerie will, when occasion requires, be helped by the country militia. The militia is based on the principle of universal service; that is to say, every man is obliged to serve for four years on active duty. The manner of putting this statute into execution was a question of considerable difficulty. The military and gendarmerie, com-

posed of all sections of the population, and commanded by officers named by the Sultan, as provided for by the statute, had not been created, so that when the Russians began to evacuate the tranquillity of the province would in the interval have to be intrusted to the Bulgarian militia, organized by Prince Dondoukoff-Korsakoff, and officered in a great part by Russians. As the Bulgarians had hitherto shown themselves hostile to the Commission, it seemed doubtful whether this militia could be relied upon to suppress disorders. The Governor-General had by the treaty the right to call in Ottoman troops; but the exercise of this right would inevitably cause serious disturbances. The Porte, also, which at first had insisted upon occupying Burgas and other points, had abandoned this project, and therefore no Turkish troops were in a position to promptly answer such a call. If the extreme party among the agitators should get the upper hand, it might even be impossible for the Commission to remain at Philippopolis. These difficulties were fully recognized both by the Porte and the foreign diplomatists; but, since the abandonment of the scheme of a mixed occupation, no one seemed to know what should be done. This state of uncertainty soon had serious consequences. The Mussulmans, afraid of being left alone with the Bulgarians, emigrated in great numbers from Roumelia, so that in the beginning of May from 50,000 to 60,000 were in Adrianople.

On May 27th Aleko Pasha entered Philippopolis. He wore on this occasion a Bulgarian bonnet, although the Sultan had ordered him to wear the Turkish fez. The question, in spite of its apparent insignificance, had become a warmly debated one. The fez is regarded as the emblem of the old Turkish *régime*, and the hat as that of the new European administration. The Russians had undertaken to use their influence in favor of the hat, and obtained from Aleko Pasha a formal promise that he would not wear the fez. Relying upon this promise, Generals Obrutscheff and Stolypine publicly declared upon several occasions that the new Governor-General would wear the hat, and thus manifest that he did not belong to the old school of Pashas. On May 30th Aleko Pasha was formally installed as Governor-General. After the reading of the two firmans of the Sultan sanctioning the organic statute, and appointing Aleko Pasha, the following manifesto of the new Governor-General was read:

MY DEAR FELLOW COUNTRYMEN: His Imperial Majesty the Sultan, our august sovereign, desiring to procure a revival of prosperity for your province, which has suffered so much in consequence of recent events, and to insure tranquillity for all the inhabitants without distinction, has appointed me Governor-General of Eastern Roumelia for a period of five years, with a view of carrying into effect the organic statute prepared by the Mixed Commission which was formed for that purpose, and which was composed of Commissioners from the great Powers signatories to the Treaty of Berlin. The reforms which the Porte de-

sires to introduce into the government of Eastern Roumelia are contained in detail in the above-mentioned statute, and I think it is needless to enumerate them here. It is sufficient to add here that the union of all is necessary to insure a faithful and complete application and fulfillment of the statute, as well as the submission and good will of the inhabitants. I earnestly recommend people not to allow themselves to be discouraged by the recollection of past evils, but to endeavor, on the contrary, to profit by the advantages granted them by the Porte, as well as by the principles applied by virtue of the organic statute above mentioned, and to endeavor thereby to repair all past misfortunes. You are not ignorant of the fact that in all situations and in all countries the fruits of skill and of labor, as well as the continued growth of public riches and prosperity, depend mainly upon order and good understanding in general and between individuals. It is the duty of all of you, therefore, to employ your best efforts to maintain public tranquillity while steadily pursuing your own occupations and labors. The entry of Ottoman troops into the interior of Eastern Roumelia being dependent upon the maintenance of public order and upon my own request for that purpose addressed to the Porte—a request which is not to be made except upon my personal appreciation of the circumstances requiring it—I rely with confidence upon those of the inhabitants who are attached to their country that they will abstain from all acts of a character which would justify the entrance of the Ottoman troops. Those who seek to create a belief that the entry of Turkish troops will be carried out, thereby causing alarm to the inhabitants of Eastern Roumelia, completely ignore the real intentions of the Sublime Porte; for whenever the Imperial Government shall deem it necessary to occupy by its troops the frontiers and certain other localities, this will only be done in conformity with the stipulations of the Treaty of Berlin, without giving cause for alarm to the inhabitants. What proves this is the fact of my arrival in the chief town of the province without the presence of any Ottoman troops. Therefore I entreat you not to listen to the malevolent suggestions, but to manifest your gratitude to the Porte for its anxiety for the well-being and interest of your country, and by employing all your efforts in facilitating the literal execution of the organic statute which assures you a free administration. In conclusion, I salute you, and offer up most hearty prayers to the Almighty for your good health and a happy life.

The question of hoisting the Turkish flag had been considered, and for that purpose a flag-staff had been erected at the gate of the *konak*. The Prince having been informed that the display of the flag might cause demonstrations and disorder, he consulted the Commissioners, observing that if disorder did occur he should immediately resign and leave for Constantinople. The Commissioners thereupon had a meeting to consider this question. The chief Ottoman Commissioner having explained that it was not customary to hoist a flag before a *konak* which was not a fortress, the Commission decided that, as the formality of the hoisting or not of the Ottoman flag could have no influence upon the execution of the organic statute, the Commission considered that the Governor-General alone could decide upon the opportuneness of observing this formality. The Prince acted upon this decision, and, wishing to avoid all risks of disturbance, directed that the flag should not be hoisted. The troops then defiled before the Governor-General, and the ceremony ended. On June 3d the Governor made the following nomina-

tions, and submitted them to the Sultan for approval: M. Christovitch, Secretary-General and Minister of the Interior; M. Kessakoff, Minister of Justice; M. Vulcovitch, Minister of Public Works; and M. Schmidt, Minister of Finance. The International Commission on the same day unanimously decided to transfer immediately the financial administration of the province to the Governor-General. The action of Aleko Pasha brought upon him the displeasure of the Turkish Government, and it informed the Powers that the refusal of Aleko to wear the fez was a violation of engagements between him and the Porte. The Government would wait until Eastern Roumelia was evacuated, when it would summon Aleko Pasha to wear the fez and hoist the Turkish flag. In fact, if the demand should not be complied with, the Porte would request the Powers to sanction Aleko's removal, and would send a body of Turkish troops to occupy the Balkans. In other respects also Aleko Pasha was charged with acting contrary to the wishes of the Porte, and contrary even to the letter and spirit of the existing enactments. Thus he appointed none but Bulgarian officials, to the utter neglect of the Greek and Turkish elements in the country. Of the Bulgarian Ministers nominated by him, one, M. Kessakoff, the brother of General Kessakoff, late commander of the Eastern Roumelian troops until the arrival of General Obrutscheff, agitated for the reunion of Eastern Roumelia and Bulgaria by main force. The advocate of rebellion a few weeks before Aleko Pasha's arrival, he was at once made Minister of Justice. In the latter part of June the Porte approved the entire Ministry with the exception of M. Kessakoff. To his non-confirmation by the Porte Aleko Pasha replied that the organic statute did not absolutely oblige him to obtain the ratification of his nominees; that he considered M. Kessakoff a fit person, and that he (Aleko), having been elected for five years, should not be interfered with during his term of office.

The Russian evacuation proceeded rapidly, and on July 27th the last Russian troops embarked at Burgas, leaving the country in the hands of the authorities. A tumult occurred in Philippopolis as soon as General Stolypine had left that town. A Bulgarian flag was raised, which Aleko Pasha ordered to be lowered, adding that in the event of non-compliance he would leave the country and return to Constantinople. His demand was complied with. Disorders continued to occur in various parts of the country, caused both by Turks and Bulgarians. In the beginning of September the Mohammedans at Philippopolis presented a petition to the representatives of the European Powers, complaining of the ill treatment they were receiving at the hands of the Bulgarians. They declared that they were insulted, attacked, wounded, and assassinated by Bulgarians. Should any of them repair to the

Government konak to complain of these misdeeds, they were driven away with blows of the whip by the officer on duty. They no longer, they said, demanded restitution of their property, but asked merely that their lives and honor should be protected. They had, however, no hope of obtaining even this small measure of justice so long as all the judges and officials were Bulgarians.

The relations of the Government with the Porte also continued in an unsatisfactory state. The Government of Eastern Roumelia having delayed the restoration of returning Mohammedan refugees, the Turkish Government sent numbers of them back to their homes, where, of course, no provision had been made for them; and they would certainly have starved if they had not been cared for by their co-religionists.

The Provincial Assembly was opened November 3d by Aleko Pasha, who in his speech recommended the impartial enforcement of the organic statute and the strict administration of justice. He further asked the Assembly to devote its attention to the budget, and to discuss the best means of improving the condition of the population.

In November Aleko Pasha paid a visit to Constantinople, after he had repeatedly refused to do so when requested by the Porte. The visit was productive of good results. Most of the differences existing between Philippopolis and Constantinople were removed, and an understanding was come to on the most important point, that of the Mohammedan refugees. All the European Powers had also taken steps to urge upon Aleko Pasha the necessity of something being done to remedy the existing state of affairs. The principal difficulty in the way of the repatriation of the fugitives having been the preparation of the necessary means of subsistence for them, the proposal formerly made by M. Schmidt, of the International Commission, to provide by a loan for these requirements, which had been rejected both by the Porte and the Government of the province, was now seriously entertained by both governments. After the return of Aleko Pasha from Constantinople a gradual change occurred in the public sentiment. The bearing of the Bulgarians became very friendly toward the Mohammedans, and even the Provincial Assembly refrained from touching any question which might disturb the peace.

EATON, MARGARET L., widow of General John Henry Eaton, Secretary of War in the Administration of President Jackson, was born in 1796, and died at Washington on November 8, 1879. Her maiden name was O'Neil. In her youth she possessed high personal beauty and a peculiar fascination of manner, which, combined with a persistent will and high ambition, enabled her to attain a prominent position in society. Her first husband, by whom she had several children, was Mr. Timberlake, a purser in the United

States Navy. In 1828, after his death, she became the wife of General Eaton, then a Senator from Tennessee, but who, a few months afterward, was given a seat in the Cabinet of President Jackson. The other members of the Cabinet were Martin Van Buren, Secretary of State; Samuel D. Ingham of Pennsylvania, Secretary of the Treasury; John Branch of North Carolina, Secretary of the Navy; John McPherson Berrien of Georgia, Attorney-General; and William T. Barry of Kentucky, Postmaster-General. This promotion of General Eaton gave to his wife a social position she had long desired. But she had not been able to escape reports so often assailing dazzling characters in the excitable society of a national capital; and so she was refused a reception on equal terms by the families of the other members of the Cabinet. This repulse soon extended to the families of foreign ministers in Washington. The husbands could not resist the influence of their dutiful wives, and a feud sprang up among them which even involved the President. At this time the estrangement between President Jackson and Vice-President Calhoun had begun, and a belief was awakened in the mind of the former that the latter had shrewdly fomented the general excitement, and it was said took an active part in promoting the crisis. Finally, the President demanded of his Secretaries the recognition of the social status of Mrs. Eaton, and was refused by all of them excepting Mr. Van Buren. As a compromise it was suggested that her public status should be conceded, while each lady should act as she chose in regard to private recognition. General Jackson wrote a very plain-spoken note on the subject to Vice-President Calhoun, but only elicited from him the diplomatic reply that it was a "ladies' quarrel," with which men could not successfully interfere, adding that "the laws of the ladies were like the laws of the Medes and Persians, and admitted neither of argument nor of amendment." The President then sent for Mr. Van Buren, the head of his Cabinet, and the only member who had been complaisant to his views (for he was a widower), and requested him as a favor to send in his resignation, which necessarily would be followed by that of the other Secretaries. Mr. Van Buren complied April 7, 1831, and was soon recompensed with the appointment of Minister to England, and proceeded to his post; but in the following winter he was rejected in the Senate by the casting vote of Vice-President Calhoun. He returned home from England as a man who had been wronged in the house of his friends, and was rewarded by a nomination for Vice-President on the same ticket with President Jackson. Both were elected, and on the expiration of the second term of President Jackson, Mr. Van Buren was elected as his successor. Two or three years later General Eaton was appointed Governor of Florida Territory, and in 1838 Minister to

Spain. In the Spanish capital Mrs. Eaton is said to have become a social favorite, and to have shone with great brilliancy at the court of the youthful Isabella. She also became a noted belle in London and Paris. Returning to Washington in 1840, she resided there very quietly until the death of her husband in November, 1856. She was left with a large estate and the custody of five grandchildren. A year later she made the acquaintance of a teacher from Italy, and subsequently married him. The marriage was an unhappy one; she lost a large portion of her property; the husband went to Europe, and of late years she lived in retirement at Washington.

ECUADOR (REPÚBLICA DEL ECUADOR). The President of the Republic is General Ignacio de Veintemilla, inaugurated in December, 1876. The Minister of the Interior and of Foreign Affairs is General José María Urbina; the Minister of Finance, Dr. Martín Icaza (of Guayaquil); and the Minister of War, Colonel C. F. Bolofía. According to the terms of the new Constitution, made at Ambato in 1878, there are two *Designados* or Vice-Presidents to replace the President should circumstances require it: the First Designado is Señor L. Salvador; the Second Designado, Señor J. Novoa. General Urbina and Dr. Icaza were appointed to their respective portfolios in March; but the former did not enter at once upon the duties of his post, the President having determined to send him on a mission southward as peacemaker between Bolivia and Chili. His department during his absence was to be under the direction of the Minister of War. The Governor of Guayaquil is General J. Sánchez Rubio. The Consul for Ecuador at New York is Mr. A. I. Dovale; and the United States Consul at Guayaquil is Mr. Ph. Eder.

The present strength of the Ecuadorian army is reported at 5,000 rank and file.

Of public instruction in the republic little is known, except that it is under the exclusive control of the clergy and the Christian Brothers. The late President García Moreno, in his last message to Congress, in 1875, stated that ninety-three schools had been established, with an average attendance of 32,000.

Almost the only establishment for higher education is the Academy of Ecuador, inaugurated at Quito in May, 1874, in accordance with the decree of the Royal Academy of Madrid. The studies are under the supervision of a director, aided by a censor and a secretary.

In an official report published in 1878, the national revenue for the year ending on August 31, 1877, was stated to have amounted to 2,228,000 pesos;* but of the expenditure, which averages about 3,350,000 pesos, no mention was made. The following table will serve to show the various sources of the revenue and the average yield of each:

* The par value of the Ecuadorian peso is about 77 cents of United States money, but the average exchange value is rarely over 71 cents.

SOURCES.	Amounts in Ecuadorian pesos.
Custom-house	1,700,000
Tobacco tax	19,000
Spirit tax	112,000
Salt monopoly	210,000
Gunpowder monopoly	80,000
Stamped paper	115,000
Income tax	65,000
Tax on sales of lands	215,000
Tithes	370,000
Pawn-Office	1,000
Post-Office	95,000
Government lands	52,000
Sundries	510,000
Total	3,594,000

The total national debt, interesting details concerning which may be found in the "Annual Cyclopædia" for 1874 and 1875, amounted in January, 1877, to 22,938,000 Ecuadorian pesos, viz.: home debt, 10,150,000; foreign debt (accruing from British loan of 1855 = £1,824,000), 12,788,000 pesos.

The foreign trade being for the most part carried on through Guayaquil, by far the larger portion of the customs are collected at that port, as may be seen by the annexed table for the seven years 1870-'76 inclusive:

YEARS.	Receipts in Ecuadorian pesos.
1870	1,360,000
1871	1,371,440
1872	1,591,730
1873	1,672,650
1874	1,442,000
1875	1,047,936
1876	1,174,053

The total value of the imports through Guayaquil for 1878 was reported at 4,734,055 pesos; and that of the exports, inclusive of precious metals, at 4,183,612 pesos. The commodities shipped in largest quantities were cacao, *tagua* or vegetable ivory, India-rubber, *jipijapa* (or so-called Panama hats), etc.

The new cacao crop (1879) was unusually abundant, and commanded an advanced price; the average price per quintal (of 100 pounds) of the crop immediately preceding having been £3 free on board. The shipments of ivory-nuts amounted in 1878 to 10,000 tons, which is a marked increase as compared with previous years. This article was sold in March at £17 10s. free on board.

The following extract from a correspondence dated Guayaquil, August, 1879, will serve at once to show the sentiments inspired by President Veintemilla's "great capacity to rule a free people," and make known the terms of recent railway contracts:

Elevated by treason and the accident of circumstance to the chief magistracy of the country, a position which he [General Veintemilla] has sustained by practices worthy of the middle ages, he does not pay the country he misgoverns even the small compliment of endeavoring to save appearances. His patriotism is self-interest, as will be understood when the fact is known that his willing tools at the convention of Ambato donated him a large increase of salary, and other substantial rewards for services which in a well-organized country would have gained for him imprisonment or banishment. His manner of granting concessions and celebrating contracts is, even in these lands of surprises, unique and striking. A case recited in the issue of the "Nacion" of the 7th inst., a newspaper of Guayaquil, is to the point. In Quito,

in January of the present year, Mr. Herman Gohring effected a contract with the Government of Ecuador, represented at that time by Don Luis Salvador, as the illustrious commander-in-chief of the armies and navies of Ecuador was at that time sojourning temporarily in Guayaquil, for the construction of a railroad from Yaguachi to Quito. The terms of the first contract, which occasioned considerable unfavorable comment in the country at the time, may be briefly stated. The contractor guaranteed within three years and a half from the date of signing the contract to finish the road, binding himself to begin the work within nine months. In return for this service the Government agreed to grant the following favors: the ownership and use of thirty miles of railroad, now existing over the new route to Quito, without any remuneration whatever to the Government; the cession of alternate sections of the public lands through which the road should pass; a subsidy of \$150,000 per annum for four years, and of \$100,000 for six years following; on the opening of the line for traffic a bonus of \$200,000; for the space of fifty years the contractor should enjoy not only the use of the railroad, but no other should be constructed to compete with it; the fifty years expired, the contractor should still enjoy the profits of the road for twenty years longer, but any others might build a road in opposition to the enterprise. This contract was duly ratified, and published in the official paper on the 7th of February. The common sense of the country condemned the contract as soon as its terms were made known, on the ground that the conditions were too favorable to the contractor. Veintemilla's method of placating public opinion was characteristic. He ignored the contract and effected another under terms more favorable still for the contractor. He increased the total subsidy by \$600,000, doubled the bonus to be paid at the completion of the work, extended the time allowed by the first contract for that purpose, undertook for account of the Government the construction of certain station buildings, etc., and doubled the number of years in which the contractor was to enjoy the usufruct of the enterprise, after the expiration of the exclusive privilege.

EGYPT, a tributary of Turkey in Northeastern Africa. The ruler of Egypt, who has the title of Khedive, is Mohammed Tevfik, born in 1852, the eldest son of Ismail Pasha, who reigned June 26, 1879. The eldest son of the Khedive is Prince Abbas Bey, born July 14, 1874.

The area and population of Egypt were as follows in 1879:

	Area in square miles.	Population.
I. EGYPT PROPER.		
Governments	68,168	569,115
Provinces	326,194	4,943,512
Total Egypt proper	394,362	5,517,627
II. OTHER POSSESSIONS.		
Nubia	333,800	1,000,000
Soodan	323,000	10,800,000
Total other possessions	656,800	11,800,000
Foreigners	68,653
Grand total	1,051,162	17,386,230

For an account of the finances, public debt, and commerce, see "Annual Cyclopædia" for 1878.

In the latter part of 1878 Mr. Rivers Wilson made a tour of inspection through the Delta, visiting the chief towns of every province; and wherever he went he held a kind of small

darbar, which all the leading functionaries of the district attended. He began with Shib-been, went on to Damanhour, thence returned south to Tanta, and from Tanta he passed on to Zagazig and Mansoorah. Thus he traversed nearly the whole of Lower Egypt. Crowds came to the stations as he went from place to place, and the people filled the streets to see the English "Monfettish." At each town he inquired into the fiscal administration, and at Tanta he made a short address to the sheiks and officials as follows :

A new era has begun for Egypt. Reforms are already initiated, and if you will only have patience you can count on their completion. If you have grievances, make them known to us and you shall be righted. We wish to establish equality and legality in the country, and the law shall no longer be for the rich alone; it shall work for rich and poor alike.

Hundreds of petitions were presented to the Minister on his circuit, and he received them all personally. The courage to present complaints was quite a novelty in Egypt. Their presentation was regarded as a sign that a belief was growing in the permanence of the changes. In the last days of 1878 the Council of Ministers also adopted a beneficial step toward simplifying the provincial administration. It abolished the office of governors of large cities, and transferred their duties to the prefects of the provinces. The Minister of Finance ordered the appointment of inspectors of finance in the provinces, whose business it should be to watch over the payment of the duties and their rightful application. Three inspectors-in-chief, two for Lower Egypt and one for Upper Egypt, were to be at the head of this important branch of the administration. Mr. Fitzgerald, the new Accountant-General, who had accompanied Mr. Wilson on his tour, and had shown great energy in the adjustment of the questions of taxation, in one of his reports described the confusion existing in this branch of the financial administration as beyond all conception, making the execution of the orders of the Minister of Finance an impossibility; and to do away with these evils the financial inspectors were to be appointed. In February, 1879, the Commissioners of the Public Debt published their report of the financial results of the year 1878. The Commissioners said that they could not admit that one class of creditors should be paid to the prejudice of others, and that, if the resources of the Egyptian Government were not sufficient to enable it to meet all its obligations, the sacrifices to be made should be borne equally by all. It seemed that since 1876 the total indebtedness of the country had only been reduced £655,000, notwithstanding the operations of the sinking fund.

A serious demonstration was made at Cairo on February 18th. After an ordinary Council of Ministers, Nubar Pasha and Mr. Rivers Wilson on leaving in a carriage were stopped by a large throng of armed officers, estimated at 400, clamoring for payment of long arrears

of salary. Both were grossly insulted and forced back, the coachman being wounded. The crowd penetrated into the courtyard, up the staircase, and into the corridor, invading even the Ministers' private room. The passages, however, were eventually cleared, but the crowd remained outside the staircase and completely surrounded the building, preventing all exit. The Khedive ultimately arrived on the scene with a mere handful of soldiers. The crowd thereupon cheered, but called out, "Go back! we must get money from the Ministers." The Khedive, however, though with great difficulty, succeeded in forcing his way into the place, and a regiment of soldiers shortly followed. The Khedive then addressed the mob from the window, promising that justice would be observed toward them. After two hours the Khedive tried to leave the building, but met such resistance that he ordered the soldiers to charge. The Master of Ceremonies and five of the mob were wounded. Many were arrested and the rest dispersed. On the following day Nubar Pasha offered his resignation, which was accepted. This event created considerable excitement in London and Paris, and was regarded in those capitals as an attempt to get rid of Nubar; and it was considered as certain that the Khedive either instigated the attack, or was at least only too ready to profit by it. Ismail Pasha called in Nubar Pasha at a moment when the Governments and public of Europe required to be assured, and when Nubar Pasha's ability and special relations were indispensable to him in promptly forming a Cabinet which should stand as a guarantee to Europe in regard to the Khedive's policy. But it was easy to see that the Khedive would find it difficult to put up with Nubar Pasha's authority; for, well as he knew Nubar's intelligence and ability, the Khedive had a profound aversion for him personally. As soon as the Cabinet was formed, mainly through the efforts of Nubar Pasha, who was supported by England and France, the Khedive's only further thought was to get rid of Nubar, whom he fancied he could henceforth do without. Nubar Pasha knew this himself, and on January 20th wrote to a friend: "The everlasting political comedy or tragedy is being played on the little stage here, just as it is everywhere else: a lost power sought to be regained, persons interested in not letting it be regained, who yet aid it for personal motives or to give themselves importance—and not a son in the Treasury withal. What a situation for the country, for the interested countries, and for your friend!"

On February 26th Prince Hassan, son of the Khedive, and commander-in-chief of the Egyptian army, paid an official visit to Mr. Vivian, the English Consul-General, and in the presence of the leading English residents apologized, on behalf of the Khedive, the army, and the country, for the gross insult offered to Mr. Rivers Wilson by officers of the

army the preceding week. Mr. Vivian replied that he deeply regretted the incident. It was incumbent on every civilized country to respect the laws of hospitality toward foreigners. It was more especially incumbent on Egypt to respect and protect an Englishman who had been sent by her Majesty's Government, at the express request of the Khedive, to take a prominent part in the government of the country. Mr. Rivers Wilson expressed satisfaction at the apology, and said that the army and the whole country should have remembered that in coming to Egypt he had only the interest of the country at heart. Under great difficulties his sole object was the introduction of order and reform into the administration.

The British Government, immediately upon the resignation of Nubar, proposed to the French Government to take joint action looking to the reinstatement of Nubar. The latter acceded to this proposition, and on March 8th a joint note was dispatched by the two Governments to the Khedive, which contained the conditions for the settlement of the crisis. These conditions included the right of Messrs. Wilson and De Blignières to veto all propositions which were not acceptable to them. The note concluded as follows: "The Khedive will comprehend the great responsibility which he has assumed in taking the initiative in these new arrangements, and the consequences to which he would expose himself if he were not able to secure the complete execution of those arrangements, or if difficulties were placed in the way of the Government, or disturbances of the public peace should take place." A new Ministry was finally formed in the second week of March, with Prince Tevfik as President of the Council, and Zulfikar as Minister for Foreign Affairs. Mr. Wilson remained Minister of Finance, and M. de Blignières Minister of Public Works. Riaz Pasha retained the portfolio of the Interior, and also discharged the duties of Minister of Justice. Ratif Pasha was succeeded in the Ministry of War by Eflatoun Pasha, a man brought up in England, used to English ways, well versed in the English language, and enjoying a high reputation for talent and honesty. The decree of nominations was signed by the Khedive and countersigned by Prince Tevfik. It was accompanied by a document of greater importance than even the decree. This document was a letter from the Khedive to Prince Tevfik containing an authoritative interpretation of the new Constitution published in August, 1878, in a letter from the Khedive to Nubar Pasha. The letter to Prince Tevfik was as follows:

HIGHNESS: At the moment when I intrust to you the presidency of the Council of Ministers, and with it the duty of forming a Cabinet, I wish to remind you that perfect harmony of views must exist among the members of that Cabinet; and I must also communicate to you my ideas concerning the accomplishment of the reforms which were inaugurated by my decree of the 28th of August last, which is the basis of our system of government.

When I established the new order of things I had no intention of separating myself from my Ministers, with whom, on the contrary, I wish to remain in close union. It is, therefore, most important that before the Cabinet comes to any decision concerning any bill or decree proposed by any one of its members, such bill or decree, with the report on which it is based, should be laid before me by the proper Minister. It is also necessary that I should inform the Cabinet of all measures of general importance which I may feel it right to introduce. In either case it is necessary that the Cabinet should meet, if I require it, to consider in concert with me the proposed measures. But, in order to maintain the complete independence of the Cabinet, I will always refrain from assisting in the deliberations.

On the other hand, as the native Ministers now form a majority in the Cabinet, it is right, in order to restore the balance of power and lend to the intervention of our European Ministers all the usefulness possible, that they should be entitled to a veto on all measures they agree in disapproving.

I hope these new plans will insure the working of the new organization, whose success will bring so much good to Egypt. The Cabinet may rest assured that, under all circumstances, it can count on the most complete and loyal assistance from me, just as I count on their devotion to the work we are carrying out in common. ISMAIL.

On April 7th a peaceable revolution occurred. Its origin was as follows: Mr. Wilson, acting with his French colleague, Mr. Baring, and the Debt Commissioners, having found it impossible to meet all the demands on the public debt, elaborated a plan for an equitable reduction of the claims of all classes of creditors, taking as a basis the last two budgets, and submitted the plan to the Khedive, who proposed a counter-project giving better terms, especially to floating-debt holders. A petition was signed in support of the Khedive's scheme by pashas, ulemas, members of the native Parliament, the Coptic Patriarch, the chief Rabbi, and the large land-owners—in fact, an essentially Egyptian opposition to European influence. The projects naturally clashed. Prince Tevfik resigned the presidency of the Council, and the Khedive dismissed Messrs. Wilson and De Blignières. A new Cabinet was then formed under the presidency of Sherif Pasha, composed entirely of native ministers. Mr. Rivers Wilson and M. de Blignières refused to resign their posts unless authorized to that effect by the British and French Governments. An official statement was promulgated explaining the action taken by the Khedive. It declared that the Khedive, complying with the daily growing national feeling, had decided to form a truly Egyptian Cabinet. A new Ministry had therefore been formed under the presidency of Sherif Pasha, the members of which would be responsible to the Council of Delegates. The latter would be invested with full powers, on the model of the European Legislative Chambers. It was added that the national financial scheme communicated by the Khedive to the Consuls-General had been elaborated by the Egyptian notables and dignitaries, and would be scrupulously carried out. A letter was also published from the Khedive, in which he accused the European Ministers.

especially Mr. Rivers Wilson, of wishing to establish laws repugnant to the manners, customs, and religion of the Egyptian population. A striking fact in this rebellion of the Khedive against the influence of the Western Powers was, that the most influential part of the population, and the chief religious and political authorities, were on his side, and resented the intrusion of European influence into Egyptian affairs. The leaders of the nation were with him in the struggle he had commenced for what he deemed independence. He had, in the first place, the support of the ulemas or priests. In Egypt, as in Constantinople, their hatred of European intrusion is intense and unfeigned. The predominance of Islam seems necessary to their very existence, and they abhor any approach to Christian rule. But it was still more significant that the Chamber of Delegates was also on the Khedive's side. This institution in 1879 was thirteen years old, the first meeting of Parliament in Egypt having been held on November 25, 1866. There is only one Chamber, and the number of dele-

gates, which up to 1879 was seventy-five, was in this year increased to one hundred. Every male inhabitant over twenty-five years of age, who is not legally interdicted, has a right to vote. Cairo names three members, Alexandria two, and Damietta one; and the rest of the country is divided into electoral districts, each returning one member. It is very probable that many of the members thus elected were the creatures of the Khedive, but the Parliament nevertheless developed considerable independence. Thus, when the Minister for Foreign Affairs went to close the session, which had come to an end by mere lapse of time, one of the deputies, Abdul Salem Mouchli, declared, on behalf of the Parliament, that they could accept no such dismissal. The Chamber, he said, had as yet done nothing; they had still much to do in the supervision of the Ministry, and they declined to separate. His colleagues supported him, and the Chamber remained in session, claiming that all ministries, whether native or foreign, should be dependent on its will and responsible to it for their conduct of

SUEZ.

affairs. Then there was the influence of the harems, which is subtle and persistent. A strict system of economy under European supervision is fatal to feminine luxury and extravagance. In short, the influential pashas, the religious party, female influence, and the principal land-owners of the provinces, all combined to support the Khedive in a determined resistance to European predominance. The latter, in the beginning of April, offered Messrs. Baring and De Bignières posts as Comptrollers-General of receipts and expenditures. Both gentlemen declined, giving as reasons, first, that the Khedive's plan was not realizable, was beyond the capabilities of the country, and opposed to the interests of Egypt and the creditors; and, secondly, that they could not concur in a *régime* which violated recent engagements with England and France. The new Government took a step on April 15th which met with the disapproval of the Western Powers. It ordered the Post-Office to open pamphlets and detain copies of the second report of the Commission of In-

quiry just published by the *Caisse Publique*. The Postmaster protested against this order, adding that he could no longer urge the European Governments to abolish their independent post-offices in Egypt. The report recommended a reduction of interest, and antedated the Egyptian bankruptcy from April 6, 1876. The *Caisse Publique* prefaced the report as follows: "We were firmly resolved to advise the acceptance of the project if the recent exclusion of European Ministers had not destroyed the only guarantees on which the success of the reform depended." The first work of the Khedive and the new Ministry was to issue a decree on April 22d, which was virtually a suspension of payment. The decree admitted that Egypt could not for the present pay her way, and declared the necessity of a general reduction. It declared that there should be no further borrowing to pay arrears of interest; and this is what was particularly vexatious to the creditors. The Khedive in this decree, however, while recording the failure of Europeans, said that in the future the

Egyptian estate would be managed by honest and sensible men, and that the creditors might look forward to a respectable liquidation.

This new revolution created a profound sensation in Western Europe, and particularly in England and France, and led to negotiations between these two Powers as to what should be done next. In the first place, the two Governments considered that the bondholders' interests were only a secondary question, and that the principal point was the establishment in Egypt of a good administration, leaving no Power any pretext for intervening in Egyptian affairs on the plea of protecting the interests of its subjects. The consequence of this first principle on which the Cabinets agreed was that a good administration was only possible in Egypt apart from the Egyptian element, or at least with the cooperation of the European element, the exclusion of which seemed to them utterly unacceptable. This conclusion was common to the two Governments. But their views diverged on the question of persons. France would have liked to force back the two dismissed Ministers upon the Khedive. England, on the contrary, had special reasons for not insisting on this point. There had been conflicts between Mr. Vivian, the English Consul-General, and Mr. Wilson, and Mr. Vivian was summoned home to give explanations, while Mr. Wilson was recalled from Egypt and replaced in his English functions. In these circumstances the French Government, of course, had to abandon its wish to make the Khedive receive back his dismissed Ministers, and to content itself with keeping him to the principle of European Ministers cooperating in the administration of Egypt. Another consequence was that, ceasing to exact the restoration of the old Ministers, the French Government could no longer require the Khedive not to change his European Ministers without the consent of the two Governments. The first instructions, therefore, sent to the agents of the two Governments and communicated to the Porte, were that France and England regarded a good administration in Egypt as indispensable to their own interests and to foreign residents, and that such an administration did not seem to them feasible without the presence of two European Ministers in the Egyptian Cabinet. The two Governments, therefore, invited the Khedive to comply as promptly as possible with their demand, and to hand over the portfolios of Finance and Public Works to English and French Ministers. There was no question in these instructions of a threat of coercive measures, nor did the note have a threatening tone. An offer was made by the Sultan in the latter part of April to depose Ismail Pasha, and to appoint Halim Pasha, Ismail's uncle (who according to the Mohammedan law of succession was the rightful heir), his successor. This proposal did not find favor with France, which wished to keep the Egyptian and Eastern questions

separate. The German Government also protested against the action of the Khedive, in a note delivered on May 17th. This note was of the same tenor as that of 1878, containing a reservation of all rights acquired by the international arrangements respecting the international courts of law and the Commission of Control, and a protest against any arbitrary change of system on the part of the Khedive which might prejudice the interests of German subjects. This note, which was aimed mainly against the decree of April 22d, was communicated to the other European Governments, and England, France, Austria, Russia, and Italy all took the same line and protested against the non-execution of the judgments of the tribunals.

The proposal made by the Porte in April to depose Ismail Pasha in favor of his uncle was repeated in June, when the Powers counseled the Khedive to abdicate, voluntarily promising to support his son Tefvik. The Khedive asked for this promise in writing, which was refused. On June 19th the British and French Consuls-General proceeded together to the palace and formally demanded the abdication of the Khedive, who asked to be allowed forty-eight hours in order to communicate with the Porte before giving his reply. To the Khedive's inquiry at Constantinople a reply was received from the Sultan personally to this effect: "Your abdication is not a question that concerns you; you await our further orders. This is the only reply you can give." On June 25th the Consuls waited on the Khedive and informed him that deposition in favor of Halim had been decided upon the day before at Constantinople, and would be proclaimed before the Council there that day. They finally urged abdication, promising a guarantee to Tefvik in writing. The Khedive demanded as conditions of abdication that his family should be provided for, as was done prior to the cession of their lands, and that the abdication should be made into the hands of the Sultan. The Consuls replied that this last condition broke off all negotiations, that they consequently withdrew their offers, and that events must take their course. The Sultan was still undecided in respect to Tefvik's succession, when Sir Austen Layard, the British Ambassador, semi-officially represented to him that if he declined to displace the Khedive the Powers would be compelled to take that step upon themselves, and Turkey would in that case eventually lose Egypt. Sir Austen Layard added that the Powers were firmly determined to establish good administration in Egypt. The Porte advised the Sultan to acquiesce in the course recommended, and accordingly, on June 26th, he signed the firman deposing the Khedive in favor of Prince Mohammed Tefvik. On the same day the Porte addressed a dispatch to the Powers, confirming the Imperial iradé of 1841, and abolishing the iradé of 1873, which authorized the Khedive of Egypt to conclude

treaties with foreign powers and to maintain a standing army. The dispatch added that the Porte would exert its influence to restore the finances of Egypt and remove the abuses existing in that country. The change itself took place without any disturbance. Ismail Pasha in the morning received an order from the Sultan requiring him to abdicate in favor of Prince Tevfik, and he at once complied with the demand. In the evening at six o'clock, Prince Tevfik was proclaimed Khedive as Tevfik I. Ismail received an annual allowance of £50,000; his sons Hassan and Hussein, £20,000 each; and his mother, £30,000. The new Khedive was offered £150,000, but accepted only £50,000. Ismail Pasha left Egypt on June 30th for Naples. Tevfik's first official acts created considerable dissatisfaction with the Powers. He formed a new Ministry under Sherif Pasha composed entirely of natives, and in a decidedly offensive manner prohibited Nubar Pasha from returning to Egypt. This prohibition, however, was revoked in August, through the influence of the Powers. In the beginning of August the firman of investiture was communicated to England and France. Those Powers informed the Porte that some phrases used in it, while giving force to the prerogatives it had been sought to put in question, did not seem explicit enough, appearing to leave certain points in doubt, a state of things they could not agree to. In consequence of these observations, the Porte handed to the Ambassadors of the two Powers an official and identical declaration setting forth that all the rights and prerogatives conferred upon Egypt, and which were not expressly abolished by the firman of investiture, remain in force. This was tantamount to saying that no change had occurred in the situation of Egypt toward the Porte, and that the latter had promptly abandoned the idea of profiting by circumstances to gain a greater sway over Egypt. All the other Powers withdrew after the collective step which led to Ismail's abdication, in order in no way to encumber the joint influence of England and France; and even Germany, after having shown by her decisive intervention that she meant to be listened to even in Egypt, took no further steps apart from the two more especially protective Powers, and hastened to state that she entirely recognized their hegemony, and had no intention of interfering with their joint influence. On August 14th the firman was presented to the Khedive. The Ministry of Sherif Pasha was dismissed on the 18th, and a new one was formed, in which the Khedive holds the presidency. The other departments were distributed as follows: Zulficar Pasha, Minister of Justice; Mansour Pasha, Interior; Mustapha Fehmi Pasha, Foreign Affairs; Hardar Pasha, Finance; Osman Reski Pasha, War and Marine; Mehemed Menachli Pasha, Public Works; Ali Ibrahim Pasha, Public Instruction. In September Messrs. Baring and De Bagnières were appointed English and

French Comptrollers-General, upon the recommendation of their respective Governments. The Khedive at first desired that their duties should be clearly defined before their definite appointment, but finally yielded to the demands of England and France, and appointed them without such understanding. The Ministry with the Khedive as President was replaced by a new one on September 21st, which was composed as follows: Riaz Pasha, President of the Council, Minister of the Interior, and *ad interim* Minister of Finance; Ali Moubarek Pasha, Minister of Public Works; Mustapha Fehmi Pasha, Foreign Affairs; Osman Pefki Pasha, War and Marine; Fakri Pasha, Justice; and Ibrahim Pasha, Public Instruction. An important circular was issued by the Ministry on October 15th to all governors, tax-collectors, inspectors, and fiscal authorities, which ordered that the pashas and other high officials, who had formerly evaded payment of taxes, should be treated like all other subjects of the Khedive; and, if they did not pay within a certain time, their rents were to be seized or their produce sold. European holders of land and houses were also to pay in future their uncontested taxes, i. e., those sanctioned by the Ministry of Finance. The foreign Consuls-General were informed of this fact.

The relations with Abyssinia were again disturbed in 1879. In July it was stated that the treaty of peace between the two countries had never been signed, and that King John had ordered 15,000 men to take possession of various districts. The Egyptian garrisons at the time consisted of 200 men at Massowah and 200 at Sennite; but Colonel Gordon left Khartoum with 3,000 men and twelve cannons for Sennite, as the bearer of a letter from the Khedive to King John. Gordon Pasha was empowered to offer the King the ports of Aith, Duroro, and Tchilioky on the Red Sea, provided he renounced all other claims and concluded a lasting peace with Egypt. In case the King refused, Gordon was to resume the offensive. In September King John wrote to the mercantile firm representing him in London, stating that he had written to Queen Victoria complaining that the outlets of his territory were closed by the Egyptians. He also stated that the English General Kirkham, in his service, was poisoned at Massowah while on his way to England with letters to the Queen.

Colonel Gordon, on arriving in Abyssinian territory at Alba, was received by one of King John's court officials, who gave several entertainments in his honor and detained him a whole week. At Adowah he was received by the King with great pomp and ceremony, and a villa was placed at his disposal, where he lodged at the King's expense. Four days after his arrival he received notice that the King had left for the province of Amhara, where an insurrection had broken out, and would be absent three weeks. The King not

having returned at the end of that time, the Egyptian envoy had no alternative but to follow him to Amhara. After his arrival at Debra Tabor in Amhara, Gordon Pasha had two audiences with the King, which led to no result, as the latter argued that without the high dignitaries of the kingdom he could take no important resolution. A fortnight afterward the King returned with Gordon Pasha to Adowah. A grand council was then assembled, but after several sittings they declared that the question of peace or war concerned the King alone, as he knew best what was good for his people. Thereupon the King put forward the following conditions of peace: 1. Restitution to Abyssinia of the coast territory that had been ceded; 2. Departure from those districts of the Mussulman colonists; 3. Restitution of the taxes collected there during the Egyptian occupation, amounting to 50,000,000 francs; 4. Restitution of the Bogos territory; 5. An extensive rectification of frontier in the direction of the Nile; 6. Recognition of King John as Emperor of Abyssinia; 7. The obligation for Egypt not to supply the Mussulmans living south of Abyssinia with arms and ammunition; 8. Suspension of customs dues between the Egyptian town of Zeilah and Abyssinia. These demands Egypt could not grant, and in consequence Gordon Pasha returned to Egypt, arriving in Massowah on December 10th. Military preparations had been going on since the first arrival of the news of the unfavorable reception of the Egyptian envoy by King John, and the latter also prepared himself for war. On December 11th the Abyssinian chiefs of the army of King John, which had assembled on the Egyptian frontier, made their way into the Khedive's territory, and succeeded in levying tribute from his subjects. In an interview with the Khedive, Gordon Pasha said that the King of Abyssinia hated and was hated by all who came in contact with him. Abyssinia, he said, was surrounded on all sides by discontented tribes and rulers. To the eastward, King Menelek of Shoa was sullenly opposing King John, but was afraid to show open hostility; to the south, Rasadall was in almost open rebellion; and in other quarters six or more chiefs were in actual revolt. Placed in this position, Abyssinia could not attack Egypt. If the Khedive would supply the malcontent tribes with arms, the second son of King Theodore would soon be placed on his father's throne.

Upper Egypt was visited during 1879 by a severe famine. A Famine Commissioner, Mr. Baird, was appointed to visit the afflicted localities, to relieve the distress, and report on the causes of the famine. He presented his report in May, representing the condition of the peasants as heart-rending. The peasants, Mr. Baird says, are without capital, steeped in poverty, and wholly dependent on the Nile both for their daily sustenance and the unfeeling demands of the tax-collector. The Nile in

1877 was so low that much arable land was left unwatered, and consequently was not cultivated. This disaster was followed by an excessive Nile, which drowned the maize, the local food-crop, and the peasants were left to beg, steal, or starve. The reason of the complete collapse before this temporary calamity is thus explained:

Even in ordinary circumstances the Egyptian peasant leads a life which has little that is attractive to European eyes. His food consists of coarse maize-bread, with beans, lentils, onions, and various weeds. He wears scanty clothing of cotton or rough homespun woolen cloth, and sleeps in a mud hut or in the open air. . . . The worst feature in his life is his chronic state of indebtedness, either to the Government for arrears of taxation or to the merchant who supplies him on credit with seed-corn and corn for his household, to be repaid with exorbitant interest when his crops are ripe. The merchants for the most part are Europeans, and are always ready to make advances to the needy peasant, provided the interest is high enough. The fellah, called upon to pay his taxes at a moment when his crops are still unripe, is compelled to borrow, and is not in a position to wrangle about the interest. For instance, last year, when great pressure was put upon the Egyptian Government to pay the coupon due in May, the peasants were forced to sell their growing crops, and in some cases, perfectly authenticated, corn was sold to the merchants for 50 piasters per ardeb, which was delivered in one month's time and then fetched 120 piasters. These are no exceptional cases; the same thing was going on over the whole of Upper Egypt. . . . At one place, where the market price of maize was 80 piasters, I found the peasants purchasing what they required for their households at 170 piasters on credit.

The famine was clearly caused by the complete absence of any reserve fund on which the peasants could fall back. The usurer and the tax-collector had brought the fellah to a completely hand-to-mouth life. There was plenty of corn in the country, so much that Mr. Baird was able to buy it under market price; and yet, during the months of September, October, November, and December, 1878, some 700,000 people were starving and 10,000 actually died from starvation. Mr. Baird drew the following conclusion from his inquiry:

The famine was a money famine; nobody who had money need starve. The agricultural population are extremely poor and overtaxed. Those who suffered most were women, children, old men, and professional beggars. The relief was sent some months too late. Owing to the good crops this year the famine is almost at an end. Unless something is done to release the people from their constant state of debt, another failure of the crops would produce equally deplorable results.

The condition of the fellahs, however, was greatly improved by the good crops of 1879, and the policy of moderation adopted by the new Government in the collection of the taxes. Unlike former years, when taxes were generally collected a year or two in advance, the tax-collectors this year confined themselves to collecting the taxes remaining unpaid from the previous year, and they received strict orders from the Khedive not to use harsh means in collecting the taxes from the fellahs.

The agricultural condition of Egypt during 1879 was a decided improvement on that of

the preceding year. The cotton crop, which in 1878 was unusually small, promised to be doubled this year, amounting to about 9,000,000 cantars, of the estimated value of £7,500,000, while the value of the cotton-seed was estimated at £1,500,000. The success of this year's crops was due mainly to the high Nile and the inundations of 1878. In Upper Egypt, the grain and sugar crops were also in a much better condition than in the previous year.

The receipts of the Suez Canal Company in 1878, according to its annual report, were 32,403,611 francs, or about 500,000 francs less than in the preceding year. The expenses had also decreased 560,221 francs, the amount for 1878 being 16,897,750 francs. After the payment of 5 per cent. interest on the shares, there remained a surplus of 3,627,109 francs, of which 71 per cent. went to the shareholders, 15 per cent. to the Egyptian Government, 10 per cent. to founders of the company, and 2 per cent. each to the Board of Directors and the employees. The number of vessels which passed through the canal in 1878 was 1,593, of 3,291,535 tons, against 1,663, of 3,418,949 tons, in 1877. Of the vessels which passed through in 1878, 1,089 were merchant steamers, 282 postal steamers, 75 transport-vessels, 59 tow-boats, 25 sailing vessels, 9 corvettes, 5 gunboats, 4 frigates, 4 ironclads, 14 avisos, and 27 miscellaneous vessels. Of passengers, there were 58,274 troops, 26,170 private citizens, and 11,919 pilgrims.

In June the Government issued a decree, in the face of Oriental superstition, sanctioning a census every decade, the first to be taken in 1880. The reasons given for this step are noteworthy. It will be of service, said the Minister, for the distribution of taxes, for military conscription, and for the labor due to the state on works of public utility. In a minor decree it was also recommended as useful from a statistical point of view.

The Egyptian Government, in accordance with a resolution made some time ago, on January 1, 1879, opened the kingdom of Darfour to commerce.

MOHAMMED TEVFIK, the new Khedive, was born November 19, 1852. By the firman of 1866, which changed the law of succession in Egypt, he became the heir apparent to the throne. He took but little part in public affairs prior to his appointment as President of the Ministry in 1879. Mr. Edwin de Leon, author of "The Khedive's Egypt," described him as follows in 1878: "I believe the heir apparent, Prince Mohammed Tevfik, has never enjoyed the advantages of foreign travel nor a foreign curriculum, but has been brought up and educated at home. Yet he does credit to his teachers, both as to mind and manners, being one of the most modest and at the same time one of the best-informed young men to be met with anywhere, universally respected as well as liked both by foreigners and by natives, though he shrinks from rather than

courts observation or society. Whether this proceeds from native modesty or from policy, the position he occupies (1878) being a more difficult and delicate one in the East than elsewhere, I am not sufficiently intimate with him to say; but my impression was that the former cause had as much to do with it as the latter. Yet his retiring manner by no means indicates a lack of will or firmness. On the contrary, I should judge he was naturally obstinate. Less politic and plausible than his father, Prince Tevfik impresses you with belief in his sincerity, a quality very clever men are often deficient in. He does not affect the Western air and habits, as do his two brothers, although he wears the Stambouli costume, and is reputed a conscientious though liberal Mussulman in creed and practice. His private character is above reproach. Prince Tevfik is decidedly Oriental both in face and figure, of the Circassian type, with square head, heavy frame, dark eyes and hair, and with something solid and substantial about him. He is the husband of but one wife, the Princess Emineh, daughter of El Hamy Pasha, and has a son, Prince Abbas, born July 14, 1874."

ELECTRIC LIGHT, EDISON'S. The most attractive field for inventive ability of late years is that of electric illumination, a subject which engrosses the attention of the electricians of all countries, who have already produced so many inventions for this purpose, on so many different principles and systems, that the popular mind is bewildered in the attempt to follow them. The development of the electro-magnetic machine by Niardet, Wilde, Brush, Fuller, and many other inventors, but especially through the improvements of Gramme and Siemens, seemed to place the electric light, if not the electric motor also, almost within reach, so economically can electric currents be produced by the modern mechanical generators. The important discovery of the divisibility of the electric current for the production of the voltaic arc between carbon-points by Jablochkoff made possible for the first time an electric light of real practical value—one which has been applied with the highest degree of success where an exceedingly brilliant, colorless, and steady light is desired; but the cost of production, the attention which the apparatus requires, the consumption of the carbon-candles, and the limitations to the subdivision render it unsuitable for purposes of general illumination. The Jablochkoff candle and the other systems of illumination by the voltaic arc, devised by Carré, Foucault, Serrin and Lontin, Rapieff, and Werdermann, were described in the article *ELECTRIC LIGHT* in the Annual "Cyclopædia" for the year 1878. In the same place the generation of electrical currents by the magneto-electric battery is described at length, with the most recent improvements in mechanical generators.

When it was known that Edison, whose genius has enriched the world with so many in-

portant applications of electricity—with duplex, quadruplex, and quite recently sextuplex telegraphy; with the electric pen; with some of the best forms of the telephone and its various modifications, as the microphone, the micro-tasimeter, the megaphone, the aërophone, the phonometer; with the phonograph (see biography of THOMAS ALVA EDISON, in "Annual Cyclopædia" for 1878)—when it was reported that this indefatigable experimenter and versatile inventor had turned his attention to the problem of electric illumination, the public expected that his fertile and practical mind would succeed if it were possible in overcoming the minor but stubborn difficulties which yet stood in the way of electrical illumination. The confidence which was felt in his ability is shown by the fact that during the months in which he was engaged in studying this subject, newspaper rumors of the success or non-success of his laboratory studies made the prices of gas-stock rise or fall on the Paris and London Exchanges. He commenced his experiments in September, 1878, and, after fifteen months of research, in the latter part of December, 1879, he published the record of his investigations to the world, and gave a public trial of the elaborated result.

Divining that the practical electric light of moderate illuminating power could not be produced by the voltaic arc, to which recent experiments have been chiefly confined, and with which Jablochhoff, Serrin, Werdermann, and others have obtained remarkable results, but by the incandescence of some resistant material, he confined his attention to the substances of low conducting powers from which the incandescent light can be obtained. These are platinum, iridium, and like metals and alloys, which only fuse at an exceedingly high temperature, and the forms of carbon which possess a high degree of purity and homogeneity. His earlier experiments were expended upon metallic material. Considering that the incandescence of the metal is the greater, the stronger the electrical current to which it is subjected, he directed his thoughts first to the invention of a regulating apparatus which would automatically break off the current when the temperature of the metal approaches the point of fusion. Constructing a lamp with a double platinum spiral as the incandescent conductor, he inserted within the spiral a platinum rod connected with a lever, one end of which is connected with the wire which conducts the current to the platinum spiral, and the other end of which is a circuit-closer, which being lowered closes the circuit with the wire which conducts off the current, causing it to pass through the lever and deflecting it from the incandescent platinum conductor. The expansion of the platinum rod by the heat presses down the end of this lever, forming the necessary continuous metallic connection, and closing the circuit below, but only momentarily, since the lowering of the temperature of the

spiral instantly causes the rod to contract, breaking the new circuit until the heat of the spiral again rises to the dangerous point. This device was, however, found to be untrustworthy after a certain period of use, the pressure of the rod upon the lever after a while bending it out of shape. Among the other circuit-closing regulators which he devised was one by which the heated air pressed a diaphragm outward, closing and breaking the circuit so rapidly that no variation in the intensity of the light was observable. Another was a device by which the expansion of the luminous conductor itself was made to draw a rod upward, which actuated a circuit-closer through an arrangement of levers. Edison developed in the earlier stages of his investigations a novel kind of lamp, from which he obtained a very brilliant light by the incandescence of a piece of zircon to which the heat-rays of the incandescent platinum spiral were transmitted by reflection. The spiral of platinum and iridium was placed in the focus of an elliptic reflector of copper coated with gold, and the heat-rays were focused upon a thin piece of zircon, which attained a degree of luminosity greatly exceeding that of the incandescent platinum.
